A plan to prevent non-subscribers using telephones without paying is being introduced in Montreal. The number of people who use other people's 'phones throughout the city, particularly those in the drug stores, during the course of the year, would doubtless number thousands. Druggists & most store-keepers are usually repaid for the use of their telephones by the popularity which they suppose it attaches to their stores & some of them have provided an extra 'phone with a switch, so that it can be placed in a convenient position for the use of their customers in particular & the public generally. Lots of places in Montreal have 50 to 100 people a day use their 'phones in that way, & the Bell Co. has been seeking for a plan to derive some financial benefit from the telephone borrower. The new system will be distinct from the ordinary telephone in the store, having no connection therewith. The person who desires to use the instrument will call up Central, when he will be requested to put 5c. in the slot & the required number will be called. If the person desiring to speak does as requested an indicator before Central will signal that the money has been deposited & everything will be all right, but if no money goes in the slot that ends the matter so far as Central is concerned. Central will be supposed to keep a strict watch on all private 'phones where a slot one is available to see that no one but those who are entitled to use it are permitted to do so. The girls in the exchange will become so well acquainted with the voices of those who ordinarily operate them that it will be easy in most of the cases for them to detect who should & who should not use the various instruments. Among the advantages of this scheme is that people who cannot afford to keep a telephone will be able to use a convenient one without being under an obligation to any person. Another advantage is that druggists & others who have telephones will be saved a great deal of inconvenience.

In the recent case of *Atkinson & others vs. the Bell Co.*, before Judge Ferguson, in Toronto, it was shown that the Co. had planted a pole on a street 66 feet wide under the superintendence & with the sanction of the Corporation & by agreement. The pole was 12 feet from the centre line & near an angle formed by a sharp turn in the street & far enough from the sidewalk to allow a beaten track for carriages to pass. The plaintiffs were driving a sleigh to which were attached a team of horses, along the street in daylight, when the driver lost control at some distance from the angle & the sleigh was dashed against the pole by which it, the horses & one of the occupants were injured. The Judge held the plaintiffs should recover. That the pole was an obstruction & defendant had notice & knowledge of it & of its dangerous character. That the fact that the team of horses had once before run away would not help defendant & that the Corporation could not recover from the Telephone Co.

After negotiations extending over 2 years, during which the Co. has paid nothing for a franchise in Brantford, Ont., the city has granted it an exclusive franchise for 5 years for \$450 a year.

The Co. will put up a copper-metallic line between Ottawa & Arnprior, Ont.

Telephone Items.

It is proposed to convert the Nicola, B.C., telegraph line into a telephone line.

The Pontiac Telephone Co. recently offered for sale its rights & plant, including about 60 miles of line.

A bill to enable towns of 1,000 people & over to acquire & operate electric light & telephone

plant for public service, is before the Manitoba Legislature.

The Inverness & Victoria Telephone Co. has about completed its lines between Baddeck, Little Narrows, Margaree, Orangedale & Whycomagh, N.S.

The New Westminster & Burrard Inlet Telephone Co. has decided to string an additional wire between Vancouver & Westminster, B.C., & from Westminster to Steveston.

A London cablegram of Apl. 5 says: "The story reaches here that during the recent violent storm, the telephone wires between Brussels & the suburb of Ixelles being broken & communication interrupted, it was suggested that telephoning without wires be attempted. This was tried, with satisfactory results, & since then the inhabitants of Ixelles have been telephoning to Brussels with the greatest ease. Electric experts here more than doubt the story so seriously set forth. Telephoning demands conditions so different from those requisite for telegraphing that they declare telephony without wires is practically impossible."

A Kingston, Ont., despatch says: "A. T. Smith, District Superintendent of the Bell Telephone Co. at Kingston, has invented special instruments of unique design for communication between the attendants on the surface and the diver at the bottom of the river, where he is engaged in the work of raising the Cornwall bridge. The ordinary diving apparatus has been dispensed with, & supplemented by special diving bells, so constructed as to withstand the pressure of the current. They are also protected by heavy metal shields. The telephone is put inside the bell, & electric alarms give the signal when either party desires to converse. Anybody can operate the ingenious mechanism."

H. W. Kent, Superintendent of the Nelson & Vernon Telephone Co., which owns & operates all the lines in Kootenay & Yale, B.C., states that from Bossburg to Spokane the line is but a single wire, grounded, which is owned by the Spokane & B. C. Telephone Co. This

does not give very satisfactory service, although the Nelson & Vernon part of the line north of the International boundary is a metallic circuit. The Inland Co., however, owning the exchange in Spokane, Wash., has built a metallic circuit to Rossland, is now building to Republic & will build from Bossburg to Russell, at the boundary, shortly. When this is done, the Nelson & Vernon Co. will have all its connections with the Inland Co., & will have a metallic circuit throughout. It is believed this will give a satisfactory service. In the meantime, the Columbia Telephone & Telegraph Co., a subsidiary flotation of the Spokane & B. C. Co., has let a contract for the poles for a line to parallel the present Nelson & Vernon line into Greenwood, & also, it is stated, to go on to Camp McKinney. Whether all these lines will be built this year remains to be seen. But the chances are that some of the contracts will go through, & that the whole Boundary Creek country will have a greatly improved telephone service.

Among the Express Companies.

The Western has notified agents to discontinue issuing money orders payable at Havana, Cuba.

From May 1, during navigation on the St. Lawrence, all matter for Europe will be routed via Montreal.

The Dominion has opened offices at Dunmore Jct., Assa., Fort Steele, B.C., Cowan, Man., Ethelbert, Man., Garland, Man., Pine River, Man., Sclater, Man.

Capt. J. Irving, formerly manager of the Canadian Pacific Navigation Co. is said to be organizing in Victoria, B.C., the Irving Express Co., for the quick handling of goods to the Atlin district.

The B. C. Ex. Co. has issued a folder with a map and time-table of the route travelled by its stages which carry the mail from Ashcroft to all points in Cariboo & Lillooet besides passengers & express. The head office is at Ashcroft; J. A. Bremner is Secretary-Treasurer.

General Manager Stout, of the Dominion & Western, left Toronto May 10 on an inspection trip to the Pacific Coast. He is accompanied by Superintendents Stewart, Boswell, & Ford, Auditor Burr & Tariff Clerk Meyer, of the Dominion, & by Superintendent S. A. Davis, of the Western.

Live stock cannot be shipped from a point located within the Northwest Territories to any point outside the Territories, without first obtaining a certificate from an inspector of brands, setting forth that he has made an inspection of stock & recorded the age, sex, brands & marks of every head of such stock.

The B. C. Express Co. does not allow examination of shipments sent c.o.d. until full amount of c.o.d. & all accrued charges are paid, except c.o.d. shipments destined to Barkerville, Clinton, Lillooet, Quesnelle & Soda Creek, B.C. All packages destined to offices of that Co. should be enclosed in oilcloth or other strong or waterproof coverings, as a protection against rains.

The Canadian laws require importers of cattle, sheep & swine to produce a declaration stating that they are intended for breeding purposes only, and that there is no disease existing among the animals in the particular locality from which they come. The following are the declared cattle quarantine stations: Halifax, N.S., St. John, N.B., Quebec (Levis) Que., Point Edward (Sarnia) Ont., Emerson, Man., Estevan, Assa., Huntingdon, B.C., New Westminster, B.C., Vancouver, B.C., Victoria, B.C.

The Dominion has opened a wagon route between Fort Steele Jct. & Fort Steele, B.C. The following routes have been opened: Kootenay Lake Steamboat Route, between Nelson & Kootenay Landing, B.C.; Rainy River Navigation Co., between Rat Portage & Fort Frances, Ont.; Toronto, Port Dalhousie & St. Catharines Steamboat Line, between Toronto & St. Catharines, Ont., re-opened for season of navigation; Bay of Quinte Navigation Co., re-opened for season of navigation; Navigation on Georgian Bay re-opened for summer season.

Central Vermont Reorganization.

A special general meeting of proprietors of the Grand Trunk was held in London, Eng., May 29th, to approve an agreement made May 1 between the Co. & the Central Vermont Ry. Co. for working arrangements between the two companies for 22 years. The notice of the meeting gave the following particulars: The C.V. system forms the chief connection of the G.T. Co. with Boston & the New England States. In 1895, for the protection of the interests of the G.T. Co., & also on account of its valuable traffic relations with the C.V. R.R. Co., it was found necessary in conjunction with E. C. Smith, the President, to apply to the courts for a receivership of that Co., & C. M. Hays & Mr. Smith were appointed Joint Receivers. The President of the G. T., when in Canada in Aug., 1897, arranged with a committee of C. V. bondholders a plan for placing that Co. on a sound financial footing, & after prolonged & anxious negotiations, the reorganization of the Co. has been completed, & unencumbered by unprofitable leases, it has been incorporated by the laws of the State of Vermont under the title of the Central Vermont Ry. Co. The capital of the reorganized Co. consists of \$3,000,000 common stock, & \$12,000,000 twenty-one-year 1st mortgage bonds bearing 4% interest. Of these bonds \$1,000,000 will be set apart & applied as required for improvements in the property, & the remainder will be issued by the C.V.R. Co. in exchange for the bonds & in the payment of certain liens, charges & equities upon the property of the old C. V.R. Co. The G.T. Co. will receive \$1,186,000 of the said 4% bonds; \$435,000 being in payment of that amount of traffic balances due by the C.V.R.R. Co. at the date of the receivership, & the remaining \$751,000 on account of investments made by the G.T. Co., in the securities of the C.V.R.R. Co. The G.T. Co. will also receive \$2,180,000 of the common stock of the reorganized company. In consideration of this settlement the agreement provides for the interchange of traffic between the two companies to continue during the currency of the 4% mortgage bonds, the G.T. Co. undertaking, in the event of the net receipts of the C.V. Co., as defined in the agreement, being in any year insufficient to meet the interest on such bonds as may from time to time be outstanding, to make good such deficiency, provided that the G.T. liability payable in any year shall not exceed 30% of its share of the gross earnings from traffic interchanged between the two companies.

In moving a resolution approving the agreement Sir C. Rivers Wilson detailed at length the history of the C.V., which was

chartered in 1843, opened in 1849, & gradually grew by extensions & by the acquisition of leased lines to 772 miles. When the G.T. management changed in 1895 it was found that the previous board, rightly appreciating the importance of the G.T. having a connection with the C.V., & securing access to Boston, had in 1883 begun to purchase a considerable amount of C.V. securities. By 1885 the G.T. had \$1,768,000 of securities, comprising \$751,300 of 1st mortgage bonds, \$114,775 of notes given by the C.V. on account of traffic balances & preferred & common stock amounting to \$902,000, which though a large majority of the stock did not

decided to put it into the hands of receivers as explained in the notice of the meeting. In Jan., 1897, there was default on the bonds & foreclosure followed. Negotiations with the bondholders followed, a new company was chartered & took over the line on May 1, making with the G.T. Co. the agreement under consideration. The G.T. Co. has a majority of the stock & a controlling influence in the new company. Several of the unproductive leased lines have been surrendered, reducing the system to about 470 miles. The main line has a few branches, some of which have been acquired by purchase by means of issue of bonds. Three small lines,

aggregating 77 miles, for which \$90,000 a year rental was paid, have been secured for \$1,000,000, saving \$50,000 a year. Judging by results while in the receivers' hands it is estimated there will be a very considerable surplus over the fixed charges, admitting, it is hoped, of something material for the common stock. The line had been worked in interests which were not those of the G.T. Henceforth it would be run on a business basis, & the undue extravagance of the past would be stopped. The President warmly commended Mr. Hays' services in connection with the reorganization, & referred approvingly to the appointment of E. H. Fitzhugh as Vice-President & General Manager, & to that of G. B. Reeve as Traffic Manager. The agreement was unanimously approved of.

Quebec Central Railway Co.

At the annual meeting in London, Eng., June 5, the President, E. Dent, said:—"The gross earnings for 1898 were \$450,249, against \$457,643 for 1897, a decrease of \$7,394. The working expenses were \$303,908, against \$309,555 for 1897. The net earnings were \$146,341, against \$148,088 for 1897, to which is added \$1,013 for interest earned, making total net earnings \$147,354. After paying \$85,166 for interest on prior lien bonds & writing off \$5,863 for settlement of some old claims, there remains a net balance of \$56,325, which, added to the \$13,450 brought forward from 1897, makes an available balance of \$69,775, out of which a dividend of 1 1/2% has been declared on the income bonds, leaving a balance to carry over of \$12,203. The percentage of working expenses was 69.24, against 69.64 for 1897. The decrease in the gross earnings was due mostly to the falling off in the lumber traffic to the U. S. It was known at the close of 1896 that on July, 1897, there would be a duty of \$2 upon every 1,000 ft. of lumber sent to the States from Canada, & the consequence was that owners sent every ton they could during the first 6 months of 1897. The traffic, therefore, for the first 6

DAVID MCNICOLL,

Assistant General Manager, Canadian Pacific Railway.

give the G.T. control, as the Vermont Legislature passed an act prohibiting any holder of stock, no matter how large the holding, to have more than one-tenth voice in the meetings of the Co. In 1895 the C.V. had an issue of \$7,000,000 1st mortgage bonds, an indebtedness of about \$360,000 equipment bonds, a floating debt of about \$2,000,000 & a 2nd mortgage of \$15,000,000, made to extinguish liabilities, but only partly issued. There was a liability of \$900,000 a year for leased lines, many of which were unproductive & traffic balances of \$400,000 due to the G.T.R. The C.V. Co. being practically bankrupt, it was

Thomas, Ont.

EXECUTIVE COMMITTEE, J. A. Macdonald, Arnprior,
Ont.; W. H. Harper, Chatham, Ont.; C. E. Morgan,
Hamilton, Ont.; T. Long, Port Hope, Ont.; A. Calder,
Windsor.

NEXT ANNUAL MEETING at Winnipeg, Oct. 13, 1899.

Canadian Marine Engineers' Association.

HONORARY PRESIDENT, O. P. St. John, Toronto;
PRES., H. Parker, Toronto; 1st VICE-PRES., A. J. Wood-
ward, Toronto; 2nd VICE-PRES., D. F. Campbell, To-
ronto.

COUNCIL, T. W. Good, W. Harwood, R. Binch, To-
ronto; P. J. Carr, Port Dalhousie; J. E. Kane, King-
ston.

TREASURER, H. Brownley, Toronto; SECRETARY, S.
A. Mills, Toronto; GUARD, H. Bowler, Toronto; AUDI-
TORS, D. L. Foley, Toronto; E. J. O'Dell, Owen Sound.

months of 1898 compared unfavorably with
the corresponding period of 1897. It is satis-
factory to know that from August onwards,
when the traffic compared with what may be
called the normal traffic, increases were again
shown. The Manager says that generally,
with the exception of lumber shipments to the
U. S., business has been good, trade in a
healthy condition, & the prospects for the
future encouraging. He has sent a telegram
announcing the earnings up to the end of
May this year, which were \$168,512, an in-
crease over the corresponding period of \$29,-
069. The net earnings for the same period
were \$50,824, an increase over those of the
corresponding period of \$8,168. He ends his
telegram by saying, 'The outlook is good.'

The report was adopted, & the retiring
directors, other than the Provincial Govern-
ment one, were re-elected. Special meetings
of the prior lien bondholders, income bond-
holders & shareholders were afterwards held
to approve the Act obtained from the Quebec
Legislature for the purpose of rearranging
the bonded debt of the Co.

The President stated that by the Act the prior
lien bonds would be repayable at par Feb. 1,
1908, and that it authorized the creation of first
debenture stock bearing interest not exceed-
ing 4% per annum, the total interest upon which
shall not exceed an annual sum of £20,000.
It was proposed to offer now to the holders
for their 5% prior lien bonds 4% 1st debenture
stock at par, exchangeable up to Aug. 1, 1899,
& to pay in cash £3 as a bonus, besides £2,-
10s. for the ½ yearly coupon due on that
date. For the past two years the net revenue
of the Co. had exceeded £30,000 a year,
being £10,000 or 50% more than the interest
on the total amount of 1st debenture stock
which the directors were enabled by the Act
to issue. Assuming that the future net
revenue continued at the present rate of
£30,000, there should be a surplus of about
£15,000, or sufficient to pay increased inter-
est on the income bonds. The directors were
authorized to exercise the power conferred
by the Act.

General Manager Grundy states that the
shipments of dairy produce over the line are
increasing rapidly. The shipments of butter
& cheese for export to Great Britain
amounted in 1898 to nearly 3,800 tons, an
increase of 400 tons over 1897. The ship-
ments of asbestos show an increase, while
those of chrome ore show a reduction of some
600 tons.

Traffic receipts for May, \$42,127.44; in-
crease over May, '98, \$358.92. Receipts
Jan. 1 to May 31, \$168,511.60; increase over
corresponding period \$9,825.53. There is a
variation between these figures & those at-
tributed to the Chairman above, which is
probably owing to an error in reporting.

Michigan Central Railway.

The annual report of this Co.'s subsidiary,
the Canada Southern, for 1898, just issued,
shows that the Co. has 457.30 miles of 1st
track, 97.56 of 2nd track & 238.06 miles of
sidings, which does not include the 15 miles
of the London & Port Stanley, over which its
trains run between St. Thomas & London,
Ont. The financial statement is as follows:

RESOURCES OF THE YEAR 1898.

Net earnings...	\$300,666.69
Received from M. C. R. R. Co.	
balance of 1897 account...	132,244.07
Receipts from other sources...	1,859.12
Cash & cash assets, Dec. 31,	
1897.....	24,241.95
	<hr/>
	\$459,011.83

DISPOSITION OF RESOURCES.

Dividends 26 & 27, paid Feb. 1	
& Aug. 1, 1898.....	\$300,000.00

Balance net earnings, 1898, due	
from M. C. R. R. Co.....	150,666.69
Cash & cash assets, Dec. 31,	
1898.....	8,345.14
	<hr/>
	\$459,011.83

The annual meetings of the C. S. & other
subsidiary companies were held at St. Thomas,
June 7, when the following directors were
elected:

CANADA SOUTHERN RY.—C. Vanderbilt, W.
K. Vanderbilt, C. M. Depew, S. F. Barger,
E. A. Wickes, J. E. Brown, C. F. Cox, New
York; H. B. Ledyard, Detroit; N. Kings-
mill, Toronto.

LEAMINGTON & ST. CLAIR RY.—C. Vander-
bilt, W. K. Vanderbilt, C. M. Depew, C. F.
Cox, New York; N. Kingsmill, J. J. Kings-
mill, Toronto; James Ross, Montreal.

NIAGARA GRAND ISLAND BRIDGE.—C. Van-
derbilt, W. K. Vanderbilt, C. M. Depew, S.
F. Barger, E. A. Wickes, E. D. Worcester,
C. F. Cox, New York; H. B. Ledyard, De-
troit; N. Kingsmill, Toronto.

NIAGARA RIVER BRIDGE.—C. Vanderbilt,
W. K. Vanderbilt, C. M. Depew, S. F. Barger,
E. A. Wickes, E. D. Worcester, C. F. Cox,
New York; H. B. Ledyard, Detroit; N.
Kingsmill, Toronto.

SARNIA, CHATHAM & ERIE RY.—C. Vander-
bilt, W. K. Vanderbilt, C. M. Depew, C. F.
Cox, New York; N. Kingsmill, Toronto.

Grand Trunk Earnings, Expenses, &c.

The following statement of earnings sup-
plied from the Montreal office, includes the
G.T. of Canada, the Chicago & G.T., & the
Detroit, Grand Haven & Milwaukee Rys.:

	1899	1898	Increase	Decrease
Jan.....	\$1,956,281	\$1,916,332	\$39,949
Feb.....	1,824,434	1,674,453	149,981
Mar....	2,186,359	2,048,970	137,389
April....	1,942,543	1,918,477	\$24,066
May....	2,039,239	1,940,980	98,259
	<hr/>	<hr/>		
	\$9,948,856	\$9,499,212	\$449,644

The following figures are issued from the
London, Eng., office:

GRAND TRUNK RAILWAY.

Revenue statement for Apl., 1899:

	1899	1898	Increase	Decrease
Gross receipts....	£321,700	£318,000	£3,700
Working expenses.	205,700	203,902	1,798
Net profit.....	£116,000	£114,098	£1,902

Aggregate for 4 months, from Jan. 1 to
Apl. 30, 1899:

	1899	1898	Increase	Decrease
Gross receipts....	£1,288,900	£1,238,006	£50,894
Working expenses	893,900	877,955	15,945
Net profit.....	£395,000	£360,051	£34,949

CHICAGO & GRAND TRUNK RAILWAY.

Revenue statement for Apl., 1899:

	1899	1898	Increase	Decrease
Gross receipts....	£62,600	£61,280	£1,320
Working expenses.	56,400	49,754	6,646
Net profit.....	£ 6,200	£11,526	£7,966	£5,326

Aggregate for 4 months, from Jan. 1 to
Apl. 30, 1899:

	1899	1898	Increase	Decrease
Gross receipts....	£279,700	£255,331	£24,369
Working expenses.	234,800	205,095	29,705
Net profit.....	£44,900	£50,236	£5,336

DETROIT, GRAND HAVEN & MILWAUKEE RY.

Revenue statement for Apl., 1899.

	1899	1898	Increase	Decrease
Gross receipts....	£14,700	£14,926	£ 226
Working expenses.	12,300	10,910	£1,390
Net profit.....	£2,400	£4,016	£1,616

Aggregate for 4 months, from Jan. 1 to
Apl. 30, 1899:

	1899	1898	Increase	Decrease
Gross receipts....	£56,400	£59,434	£3,034
Working expenses..	49,500	48,890	610
Net profit.....	£6,900	£10,544	£3,644

RAILWAY MILEAGE IN CANADA 1868 TO 1898.

MILES IN OPERATION
each square equal to 1000 Miles

DETAILS OF G.T.R. RECEIPTS JAN. 1 TO APR. 30.

	1898.	1898.
Passengers, number	1,728,569	1,849,755
amount	£ 298,071	£ 278,525
Immigrants, number	1,723	1,851
amount	£ 793	£ 892
Mails, express, &c.	£ 56,302	£ 56,158
Freight, tons	3,211,253	3,104,099

Total	£2,044,285	£1,952,900	£91,385	

C.P.R. Earnings & Expenses.

Gross earnings, working expenses, net profit and increases or decreases over 1898, from Jan. 1, 1899.

	Earnings.	Expenses.	Net Profits.	Increase or decrease.
Jan.	\$1,804,570.36	\$1,247,096.50	\$557,473.86	\$101,000.00
Feb.	1,754,382.82	1,154,081.34	600,301.48	179,034.12
Mar.	2,109,667.58	1,280,772.01	828,895.57	75,662.06+
Apr.	2,196,112.10	1,276,008.91	920,103.19	203,207.80+
	\$7,923,933.16	\$4,957,498.76	\$2,966,434.40	\$556,815.25+
				+ Increase.

Approximate earnings for May, \$2,375,000, against \$2,229,000 in May, 1898; increase, \$146,000.

SUBSIDIARY LINES.

DULUTH, SOUTH SHORE & ATLANTIC.—Approximate earnings for May, \$204,182; increase over May, 1898, \$31,091.

Net earnings for March, \$53,385, increase over March, 1898, \$3,609.

MINERAL RANGE, HANCOCK & CALUMET.—Approximate earnings for May, \$36,589; increase over May, 1898, \$7,458.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—Approximate earnings for May, \$337,765; increase over May, 1898, \$2,078.

Net earnings, 9 months, to Mar. 31, \$164,396.45. April gross earnings, \$348,912.97; expenses, \$184,516.52; net, \$164,396.45.

Canadian Pacific Railway Land Sales.

	Acres.	Amount.
Jan.	11,708	\$19,411.35
Feb.	13,747	43,371.00
Mar.	24,045	74,430.00
Apr.	36,626	110,285.00
May	57,573	137,835.00
	128,709	\$275,331.35

RAILWAY FINANCE, MEETINGS, &c.

Calgary & Edmonton net earnings for Apr. \$9,482.89, against \$25,721.96 for Apr. '98.

The Cassiar Central Ry. Co. gives notice that a power of attorney given by it to E. D. Self, of the District of Cassiar, B.C., May 10, 1898, has been revoked.

Canadian Pacific.—Last month the Co. offered for subscription in London, Eng., at £196 per bond of \$1,000, an issue of \$3,500,000 4% 2nd mortgage 50-year gold bonds of the Minneapolis, St. Paul & Sault Ste. Marie Ry., the interest on which is guaranteed unconditionally by the C.P. Co., & which is payable in gold in New York, or by the C.P. Co. in London, at the fixed exchange of 4s. 1½d. per dollar, less income tax. The prospectus announced that the total amount of bonds secured by the 2nd mortgage is \$5,000,000, of which only \$3,500,000 will be certified at present by the trustees & delivered to the M. St. P. & S. Ste. M.R. Co., to be disposed of. The remaining bonds to the par value of \$1,500,000 will only be certified by the trustees, & delivered by them from time to time in such amounts as the C.P. Co. may approve in writing. The agreement between the C.P. Co. & the M. St. P. & S. Ste. M. Co. provides that the proceeds of the bonds shall be applied for terminal yards & facilities at

Minneapolis, reconstruction bridges, & general additions & improvements, redemption of interest-bearing securities coming due for payments on accounts of rolling stock equipment (mainly mortgaged), for additional equipment, & for payment of floating debt incurred for additions & improvements to the property. The cases were opened in London May 15 & closed May 16. Speaking of it the Canadian Gazette says: "By this issue the 'Soo' Co. will clear off all capital engagements, & have the means of providing the additional facilities of business which the prevailing activity has shown to be necessary, while its surplus revenue will at the same time be set free for dividend or reserve purposes. The C.P. Co. is to be congratulated upon having thus got its important connection into a secure situation."

The Chignecto Marine Transport Ry. Co.'s annual meeting was held in London, Eng., June 3. The Chairman stated the meeting was purely formal, there being no accounts to present. Negotiations were being followed up, but the reply of the Canadian Government was not altogether of a satisfactory character. A. D. Provand, M.P., said he went to Ottawa in Oct. last, saw the Premier, & arranged to make proposals for a settlement. These were submitted by letter in Jan., and the reply recently received was very unsatisfactory. The matter could not be dealt with at the shareholders' meeting, because all the questions relating to the negotiations had been considered at a joint meeting of debenture-holders & shareholders. The correspondence would be printed & circulated. The Chairman said the works had been kept in constant repair, money advanced from various sources, chiefly by debenture-holders, having been used therefor.

Duluth, South Shore & Atlantic.—At a meeting of stockholders, June 1, Lord Strath-

cona & R. B. Angus, Montreal, were elected directors.

Dominion Atlantic receipts for Apl., \$45,179 increase over Apl., '98, \$4,453. Four months to Apl. 30, \$156,367, increase over corresponding period \$15,429.

Manitoba & Northwestern.—On May 31 the General Manager issued a circular stating that the Co. hoped to be in a position very shortly thereafter to settle the outstanding working expense claims contracted prior to the appointment of the Receiver on June 7, 1893, & requesting statements of claims from creditors.

The trustees of the 1st mortgage bondholders announce that, having received a refund of certain expenses originally debited against the trustees, the distribution announced in the notice of May 29 will be increased from £3 10s. 6d. to £3 12s. per bond in respect of the proceeds of the sale of land warrants & rights to land.

Minneapolis, St. Paul, & St. Ste. Marie.—

At the annual meeting in Minneapolis, June 6, the following were elected directors: T. Lowry, J. Martin, W. D. Washburn, J. S. Pillsbury, Sir Wm. Van Horne, T. G. Shaughnessy, C. H. Pettit, F. H. Peavy, W. B. Dean, W. H. Bradley, R. B. Angus. The old officers were re-elected.

The Ontario & Rainy River Ry. Co.'s bill, empowering it to buy the Port Arthur, Duluth & Western Ry., has passed the Railway Committee at Ottawa, having been amended so as to protect the creditors & to protect the town of Port Arthur, which gave a bonus of \$25,000 in consideration of the terminals & shops being located there.

Port Arthur, Duluth & Western.—D. F. Burke, Port Arthur, has taken action against this Co., the Toronto General Trusts Co., as executor of the late John Leys, of Toronto,

& several mortgagees of the Co. Mr. Burke, who is one of the biggest bondholders of the Co., claims \$62,556 for moneys advanced & for services rendered to the Co. He asks for \$155,000 worth of bonds which he claims to own, or a declaration that the Toronto General Trusts Co. holds them as trustee for him. As a creditor, shareholder & bondholder, he sues to set aside a consent judgment entered in an action on Feb. 14 last, which amounted to an agreement between the bondholders to sell the road, on the ground that it was obtained by fraud & misrepresentation, that the Ry. Co. had no power to give a consent judgment, & that the court had no jurisdiction to direct a sale of the road under the statute. Mr. Burke also attacks the mortgage, holding that it covers property which the Co. had no power to mortgage, its powers of mortgaging its assets being expressly limited by statute. He asks that the mortgage be set aside in so far as the power of sale was given, & in so far as the mortgage purports to cover the property & assets of the Co. other than the undertaking as defined by the statute of incorporation. He also asks for an order restraining defendants from selling the railway, for an account of the dealings with the railway, for damages for the alleged fraudulent dealings with the railway through which he claims to have sustained loss, or in the alternative he asks the court to set aside the whole issue of bonds by the Ry. Co. to its co-defendants, on the ground that it was obtained by fraud & misrepresentation.

Pembroke Southern.—A mortgage given by this Co. Mar. 20 last, to the Ottawa Trust & Deposit Co., as trustee, to secure an issue of bonds, has been deposited with the Provincial Secretary, Toronto.

Qu'Appelle, Long Lake & Saskatchewan net earnings for Apl. \$2,371.66, as against net loss of \$677.99 in Apl. '98.

The Northey Gas or Gasoline Engine.

In Connection with Pumping Machinery for Tank Duty.

"BUILT FOR HARD WORK."

Railway Officials will find the Northey Engine to be a marked improvement over steam or other forms of power for this duty. It is simple of construction, and easily managed, necessitating only the turn of a fly-wheel to start, while it can be going at full speed in a few seconds and be shut down on the instant. Needs no engineer to look after it, the station hands can do all that is required, while it will run for hours at a time with little or no attention. The Engine is compactly built and of the best materials; it uses either gas or gasoline for fuel, and its safety and economy with either have proved it to be the most satisfactory power in the market.

We will cheerfully send Booklet and every information upon request.

The Northey Mfg. Co., Limited, 1032 KING ST. SUBWAY, Toronto, Ont.

Seattle & Northern.—This line, which runs from Hamilton to Anacortes, Wash., 35 miles, & has been owned by the Pacific Coast Co., is said to have changed hands. In Seattle it is asserted that it has been secured by J. J. Hill, of the Great Northern (U.S.A.)

Toronto, Hamilton & Buffalo.—At the annual meeting in Toronto, June 6, the following were elected directors:—W. K. Vanderbilt, New York; J. N. Beckley, Rochester, N.Y.; T. G. Shaughnessy, Montreal; S. R. Callaway, New York; S. E. Peabody, Boston; H. B. Ledyard, Detroit; C. F. Cox, New York.

Wellington, Grey & Bruce.—The estimated earnings for the ½ year ended June 30, applicable to meet interest on the bonds, will admit of the payment of £2 1s. %. This payment will be applied as follows: 1s. in final discharge of coupon 37, due Jan., 1889, & £2 on account of coupon 38, due July 1, 1889. Payment will be made on & after July 1 at the offices of the G.T.R. Co., in London, Eng. The numbers of bonds, amounting to £2,200, drawn to be paid off at par on July 1, are announced.

This line is worked by the G.T.R., which gives the W.G. & B. bonds 30% of the gross receipts as interest, and sets aside a further percentage for redeeming the bonds by drawings in May & Nov. Coupons subsequent to those mentioned above are in arrear.

RAILWAY APPOINTMENTS, Etc.

Alberta Railway & Coal Co.—W. D. Barclay, C. E., General Manager, has resigned to enter the service of Foley Bros., railway contractors, St. Paul, Minn. Mr. Barclay, who was engaged on C.P.R. surveys & construction for some years, had charge of the construction of the A.R. & C. Co.'s line from Lethbridge to the International Boundary, & of the Great Falls & Canada Ry. from the Boundary to Great Falls, Montana. On the completion of these lines in 1890, he was appointed General Superintendent of both, & then became General Manager. The President, E. T. Galt, will discharge the duties heretofore devolving upon Mr. Barclay, it not being the intention to appoint another Manager.

Canadian Pacific.—At the monthly meeting of directors, June 12, Sir Wm. Van Horne resigned the Presidency & was elected Chairman of the Board, the Vice-President, T. G. Shaughnessy, being elected to succeed him as President. No one was elected to the vacant Vice-Presidency. After the meeting Sir Wm. made the following statement:—"The reason for the change from a railway standpoint is the need of providing for the enlargement of the executive organization of the Co., the vast growth of its system & the wide extent of its operations having resulted in an amount of executive work quite beyond the powers of endurance possessed by any two men. As to myself I am not cutting loose from the C.P.R. & I shall take just as much interest in its affairs as I ever did; but I shall now be free from every-day duties & able to see something of the world should I feel like it. This is my 42nd year of continuous railway work & my 18th with the Canadian Pacific. In all these years I have had but two short holidays & I have felt for a good while back that I ought to free myself from the many demands of business & at the same time make way for the younger men. The present seems a most favorable time for such a change, for the Co. is in a splendid position in every way & its prosperous future seems quite assured. But one of my chief reasons for asking our directors to permit me to relinquish the duties of the office of President was to secure the well-earned promotion of Mr. Shaughnessy, whose services to the Co. have been beyond estimation & whom I look upon as all that could be wished for as the chief executive officer of a

great corporation, honorable, capable, energetic & fair-dealing. I have known him intimately for many years & have never yet discovered a fault in him, unless it be injustice to himself. The warmth of my feelings towards him can only be imagined by those who know him well. The shareholders of the C.P.R. Co. are to be congratulated on having such a man in command.

A portrait & short biographical sketch of Mr. Shaughnessy appeared in our issue of Oct. last. His first official act as President was to appoint as Assistant General Manager, D. McNicoll, heretofore Passenger Traffic Manager. Mr. McNicoll was born at Arbroath, Forfarshire, Scotland, April, 1852. He entered the railway service in Aug., 1866, as clerk in the Goods Managers' office of the North British Ry. In 1873 he removed to England & obtained a similar position with the Midland Ry. At the age of 21 he came to Canada. He first worked on the Northern Ry. at Meaford & Collingwood, & in less than a year became chief clerk, removing to the general office of the Toronto, Grey & Bruce Ry. at Toronto. He remained in this position until 1881, when he became General Freight & Passenger Agent of the same railway & General Traffic Agent of the Owen Sound Steamship line trading on the upper lakes. In 1883 he became General Passenger Agent of the Credit Valley, Toronto, Grey & Bruce, & Ontario & Quebec Rys., & he retained this position when these lines became amalgamated with the C.P.R. In 1885 he was removed to Montreal & became the General Passenger Agent of all the lines of the C.P.R. east of Port Arthur. On Jan. 1, 1896, he was appointed Passenger Traffic Manager.

For the present at least, & probably until the completion of the extension to the Windsor St. station & general offices building, Sir Wm. Van Horne & Mr. Shaughnessy retain their old offices. Mr. McNicoll has moved into the 1st room of Sir William's suite, heretofore occupied by A. R. G. Heward, who has gone into the room made for Mr. Osborne when he was Assistant to the Vice-President. Mr. McNicoll's clerks are located in the 2nd room of Sir William's suite, which is also occupied by the Chairman's Secretary. G. Hodge, heretofore Mr. Shaughnessy's Chief Clerk, has been given a similar position in Mr. McNicoll's office.

R. Kerr, heretofore Traffic Manager of the Western Lines, with headquarters at Winnipeg, has been appointed Passenger Traffic Manager at Montreal to succeed Mr. McNicoll. Mr. Kerr was born in Toronto in Aug., 1845, & entered railway service at the age of 21, being first employed as warehouse clerk, & afterwards filling various positions with the Northern Ry. In 1879 he was appointed Passenger Agent of that line, afterwards becoming General Freight & Passenger Agent of the Northern & North-Western Ry., which position he filled until June, 1884, when he was appointed General Freight & Passenger Agent of the lines of the C.P.R. west of Lake Superior, with headquarters at Winnipeg, his title being subsequently changed to Traffic Manager of Western Lines. Consequent on the promotion of Mr. Kerr to Montreal the following changes have been made in the traffic department of the lines west of Lake Superior, the position of Traffic Manager having been abolished.

Passenger Department.—C. E. McPherson, heretofore Assistant General Passenger Agent at Toronto, is appointed General Passenger Agent of Western Lines, headquarters at Winnipeg. E. J. Coyle, heretofore District Passenger Agent at Vancouver, is appointed Assistant General Passenger Agent of Pacific Division, Kootenay & Pacific Coast, headquarters at Vancouver, authority extending west of Laggan & Fernie. W. Stitt, heretofore Chief Clerk of the passenger branch at Winnipeg, is appointed Assistant General

Passenger Agent of Western Division, office at Winnipeg, authority extending from Port Arthur to Laggan & Fernie inclusive.

Freight Department.—W. R. MacInnes, heretofore General Agent Freight Department at Chicago, is appointed General Freight Agent of lines west of Lake Superior, headquarters at Winnipeg. G. H. Shaw, heretofore Chief Clerk Freight Branch at Winnipeg, is appointed Assistant General Freight Agent of Western Division, main line & branches, Port Arthur to Laggan & Fernie, headquarters at Winnipeg. A. Cameron, heretofore District Freight Agent at Vancouver, is appointed Assistant General Freight Agent, Pacific Division, main line & branches, west of Laggan, headquarters at Vancouver. F. W. Peters, heretofore District Freight Agent at Nelson, B.C., is appointed Assistant General Freight Agent Kootenay & Boundary Creek districts, comprising lines west of Fernie & south of Golden, Arrowhead & Penticton, headquarters at Nelson, B.C. W. A. Kittermaster, heretofore District Freight Agent at Detroit, Mich., is appointed General Agent Freight Department, at 234 La Salle St., Chicago. M. H. Brown, heretofore Chief Clerk in Freight Traffic Manager's office at Montreal, is appointed District Freight Agent at 11 Fort St. West, Detroit, Mich.

A. H. Notman, heretofore Assistant General Passenger Agent at St. John, N.B., succeeds Mr. McPherson as Assistant General Passenger Agent at Toronto, with authority extending west of Kingston & Sharbot Lake to Detroit, & south of North Bay. This is a curtailment of the district, which under Mr. McPherson included the province of Ontario west of & including Kingston & Sharbot Lake, & the line of the K. & P. Ry. between those points; all south of the C.P.R. main line west of Renfrew, the C.P.R. main line North Bay to McLeans, also the Sault Ste. Marie branch, the town of Sault Ste. Marie, Mich., Mackinac Island, & Detroit, Mich. The territory which has been detached from the Toronto office will come under the direct control of C. E. E. Ussher, General Passenger Agent, Montreal. Mr. Notman has been succeeded at St. John, N.B., by A. J. Heath, heretofore Chief Clerk in his office, & formerly General Passenger Agent of the New Brunswick Ry., which was absorbed by the C.P.R. Mr. Heath is given the title of District Passenger Agent Atlantic Division, with authority extending east of Lake Megantic, the Maritime Provinces, & State of Maine, Oldtown, & north.

Circulars issued by Freight Traffic Manager Bosworth in connection with some of the above mentioned appointments are approved by Mr. Shaughnessy. Those issued by Passenger Traffic Manager Kerr are approved by Mr. McNicoll.

G. W. Smith, heretofore Secretary to the Traffic Manager at Winnipeg, has been appointed District Passenger Agent at Seattle.

D. McLean, fuel inspector, at Moose Jaw, Assa., has been transferred to Calgary, Alta., with jurisdiction over the main line from Swift Current to Laggan & the Crow's Nest branch. J. Armstrong has been given a similar position between Fort William, Ont., & Swift Current, Assa.

J. E. Parker, City Ticket Agent at Ottawa, has resigned owing to continued ill health. He started with the G.T.R. in Ottawa in 1874, then was Canadian Agent of the Union Pacific, with office in Montreal, & has been with the C.P.R. 15 years. He is succeeded by G. Duncan, heretofore Passenger Agent at Quebec, who is succeeded by E. H. Crean, heretofore City Ticket Agent at Sherbrooke, Que.

Central Vermont.—J. A. Allen, Trainmaster, has resigned, & the office is abolished. H. Brainerd, General Baggage Agent, has resigned, the office is abolished, & the duties will be performed by the General Passenger Agent. F. S. Holbrook has been appointed

Commercial Agent at 88 Wall Street, New York City.

Grand Trunk. J. A. Sheedy, Master of Bridges & Buildings, Middle Division, having resigned to accept a more lucrative position with a Philadelphia shipbuilding company, has been succeeded temporarily by J. Wilson, heretofore District Inspector at London, who is said to be likely to be appointed to the position. Mr. Wilson is succeeded at London by W. Kirkpatrick, heretofore District Inspector at Hamilton who is succeeded there by J. Kennedy.

Spokane Falls & Northern. H. A. Jackson has been appointed Commercial Agent of the Great Northern Ry., & General Freight & Passenger Agent of the Spokane Falls & Northern Ry. at Spokane, Wash., vice C. G. Dixon, who died suddenly June 10 of heart disease. Mr. Dixon was born at Indianapolis, Ind., in 1851, & entered railway service in 1883 as Assistant District Passenger Agent of the Cincinnati, Indianapolis, St. Louis & Chicago, which position he held for a number of years. In 1892 he went to the Great Northern as Travelling Freight & Passenger Agent of the coast lines, & was City Passenger & Ticket Agent of the same road at Seattle, Wash., from May to Dec., 1893, when he was appointed General Agent at Spokane. On Aug. 10, 1898, he was appointed General Freight Agent & General Passenger & Ticket Agent of the Spokane Falls & Northern, in addition to his duties with the Great Northern.

Mainly About People.

J. R. Joughins, Mechanical Superintendent of the Intercolonial, has gone with his family on a trip to Virginia.

Major Girouard, Chief of the British Government Railways in Egypt, is expected in Montreal in Aug. to visit his father.

L. A. Hamilton, Land Commissioner, C.P.R., Mrs. & Miss Hamilton, have returned to Winnipeg after a 5 months' European trip.

A. D. Hewat, until recently General Passenger Agent of the Dominion Atlantic Ry., died at Annapolis, N.S., June 28, of consumption.

Lord Strathcona has offered \$10,000, \$15,000 or \$20,000 if necessary towards the \$100,000 fund which is being raised for Sir Wilfrid Laurier.

F. L. Wanklyn, Manager Montreal Street Ry., has purchased the summer residence of

the late H. Abbott, Q.C., at Ste. Anne de Bellevue, Que.

Roadmaster Bruce, of the G.T.R., at Sarnia, had a shoulder dislocated & his head injured by being thrown from a gasoline velocipede near Sarnia recently.

At the recent convention of the Association of American Railway Accounting Officers in Montreal, I. G. Ogden, Comptroller C.P.R., was elected 1st Vice-President.

B. D. Caldwell has resigned the chairmanship of the Western Passenger Association at Chicago to become General Traffic Manager of the Delaware, Lackawanna & Western Ry.

T. Tait, Manager C.P.R. Eastern Lines, is expected to return to Montreal from England early in July. Mrs. Tait & her father, G. R. Cockburn, are staying at Ocouquit, on the Maine coast.

Sir Wm. Van Horne started railroading at 14, Mr. Shaughnessy at 16 & Mr. McNicoll at 13. Evidently they have to be caught young if they are going to succeed at the business.—Montreal Herald.

The Hamilton, Ont., Board of Trade seems partial to ex-railway men. S. Barker, formerly of the Northern Ry., is its President; and C. Stiff, formerly of the Great Western, is Secretary-Treasurer.

R. G. Reid, proprietor of the Newfoundland Ry., who has been spending the winter in Northern Africa, has returned to Montreal accompanied by Mrs. & Miss Reid, & is greatly benefited in health.

On leaving St. John, N.B., recently for Toronto, A. H. Notman, Assistant General Passenger Agent of the C. P. R., was presented with a handsomely fitted suit case by the St. John Passenger staff.

On leaving the service of the G.T.R. recently J. A. Sheedy, who had been Master of Bridges & Buildings of the Middle Division for a little over a year, was presented by the staff with a silver tea service, a cabinet of silver & a pair of gold cuff links.

J. Mooney, Superintendent of the Brockville, Westport & Sault Ste. Marie Ry., had his horse run away on May 16. The animal went for 5 miles before the buggy collided with a telegraph pole. Mr. Mooney, who is 75 years of age, has suffered very much from the shock.

J. M. Graham, at one time General Manager of the Northern Pacific & Manitoba Ry., with headquarters at Winnipeg, & latterly General Superintendent of the Trans-Ohio

divisions of the Baltimore & Ohio, has been appointed Chief Engineer of that system, with headquarters at Baltimore, Md.

President Sir C. Rivers Wilson, of the G.T.R., sailed from Liverpool on the Lucania, June 5, & arrived in Montreal June 11, accompanied by Lady Wilson, A. Hubbard, one of the directors, & W. Lindley, Secretary of the Co. General Manager Hays & Traffic Manager Reeve met them at New York. They are now making a trip over the system.

Alex. Milloy, formerly Traffic Manager of the Richelieu & Ontario Navigation Co., died in Montreal June 1, aged 77. He was born in Kintyre, Argyleshire, Scotland, & went into the service of the Canadian Steamboat & Mail Coach Co. in 1840. In 1875 this Co. was amalgamated with the R. & O. N. Co. Mr. Milloy only resigned from the latter Co. a little over a year ago.

H. B. Plant, President of the Plant Investment Co., controlling the great system of railways and hotels in Florida, the steamers between Tampa & Havana & the Canada Atlantic & Plant Steamship Co., operating steamers between Boston, Nova Scotia & Prince Edward Island, died suddenly in New York, June 23, aged 80. He was engaged in business till within a few hours of his death.

Sir Wm. Van Horne went to his summer residence at St. Andrews, N.B., recently, to make arrangements for spending the summer there. A Montreal paper says Sir Wm., when not actively engaged in railroading, is a country gentleman of the best type, & devotes much attention to farming pursuits, to the rearing of the choicest cattle, & the finest breeds of horses; & he will be able to gratify his tastes in these directions more than he has been in the past.

Some changes are said to be imminent in the Mechanical Department of the C.P.R.'s Western Lines. It is said to be probable that W. Cross at present General Master Mechanic of the Western & Pacific Divisions, will be appointed Assistant Mechanical Superintendent, & that he will have special charge of the Winnipeg shops, & that a Master Mechanic will be appointed for the Western Division. It is also thought some re-arrangement of the engineering staff of the Western Lines is in contemplation.

T. Ridgedale has been appointed Canadian Freight & Passenger Agent for the Chicago Great Western Ry., with headquarters at Montreal. He entered the G.T.R. service in 1868, & after filling several positions, the last

MICA BOILER COVERING

For Locomotive, Marine and Stationary Boilers

Tested by Mechanical Experts of the C.P.Ry. Co., G.T.Ry. Co., M.C.Ry. Co., Boiler Inspection Insurance Co., and proved to be the

Mica Boiler Covering Co., Limited, 9 Jordan St., Toronto, Ont.

of which was that of Travelling Passenger Agent, he resigned to accept the Canadian passenger agency of the Wisconsin Central lines, which he held for about 8 years, when it was closed. He then entered the service of the Chicago & Alton Ry.'s General Passenger & Ticket Department, from which he has just resigned.

Sir Wm. Van Horne is establishing a large farm near East Selkirk, Man. F. W. Barber, of Georgetown, Ont., has been appointed Superintendent. A residence & large farm buildings will be erected at once. Sir Wm. says his chief object in starting the farm is to stimulate the cultivation of the unoccupied lands in the vicinity & about Winnipeg by showing what results can be obtained from them. The farm extends about 5 miles along the railway on both sides, & is so situated that he thinks it will, with proper cultivation, make a good advertisement.

J. W. Brewster, formerly agent for the C.P.R. at Trail, B.C., & J. H. Sinclair, his assistant, have been found guilty of embezzlement of the funds of the Co., & sentenced respectively to 15 & 30 months' imprisonment with hard labor. Brewster's sentence was somewhat mitigated, as the evidence showed he was largely influenced by Sinclair. The latter fled to Spokane, but was extradited, whereas the former was arrested in Trail shortly after the discovery of the shortage. Strenuous efforts were made by Brewster's friends to effect a settlement with the C. P.R., but without avail, as the case had been put in the hands of the Crown Attorney.

Major Bennett, of Toronto, who died at Parkhill, Ont., early in June, was born in Cornwall, Eng., in 1823, being the only son of Capt. Bennett, & nephew of Sir John Bennett, of London. When a boy he was apprenticed to Sir John Rennie to learn engineering. He came to this country in 1846 & took the management of the Northern Ry. shops at Toronto. In 1871 he was appointed Deputy Collector of Inland Revenue. He was captain of no. 3 company, Q. O. R., at the Fenian raid in 1866. He was an Orangeman, held the office of Grand Master of Ontario West, & was also elected Vice-President of the Triennial Council of the World. He was also a Freemason.

Before leaving Toronto for Winnipeg, to assume the General Passenger Agency of the C.P.R. Western lines, C. E. McPherson received numerous marks of appreciation. His fellow-members of the Toronto Club tendered him a dinner, the staffs of the passenger & ticket offices presented him with a cut glass liqueur set, and a number of personal friends gave him a gold watch. His farewell card, a clever adaptation, read:

"To the west, to the west! to the land of the free,
Where the mighty Red River rolls down to the sea;
Where a man is a man if he's willing to toil
And the humblest may gather the fruits of the soil
Good-bye."

The career of Lucius Tuttle, President of the Boston & Maine, furnishes an excellent example of how ability & hard work will come to the front in the traffic department. Mr. Tuttle began railway life in 1865, when he was 19 years old, as a clerk in the ticket office of the Hartford, Providence & Fishkill R.R. He became General Ticket Agent of the road in the following year & held that position for 12 years, until in 1878 he became Assistant General Passenger Agent of the New York & New England. In Feb., 1879, he was made General Passenger Agent of the Eastern Railway, & in 1885 went to the Boston & Lowell with the same title. In 1887 he became Passenger Traffic Manager of the Canadian Pacific, which place he left in 1889 to take the Commissionship of the Passenger Department of the Trunk Line Association. In the following year he was appointed General Manager of the New York, New Haven & Hartford, & in Oct., 1893, was elected to the Presidency of the Boston & Maine, which position he still holds. It is evident from the foregoing that Mr. Tuttle must be thoroughly

pany may advance money, & the business of the railway be resumed.

Canadian Pacific.—The Imperial Privy Council has reversed the judgment of the courts of British Columbia, & has granted an injunction restraining Parke & Pritchard, owners of a ranch in the Thomson River Valley, from irrigating in a manner injurious to the C.P.R. track.

The Woods Motor Co. has been organized in New Jersey, with a capital of \$1,000,000, to manufacture automobiles under the patents of C. E. Woods. A factory will be established in Canada. F. Nicholls, of Toronto, is Vice-President of the Co., & H. P. Dwight, President of the G.N.W. Telegraph Co., is one of the directors.

The Hudson's Bay Route.—Sir Wm. Van Horne, in a recent interview in Winnipeg, referred to the question of a railway to Hudson's Bay, & said that though he did not think that its construction would be easily attained or that it would soon be begun, yet he did not doubt its ultimate construction without

regard to its usefulness as a through route of transportation. With reference to its value as a route of grain transportation, Sir Wm. was unable to give other than an adverse answer, saying that until a feasible scheme was devised to open up the straits to navigation for a longer season than is at present possible, the proposal was untenable. "The real trouble," he said, "is not in Hudson's Bay itself, but in the fact that ice packs drift in from Fox & Inlet block Davis Straits."

The Chilkoot Pass Route to the Yukon, which is composed of the lines of the Chilkoot R.R. & Transport Co., the Alaska Ry. & Transportation Co. & the Dyea-Klondike Transportation Co., is a system of aerial tramways or cables over

the Chilkoot Pass, Alaska. These cables extend from Canyon City, at the entrance to Dyea Canyon, over the summit of the pass to Crater Lake, a mile beyond. Freight is transported on these tramways by means of buckets suspended from a stationary cable & propelled by a traction cable. The weight limit of a single article is about 400 lbs., & the length limit about 40 ft. The cables are propelled by 2 power plants, 1 at Canyon City & the other at Sheep Camp, about half-way from Canyon City to the Summit of the Pass. From Dyea to Canyon City, freight is transported by waggon, & from the terminus at Crater Lake to Lake Lindeman, the head water of the Yukon River, in part by pack horses & in part by boat, on a chain of 3 or 4 small lakes. At Lake Lindeman the freight is placed on barges & transported one mile to Lake Bennett, where the Yukon steamers leave for Dawson City. The distance from Dyea to Lake Bennett is about 30 miles. The average time consumed in transit is about 3 days, but this time is sometimes extended by reason of storms.

GRAND TRUNK 10-WHEELED PASSENGER LOCOMOTIVE.

familiar with traffic affairs in New England, while his former connection with the C.P.R. of course peculiarly adapts him to his present position with a road with which it has such close association. Apart from his experience, however, Mr. Tuttle is a man of great natural ability, of a vigorous & forceful personality, & is cordially liked by those who know him well.—Railway Age.

The Hamilton, Ont., Incline Ry. at the east end of the city, with about 40 acres of land adjoining it on the mountain, will be sold July 14 under mortgage.

Prescott Elevator Co.—In our last issue the capacity of this Co.'s elevator at Prescott, Ont., of which an illustration was given, was stated as 1,000 bus. Of course, the mistake was obvious. The capacity is 1,000,000 bus.

Montreal Incline Ry.—It is said that holders of mortgages on the East End Incline Ry. are pressing for their money, & that the property may be sold. The cars have not been running since last fall. A Montreal loan com-

Grand Trunk Equipment.

The 10-wheel passenger locomotive illustrated on page 107 is the first of an order for 5 recently turned out at the G. T. R. shops, Montreal. Following are the general dimensions:

CYLINDERS.—Diameter.....	20 in.
Stroke.....	26 in.
Boiler.—Diameter.....	62 in.
Working pressure.....	200 lbs.
Fire Box.—Material.....	Steel.
Length.....	120 in.
Width.....	40½ in.
Depth, front.....	70½ in.
Heating Surface.—Grate area.....	33-43 sq. ft.
Driving Wheels.—Diameter, outside.....	72 in.
Journals.....	15 x 12 in.
Wheel Base.—Driving.....	15 ft. 8 in.
Total engine.....	26 ft. 11 in.
Total engine & tender.....	53 ft. 9 in.
Weight.—Total engine.....	100,000 lbs.
Total engine & tender.....	268,000 lbs.
Tender.—Tank capacity.....	4,500 gallons.

These monster locomotives are 64¾ ft. long & in order to pass under the bridges are 14¾ ft. high.

The Co. is also building 6 moguls for freight service, the general dimensions being as follows:—

CYLINDERS.—Diameter.....	20 in.
Stroke.....	26 in.
Boiler.—Diameter.....	62 in.
Working pressure.....	200 lbs.
Fire Box.—Material.....	Steel.
Length.....	120 in.
Width.....	40½ in.
Depth, front.....	73¼ in.
Heating Surface.—Grate area.....	33-43 sq. ft.
Driving Wheels.—Diameter, outside.....	62 in.
Journals.....	9½ x 12 in.
Wheel Base.—Driving.....	15 ft. 8 in.
Total engine.....	24 ft. 1 in.
Total engine & tender.....	50 ft. 11 in.
Weight.—Total engine.....	153,000 lbs.
Total engine & tender.....	253,000 lbs.
Tender.—Tank capacity.....	4,500 gallons.

A little while ago the Co. called for tenders for 500 box cars, but the prices quoted were so high that they will be built at its Montreal shops.

The Co. has recently placed on the day run between Montreal & Toronto, both ways, 2 magnificent vestibuled trains, entirely built in the Montreal shops; each train consists of parlor car, composite cafe-parlor car, 1st class car, & composite baggage & 2nd class car, with compartment for smokers. The parlor compartment of the composite cafe-parlor car has 10 revolving chairs covered in peacock blue plush, & 2 wicker chairs. Large windows are another feature. The dining-room has seat-

ing capacity for 12. It is handsomely carpeted, & furnished with leather-covered movable chairs. The kitchen, pantry, refrigerator, wine locker, gas range & buffet, are arranged in a most compact way with a view to quick service & a saving of space. At the further end of the car are the smoking room & men's saloon with large open lavatory. The smoking room is supplied with 5 arm chairs & a sofa, the latter accommodating 3 persons.

Intercolonial Equipment.

Following is a list of orders placed during the past few months for I.C.R. equipment, most of which has already been delivered:

1 locomotive, with Cleveland cylinders, built by Baldwin Locomotive Works; 5 express locomotives.

8 sleeping cars, 4 dining cars, 10 1st class cars, 9 2nd class sleepers, 6 baggage cars, the latter by Rhodes, Curry & Co., Amherst, N.S.; 4 postal and baggage cars, by Rhodes, Curry & Co.

100 flat cars, & 250 box cars, by Rhodes, Curry & Co., also 150 box cars.

The Dominion estimates for 1899-1900 provide \$343,000 for rolling stock chargeable to capital, against \$600,000 in 1898-9. To apply air brakes to freight cars \$20,000 is provided, the same as for the current year. \$5,000 is provided for machinery at Moncton. The P.E.I. Ry. is to get \$8,000 for rolling stock, against \$3,500 this year.

Canada Atlantic Equipment.

The Ottawa, Arnprior & Parry Sound Ry. has had a number of locomotives for both passenger & freight service built at the Baldwin Locomotive Works, Philadelphia, during the past few months. No. 631, illustrated on page 169, has been in service for some little time. Following are the general dimensions of some of the locomotives:

FOR FAST PASSENGER SERVICE.

CYLINDERS.—Diameter, (high pressure).....	13 in.
Stroke.....	22 in.
Boiler.—Diameter.....	26 in.
Working pressure.....	200 lbs.
Fire Box.—Material.....	Steel.
Length.....	103-16 in.
Width.....	42½ in.

IREBOX.—Depth.....	F, 71½ in.; B, 69 in.
Thickness of Sheets, sides.....	5-16 in.
back.....	5-16 in.
crown.....	½ in.
tube.....	½ in.
TUBES.—Number.....	262
Diameter.....	8 x 12 in.
Length.....	15 ft.
DRIVING WHEELS.—Diameter Outside.....	78 in.
of Centre.....	72 in.
Journals.....	8 x 12 in.
ENGINE TRUCK WHEELS.—Diameter.....	36 in.
Journals.....	5½ x 10 in.
TRAILING WHEELS.—Diameter.....	54 in.
Journals.....	5 x 12 in.
WHEEL BASE.—Driving.....	6 ft. 9 in.
Total Engine.....	25 ft. 6 in.
Rigid.....	13 ft. 9 in.
TENDER.—Diameter of Wheels.....	36 in.
Journals.....	5 x 9 in.
Tank Capacity.....	6,000 gals.

FOR FREIGHT SERVICE.

CYLINDERS.—Diameter, (high pressure).....	14 in.
Stroke.....	24 in.
Valve.....	26 in.
Boiler.—Diameter.....	60 in.
Thickness of Sheets.....	5/8 & 11-16 in.
Working Pressure.....	180
Fuel.....	Soft Coal.
FIREBOX.—Material.....	Steel.
Length.....	102½ in.
Width.....	42 in.
Depth.....	F, 69½ in.; B, 58½ in.
Thickness of Sheets, sides.....	3/8 in.
back.....	3/8 in.
crown.....	½ in.
tube.....	½ in.
TUBES.—Number.....	280
Diameter.....	2 in.
Length.....	14 ft. 4½ in.
DRIVING WHEELS.—Diameter outside.....	56 in.
of centre.....	50 in.
Journals.....	8½ x 11 in.
ENGINE TRUCK WHEELS.—Diameter.....	30 in.
Journals.....	6 x 10 in.
WHEEL BASE.—Driving.....	13 ft.
Total Engine.....	24 ft. 9 in.
WEIGHT.—On Drivers.....	116,850 lbs.
On Truck.....	33,930 lbs.
Total Engine.....	150,780
TENDER.—Diameter of Wheels.....	33 in.
Journals.....	5 x 9 in.
Tank Capacity.....	4,000 gals.

FOR FREIGHT SERVICE.

CYLINDERS.—Diameter (high pressure).....	15½ in.
Stroke.....	26 in.
Valve.....	30 in.
Boiler.—Diameter.....	68 in.
Thickness of Sheets.....	11-16 x 3/4 in.
Working Pressure.....	180
Fuel.....	Soft Coal.
FIREBOX.—Material.....	Steel.
Length.....	120½ in.
Width.....	42 in.
Depth.....	F, 72¼ in.; B, 69½ in.
Thickness of Sheets, sides.....	3/8 in.
back.....	3/8 in.
crown.....	½ in.
tube.....	½ in.

TENDER.—Diameter of Wheels.....	33 ft.
Journals.....	5 x 9 in.
Tank Capacity.....	4,500 gals.

A large amount of work is being done at the Canada Atlantic shops in Ottawa. Twenty-five stock cars have recently been completed, 25 refrigerator cars are being built & 500 box cars have been commenced at.

Entirely new trains, with thoroughly up-to-date cars, have been put on between Ottawa & Montreal, both ways.

We are officially informed that the report recently published in some daily papers to the effect that this Co. had built car shops in Ottawa was unfounded, as a start has not yet been made at the permanent shops. The report probably arose from the erection of some temporary buildings, put up for the construction of a lot of freight cars pending the construction of the permanent shops. The first temporary building is to be used as an erecting shop and is 450 x 80 ft. The second one, which contains the machinery, is 225 x 90 ft.

Sydney & Louisburg Equipment.

This Co. has recently placed an order for 3 freight locomotives, 2 moguls & 1 consolidation, the principal dimensions being as follows:

	Consolidation.	Mogul.
Gauge.....	4 ft. 8½ in.	4 ft. 8½ in.
Fuel.....	Bituminous coal.	Bituminous coal.
Cylinders.....	22 in. x 28 in.	19 in. x 26 in.
Drivers.....	55 in. diam.	55 in. diam.
Rigid wheel base.....	36 ft. 3 in.	13 ft. 2 in.
Total wheel base.....	172,000 lbs.	33 ft. 6 in.
Weight in working order, 243,000 lbs.	172,000 lbs.	122,000 lbs.
on drivers.....	172,000 lbs.	122,000 lbs.
Tubes.....	348, 2 in. diam.,	236, 2 in. diam.,
115 ft. 6 in. long.	12 ft. long.	12 ft. long.
Firebox.....	114 in. x 41½ in.	90 in. x 41½ in.

The Co. has ordered 3 passenger cars & 12 flat cars from Rhodes, Curry & Co., Amherst, N.S., & has also placed an order for 50 steel coal cars of 100,000 lbs. capacity.

Equipment Notes.

The Esquimalt & Nanaimo Ry. has ordered a 10-wheel locomotive from the Baldwin Works.

The Bay of Quinte Ry. recently placed an order for 5 box cars.

The Quebec Central Ry. is having built two 8-wheel passenger engines with 18 in. x 24 in. cylinders.

repair no more jimmies." The General Superintendent of the Lehigh Valley informs us that this is not correct. The 4-wheel coal cars were not sold to a Canadian road, but to a Detroit car company which proposes cutting them down & utilizing the scrap material. He understands the New Jersey Central has also disposed of its similar cars to car-builders, & not to a Canadian line.

The C.P.R. Co.'s saw-mill at Fernie, B.C., has been swept away by a freshet on Elk River.

Canadian Freight Association.—At a meeting of the Tariff Committee at Toronto, June 1, special rates & arrangements 1,605 to 1,625 were agreed to.

R. Marpole, General Superintendent C.P.R., Vancouver, writes:—"THE RAILWAY & SHIPPING WORLD proves very interesting indeed & contains much useful information pertaining to railway matters. If there is anything I can do to encourage or further the interests of your paper please command me."

The Transportation Question.—At the recent annual meeting of the Bank of Commerce, General Manager Walker, in referring to what he termed the ever-pressing question of transportation, said: "It would be well for all of us to consider that we have ahead of us responsibilities in transportation not only

BALDWIN LOCOMOTIVE FOR OTTAWA, ARNPRIOR AND PARRY SOUND RAILWAY.

Canadian Pacific Equipment.

There are being built at the Montreal shops six 10-wheel passenger engines, of which the following are the principal dimensions:—Weight in working order about 140,000 lbs.; cylinders 19 by 24 ins.; boiler of Belpaire type, with working pressure of 200 lbs.; fire-box, 9 ft. 1½ ins. long, 3 ft. 6¾ ins. wide, 5 ft. 6½ ins. deep at front, & 4 ft. 3 ins. at back; heating surface, tubes, 1,717 sq. ft.; fire-box, 155 sq. ft.; total, 1,872 sq. ft.; steel tender frame, cast-steel driving wheel centres. Two simple consolidation engines are being built with cylinders 20 x 26 ins., & 57 in. driving wheels, also 8 compound consolidation engines, cylinders 21 & 33 x 26 ins.; weight about 150 lbs. An order has also been placed outside for 6 large engines.

At the Montreal shops are being built 4 1st class cars, 1 smoking car, 1 2nd class car, 5 mail & express cars, & 5 baggage & smoking cars, all 57 ft. 2 ins. long, also 2 parlor cars 70½ ft. long.

At the Perth shops there are being built 10 ventilated fruit cars, 50 ft. long, 40 stock cars of 80,000 lbs. capacity, & 500 box cars of 60,000 lbs. capacity.

Under the title of "Locomotive Data," Burnham, Williams & Co., Baldwin Locomotive Works, Philadelphia, have issued a handy little book for the pocket which contains a lot of valuable information & tables compressed into a small compass.

The Canadian Northern Ry. has recently bought 3 consolidated engines, cylinders 20 x 24 ins., with 50 in. driving wheels, for freight traffic, & 1st class coaches, standard size, finished inside in cherry, with plush seats; orders have also been placed for a number of box & platform cars.

The Minister of Railways recently stated in the House of Commons that no private car had been purchased or constructed by the Department of Railways since July 1, 1896, but the official car Montreal had been purchased for the use of the Traffic Manager at a cost of \$4,500.

The Railway World, Philadelphia, recently published the following item: "To avoid the expense of putting patent couplers on their six-ton jimmy cars, the Lehigh Valley & Jersey Central have sold their thousands of these cars to a Canadian road & as soon as possible will use only gondolas, equipped as the law requires. Shops have instructions to

pressing, but requiring us to hold wider views of our national destiny than we are in the habit of holding. Russia, according to a recent report, had in 1897 about 25,000 miles of railroad in operation, against our 16,000 miles, & there were in 1898, according to the Journal de St. Petersburg, in course of construction & authorized to be commenced shortly, over 8,000 miles. Of this total, additions to over 20 existing lines of over 3,700 miles are actually under construction. In Canada we are not building more than 200 or 300 miles of new railway per annum. Russia, therefore, with only 50% more railway in 1897, is building at more than 10 times the rate of Canada. There is, perhaps, not much value in comparing two countries, one with 5,000,000 people, & the other with over 100,000,000, but territorially there is certainly some room for comparisons. Clearly we need more railways, more inland ships, & on entirely new models, quicker transportation at sea, deeper canals, better terminal facilities at our seaports. If we were carrying our own products to the European countries where they are consumed, these needs would still exist, but they would not be so pressing, their absence would not be so much in the nature of a national shame."

Passenger Traffic Matters.

The Ottawa & New York Ry. has increased its service to 4 trains each way daily between Ottawa & Cornwall.

Tourist travel to Cape Breton will be very heavy this summer. Newfoundland will also be a good many tourists.

On July 1 the Northern Pacific will reduce passenger rates on its branch lines in Manitoba from 4c. to 3c. a mile.

I. C. R. sleepers now run through between Montreal & Ottawa, going over the G. T. R. & Canada Atlantic west of Montreal.

Passenger rates between Victoria, B.C., & Dawson, Yukon, via St. Michael's, have been raised to \$200 1st class & \$150 2nd.

Some months ago the Northern Pacific put on a second daily train between St. Paul & the Pacific Coast, but has withdrawn it, business not having proved sufficient.

The members of the Canadian Ticket Agents' Association, who will meet at Winnipeg in Oct., will return through the U.S., going south from Winnipeg over the Northern Pacific.

The G. T. R., the Maine Steamship Co., & the Lehigh Valley R. R. ticket offices have resumed business in new & large quarters at the corner of Broadway & Reade St., New York.

The C.P.R. Passenger Traffic Department is equipping a number of its ticket agencies with handsome enamelled iron signs, in blue & white, for outdoor use, supplied by the Acton Burrows Co., Toronto.

A recent number of the New York Outlook contains an article by Geo. Kennan, in which he refers to the advertising of Canada in distant lands by the C.P.R., mentioning more especially the case of a Cuban school, where the pupils got their knowledge of geography from one of the Co.'s charts.

"Summer Homes in the green hills of Vermont, islands & shores of Lake Champlain, Adirondacks & Canada," is a charmingly written, well printed & beautifully illustrated pamphlet of over 100 pgs., describing the summer resorts reached by the Green Mountain route, the Central Vermont Ry., from the Passenger Department of which it can be obtained.

The C.P.R. has imported three of Switzerland's most experienced & intrepid Alpine climbers, & has sent them out to help visitors tackle the Rockies in the vicinity of Banff, The Lakes in the Clouds & the Great Glacier. They are sturdy, picturesque fellows, wearing

grey suits & broad-brimmed hats, set off with black cock feathers. They are decorated with the gold & enamel medal of the Alpine Club & other trophies of their calling.

"The Montreal Witness pays a compliment to Sir W. Van Horne as the author of what used to be called in a half-jocular way, Parisian politeness, the courteous, & even kindly, treatment of its passengers, which has been the rule of conduct from the first among officers & employes of this Co., & has resulted in reforms in the same matter in other companies serving the public. We think that the compliment is well deserved, & that it is largely due to the officers of the Co. that passengers travel in much greater comfort to-day than was obtainable some years ago."—Toronto Globe.

W. A. D. Lees, an Ottawa barrister, who has a branch office in Russell, 20 miles distant, which he visits once a week, is suing the Ottawa & New York Ry. for \$49.55 for alleged excessive charges on tickets & \$148.65 for damages. The return fare to Russell, 20 miles, is \$1.20. The Co. has stopped giving 2nd class fares, but maintains 2nd class cars on the line. Mr. Lees says the Co. has refused to give him commutation tickets, & charges him at the rate of 3½c. a mile. He enters his action under clauses of the Railway Act dealing with unjust charges, & says the tariff of rates charged by the Co. has not been approved by the Governor-in-Council, as required by the Act, & consequently the Co. has no right to charge fares.

From June 5 to 12 General Passenger Agent Davis, of the G.T.R., took about 30 of the Co.'s principal ticket agents & a few others on an educational trip from Toronto to Lakes Simcoe & Couchiching, the Muskoka Lakes, the Lake of Bays, The Magnetawan River & Georgian Bay. On every hand were seen evidences of additional & improved accommodation for tourist travel, which will undoubtedly be very large to all that region this year, as the result of the elaborate & extensive advertising the G.T.R. has done. This year the Muskoka Express from Toronto will run through to Scotia Jct.; on the O.A. & P.S. Ry., instead of only to Muskoka wharf. Mr. Davis says he believes that the Muskoka business will increase so much that in a short time the G.T.R. will receive \$1,000,000 a year out of it.

The most important recent event in passenger matters is the inauguration by the C.P.R. of its fast service between Montreal & Vancouver. Heretofore the journey has taken 5 days, now it has been reduced to 99 hours &

45 minutes, & a daily transcontinental service takes the place of the 6 days a week trains, the daily service not having hitherto extended east of Winnipeg. The increased & quicker service has been rendered necessary by the congestion of through travel, & will undoubtedly largely augment the Co.'s business. Montreal is left at 9.30 a.m., Vancouver being reached at 1.15 p.m. on the 4th day. Vancouver is left at 1.15 p.m., Montreal being reached at 6.10 p.m. on the 4th day. It must be remembered that there are 3 changes in time between Montreal & Vancouver of 1 hour each at Fort William, Brandon & Laggan, so that when it is 9.30 a.m. in Montreal it is 6.30 a.m. in Vancouver. The new service was inaugurated June 18, trains starting from Montreal & Vancouver. They crossed at Burrows, Assn., 1,667 miles from Montreal & 1,239 miles from Vancouver, on June 20, & reached the terminal points promptly on time on June 22. The distance between Montreal & Vancouver is 2,906 miles. Of course but few stops are made by the Imperial Limited, & the local travel is provided for by additional train service. The new service places Vancouver within 10 days of London, Eng., & Japan within 3 weeks of London, & has attracted great attention in England. Besides its practical utility, it will prove a most valuable advertisement for the Co.

Freight Traffic Matters.

The Transcontinental Freight Rates Bureau has appointed inspectors at Vancouver & Victoria, B.C., to enforce uniform freight rates.

The Sun Oil Refining Co. has instituted proceedings against the G. T. R., to recover \$184,86, alleged to have been collected illegally in freight rates on oil under the discriminatory tariff.

The offices of the Central Vermont Ry., in the Board of Trade Building, Montreal, have been abolished, & all matters pertaining to freight traffic affecting Montreal will hereafter be managed by F. J. Watson, Division Freight Agent G. T. R., Board of Trade Building, Montreal.

The statistician of the New York Produce Exchange gives notice that from July 1 the stock of grain at Fort William & Port Arthur, Ont., will be included in the report of the visible supply. The entire change contemplated is to drop Albany, Oswego & Cincinnati & add Fort William, Port Arthur, New Orleans & Galveston. The change is significant of the wonderful development of the Canadian west and the progress of the new south.

THE BARRETT TRACK JACK.

Recommended as a standard by the

Road Masters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low set loads.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting capacity,
10 to 15 tons.

Lowering.

No. 1 Trip.

The C.P.R. has made a reduction of from 20 to 40% in the rate for live stock shipments from the North West Territories to Kootenay points. The 40% reduction applies to live stock shipped from Macleod, & is due to the fact that former shipments from the southern points had to go round by way of Calgary, whereas now they go over the Crow's Nest road.

The customs complications until recently attendant on the shipment of merchandise from B. C. ports to Dawson, Yukon, will for the future be avoided by an arrangement recently concluded. The White Pass & Yukon Ry. Co. & the Canadian Development Co. have in conjunction put up the necessary security with the customs collector at Victoria, & have become bonded carriers, authorized to take dutiable goods through to Dawson without any customs detention.

The C. P. R. has given notice that in the shipment of bulk wheat from Fort William to Montreal for export by its steamers via Owen Sound, it will deliver to barges at Montreal or to ocean steamships (if the grain is loaded direct from the elevator to the steamer) the exact quantity of grain specified on the bill of lading, but will not assume any responsibility for any difference in outturn from the barges to the ocean vessel in the port of Montreal. On all rail shipments the Co. will deliver to barges or to steamers if alongside the elevators the actual inturn of the car & will not assume any responsibility for subsequent shortages.

Heavy reductions in rates have been made on the Western Division of the C.P.R., & on the Northern Pacific lines in Manitoba. From Winnipeg to Brandon 1st class freight has been reduced from 37c. to 20c. per 100 lbs.; 2nd class, 31 1-2c. to 18c.; 3rd class, 26c. to 16c.; 4th class, 19 1-2c. to 14c.; 5th class, 14 1-2c. to 9c. From Winnipeg to Brandon 1st class is reduced from 57c. to 37c.; 2nd class, 48c. to 32c.; 3rd class, 39c. to 27c.; 4th class, 29c. to 22c.; 5th class, 23c. to 16c. From Winnipeg to Portage la Prairie the reduction is, 1st class, 40c. to 20c.; 2nd class, 34c. to 18c.; 3rd class, 28c. to 16c.; 4th class, 21c. to 14c.; 5th class, 16c. to 9c.

The Michigan Central issued a tariff to take effect June 28, making the rate from Chicago to New York 13c. per 100 lbs. on oats, & 11c. per 100 lbs. on corn, the respective reductions being 4c. & 6c. The G.T.R. followed & made the cut. The M.C.R. holds that in making this cut it was only issuing a public tariff to meet the secret cutting of other systems. Mr. Loud, of the G.T.R., thinks the trouble will not last long, & that the sweeping cut will have the result of quickly restoring the rates to their old basis. The C.P.R. freight authorities state they do not propose to be dragged into this war, which is causing a good deal of bitterness in railway circles in Chicago.

G. T. R. Trackmen's Strike.

On May 22 the trackmen generally on the G. T. R. system struck work, giving as a reason that demands made on the management had not been complied with. The demands were as follows:—

That all permanent employes under a road-master be granted a raise of 25c. a day on present wages.

That all permanent employes are to be regarded as in line of promotion, seniority to have preference where merit & other qualifications are equal.

That all trackmen who resume duty after hours, as on Sunday, receive time and a half for the same.

That the permanent staff on each section be 1 man to every 2 miles of track, or fraction of 2 miles, not including foreman. All terminal points & yards to have 1 man to every 10

switches in addition to 1 man to every 2 miles of main line track.

That the wages of men employed on snow-ploughs & scrapers be:—Foremen, \$3 a day of 10 hours; trackmen, \$2 a day of 10 hours.

That the hours of work on Saturday be from 7 a.m. to 12 m., & from 1 p.m. to 4 p.m., with a full day's pay for the same.

That trackmen be given all reasonable leave of absence to attend monthly meetings, & a pass be given to attend the annual conventions.

That there shall be no discrimination against trackmen for being members of the Order of Railroad Trackmen, & when called to serve on boards of adjustment they shall be relieved without unnecessary delay for such purpose, but only on request of the Chairman of their Executive Committee.

During the strike the men, with very few exceptions, behaved in a most orderly way; some demonstrations took place but they were most likely got up by indiscreet sympathisers. On Saturday, June 3, as the result of conferences between General Manager Hays & two members of Parliament, Messrs. Taylor & Powell, the men's committee called the strike off & told the men to report on Monday, June 5, for work. On going to resume work the men were told they were out of the Co.'s service & would have to make formal application for re-employment. This they contended was a breach of faith & most of them resumed the strike which continued until June 19, when as the result of negotiations between J. Sutherland, M.P., representing the Dominion Premier & Mr. Hays they resumed work, the arrangement being that within 30 days Mr. Hays would discuss the whole question with a committee of 5 representing the trackmen, that none of the strikers be refused employment unless they had been guilty of acts of violence or of having used menacing language towards the new men or the foremen & others who refused to go out. During the strike the operating department did splendid work, trains being run on time & there being nothing to show that things were not going on in the usual way.

Railway Operating Matters.

It is said the Wabash will oil its road bed between Detroit & Buffalo.

Coke made in Halifax is being used experimentally on locomotives on the Dartmouth branch of the I.C.R., also between Halifax & Truro.

Negotiations are going on between the G.T.R. locomotive drivers & the management in regard to an increase in wages & some other matters.

The C.P.R. has been experimenting with an automatic mail catcher on its main line near Ottawa, with a view to use it on the Imperial Limited.

Negotiations in regard to the running of the C.P.R. trains over the I.C.R. between St. John, N.B., & Halifax appear to be at a standstill; at all events no progress has been made public.

A handsome set of the Acton Burrows Co.'s enamelled iron signs is now being used at Winnipeg station as sign boards to show the destinations of the various trains departing from the station.

Dominion Railway Legislation.

A bill introduced in the House of Commons by the Minister of Railways to amend the general Railway Act, proposes to amend section 90, relating to general powers of railway companies; to add as sec. 192a. a section providing that power under a special act to construct & use a bridge shall be exercised, subject to the provisions of the section to be added; and to substitute new provisions for

sec. 273, subsections 2 and 3, relating to trespasses, damages, etc. The most important features of the bill are the two last clauses.

One of these provides that if it appears to the Railway Committee of the Privy Council that for the public convenience a station should be located at any point on a railway subsidized by the Parliament of Canada or of any province in which the railway is constructed, the Committee (with the approval of the Governor-in-Council) may order the Co. to erect, maintain & operate a station at that point, & may define the accommodation to be provided in connection therewith, & the Co. shall obey every such order whether there be or be not any covenant on the subject in any agreement relating to the subsidy.

The last clause provides that the Railway Committee may, from time to time, make rules & regulations, not inconsistent with the Railway Act, for the operating of all or any of the railways subject to the jurisdiction of Parliament, & such rules & regulations shall supersede all previous rules & regulations made by the Co. operating any of such railways in so far as they differ therefrom. It will be remembered that the new rules framed by the G.T.R. on the basis of the rules of the American Railway Association were approved by the Government last year, but subsequently the Minister of Railways requested the management to defer putting them in force. It is now probable that they will not go into effect, but that their place will be taken by rules to be framed by the Railway Committee.

Vancouver Island Railway Projects.

Several schemes are on foot to give Vancouver Island, or more properly speaking the city of Victoria, improved connection with the mainland & connection with more railways. The matter is occupying the attention of a committee of 50 citizens, numerous meetings have been held, & the local press is devoting much space to the subject. One proposal comes from the Port Angeles Eastern Ry., which is projected from Port Angeles, Wash., on the Strait of Juan de Fuca. It was at first intended to build to a connection with the Port Townsend Southern Ry., which runs from Port Townsend southerly 27 miles & is owned by the Pacific Coast Co., but the projectors now talk of building to Olympia, Wash., 111 miles, where connection can be made with the Northern Pacific. The estimated cost of the line is \$2,250,000. Port Angeles is aiding the project to the extent of \$50,000, including land, & through the Squim Valley the Co. will receive timber grants. A survey of a portion of the route has been made & some six miles have been built. The promoters claim that Port Angeles has exceptional advantages as a port, being 80 miles nearer the Pacific than Seattle & 120 miles nearer than Tacoma, being naturally the 1st port of call from the Orient & having a splendid harbor. The promoters want to secure connection with Victoria, B.C., across the Strait, the distance from dock to dock being between 18 & 19 miles. They propose to operate a twin screw ferryboat with a capacity of 10 loaded freight cars, or 6 to 8 passenger coaches, with accommodation for broken freight, making one or more trips a day at the rate of about 9 miles an hour, also to operate a steel passenger steamer, to also carry fast freight & express matter, with a speed of 18 knots, to provide the necessary wharves & other accommodation for the traffic, & to give Victoria transcontinental connection at Olympia, for which the Co. asks a bonus of \$350,000 from the city of Victoria.

The Esquimalt & Nanaimo Ry. has also made a proposition to the city to operate a steam freight & passenger ferry between Vancouver & some point on the E. & N. line

most suitable for connection with the C.P.R. transferring freight to & from Victoria in the original cars, the service to be 1st class, freight to be handled promptly & at a saving of \$1 a ton on wharfage charges. For passenger service 2 round trips daily 6 days a week, each trip to be made in 3½ hours, & one trip by a relief steamer on the other day. The E. & N. management says the scheme would require a large outlay to provide facilities for transferring cars at Vancouver & at a point on its line, steam ferry, relief steamer, additional railway equipment, terminal buildings, &c., & asks the city for \$700,000 in cash & to secure about 19 acres of land situated on the Indian reserve at Victoria for terminal grounds, with exemption from taxation for 15 years, also to secure permission for the construction of a bridge across the harbor from the Indian reserve to the outer wharf, the Co. to convey its present terminal grounds & bridge to the city.

Other schemes are for the route advocated by the late Premier DeCosmos via Swartz Bay to the nearest point on the mainland, & for the utilizing of the Victoria & Sidney Railway as a link in the chain of communication.

Canadian Pacific Betterments, &c.

Mattawamkeag to Princeton.—Unconfirmed reports say that surveys are being made for a connecting line from the Co.'s main line at Mattawamkeag, Me., some 50 miles southeast to Princeton, Me., to connect with the St. Croix & Penobscot.

Windsor St. Station, Montreal.—The plans for the extension of this building have been practically settled on, & work is expected to start very shortly. (May, pg. 138.)

Owen Sound Branch.—Surveys are being made by H. W. D. Armstrong, C.E., on which to base estimates for the improvement of the northern portion of this branch. Between Rockford & Flesherton, some 28 miles, some of the present gradients are as much as 106 ft. to the mile, & it is the intention to reduce them to 43 ft. The line must necessarily cross the ridges of the country, the summit at Dundalk being 1,050 ft. above the track at Owen Sound station. To reach this summit in crossing these ridges the gradient cannot be reduced without deviations from the present alignment, unless by extensive excavations & filling. To overcome the present expense of haulage of freight, it is proposed to make some detours by building pieces of new line at different points, which will reduce the gradients to 43 ft. per mile. With the present gradient in places a consolidated locomotive

will not haul more than 400 to 450 tons, whereas with the proposed reduction of gradients it will be possible to haul 1,000 tons.

The Fort William Round House. recently destroyed by fire, is to be replaced by a much larger solid structure, which is likely to be located near the Co.'s coal wharves there.

Bonnet Lake Branch.—A survey is being made for this proposed branch from Tyndall, 29 miles east of Winnipeg, some 40 miles to Bonnet Portages, on the Winnipeg River a little north of Bonnet Lake. The decision of the Co. to build an hotel in Winnipeg is likely to hasten the construction of this branch, as there is magnificent clay on its route from which the brick for the hotel could be manufactured to great advantage. (May, pg. 139.)

Winnipeg Terminals.—We are officially informed that the Co. has decided on expenditures on its terminals at Winnipeg which will aggregate about \$850,000. At present the tracks at the station are laid on Point Douglas Avenue, which is owned by the city, so that it is impossible to close them in, & there is not sufficient track accommodation for the business, there being but 2 main tracks & 2 sidings. The present station building will be taken down & a number of tracks laid on its site, the whole to be covered in by a train shed. Immediately south of this a building for station purposes, divisional offices, etc., will be erected, then immediately south again will be reared a magnificent hotel structure which will far eclipse the Manitoba hotel destroyed by fire last winter & will have rooms for 250 guests. The western front of the hotel will be on Main St. & the south front on Fonseca St., along which it will run some 300 ft. Sir Wm. Van Horne has very kindly shown us a perspective view & floor plans of the hotel & station buildings which will be of Renaissance architecture.

The Winnipeg stock yards are to be entirely roofed over & provided with floors.

Winnipeg Cemetery Spur.—The Winnipeg City Council is endeavoring to get the Co. to build a spur from its main line to Brookside Cemetery & to run funeral trains.

Stonewall Branch.—It is not probable that any extension will be made this year beyond Teulon, to which point the branch was extended last year. The Parliamentary Railway Committee at Ottawa recently refused an application of the Co. for power to build from a point on this branch near Foxton to Sifton's Landing, on the east side of Lake Manitoba, on the ground that it would interfere with the Canadian Northern Ry., which has acquired the charter of the Winnipeg & Hudson's Bay Ry.

Snowflake Branch.—The Co. has let a contract for the construction of a short line from La Riviere, on its Pembina Mountain Branch, 112 miles southwest of Winnipeg, a distance of some 20 miles southerly to the Snowflake district. The southern terminus of the branch will be very near the International Boundary.

Deloraine to Waskada.—The Co. is applying to the Manitoba Legislature for power to build a line from or near Deloraine southerly & westerly, in townships 1, 2 & 3, to the western boundary of the province. This line would pass through the Waskada district, & much, if not all, of the right of way has already been secured. (May, pg. 139.)

Crow's Nest Pass Branch.—A large force of men are at work putting this line in shape & making improvements where the operation so far has shown them to be necessary. No decision has been announced as to the completion of the line from Kootenay Landing to Nelson. (May, pg. 139.)

Vancouver Station.—In our issue of Nov. last we published a perspective view of this building, & a pretty complete description of it supplied by the architect. As it is now practically completed, it may be of interest to reproduce another description of it, recently given by the Vancouver World:—The general style of the architecture is of the French Renaissance period, with the famous portal towers & huge roof that form the features of that model. Artistic & symmetrical as the building is, viewed from the city side, its imposing appearance is particularly striking as viewed from the harbor. The north side is perhaps somewhat plain, but it is from this splendid extent of architecture, set off by shapely bands & cornices of stone, that the building is gaining its reputation as a handsome structure. In appearance, as well as for general utility, the new station will be one of the finest railway buildings in Canada. In modern convenience it will be second to none in the country. Approaching the station from Cordova St. the design of the two towers & the archway is particularly striking. The west tower is round, & the east one octagonal. The width of the arch is over 40 ft., & there is some fine carved stonework at either end, giving the entrance in detail a very handsome appearance. The main floor opposite the entrance is one of the special features. For half the length of the building, about 100 ft., & nearly the same in width, are the general waiting-room & ticket office, the latter a circular box office in the centre. This corridor is very handsomely fitted up, & is flanked on one side by a special room for ladies. Toward the opposite end of the room is the ele-

vator. The design of the columns & windows, which give a very fine view of the harbor, is very attractive, & the appearance of the room is enhanced by the winding staircases that descend to the floors below. The office in one of the towers on this floor will be devoted to the commercial telegraph department, specially for business that will naturally come from people passing through the building; while the apartment in the west tower will be used as a parcel room. In the eastern wing of the main floor are the offices of the General Superintendent, & across the hall are those of the Local Treasurer, as well as those of the Accountant, Purchasing Agent & Car Accountant. The Local Superintendent's & the train despatchers' rooms occupy the east wing on the intersol floor, while in the main building is a bonded-warehouse for ship's stores. The officials of the steamship service will also be on the intersol floor, with offices overlooking the Inlet. All these are fitted with vaults & the other arrangements are of the most convenient kind. The corridor of the ground floor will be one of the features of the building, & every convenience will be furnished there for passengers coming in & going out. Two huge stairways lead from it to the main floor above, & all the fittings are very artistically arranged. In the west wing will be the Dominion Express office & the offices of the Land Commissioner & Auditor, while in the east wing a restaurant with smaller rooms attached, conductors' & baggage rooms, besides another bonded-warehouse for foreign baggage will occupy the space. The 2nd floor will be occupied by the Engineer's department, the 3rd as a telegraphic department, the 4th & 5th have not yet been allotted. The building is replete with modern conveniences. It will be heated by steam & the same plant will operate an electric generator, which will supply all the Co.'s offices on the wharves & elsewhere. There are a hydrant & hose appliances on each floor. The grounds will be neatly arranged in front of the building. There will be a retaining wall on the east side, & on the west it will be on the slope of the street, capped with granite & an iron fence. Along the track front & western end, there will be a covered walk 15 ft. wide. British Columbia material has to a large extent been used in the construction of this building, which is 200 ft. long by 80 in width. Even taking its size into consideration, the quantity of material is remarkable. Sixty-five carloads of stone were brought from Calgary, while 3,000 yards of granite were used. There are 13,500 yards of plastering in the building, & the 240 squares of slate were obtained from B.C. quarries. Two million bricks were used, these being purchased in Victoria.

New Westminster.—Work on the station building is progressing satisfactorily. If the city will grant certain concessions, it is said the Co. will make extensive improvements on the water front, including additional tracks, & a stone sea wall.

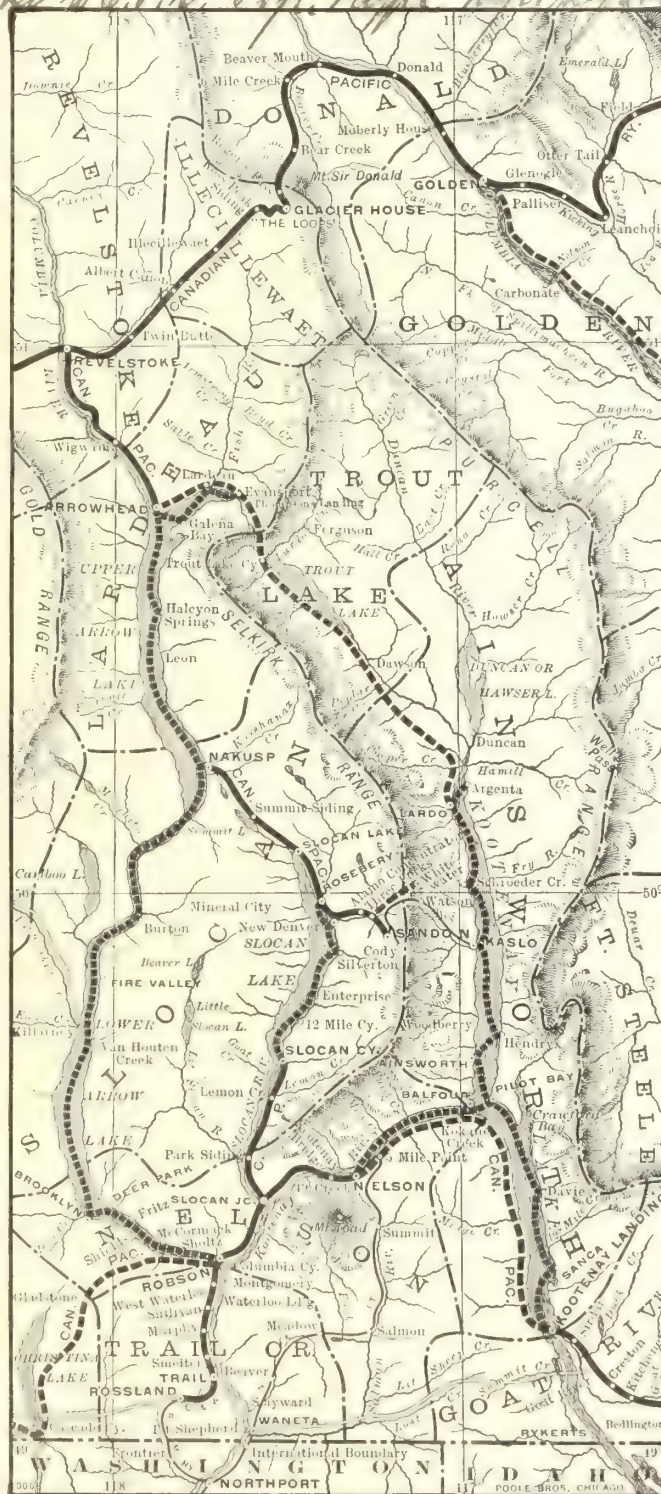

Rossland Branch.—The narrow gauge portion of the Columbia & Western Ry. from Trail to Rossland, B. C., 13.6 miles, was built in the winter of 1895-6. Its peculiar features were its steep grades & sharp curves, rising

2,300 ft. from the wharf track at Trail to the railway ore bunkers at Le Roi mine, Rossland. The grade on all tangents was 4% & the curves were compensated .04 per deg. The maximum curves were 25 degrees, of which there were 38, whose aggregate length was approximately 3 miles. There was a switch-back between Smelter Jct. & Trail, &

nal trestles have been filled & the others strengthened. The grading was done during Sept., Oct. & Nov., 1898, by Winters, Parsons & Boomer, contractors. Track laying was deferred until the spring, on account of the severity of the winters in that locality, when it was done by the Ry. Co. The work was done under the immediate direction of F.

P. Gutelius, Superintendent of the Co.'s Rossland branch, to whom we are indebted for the data of this article. He was General Superintendent of the road under the old management & had charge of its original construction. The entire work of grading & track laying was completed without delaying traffic for an hour, except that all freight & passenger trains were scheduled to run at night. The new track, which follows the same general alignment & has the same grades, is laid with 6 ft. ties & 60 lbs. steel rails, the material for which was delivered along the track by narrow gauge work trains, & by laying towards Trail, the supply point for track material, these trains were able to deliver the material just ahead of the tracklayers in the day time. The system of renewing out of face was adopted, thus allowing joint ties to be properly placed & rails to be full spiked as new track was being laid. By this method a gang of 40 men would remove 2,500 ft. of old track & replace it with standard track in a day. The greatest record for any one day was 3,800 ft. Upon the new track a 3rd narrow gauge rail half spiked was laid. Each evening the track so laid was connected to the undisturbed narrow gauge track, over which the narrow gauge trains were run during the night. The operation of narrow gauge trains on one 28 lbs. rail & one 60 lbs. rail was not attended with any difficulty or accident, so that to the successful use of the one 28 lbs. rail in maintaining the narrow gauge track must be attributed the ease with which the change in gauge was executed. Rails were cut for standard gauge switches for all spurs, passing sidings & switch-backs, although temporary narrow gauge switches were laid as the work progressed, except in case of Smelter Jct. yard where the tracks were arranged for use of both gauges. Here a combination switch was used. On June 14 the entire standard gauge track was laid except the substitution of standard for narrow gauge switches, of which there were 14. On June 15, Roadmaster Sullivan divided his 100 trackmen into 6 gangs, & the work of changing the switches was started at 7 o'clock, after all the narrow gauge equipment was unloaded & taken to Smelter Jct., where it was stored. At 13 o'clock the first passenger train started from Smelter Jct., arriving at Rossland at 15 o'clock. The train consisted of a consolidated locomotive & 2 passenger cars, rounding successfully the thirty 20 degree curves, whose

aggregate length is nearly 3 miles. These curves are laid with gauge widened 1 in. & with only 1 in. elevation to outer rail. No guard or check rails are used & running rails are laid on service tie plates with 3 spikes in each, which are holding the track to gauge without the use of rail braces. Passenger trains are run up & down this incline at the rate of 12 miles an hour & freight trains at 8

C.P.R. LINES IN KOOTENAY DISTRICT, BRITISH COLUMBIA.

miles an hour. In the passing of this narrow gauge railway, it may be interesting to know that during its original construction, 3 years of operation & its reconstruction, not a single fatality on account of accident to passenger or employee has occurred.

A station 64 ft. long, 33 ft. wide, & 1½ stories high, is being built at Rossland. A round-house will also be built there.

West Robson to Boundary Creek.—In a recent interview W. F. Tye, Chief Engineer of Construction, said this is the most difficult piece of road-building ever attempted in Canada. Mr. Tye landed at the mouth of Dog Creek, on Lower Arrow Lake, Feb. 1, 1898, with a force of engineers, & began the work of running the location lines. Some idea of the difficulties to be overcome by the engineers may be gained when it is stated that on this survey 100 pairs of snowshoes were worn out. The contract for 105 miles was let to Mann, Foley Bros. & Larson in June, 1898, & active construction at once begun. Mr. Tye divided the engineers into 4 divisions, with about 25 miles each to deal with. The 1st was under F. M. Young, whose work is now done, & he is out near Pentiction; the 2nd is under G. Farr, with a camp at the Summit; the 3rd is in charge of O. England, at Cascade, while F. M. Rice, located at Greenwood, is division engineer for the balance of the line. The grading of the whole line to Midway is nearly completed, track laying is progressing rapidly, & the whole line is expected to be completed by the fall. (May, pg. 130).

Work is being pushed as fast as possible on the branch lines to the various mining camps,

which were described in our May issue, pg. 130.

Branch to Republic, Wash.—President Shaughnessy gives an emphatic denial to the report that the C.P.R. & Great Northern have arrived at an agreement to build a joint line to connect the Boundary Creek district of B.C. with the Republic mining camp in Washington, saying that he knows absolutely nothing concerning the reported agreement, that no conference bearing upon the subject has been held, & that the story has evidently been manufactured out of whole cloth. (May, pg. 130).

On to Pentiction.—It is evident that the Co. intends to examine the country lying between the Kettle River & Okanagan valleys. It is reported that a party is working eastwards from the Okanagan Valley. Recently a party under J. J. Odell passed through Midway en route, it is thought, for the West Fork of Kettle River, in the valley of which stream he was at work nearly all last winter. Whether this party will work up to the summit of the divide forming the watershed of the creeks running westwards to the Okanagan Valley or eastwards to the Kettle River Valley has not been made public, but it is probable that either the survey of the line from Midway to Beaver Creek—a tributary of the West Fork, was not completed before Mr. Odell's last party was recalled, & is to be finished now, or, if it were completed, the work now being undertaken is a survey from Beaver Creek over the divide to Okanagan Lake at either Pentiction or the outlet of the Mission Valley.

Arrowhead to Kootenay Lake.—The legal fight between the C.P.R. & the Kootenay

Valley Ry. Co.'s subsidiary, the Kaslo & Lardo Duncan Ry., for the possession of the Duncan Pass, has been settled. The C.P.R. is pushing construction from Kootenay Lake to Trout Lake, some 600 men being at work. H. B. Walkem, C.E., is in charge. (May, pg. 140).

Grand Trunk Betterments, Etc.

Work was commenced on the general office building in Montreal May 30. P. Lyall & Sons, Montreal, have the contract for masonry, amounting to over \$250,000. The lower part of the buildings will be of grey granite from Stanstead Jct., & the balance of the structure of Oolitic limestone from Bedford, Ind.

It was the intention of the management to have had the Victoria Jubilee Bridge opened on Dominion Day, but as the work was not completed, the opening had to be postponed, & it is not likely there will be any ceremony in connection with it.

Owing to the height of the locomotives recently constructed, & the lowness of the tubular span over the Ottawa river at St. Annes, the Co. is unable to use them on the western section. This difficulty will be remedied by the demolition of the tube & the erection of an open span bridge similar in height to the Victoria bridge. The engines are now running on the eastern & southern divisions out of Montreal.

The superstructures of all the iron bridges between Montreal & Island Pond are being renewed. It is said contracts have been let for the renewal of the superstructure of the

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the odd-numbered sections along the Main Line and Branches, and in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North-West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6 an acre.

Lands in Assiniboia, east of the 3rd meridian, average \$3 to \$4 an acre.

Lands west of the 3rd meridian, including the Calgary District, generally \$3 per acre.

Lands in Northern Alberta and the Lake Dauphin District, \$3 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest is divided into ten instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or grazing lands.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions:

160 acres at \$3.00 per acre, 1st instalment \$71.90, and nine equal instalments of \$60.
160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.
160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.
160 acres at \$4.50 per acre, 1st instalment \$107.85, and nine equal instalments of \$90.
160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.
160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.
160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the usual cash instalment.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

Write for maps and full particulars.

L. A. HAMILTON, Land Commissioner,
F. T. CRIFFIN, - Asst. Land Commissioner,

WINNIPEG.

ENAMELED IRON SIGNS

For Steam & Electric Railways, Steamship, Express, Telegraph, Telephone and Advertising purposes.

Railway Station Names, Street Car Route Signs, Express, Telegraph and Telephone Office Signs, Semaphore Arms, Switch Targets and Advertising Signs of every description of size and color made to order.

Railway, Steamship and Ferry Signs

For doors, etc., 23 x 3½ inches, blue letters and border on white ground, carried in stock with following lettering.

Waiting Room	Ladies' Toilet	Private Office	Dining Room
General Waiting Room	Men's Toilet	Freight Office	Lunch Room
Ladies' Waiting Room	Baggage Room	Ticket Office	Smoking Room
Men's Waiting Room	Agent's Office	Telegraph Office	No Admittance

The following are carried in stock, size 10 x 2½:—

Men Women Exit Fire Escape

Railway numbers for bridges, mile posts, signal houses, etc.; single figures on plates 8½ in. high.

These signs last practically for ever, they never fade or tarnish, they are ever bright and attractive, they are absolutely impervious to heat or cold, they are the only signs that will withstand the effects of weather in all climates.

For Prices, Illustrated Catalogues, etc., address

THE ACTON BURROWS COMPANY,

Agents for the Imperial Enamel Co. of Birmingham,
29 Melinda Street, Toronto, Canada.

BRANCH OFFICES—107 Lombard Street, Winnipeg S. A. Erskine, Resident Agent;
28 Broad Street, Victoria, B.C., D. H. Macdowall, Resident Agent.

International bridge over the Niagara River between Fort Erie & Buffalo.

A contract has been let for a Y.M.C.A. building in the Co.'s yards at Detroit, Mich.

Considerable improvements are being made to the road bed of the Southern Division, which is occupied jointly by the G.T.R. & the Wabash. The work includes a good deal of ballasting, reducing grades, etc., near Cayuga & Renton, & the laying of 80 miles of heavy steel rails between Delhi & Glencoe.

Surveys, Construction, Betterment. &c.

Alaska.—The Alaska Yukon River Transportation Co. will, it is said, build some 75 miles of line from Norton Sound, near the mouth of the Imalakli River, to the Yukon River, which will save about 700 miles of river travel.

Algoma Central.—Surveys have been made from Sault Ste. Marie, Ont., to Missinabie, Ont., some 225 miles, & it is said right of way has been secured.

The Atlin Short Line Ry. & Navigation Co., projected by R. Dunsmuir & Sons, Victoria, B.C., is said to be building a narrow gauge line $2\frac{1}{4}$ miles long from Taku City to Atlin Lake, to connect steamboat navigation between Lakes Bennett & Atlin. It is said it will be finished this month.

Bangor & Aroostook.—C. L. B. Miles, Chief Engineer of the Restigouche & Western Ry., has been assisting Chief Engineer Burpee of the B. & A., in completing the location surveys from Caribou, Me., the present terminus of the B. & A., to Van Buren, Me., on the international boundary at St. John River, some 34 miles. The B. & A. proposes to build this section this year, & to connect by an international bridge across the St. John River, between Van Buren & St. Leonards, with the Restigouche & Western, also with the C.P.R. & the Temiscouata.

Brandon & Southwestern.—The promoters are applying for Dominion aid, & were recently reported to have said that the Dominion Government had passed an Order-in-Council granting \$3,200 a mile. We were recently informed on excellent authority that no Order-in-Council had been passed, but it is believed application for aid has been made. (May, pg. 132.)

Buffalo Union Station.—The new building will, it is said, cost \$6,000,000. The main waiting-room will be 86 by 235 ft., the midway or entrance to the train sheds, 65 by 400 ft., & the dining-room 47 by 125 ft. The station will be so constructed as to allow every street car line in the city to pass in a circuit under it.—Railway Age.

Canadian Northern.—W. Mackenzie states that work on the extension from Cowan towards the Saskatchewan is progressing favorably, though it was delayed in the spring owing to the lateness of the season. In a recent interview at Winnipeg he said that the terminus of the line would be some point on Hudson's Bay, probably York Factory or Fort Churchill, & that it would be the first step towards the Hudson's Bay Navigation service. He expressed his faith in the Hudson's Bay route, considering a steamship service quite possible. D. D. Mann has recently stated that the C.N.R. will ultimately be extended to Edmonton, Alta. An arrangement has been effected between the Co. & the Manitoba Government for a 25 miles branch of the line to be built from Dauphin, 120 miles from Gladstone Jet., into the Gilbert Plains district. The Government guarantees the bonds to the extent of \$8,000 a mile, taking a 1st lien on the line as security. (May, pg. 132.)

The C. N. Co. controls the charter of the old Winnipeg & Hudson's Bay Ry., of which 40 miles were built from a point on the C.P.R.

just west of Winnipeg to St. Laurent, on the east side of Lake Manitoba, but the line was never operated. It is said this line will be put in repair, or rather reconstructed, & continued via the narrows of Lake Manitoba to a connection with the C.N. line in the Dauphin district. Another scheme is said to be to utilize only a portion of the old W. & H. B. road bed, probably as far as Ossowo, & to build from there westerly, going north to Portage la Prairie & south of Lake Manitoba, practically on the route of the C.P.R. Co.'s 1st line from Winnipeg west, continuing across the big plains north of Carberry to points in northwest Manitoba & on to Brandon. A short line from above Beaver Creek to Gladstone, the southern terminus of the C.N., would give that line access to Winnipeg.

Central Ontario.—This Co. recently called for tenders for the construction of an extension to Bancroft, about 21 miles. (May, pg. 132.)

Coast Ry. of N.S.—Work between East Pubnico & Barrington, about 20 miles, is reported as being pushed as rapidly as possible. (May, pg. 133.)

Granville & Victoria Beach.—It is said D. S. Noble, C.E., has begun a survey for this line from Victoria Beach, N.S., on the Bay of Fundy, to Middleton, N.S., where connection would be made with the Dominion Atlantic & Nova Scotia Central Rys. J. O'Brien, who is interested in the Midland Ry., now under construction, is said to have secured options from the local promoters.

Great Northern.—Ross, Barry & McRae, the contractors for the 88 miles to be built between Shawenegan & Hawkesbury, have sublet all the grading, etc., & contracts have been given for the bridge superstructures. The bridge over the Ottawa River at Hawkesbury will have 7 spans of 210 ft. each, & $\frac{1}{4}$ mile of trestle work. The Bayonne bridge at St. Elizabeth will have a span of 100 ft., & the Chicot River will be crossed by a steel trestle 300 ft. long. The Maskinonge River will be crossed by a bridge of 100 ft. span, & there will be a steel trestle in connection with this bridge 1,000 ft. in length & 170 ft. high. The River du Loup will require 800 ft. of steel trestle at a height of 150 ft., & the east & west branches of the Yamachiche River bridge will also have steel trestles, the east 500 ft. & the west 300 ft. long. A contract has been let for a branch of 4 miles from the main line to the Shawenegan Falls on the St. Maurice River. (May, pg. 133.)

Great North-West Central.—Engineer Dancer has completed surveys from McGregor, on the main line of the C.P.R., 22 miles west of Portage la Prairie, to Varcoe on the G.N.W.C., 10 miles from its starting point at Chater. The C.P.R. Right of Way Agent has secured 20 miles of the right of way, starting from McGregor, & H. Lumsden, C.E., has laid out the work for the graders. It is not known whether this line will be built under the G.N.W.C. charter or under the powers possessed by the C.P.R. The Minister of Railways recently stated that the C.P.R. Co. had power to construct the branch under its original charter.

The application of the G.N.W.C. Co. for an extension of time for going on with the construction of its line from its present western terminus at Hamiota caused a big fight in the Railway Committee and in the House of Commons. A clause was added to the bill in committee providing that not less than \$20,000 be spent on extension work westward from Hamiota this year & subsequently President Shaughnessy of the C.P.R. stated that 20 miles would be built this year. The G.N.W.C. has passed into the hands of T. G. Shaughnessy, R. B. Angus and G. M. Clarke in the interests of the C.P.R. (May, pg. 134.)

Intercolonial.—Of the \$45,000 in the Dominion estimates for increased accommoda-

tion at St. John, N.B., \$200,000 has already been spent, \$1,000,000 being for the purchase of the long wharf property. The estimated total cost of the wharf, siding & warehouse for the deep water terminus is \$698,156. A large force is clearing away the rock preparing the site for the elevator. Work is not progressing very rapidly on the elevator at Halifax, but it is said it will be completed this year. (May, pg. 134.)

Interprovincial Bridge.—Work has been nearly completed on the piers of the bridge which is being built by the Pontiac Pacific Jet. & the Ottawa & Gatineau Rys., between Ottawa & Hull.

Inverness & Richmond.—Mackenzie, Mann & Co., who control this Co., have contracted with the Nova Scotia Government to build the first 57 miles from the Strait of Canso to Broad Cove Mines, receiving therefor a Provincial subsidy of \$4,000 a mile. The Co. will also get \$3,200 a mile from the Dominion & \$1,000 a mile from municipalities. The contract for grading, track laying, & ballasting has been let to Ryan & Macdonald, Soulanges Canal contractors. It is stated that 30 miles will be constructed this year, & a good start made on the remainder of the work. Some 15 miles from the Straits of Canso north were partially graded some time ago, & the Co. has had a number of men at work since July last to comply with the Act. The line is ultimately to be extended to Cheticamp, about 100 miles from the Strait of Canso. (May, pg. 134.)

James Bay.—A. J. Sinclair, C.E., acting for Mackenzie, Mann & Co., has made a survey of the 4 miles of proposed line to connect the Q.A. & P.S. Ry. with Parry Sound, & which will ultimately be used as part of the James Bay Ry. (May, pg. 137.)

Kingston & Pembroke.—All the large openings are being shortened up, wooden structures being replaced by steel bridges on masonry. Those now being done are:—

	New Length.	Old Length.
Calabogis Lake.....	100 ft.	167 ft.
Mississippi River.....	30 "	100 "
Clyde River.....	30 "	70 "
".....	20 "	30 "
Opeongo Station.....	18 "	45 "
Sharbot Lake.....	20 "	25 "

In the near future the management expects to similarly deal with 3 more openings between Mississippi Station & Sharbot Lake.

Kootenay Ry. & Navigation Co.—We were officially informed recently that construction was being pushed all along the line from Bonner's Ferry, Idaho, to Kuskanook, B.C., at the head of Kootenay Lake. Between Bonner's Ferry & the International Boundary the line is being built under the charter of the Kootenai Valley Ry., & from the International Boundary to Kuskanook the charter of the Bedlington & Nelson Ry. is being used. The bridge across Kootenay River is completed, & it is hoped the road will be in operation about the middle of Aug. (May, pg. 134.)

Lake Erie & Detroit River.—Considerable improvements will be made this year, including a steel bridge over the Thames River at Chatham, the construction of ship docks at Sarnia & Rondeau Harbor, ballasting 30 miles of the Erie & Huron division, fencing 20 miles of the Erie & Huron division, erecting round-houses at Sarnia & Rondeau, stations at Wallaceburg, Eberts, Watson & Blenheim & 12 tool houses, painting & repairs on main line of the Erie & Huron division, renewals & repairs to culverts, alterations & repairs to engine house & shops at Walkerville.

The Michigan Central is vigorously opposing the proposed extension of the L.E. & D.R. Co.'s line from Ridgeway to St. Thomas & is trying to force the L.E. & D.R. to use the M.C.R. tracks instead. The M.C.R. is behind the attacks on the by-laws granting bonuses to the L.E. & D.R., & has had a deputation lobbying at Ottawa.

Manitoba & Southeastern.—Construction from La Broquerie, last year's terminus, towards the International Boundary was delayed in the spring by wet, but is now progressing satisfactorily. W. Mackenzie states that this line, and its connection, the Minnesota & Manitoba R.R., will be completed to Rainy River this season, & that he expects the connection between Rainy River & Thunder Bay, the Ontario & Rainy River Ry., will be finished in time to carry wheat of the 1901 crop. (May, pg. 134.)

Nanaimo-Alberni.—It is said that a start has been made on the construction of a line to connect these two places on Vancouver Island.

Northern Pacific.—Early in June it was announced that the Co. had decided not to rebuild the Manitoba Hotel in Winnipeg, but simply to re-erect the station & divisional offices, the reason given being that the Co. had failed to come to an agreement with the Provincial Government as to the extension of its lines in the province. It has since been stated that, as the result of further negotiations, an arrangement has been arrived at with the Government, but it is hardly likely that the hotel will be rebuilt in view of the decision of the C.P.R. to build a large hotel, most of the business of the Manitoba Hotel having been derived from C.P.R. passengers. No announcement has been made as to the terms of the arrangement with the Government, but it is believed that a branch will be built from Portage la Prairie northerly to Clandeboye Bay or some other point on the east side of Lake Manitoba, & another branch from Portage la Prairie westerly towards Hamiota, with a spur to Brandon, & that the Government will guarantee bonds to the extent of \$8,000 a mile. The Co. has applied for power to build a line from its main line at Morris, east or southeasterly to the International Boundary, & it is thought that this is with a view of getting an air line to Duluth. (May, pg. 135.)

Ontario & Rainy River.—The number of men employed on construction has been largely increased, & several additional contracts have been let. W. Mackenzie states

that it is expected to have the line completed by the fall of 1901. It is considered certain that the Dominion Parliament will increase the bonus to \$6,400 a mile irrespective of the cost of construction. In giving the Co. power to secure the Port Arthur, Duluth & Western Ry., Parliament has protected the town of Port Arthur, which gave \$25,000 bonus for the shops of the P. A. D. & W. being located there. (May, pg. 136.)

Ottawa & Gatineau Valley.—No definite information is obtainable as to whether the proposed extension from the present terminus at Gracefield, 60 miles from Ottawa, to Maniwaki, 28 miles, will be gone on with this year. Settlers beyond Maniwaki have petitioned for a further extension north to Eagle Bay on Great Victoria Lake. (May, pg. 136.)

Rutland & Noyan.—This Co. has been chartered by the Dominion Parliament to build some 3 or 4 miles of track to connect the Rutland with the Canada Atlantic. The connection will be made from Alburg, Vt., the portion of the line on the Canadian side to be built under the R. & N. charter.

Wabash.—It is said the Co. has bonded some farm property in the east end of St. Thomas, Ont., with a view to the erection of shops. At present much of the repairing work of the Canadian Division has to be sent to the works at Fort Wayne, Ind.

The Tilsonburg, Lake Erie & Pacific now runs from Port Burwell, Ont., to Tilsonburg, 20 miles, connecting at the latter place with the G.T.R., M.C.R., & the Wabash. The Co. wants to extend to Woodstock, & is endeavoring to secure a Government subsidy.

White Pass & Yukon.—On June 12 we were officially advised as follows: "Construction is now actively in progress between the summit of the White Pass & Lake Bennett; 12 miles of roadbed from Lake Bennett southerly towards the summit is completed up to the foot of Middle Lake, ready for the laying of rails, leaving about 5½ miles of rock work along Summit & Middle Lakes to complete; when track laying will be commenced, & continued to Lake Bennett, to which point it is hoped to have rails laid by July 10 at latest,

when train service will be immediately started the whole way from Skagway to Lake Bennett." (May, pg. 137.)

It is reported that as soon as the rails are laid from Skagway to Lake Bennett, construction will be commenced on the line from the latter place to White Horse Rapids, with the intention of ultimately going to Fort Selkirk, at the mouth of Lewis River. All the first surveys of this extension have been made & surveyors & construction engineers are said to be now in the field getting ready for the grading.

Capt. W. Langley is said to have completed arrangements to build a narrow-gauge line from Taku City to Atlin, N.W.T., in connection with the W.P. & Y. The road is to be about 3 miles long. This information somewhat conflicts with the information about the Atlin Short Line Ry. & Navigation Co. on pg. 175.

G.T.R. Clearing House.—A prominent Chicago railway man writes, with reference to the recent meeting of the Association of Railway Accountants in Montreal, that it was then stated that although the association was established in 1888, it was only this year that the New York Central created a clearing house for its through freight. He points out that as far back as 1882 the G.T.R. instituted this method of arriving at the proportion due to the several companies it did business with, as far as possible. It thus not only saved the junction staff for the G.T., but a duplicate thereof for each of the companies concerned, which must, in the past 18 years, have saved the companies hundreds of thousands of dollars. The companies embraced in this clearing house, which was established in the auditor's office of the G.T.R. by the then Auditor, T. B. Hawson, were the G.T.R., Chicago & G.T.R., Detroit, Grand Haven & Milwaukee, Canada Atlantic, Intercolonial, Central Vermont, & other railways. The traffic earnings amounted to many thousands a year, while the staff required to do the work consists of a few clerks. The system does away with the need for the employment of scores of men.—Witness.

Recent Dominion Legislation.

Among the acts passed at the current session of the Dominion Parliament, & assented to by the Governor-General, are the following:

To amend the Act respecting certain works constructed in or over navigable waters.

To incorporate the Edmonton & Slave Lake Ry. Co.

To incorporate the St. Clair & Erie Ship Canal Co.

To confirm an agreement between the C.P. Ry. Co. & the Hull Electric Co.

Respecting the British Columbia Southern Ry. Co.

Respecting the Canada Southern Ry. Co.

Respecting the Pontiac Pacific Jct. Ry. Co.

Respecting the Brandon & South-Western Ry. Co.

Respecting the Ottawa & Gatineau Ry. Co.

Respecting the Columbia & Western Ry. Co.

Respecting the Atlantic & North-West Ry. Co.

Respecting the Central Counties Ry. Co.

Respecting the Cobourg, Northumberland, & Pacific Ry. Co.

Respecting the Lindsay, Bobcaygeon, & Pontypool Ry. Co.

Respecting the Lindsay, Haliburton, & Mat-tawa Ry. Co.

Respecting the Northern Pacific & Manitoba Ry. Co.

Respecting the Richelieu & Ontario Navigation Co.

Respecting the Quebec Steamboat Co.

Respecting the Nipissing & James Bay Ry. Co.

Respecting the Saskatchewan Ry. & Mining Co.

Respecting the C.P.R. Co.

Respecting the James Bay Ry. Co.

Respecting the Great North-West Central Ry. Co.

To incorporate La Compagnie du Chemin de Fer de Colonization du Nord

To incorporate the Russell, Dundas & Grenville Counties Ry. Co.

To incorporate the Arthabaska Ry. Co.

To authorize the incorporation of the Erie & Huron Ry. Co., & the Lake Erie & Detroit River Ry. Co.

Respecting the Ottawa Electric Ry. Co.

Respecting the Hudson's Bay & Yukon Ry. & Navigation Co., & to change its name to the Hudson's Bay & North-West Rys. Co.

To incorporate the Edmonton & Saskatchewan Ry. Co.

To incorporate the Klondike Mines Ry. Co.

To incorporate the Canadian Inland Transportation Co.

Respecting the Northern Commercial Telegraph Co.

Respecting the Bedlington & Nelson Ry. Co.

To incorporate the Sudbury & Wahnapi-ta Ry. Co.

Respecting the Quebec, Montmorency & Charlevoix Ry. Co., & to change its name to the Quebec Ry., Light & Power Co.

To incorporate the Rutland & Noyan Ry. Co.

Respecting the Canadian Northern Ry. Co.

Respecting the Red Deer Valley Ry. & Coal Co.

Respecting the jurisdiction of the Exchequer Court as to railway debts.

D. W. Newcombe, Superintendent C.P.R., Woodstock, N.B., writes: "THE RAILWAY & SHIPPING WORLD is a very interesting publication, & contains much useful information."

Atlantic & Lake Superior.—In response to a recent complaint in the House of Commons about the failure of the Atlantic & Lake Superior Railway Co. to operate the short line between Lachute & St. Andrews, Que.,

the Minister of Railways said there was little hope of the Government being able to compel its operation.

The Maritime Board of Trade, at a meeting to be held in St. John, N.B., Aug. 16, will, among other things, discuss the development of the iron & steel industries; the proposed increase in marine insurance rates in connection with Canadian ports on the Atlantic coast; tourist travel & the development of accommodations for summer visitors, & their attraction to points of interest; encouragement of trade relations between Canada & the West Indies.

The Hudson's Bay Co. has had a most successful year, the directors having recommended a dividend of 13s. a share, a bonus of 7s. a share, & the setting aside of £10,000 out of the profits of the year towards a provident fund for the employees of the Co., leaving to be carried forward £41,968, as against £26,372 last year. The dividend above mentioned is the highest paid since 1883-4 when it was 22s. a share, but the capital then consisted of shares of £14, while now they are of £13. The up-to-date business methods introduced into the management of the Co. by Commissioner Chipman are proving thoroughly successful.

Canada Atlantic.—In the appeal case of this Co. vs. Henderson, recently heard by the Supreme Court in Ottawa, the action was brought against the Co. to recover compensation for injuries sustained by Dr. Henderson in consequence of his horse being frightened by a train approaching the crossing at Elgin Street, in Stewar-ton. The jury found that no bell was rung, & the signalman did not give warning. Counsel for the Co. contended that the statute did not require the bell to be rung by engines shunting in a yard & less than 80 rods from a crossing, & also that the evidence did not warrant the findings, & that there should be a new trial. The court dismissed the appeal with costs.

Yukon Railways.—The Premier, Sir Wilfrid Laurier, recently announced that, pending the settlement of the Alaska boundary question, no more charters will be granted by the Dominion Parliament for railways into the Yukon which start from points on the coast now in possession of & claimed by the U.S. Most of the charters applied for at this session were for lines to run from Pyramid Harbor, along the Dalton trail to Dawson. Pyramid Harbor is in disputed territory. By allowing one of these lines to be built, a U.S. city would be built up at Pyramid Harbor, as has been done at Skagway by the building of the White Pass & Yukon Ry. The influence of such a city would be against Canada in the settlement of the dispute. Should it be determined by arbitration that Pyramid Harbor does belong to the U.S., the policy of the Dominion Government will be to get access to the Yukon not by the Lynn Canal, but by railways from the Yukon to where there is indisputable Canadian coast water, probably to Observatory Inlet.

Canadian Press Association. The members will start Aug. 1 on a trip to the Pacific coast, leaving in two sections, one from Montreal via C.P.R., the other from Toronto via G.T.R., combining at North Bay, from which point they will travel by special train, consisting of sleeping, dining, & baggage cars. The Toronto section will make a few hours' stop at some Muskoka point, from which the Muskoka Navigation Co. will take the members for a short lake trip. Stops of a day each will be made at Port Arthur, Rat Portage, 2 days at Winnipeg & various short stops at prairie points, & from 3 to 4 days in the mountains. The trip to Vancouver will be made by the main line, & the return by way of Kootenay district & the Crow's Nest Pass Ry. Toronto & Montreal will be reach-

ed on the return journey on Aug. 27 & 28. Free railway transportation will be provided, the members of the party merely paying for sleeping cars & meals. The Minister of Marine has placed the Government steamer Quadra at the disposal of the party for a few days' cruise on the Pacific coast.

G.T.R. Suit about Passes.—The Co. has filed its defence to the action brought by the Niagara Falls Suspension Bridge Co. & the Niagara Falls International Bridge Co. to compel the G.T.R. to secure passes for the directors & officials of the bridge companies from all the railways using the bridge. The G.T. states that the plaintiffs have not at any time demanded these tickets. The agreement of Feb. 27, 1875, between plaintiffs & the G.W.R. is referred to as providing for the release of the G.T. from every demand except that of the annual rent. Therefore, defendant says, it is not obliged to make plaintiffs any further or other compensation for the use of the bridge. The statement adds that the bridge companies are not under obligation to pay the rates or fares of their own directors & officials when travelling for pleasure or on their own business, & that the bridge companies can suffer no loss by reason of their directors not having such free tickets. The defendant then says that if it was bound at all to give free tickets it was only on requisition from the bridge companies from time to time, as required. Lastly, the G.T. says that these directors or officials gave no consideration for any such free transportation, & that it was not called upon to pay for the same.

A Great Railway's Progress.

With the establishment of a limited flyer across the continent the C.P.R. gives another proof of a determination to keep abreast of the demands of the traffic and to expand with the growth of the Dominion. This is a piece of most commendable enterprise & is in keeping with the policy that has been pursued by the road since its construction was first undertaken. The new flyer shortens the trip from ocean to ocean by 24 hours, which, considering the speed of the ordinary service, is a marked achievement in railway operation. The "Imperial Limited" leaves Montreal every morning at 9.30 and reaches Vancouver on the afternoon of the 4th day thereafter at 1.15, reducing the time to a little over 4 days. The east-bound flyer leaves Vancouver at 1.15 in the afternoon, reaching Montreal at 6 p.m. on the 4th day thereafter. In contemplating this achievement it is hard to realize that but 13 years have elapsed since the first through train left Montreal for the Pacific terminus. In 1886, when the first transcontinental train was started, the total length of all the Co.'s lines was 4,500 miles. During the interval the railway has expanded with the Dominion till to-day the Co. operates a system, including leased lines, of 9,600 miles. Equipment has kept pace with the extension of the system operated. The number of engines has increased from 336 to 644, & passenger & baggage cars from 289 to 622. In freight & cattle cars there has been an increase from 7,858 to 16,942, & in all essentials of operation & maintenance there has been the same rapid expansion.

Growth & development have been even more remarkable in the marine department of the service. The traffic of the Pacific Ocean has been served by splendid lines of steamships, the "three white Empresses" being regarded as the best passenger ships afloat. These lines reach out from the railway terminus at Vancouver to China, Japan & Vladivostok, they turn south to Hawaii, to Fiji & Australia, & cover the newly-established traffic to the golden Klondike. In addition to the three Empresses, the Tartar & the Athenian on the Pacific routes,

The company has the Alberta, Athabasca & Manitoba on the upper lakes, two great ferry steamers on the Detroit River, more than a score of freight & passenger steamers & many adjuncts to the service on the inland waters of southern British Columbia. Some interesting figures as to the growth of the road & its business since the initial through train was despatched in 1886 are given in the Montreal Star. At that time 3 tracks sufficed for the Co. at Montreal, but now there are 13 at the Place Viger & 7 at Windsor station. In that year the railway carried 1,804,319 passengers & 2,046,195 tons of freight, the number of passengers carried 1 mile being 150,466,149, & the number of tons of freight hauled 1 mile being 555,438,581. Last year the number of passengers carried reached 3,674,502, the number carried 1 mile being 430,493,130. The freight traffic increased to 5,588,038 tons handled, or 2,148,319,867 tons carried 1 mile. This expansion has been accompanied by a reduction of rates, the earnings per mile having decreased from 2.10 to 1.52 on each passenger, & from 1.10 to 0.75 cent on each ton of freight. The earnings increased from \$10,018,803 to \$26,138,977, & the operating expenses from \$6,378,317 to \$15,003,603.

In 1886 the Co. commenced the erection of its first hotel at Banff Springs, in the Rockies. That line of enterprise has kept pace with the general development, until now the hotel at Banff is but one in a complete chain extending along the Canadian highway. These hotels include the Chateau Frontenac at Quebec, the Kaministiquia at Fort William, the Mount Stephen House at Field, the Glacier House, the Revelstoke, the Fraser Canyon House & the Hotel Vancouver. In the spirit of enterprise that never fags the Co. is now planning the erection of a palatial hotel at Winnipeg that will equal or surpass any of its present magnificent hostelries. In addition to these enterprises the Co. has developed a telegraph service across the continent, with wide ramifications. It owns and operates its own express system, & has also an extensive grain elevator business. It builds its own cars & locomotives, has its own sleeping car service, & employs a force of men estimated at close on 30,000. All this has been the development of 13 years from a line between Quebec & Port Moody at the head of Burrard Inlet, built as a necessity to the new political organization of the Dominion. The first trans-continental train over the new road required 136 hours to make the trip, which time has been reduced by the Imperial Limited to 99 hours 45 minutes. This brings London within 10 days of Vancouver & within 21 days of Japan, drawing the Dominion still closer to the mother land, & increasing our importance as a link in world-circling traffic. —Globe.

New Brunswick Legislation.

At the last session of the Legislature the following Acts were passed among others:

To amend 54 Vic. Chap. 2, so far as it relates to the Gulf Shore Ry.

To confirm an agreement between St. John City & the C.P.R. Co., & to enable the city to make tax exemptions in favor of the Co.

To aid in the construction of a graving dock at St. John.

To revive the Act incorporating the Fredericton, Gibson, and Marysville Electric Ry. Co.

To incorporate the Imperial Dry Dock Co. of St. John.

To continue the Act incorporating the St. Louis, Richibucto & Buctouche Ry. Co.

To confirm a conveyance from St. John City to the C.P.R. Co. & for other purposes.

To incorporate the Shediac Coast Ry. Co.

Questions About Locomotives.

At the recent annual meeting of the American Ry. Master Mechanics' Association at old Point Comfort, in the discussion on the question, "Can the ordinary marine salinometer be used to advantage in districts where alkali water has to be used, in order to avoid excessive concentration & damage to firebox?" R. Atkinson, Mechanical Superintendent C.P.R., said: "The possibility of a salinometer was brought to my attention by having a piece of firebox plate sent in which was cracked & apparently burned, with no indication of scale having formed, & as we know that when the steam is distilled from the water in the boiler the salts remain behind, they must concentrate. Suppose a locomotive boiler holds 1,000 gals. of water. In the course of one division, running 120 miles, it is refilled about 6 times, & therefore the contents of 7,000 gals. are concentrated into 1,000 gals., & doubled on the returning trip; so that if the water contains 20 grains per gallon of impurities we have 13 times that amount at the end of the return trip. If this is soluble impurity, the water necessarily is much more dense than it was previously, & its boiling point raised, & possibly the firebox sheets may be injured by the increased heat necessary to evaporate water from that solution."

In the discussion on the best method of applying stay bolts to locomotive boilers, including making the bolts & preparing the stay-bolt holes, Mr. Atkinson said: "I put myself on record as not being in favor of drilling or punching stay bolts. It appears to me wrong in principle—that the point where the stay-bolts fail most is near the outside sheet. It is misleading to have anyone think they could rely on getting a certain result from them, when they would fill up with scale & leave us in the dark as to the condition of the box."

Historical Sketch of the G.T.R.

The following was written by J. J. Lanning, formerly Asst. General Manager of the G. T. R., shortly before his death in the summer of 1897, & was supplied by Gen. Manager Hays for publication in Canada, an Encyclopædia of the Country, edited by J. Castell Hopkins, & published by the Linscott Pub. Co., Toronto, from which it is now reproduced by permission, being copyrighted.

When it is remembered that the reports issued by the large railway corporations of this continent each year, detailing the receipts & expenditure of vast sums of money, & recording the particulars of all important events & transactions occurring in connection with their respective companies during the twelve months, usually contain from 25 to 50 pages of closely printed matter, the reader will understand the difficulty experienced in recounting in anything like an intelligible form, in a paper of this kind, the history of the G.T.R. Co. from its inception in 1852 up to the present time. If reference be made to lines in existence prior to the building of the G.T., but now incorporated in that Co.'s system, we must go back to 1832, when the Champlain & St. Lawrence Ry. Co. received its charter, bearing the royal assent of William IV.

The problem of transportation of passenger & freight traffic by means of wheeled vehicles propelled by steam over 2 lines of rail had been only recently successfully demonstrated by Stephenson, & the news of its success had the effect of inducing the prominent men of Montreal to establish a line of railway running from a point as near to that city as prac-

15 Adelaide Street East, Toronto

licable in the direction of New York, & the result was the construction of the railway under the name, Champlain & St. Lawrence, from Laprairie to St. Johns, Que. The line was opened for traffic in 1836, being laid with wooden rails & worked by horse-power during the first year of its existence. But one winter's experience satisfied the promoters that these two features of the undertaking would have to be improved upon by the substitution of something more substantial, & in the following year the wooden flanges, as the rails were termed in the act of incorporation, were replaced by iron, & the horse supplanted by the more enduring steam-motor.

The line was shortly afterwards extended from St. John's to Rouse's Point, N.Y., & in connection with this it may not be out of place to mention that in an early edition of the Biographical Directory of Railway Officials—a semi-official publication—appears a sketch of the late Jay Gould's career in which it is stated that his first experience in railway work was as a surveyor in the location of this line. The political disturbances during 1837 & 1838, together with business depression, put a damper, however, on further Canadian railway construction, & there is no record of any railway charter being granted or applied for until 1845. In that year the Atlantic & the St. Lawrence Ry. Co. obtained incorporation for the purpose of building a line from Portland, Me., running west through that state, New Hampshire & Vermont, to a connection at the international boundary with the St. Lawrence & Atlantic Ry., also organized the same year.

The Great Western Ry. Co. was also incorporated in that year under the name of the Hamilton & Sandwich Ry., for the purpose of securing connection between Hamilton & Detroit. In the following year, 1846, the Montreal & Lachine Ry. Co. was organized & incorporated, & the next year saw its line between the two points mentioned an accomplished fact. It also established a ferry service between Lachine & Caughnawaga in Quebec, & at the latter place connected with a short railway chartered as the Lake St. Louis & Province Line Ry., running from Caughnawaga, opposite Lachine, south-easterly to the International Boundary Line. Another important line known as the Toronto, Simcoe & Lake Huron secured incorporation as a company in 1849 & commenced the construction of a railway from Toronto northward to Collingwood. Its name was subsequently changed to Ontario, Simcoe and Huron, & again to that of the Northern Ry., being like all the other companies just mentioned, finally merged in the G.T. System.

On Aug. 10, 1850, the Quebec & Richmond Ry. Co. was incorporated with power to construct a line from Richmond to Point Levis via Chaudiere Junction, & twelve months after the Toronto & Guelph Ry. Co. was granted authority to build between these points. On Oct. 11 following the St. Lawrence & Atlantic Co.'s line was opened from Longueuil to Richmond, & the Champlain & St. Lawrence Co. carried its road from LaPrairie to St. Lambert in the early months of 1852. Charters were also obtained in 1852 for the construction of a railway from Chaudiere Junction to Trois Pistoles by the G.T.R. Co. of Canada East; one from Montreal to Toronto, & this was really the parent stem, by the G.T.R.; & a third from Toronto to Hamilton by the Toronto & Hamilton Ry. Co. In the meantime the principal lines under construction, viz., The Great Western, The Northern & the St. Lawrence & Atlantic were struggling under financial difficulties owing to the want of capital. Canada was then very young & but thinly populated. Owing to improvement in the inland navigation the cost of transportation had been materially lessened, but the closing of navigation during the winter months made it necessary on the part of the Government of the day to find a remedy, & it was deemed an

important measure of public policy to secure access to the sea-board at all periods of the year.

It was believed that there would be sufficient Canadian traffic to maintain a line of railway connecting the principal cities & towns of the old Province of Canada, now Ontario & Quebec. Their policy being quite in accord with public opinion, the Government determined on aiding the railway companies, & an Act (12 Victoria, cap. 29, 1849) was passed affording Government assistance in the shape of loans to railways of not less than 75 miles in length. The conditions of this Act were found to be in some respects unworkable, & too onerous, & further legislation of a more liberal character was passed in 1851 (14 Victoria, cap. 73). This Act was entitled "An Act to make provision for the construction of a main trunk line of railway throughout the whole length of this Province." In the first section of the Act it is declared that "Whereas it is of the highest importance to the progress & welfare of this Province that a main trunk line of railway should be made throughout the length thereof, & from the eastern frontier thereof, through the provinces of New Brunswick & Nova Scotia to the city & fort of Halifax: It is, therefore, expedient that every effort should be made to secure the construction of such railway," etc. Briefly, the Act provided for three eventualities. 1st, The construction of an intercolonial road from Halifax to Quebec, in conjunction with the provinces of New Brunswick and Nova Scotia, on a loan under Imperial guarantee, or from funds advanced by the British Government. 2nd, That if the Imperial guarantee was obtained, the road should be continued as part of the main trunk line to Hamilton or some other point on the Great Western; but failing the Imperial guarantee the road was to be constructed jointly by the Province of Canada (now Ontario & Quebec) & the Municipal Corporations, which should subscribe for half the cost—the whole to be completed & managed as a provincial public work. 3rd, If neither of these projects proved practicable, the work might be undertaken by chartered companies, which would be entitled to the provincial aid in a guarantee extended from the interest to the principal on loans amounting to one-half of the cost of the railway.

(To be continued in next issue.)

SHIPPING MATTERS.

The Teslin Lake Route.

The report of the Chief Engineer of the Public Works Department, L. Coste, was recently submitted to Parliament. The first report was dated July 10, 1898, & in it he says he has learned that the Stikine is navigable for powerful boats from its mouth to Glenora, about 140 miles. The river is tolerably free from snags, but at sharp bends there are heavy currents. Lake Teslin is navigable for vessels of light draught, not more than 3½ ft. Teslin River can be navigated by small river steamers. Lewes River is navigable to its confluence with the Yukon, but great difficulty is experienced in running the Five Finger rapids. The Yukon, while shallow, is navigable for small river boats. On Apl. 25, he reports, after having examined the mouth of the Stikine, "I believe the Stikine route will be the cheapest & best inlet into the Yukon territory for all provisions & mining supplies required in that country during the summer season." He suggests building a wharf at Wrangel, although it is in U. S. territory.

On December 7, he reports very fully on the Skagway route, saying: "The Skagway route is bound to remain for years yet the favorite route into the Yukon country, & inasmuch as it is almost entirely in Canadian territory, I feel justified in recommending

these improvements to the earnest attention of the Minister." Following are the improvements recommended:

At Cariboo crossing, dam required to increase depth of water by 1 ft. at least, estimated cost.....	\$6,000
Removal of rocks in Six Mile River between Lake Tagish & Lake Marsh, say.....	2,000
Removal of rocks in the Thirty Mile River from Lake Laberge to the confluence of the Lewes & Teslin Rivers, say.....	10,000
Removal of rocks at the Five Finger Rapids, say.....	5,000
Removal of rocks at Rink Rapids.....	1,000
Total.....	\$24,000
Add for contingencies & superintendence.....	6,000
	\$30,000

On December 9, he reports on the inlets on the Pacific coast, & the Stikine River. Of this he says: "After a most careful examination of the Stikine River I concluded that it was not necessary to make a thorough survey of that river, owing to the ever-changing course of the navigable channel & the fact that I realized that a survey would cost at least \$25,000. On the whole, while the Stikine River is navigable for three months in the year by powerful steamers of light draught, it is evident that if the proposed railway between Glenora & Teslin Lake had been built, the Stikine River would only have served temporarily as the first link in this route, & that it would have been necessary to extend the railway in a southerly direction to a point on the Pacific in Canadian territory."

List of Lights & Fog Signals.

The Department of Marine has issued a list of lights & fog signals on the coasts, rivers & lakes of the Dominion, corrected to Apr. 1, 1899. The lights in the Bay of Fundy & on the southern & eastern coasts of Nova Scotia, those required for the winter passage of either steamers or ice boats to Prince Edward Island, & all the lights in British Columbia, are exhibited all the year round. All other lights under the control of the department are maintained in operation whenever the navigation in the vicinity is open. Lights used solely as harbor lights are not exhibited when the harbor is closed, although the general navigation may remain open. Fishing lights are maintained only during the fishing season. In any case where there is reasonable doubt whether the light is required it is kept in operation. All the lightships in the River St. Lawrence below Quebec leave Quebec each spring for their stations as early as ice will permit. The Red Island & White Island lightships leave their stations for winter quarters on Nov. 15 annually. All the gas buoys in the River St. Lawrence are set out as soon as possible after May 11 each spring, & taken up as soon as convenient after Nov. 10 each autumn, when they are replaced by wooden can buoys. All buoys in the River St. Lawrence below Quebec are removed after Nov. 14, excepting those replacing the gas buoys at each end of the Beaujeu Bank & at the Channel Patch, one at the west end of Middle Bank, & one at St. Roch, East Point, in the Traverse, which are left when possible until the last ocean vessel has passed out.

The following points are emphasized: The intrinsic power of a light should always be considered when expecting to make it in thick weather. A weak light is easily obscured by haze, & no dependence can be placed on its being seen. Coloured lights are also inferior in power to bright or white lights, & are more quickly lost under unfavorable circumstances.

In some conditions of the atmosphere, white lights may have a reddish hue. The mariner should not trust solely to color where there are doubts, but verify the position by taking a bearing of the light. On either side of the line of demarcation, between white & red, & also between white & green, there is always a small arc of uncertain color.

Having to view the varying distances at which a fog signal can be heard at sea, & the frequent occurrence of fog near to, but not observable from, a fog signal station, mariners are cautioned that, whilst they are entitled to assume that every endeavor will be made to start fog-signals as soon as possible after signs of fog have been observed, they should not, when approaching the land in a fog, rely implicitly upon these fog-signals, but should always use the lead, which, in nearly all cases, will give sufficient warning. Mariners are strongly cautioned that they must not judge their distance from a fog-signal by the power of the sound. Under certain conditions of the atmosphere the sound may be lost at a very short distance from the station, & these conditions may vary at the same station within very short intervals of time. The expression "foggy weather" means that the state of the atmosphere is such as to make objects indistinct.

R. G. Reid states that 2 of the steamships constructed for the Newfoundland service will be completed this year, the remaining 5 to follow next year.

At the opening of navigation it was considered probable that the Soulages canal would be ready for traffic early this summer, & that then the 14-ft. waterway of the Upper St. Lawrence would show the country what could be done in the transportation of some of this season's grain from the Western prairies & the Western States. This hope, however, would seem to be doomed to disappointment, as much work remains to be done before the Soulages canal is finished, & boats of 9-ft. draught will probably have to do the whole of the trade for 1899.

Hamilton is asking government aid to the extent of \$500,000 for improvements to Hamilton harbor. The improvements requested are the deepening of the harbor, the dredg-

ing of the approach thereto, the extension of the piers & the erection of a red range light. Hamilton is becoming an important center in the iron smelting industry, & as the supply of ore is brought by lake vessels, the harbor must be deepened to give these vessels, drawing fourteen to sixteen feet of water, admittance. The coal & other supplies for the Hamilton manufactories are also brought in by water to a great extent, & hence another necessity for the deepening of the harbor.

Yukon & Northern Navigation Matters.

We are indebted to the Klondike Miner for a lot of information about Yukon navigation matters.

The str. Scotia, 80 ft. long, 20 ft. beam & 4 ft. hold, was built this spring by Capt. E.W. Spencer, of Portland, Ore., on Atlin lake. She will run to all points on Atlin lake.

Vancouver has at last secured a direct weekly steamship service to northern ports by an arrangement between the Union Steamship Co. & the Bennett Lake Steamship Co., under which the s.s. Cutch of the former line, & the s.s. Amur of the latter, will perform the service.

The telegraph construction party sent by the Dominion Government to build the telegraph line between Lake Bennett & Dawson, is also looking after the improvement of navigation. A wing dam 335 ft. long, 10 ft. wide & 6 ft. high has been built at Cariboo to throw the water all into the main channel. It is built of logs on brush mattresses & filled with stone, & is faced with plank to make it water-tight. It had to be built in water 3½ ft. deep. Three beacon piers have also been built on that river 12 ft. square & filled with stone for the guidance of vessels. Two lifting barges have been constructed, & are used in removing all rocks from Six Mile River.

On the Upper Yukon River, i.e., above Dawson towards White Horse, the British America Corporation will run 2 or 3 steamers, probably the Tyrrell & Lightning. There will also be the str. Willie Irving & the strs. Clara, Gold Star & Florence, which wintered at

White Horse. The Canadian Development Co. will put all its boats on the up river trade—the Canadian, Victorian, Columbian & Anglian. It also has the Australian operating from White Horse to Bennett City, & has 2 fast steel launches in the same service. The Bennett Lake & Klondike Navigation Co. will run the strs. Ora, Nora & Flora same as last season, the Ora & Flora to White Horse Rapids, & the Nora from White Horse to Bennett City.

Lake Bennett has been a busy boat-building point during the past winter & spring. Six river steamers & over 100 scows & barges have been built there, & 2 river steamers have been overhauled & repaired. The Canadian Development Co. has built a steel steamer, the Australian, at a cost of \$75,000. She is 115 ft. long, 24-ft. beam, & 3 ft. draught. She has accommodation for 175 passengers & 100 tons of freight, & has a speed of 15 miles an hour. The same Co. will operate 2 twin-screw steel launches, designed to run 16 miles an hour, & 2 steel barges, 100 ft. long by 20 ft. beam. The Co. will also operate 6 steamers on the river below White Horse rapids. The Bennett & Atlin Lake Transportation Co. has built a lake & river steamer, the s.s. Bailey, costing \$60,000. She is 110 ft. keel, or 126 ft. over all in length, 22 ft. beam, with hold depth of 4½ ft. She has a draught of 16 inches. The Northern Lakes & Rivers Navigation Co., of Victoria, has built the steamer Ruth. She is 60 ft. long, 16 ft. beam. Capt. J. Irving, of Victoria, has built The Gleaner, 115 ft long, 24 ft. beam & 5 ft. hold. She will accommodate 100 passengers. She will run between Bennett & White Horse, & also to Taku City, connecting there with the tramway & Capt. E. W. Spencer's Atlin Lake str. Scotia.

Following are particulars of the steamers which will ply this season on what may be called the Lower Yukon River, below Dawson, i. e., towards the sea & St. Michaels. The Seattle-Yukon Transportation Co. will run its 3 steamers Seattle nos. 1, 2 & 3. The Standard Oil Co. has one boat on the river, the Oil City, carrying its own freight. The Alaska Commercial Co. will run its 9 steamers,

To the Land of Sunshine.

Take the Sunshine Route from Chicago to Los Angeles, San Francisco and other points in California, and escape the rigors of winter in the East and North.

Pullman Tourist Cars for first and second class passengers leave Chicago every Saturday at 2 o'clock p.m. via the Chicago, Milwaukee and St. Paul Railway to Kansas City, thence to California via the Atchison, Topeka and Santa Fe Railway—a real Sunshine Route.

This is the earliest afternoon train leaving Chicago for the West after arrival of morning trains from the East, thus avoiding tedious delay.

The Sunshine Route is essentially the best and most patronized through car-line for men, women and children. Every attention paid to the needs of passengers en route.

Send for a Sunshine Route time-table folder. It costs nothing.

Address A. J. Taylor, Canadian Passenger Agent, 8 King Street E., Toronto, Ont.

the Louise, Hanna, Sarah, Susie, Alice, Leah, Belle, Marguerette & Victoria, together with the 8 barges wintered at Androfski. Some of the boats were expected in Dawson about June 15, while the others would wait for outside traffic. The North American Transportation & Trading Co. has 7 steamers & 3 barges. Its powerful tug Klondike will operate from St. Michaels to Ft. Hamilton. The Alaska Exploration Co. will operate 6 steamers & 6 barges on the lower river. The Mary F. Graff wintered at the Dahl River, the Linda & F. K. Gustin at St. Michaels, & the Herman just below Rampart City. This Co. also owns the Clara Belle & the Arnold. The Empire Line will operate 9 steamers on the lower river, the Tacoma & Victoria were recently reported on the way up the river, the Seattle is taking a load of government supplies, & the St. Michaels is loaded for the Standard Oil Co. The Dawson, Munook, Tanana, Yukon & Empire were to leave Seattle June 10 & steam to St. Michaels under their own steam. The Co. will operate ocean liners to accommodate its business. It is building warehouses at Dawson.

It is to be war to the death between the companies catering for the Klondike business via St. Michael & the lower Yukon river, & those which aim to control this trade by way of the White Pass & Yukon Ry. & the river steamers, the latter combination being favorite in the betting. Numerous conferences preliminary to a determination of through freight & passenger rates have been held by the four companies controlling the rail & river system, & as a result it is announced that the rates by the all-water route will be met in every particular while the four-sided combination has the advantage in being able to land passengers or consignments in Dawson in 10 days or less from Victoria, the round-about sea & river journey requiring the better part of two months, with a chance that shallows may prevent freight sent in that way from ever reaching its destination. The companies named in the combination are the Canadian Pacific Navigation Co., the Alaska Steamship Co., the Canadian Development Co. (in connection with which Capt. Irving's lake & river steamers will be operated), & the White Pass & Yukon Ry. Co., covering the land link from Skagway to Bennett. The adopted rate scale provides for a 1st class fare from any Puget Sound or B. C. port to Dawson, of \$135, or \$127.50 2nd class. Half rate tickets will be sold for children of from 5 to 12 years. On the full ticket 150 lbs. of baggage will be carried free, & on the ½ ticket 75 lbs. From Dawson to B. C. or Puget Sound ports the rate of the upper river combination is \$185 1st class or \$177.50 2nd class, these rates paralleling closely the rates announced by the round-about all-water route. The latter involves a journey of almost as many weeks as the former requires days. Besides, the connections have been so perfected with the completion of the railway link that one does not require to walk a foot of the way. The adopted freight tariff for Atlin, on all commodities, regardless of class, is \$100 a ton from Vancouver, Victoria or Puget Sound points, on less than 10-ton lots; for 10 tons or more, a cut of \$10 on the ton is made. A classification scale is made for the Klondike freights, 3rd class merchandise including provisions such as beans, bacon, flour, sugar, etc., for which the through rate is \$136 a ton. Second-class freight embraces dry-goods, general supplies, etc., with a rate thereon of \$155 a ton; & 1st class freight, consisting of perishable and breakable goods, commands a transportation charge of \$160. Live stock for Dawson will be accepted in carload lots of 14 or more at \$82 each. These rates stand out in marked contrast with the figures prevailing a year ago. The freight rate then was 60c. a pound, or \$1,200 a ton from Skagway to Bennett, & 20 to 30c. more for the haul to Dawson, a total

of at least \$1,600 a ton through to the Klondike capital, a month or 6 weeks being at that time required for the carriage of merchandise even as far as Bennett.—Victoria Colonist.

The Plant Steamship Line.

The passenger traffic between the Maritime Provinces & the New England States has assumed such proportions that the Plant Co. has placed on the route its magnificent 5,000-ton steamship La Grande Duchesse. She made her first trip on the route in the middle of June, running from Boston light to Meagher's Beach light, near Halifax, in 21 hrs. 45 minutes, the previous best record being the s.s. Olivette's, 23 hrs. 40 mins. For the balance of the season she will run direct between Boston & Halifax, calling also at Hawkesbury, N.S., & Charlottetown, P.E.I.

La Grande Duchesse, which was built at Newport News in 1896, is fitted with every modern appliance known to the art of shipbuilding, including electric lights, searchlight, & telephone connection between staterooms & the purser's office. Her furnishings, from staterooms en suite, with bath, to the berths in the cabin, are in perfect taste. Her dining & main saloons are equally attractive, & her immense size is a guarantee of plenty of deck room even for her full quota of passengers. She is built entirely of steel, & is of the following dimensions: 404 ft. long over all, 380 ft. between perpendiculars, 47 ft. 9 ins. beam, 37 ft. 4 ins. deep from top of deck to base line, & is fitted with 2 steel masts fore-and-aft rigged. She has a water bottom extending from her stuffing box bulkhead to her collision bulkhead, also numerous steel decks; all the houses are of steel. The stern & rudder frames are made of cast steel, & the rudder stock of fluid compressed steel, the steering gear consists of a steel apparatus operated by a telemotor; also heavy Napier steering gear. The vessel is fitted with a steam windlass & capstan & hoisting engines for handling cargo, & has steam elevators in two of the hatches.

On the main deck forward is the dining saloon, with seating capacity for 125. This is handsomely fitted up & decorated in white & gold. Forward of the dining room is a reception room, forward of which are sleeping accommodations for passengers. In the after end of the dining saloon is a grand stairway leading to the social hall above. On the main deck aft of the dining saloon is the pantry, & aft of this is the large gallery. On this deck are located cold storage for provisions, officers' mess room, baker & porter shop, telephone exchange room, stewardess' room & a number of staterooms abreast of the boilers & engine hatches for oilers, water tenders, etc. Aft of the machinery is the main saloon with 2 tiers of staterooms on each side; in the forward end of this saloon is the grand stairway leading to the social hall above. Immediately aft of the main saloon are toilets, bathrooms etc., for ladies and gentlemen. In the forward end of the upper or promenade deck is a social hall for 2nd class passengers, with a stairway leading to the dining room. This social hall has quite a number of staterooms for 1st class passengers. On the pilot-house deck forward is the pilot-house, aft of which is the captain's room & 2 tiers of state rooms continuing to the smoke stack. Over the social hall aft is a large steel house fitted up as a ladies' observatory. The 2nd class social hall & reception room are finished in quartered oak.

The vessel is equipped with 12 life boats, 6 life rafts & the necessary life preservers, etc. There is a complete ventilating system connected to every compartment & stateroom in the vessel; she is also fitted with a complete fire alarm system, & is lighted by electricity, which is furnished by 2 generators direct

driven, also search light, etc. The machinery consists of 2 inverted, direct acting service condensing, quadruple expansion engines, driving twin screws; wheels made of manganese bronze. The total horse-power of the engines is 7,000. Steam is supplied by 8 boilers built for a working pressure of 250 lbs. of steam, fitted with 1 smoke stack. In addition there are numerous pumps for ballast, bilge, sanitary fire & feed purposes. Unusual precaution has been used in every part in the construction for the safety & comfort of passengers, having accommodations for 500 1st class & 200 2nd class. The vessel has also been designed in compliance with U.S. government requirements for auxiliary cruisers.

Since the Mascotte was built in 1885, the Plant line has steadily extended its service. From the system about the Florida coast, & between Port Tampa, Cuba & Jamaica, catering in hotels & steam communication to winter tourists & travellers, the line a few years ago extended its service eastward & absorbed the Canada Atlantic Steamship Co., with its ocean str. Halifax, plying between Boston & Halifax, & also the Old Colonial line between Boston, Halifax, the Strait of Canso & Charlottetown, with its str. Carroll & Worcester, which were retired or broken up, the service being improved in summer by the Olivette or Florida, the latter also another large addition to the line. This eastern business has developed very extensively, with demands by summer tourists often exceeding accommodations.

Using Oil in Stormy Weather.

A circular on this subject recently issued by Lieut. W. J. Wilson, nautical expert in charge of the Branch Hydrographic office at Chicago, is attracting a good deal of attention. It reads: "Masters of vessels cannot be reminded too often of the use of oil in stormy weather. Its importance is well illustrated by the fact that it is now recognized in standard books on seamanship. The international marine conference at Washington recommended that the several governments require all their seagoing vessels to carry a sufficient quantity of animal or vegetable oil for the purpose of calming the sea in rough weather, together with suitable means of applying it. Thick & heavy oils are the best. Mineral oils are not so effective as animal or vegetable oils. Raw petroleum has given favorable results, but not so good when it is refined. Certain oils, like coconut oil & some kinds of fish oil, congeal in cold weather, & are therefore useless, but may be mixed with mineral oils to advantage.

"As a general rule, probably the best way to use oil is by filling the wash bowls forward with oakum & oil, letting the oil drip out slowly through the waste pipes. Another simple & easy way to distribute oil is by means of canvas bags about 1 ft. long, filled with oakum & oil, pierced with holes by means of a coarse sail needle & held by a lanyard. Running before a gale, use oil from bags at the cathead or from forward waste pipes; if yawning badly & threatening to broach to, use oil forward & abaft the beam on both sides. Lying to, distribute oil from the weather bow. With a high beam sea, use oil bags at regular intervals along the weather side. In a heavy cross sea, have bags along both sides. Steaming into a heavy sea, use oil through forward waste pipes. There are many other cases where oil may be used to advantage, such as lowering & hoisting boats, riding to a sea anchor, crossing rollers or surf on a bar & from lifeboats & stranded vessels."

Lieut. Wilson further says: "If captains could be made to understand the many advantages offered by the proper use of oil in rough weather & in case of accidents, there would not be a boat leave port without a supply

of oil & the necessary equipment. The application of the fluid to quiet the waves is a simple experiment. It is a positive success. Within a few years all captains will, I think, use oil as a safeguard. The cost is comparatively small, & there is no reason why it should not come into general use on the lakes. I could recall a dozen cases where the timely use of oil saved boats & their crews. The effect of oil dripped from a boat is a rough seas not generally understood by landmen. Some people seem to think that huge mountains of water should be instantly calmed by the application of oil. Of course, that is not expected. The oil quiets the waves to a certain extent & prevents them from breaking over the craft. When oil is used the waves, instead of crashing over the deck, & in extreme cases tearing away the cabin, demolishing the hatches & flooding the boiler-room, come in long swells & are thus rendered less harmful."

Shipbuilding in Nova Scotia.

P. T. McGrath, in writing from St. John's, Nfld., about the proposed operations of the Dominion Steel & Iron Co., says:—"The plans of the syndicate comprehend nothing less vast & ambitious than the creation of a second Clyde bank or Belfast at the Sydney inlet, in Cape Breton, for the construction of iron steamers for commercial & maybe for warlike purposes. The erection of an immense shipbuilding plant in that region might be regarded at first sight as a visionary scheme, but the practical, business-like character of the men identified with the movement warrants the belief that they will make it a financial success. Though the U.S. possesses some dockyards along the Atlantic coast, need of a commercial shipbuilding plant has been greatly deplored, & the conditions under which the Whitney syndicate can produce the materials for such an industry encourage them in the hope that they can defy competition from any quarter whatever."

"The essentials to the attainment of this end are an unlimited supply of iron ore sufficiently rich in quality, an abundance of cheap labor, coal & limestone in close proximity, & transshipping facilities & watercarriage to comprehend the varied phases of a large shipyard. The iron deposits of Newfoundland & the low rate of wages prevailing here enabled the first 2 conditions to be met here; the coal & limestone abound in Cape Breton, & North Sydney forms one of the finest harbors in the world, with foreshore conditions most advantageous for the purpose had in view by these enterprising capitalists."

North Sydney has offered a free site for the erection of the plant & exemption from city taxes, etc.; in fact, there is spirited bidding among all the Cape Breton towns for the establishment of such a prosperity-promoter among them. It is estimated that the various undertakings in connection with such an enterprise—steamer crews, longshoremen, labor-

ers, smelters, coal miners & shipbuilders eventually—will call for the employment of quite an army of men, some thousands at least, & it is not difficult to imagine the benefit which will react upon the Dominion & on the various other industries associated with it, directly or otherwise.—Globe.

Canadian Shipping Statistics.

The report on shipping just issued by the Dominion Department of Marine shows that the number of vessels remaining on the registry books of the Dominion on Dec. 31, 1898, including old & new vessels, sailing vessels, steamers & barges, was 6,643, measuring 693,782 tons register tonnage, a decrease of 41 vessels & of 37,972 tons register from 1897. The number of steamers on the registry books on the same date was 1,909, with a gross tonnage of 267,237 tons. Assuming the average value to be \$30 a ton, the value of the registered tonnage of Canada, on Dec. 31 last, was \$20,813,460.

Following are the figures by Provinces:—

	Sailing Ships and Steamers.	Steamers.	Gross Tonnage of Steamers.	Net Tonnage of Sailing Ships and Steamers.
New Brunswick	993	117	9,858	89,257
Nova Scotia	2,167	146	19,747	262,176
Quebec	1,378	322	75,349	144,447
Ontario	1,452	924	99,419	134,180
P. E. Island	178	21	4,043	15,979
British Columbia	444	299	52,129	40,304
Manitoba	121	80	6,692	7,439
Total	6,643	1,909	267,237	693,782

Following is a statement of vessels built & registered in 1897 & 1898:—

	1897.		1898.	
	Vessels.	Tons.	Vessels.	Tons.
New Brunswick	33	1,738	31	790
Nova Scotia	54	4,259	67	4,962
Quebec	49	4,227	51	4,139
Ontario	50	3,850	46	1,872
P. E. Island	2	226	5	372
British Columbia	26	2,429	72	12,228
Manitoba	16	365	6	159
Total	231	17,094	278	24,522

Estimating the value of the new tonnage at \$45 a ton, it gives a total value of \$1,103,490 for new vessels.

A statement giving the net tonnage of each of the maritime States of the world, shows that Canada holds 7th place, as follows:—

British, including Canada and the Colonies	9,760,043
American	1,837,729
German	1,572,665
Norwegian	1,545,822
French	801,164
Italian	730,953
Canadian	693,782

Richelieu & Ontario Navigation Co.

The Co. is operating 26 steamers.

The Dominion Parliament has given the Co. power to increase its capital from \$2,000,000 to \$5,000,000 & to build & operate hotels.

It is intended to make daylight trips between Quebec & Montreal, starting about the middle of July. The str. Caspian & Columbian will do the service. The orchestras will be transferred from the night to the day boats.

It is said plans have been prepared for additional steamers for the Co., one to run through between Toronto & Montreal & the other for service on the St. Lawrence alone, but no decision has been come to about building them.

The new str. Toronto, already described in these columns, went into service June 1 & is making tri-weekly trips between Toronto & Prescott via Charlotte, N.Y. The officers are Capt. H. Esford, formerly of the Corsican; 1st officer, W. Booth, Jr.; Chief Engineer, W. Black; Purser, J. B. Tinning. The str. Bohemian meets her at Prescott & takes the passengers down the Rapids.

Early in May an agreement was entered into between the R. & O. N. Co. & the American line by which competition between the two companies between Clayton & Alexandria Bay & Montreal was withdrawn. The Richelieu Co. in return withdraws its boats from the islands. By the new arrangement the Richelieu Co. secures a monopoly of the through traffic, & the announcement of the arrangement had an appreciable effect on the Co.'s stock.

The Co. has purchased for \$80,000 the Virginia, a steamer owned by the Baltimore Packet Co., of Baltimore. The Virginia will

replace the Carolina on the Saguenay route. She is a side-wheeler with capacity for about 350 passengers.

British Columbia Shipping.

The str. Victoria has succeeded the str. City of Kingston on the Victoria-Seattle run.

G. D. Bowles, R.N.R., is commanding the C.P.R. Co.'s R.M.S. Empress of Japan during the absence of Capt. Lee on a holiday. Mr. Bowles was formerly chief officer of the Empress of India.

The Dominion Steamboat Line Co. has been incorporated with \$45,000 capital, & head office at Bennett City, Cassiar District, to acquire the str. Clifford Sifton & to take over the business of the Dominion Steamboat Line.

An English Co. is said to have made an offer for Armstrong & Morrison's foundry, etc., in Vancouver, with a view of establishing a marine railway with larger ways & more up-to-date accommodation than the present one in Vancouver.

The liquidator of J. Huddart's Canadian-Australian Steamship Co. offers for sale by tender in one lot as a going concern the steamships Miowera, Warrimoo & Aorangi, & all the business goodwill & property of the Co. This is a mere formal stage in the reconstruction of the Co., & is not likely to affect the continuance of the service.

Capt. John Irving, having retired from the management of the Canadian Pacific Navigation Co., as recently mentioned in this paper, has gone into steamboat business for himself between Bennett & Atlin & Bennett & Dawson City. F. W. Vincent is at present Assistant Manager of the C.P.N. Co. We were recently informed that there was nothing new to report in regard to a new steamer for the Victoria-Vancouver route.

A recent traveller by one of the C. P. R.'s Empress steamers, writes from Yokohama: "The resident in the East has one advantage of his brother at home, & that is, he can at times travel on an Empress of the C. P. R. line. He who has not done so has surely missed one of the pleasures of life. For it is a pleasure to travel at anything from 15 to 17 knots on a huge yacht, whose means of propulsion, in the entire absence of vibration, can only be guessed at; where faultless meals are served up, with the attendance of clean, silent & picturesque Chinamen; & where a walk through the carpeted & steam-heated alleyways below, gives the impression of a first-class hotel on shore."

Maritime Province Shipping.

The str. Grand Lake has been purchased by the Newfoundland Ry. to ply in connection with it.

The Victoria S.S. Co. has been incorporated with a capital of \$12,000, & headquarters at Baddeck, N.S.

It is said the str. Harlaw will not continue on the Cape Breton-Newfoundland route this season, owing to a large reduction in her subsidy.

The s.s. Mayflower has been put on the route between Pictou, N.S., & Magdalen Islands & Cape Breton, in place of the s.s. St. Olaf.

The str. Nyanza, recently built at Hantsport, N.S., has been placed on the Petitcodiac River, & is running between Moncton, N.B., & river & bay points.

The Star Line S.S. Co., Ltd., has been incorporated under the New Brunswick Companies Act to acquire the vessels, business, &c., of the Star Line S.S. Co. on the St. John River & its tributaries.

The Washington County R.R. announces that next season it will put on steamers between Eastport, Me., & Digby, N.S., with a view to diverting the Nova Scotia traffic over its line & on to the Maine Central.

The str. Lunenburg has been purchased for the mail service between Pictou, N.S., & Magdalen Islands. The Maritime Transportation Co. has chartered the str. Acadia to take her place on the Halifax-Lunenburg trip.

The incorporation of separate joint stock companies for a single vessel goes on apace, the latest being the s.s. Tanagra Co., & the Ship Charles Co., in New Brunswick, the Ship Canada Co., & the Ship Harvest Queen Co., at Wolfville, N.S.

The Dominion Atlantic Ry. has received the latest addition to its fleet, the s.s. Prince Arthur, which was built at Hull, Eng. She is as nearly as possible identical with the Co.'s s.s. Prince George, & on her trial trip

The promoter, G. Robertson, will probably go to England at once to interview the Admiralty in regard to an Imperial subvention, having last year obtained Mr. Goschen's promise that such would be forthcoming. The Minister of Finance also proposes to take power to grant \$10,000 a year for 20 years to assist in lengthening existing dry docks. This would apply to Halifax & Quebec.

Ontario & The Great Lakes.

The lighthouse supplies for the Great Lakes are this year being delivered by the str. Saturn.

The Signal Towing & Rafting Co., of Wiar-ton, has been incorporated under the Ontario Companies Act, capital \$3,000.

The Dominion Government has granted permission for the change of the name of the str. Eurydice, of Toronto, to the Donnelly.

The Rainy River & Pioneer Steamboat lines on Lake of the Woods, have been amalgamated as the Rainy River Navigation Co., with a capital of \$100,000.

At the annual meeting of the St. Lawrence River Steamboat Co. in Kingston, recently, the old directors & officers were re-elected & 6% dividend declared.

The str. Lincoln, of the Lakeside Navigation Co., formerly known as the Greyhound, which was rebuilt & enlarged last winter, is running between Toronto & St. Catharines.

A. Mackenzie has purchased the str. Sir W. C. Van Horne & fleet of barges from Boucher, Langstaff & Holmes, & is doing a passenger & freight business between Rat Portage & Fort Francis.

The Oakville Navigation Co. has been incorporated under the Ontario Companies Act, capital \$40,000. It is empowered to establish a summer hotel & resort, as well as to do navigation business.

At the recent annual meeting of the Westcott Wrecking Co. in Sarnia these officers were elected: President & Manager, J. W. Westcott, Detroit; other directors: F. F. Pardee, Sarnia; I. Watt, Windsor.

The Ottawa Forwarding Co. has built, at Ottawa, a freight steamer 112 ft. long, 24 ft. beam, & 9 ft. deep. She will have a speed of 12 miles an hour, & will run between Oswego & Montreal. The Co. now has a fleet of 6 freighters, 2 on the St. Lawrence route & 4 on the Ottawa & Rideau Rivers.

A. T. Wood, W. E. Sanford, W. Southam, C. E. Doolittle, C. W. Wilcox, W. D. Long, & A. B. Mackay, have applied for incorporation as the Quebec, Hamilton & Fort William Navigation Co., capital \$1,000,000, head office Hamilton. It is proposed to build 2 steamers at Hamilton this year & others later on.

There is no passenger war on the St. Lawrence this year, the R. & O. N. Co. handling the through business exclusively, & the Folger boats attending to the local Thousand Island business. The Folger fleet consist of the strs. New York, Empire State, America, St. Lawrence, New Island Wanderer, Islander, & Jessie Bain.

The Northern Navigation Co. of Ontario, with headquarters at Collingwood, has had its capital increased from \$350,000 to \$1,000,000. The officers recently elected are: J. Scott, President; J. J. Long, Vice-President; C. E. Stephens, Treasurer; T. Long, Secre-

OTTAWA RIVER NAVIGATION CO.'S STEAMBOAT VICTORIA.

slightly exceeded the latter's speed, attaining a mean speed of 22 knots. Both these steamers are heated by electricity.

The first step has been taken in what looks like the beginning of a war between the Dominion Atlantic Ry. & the International Steamship Co., for the St. John, N.B., & Boston passenger & freight business. The International has had the business for 30 years, & has provided a service which was slow, as stops were made at Eastport. Recently the D.A.R. announced 2 trips a week direct by the s.s. Prince Edward. The International Co. followed by announcing that steamer St. Croix will not call at Eastport in future, but will make 2 direct trips each week. The next step in the fight will probably be the placing of another boat on the route by the D.A.R.

The scheme for a dry dock 800 ft. long at St. John, N.B., is taking shape. The New Brunswick Legislature has incorporated the Imperial Dry Dock Co. with a capital of \$1,000,000, & has given a subsidy of \$5,000 a year for 40 years, on consideration that the Dominion & Imperial Governments also grant substantial aid. The Dominion Minister of Finance has given notice of a resolution to grant an annual subsidy of \$20,000 for 20 years. Under the present statute the Dominion Government can only give aid to the extent of 2 per cent. per annum on \$500,000.

ary; J. J. Long, C. E. Stephens, C. Cameron & M. Hinton, Managing Board; A. Miscampbell, Manager.

The Lake Ontario Navigation Co.'s str. *Albatross*, built at Picton last winter, & in which the old *Empress of India's* engines, etc., have been used, is running tri-weekly between Toronto, Charlotte, Sudus Point, Oswego, Kingston, Rockport & Alexandria Bay. The citizens of Picton presented a set of flags for her, accompanied by a congratulatory address to Capt. Hepburn.

The tug *Walker*, which foundered last fall near Nicholson's Island, Lake Ontario, has been raised. She was hoisted & bound firmly with chains to the bottom of the schr. *Graham*. When fastened together this way the boats drew 35 ft. of water. They were then towed to Kingston. While searching for the *Walker* the wreckers found the wreck of the propeller *Zealand*, which was lost in 1880 with a valuable cargo & entire crew.

The Polson Iron Works, Toronto, at which the str. *Majestic*, described under the head of Quebec, is being built, has negotiations for the construction of other steamers pending, & it is expected to have another large vessel under way at the works in a short time. It is the intention of the Co. to enlarge its docks by filling in the marine railway adjacent to the main workshops & making an extension out into the bay as far as the new windmill line, giving a space of about 7 acres.

The Canada Atlantic Ry. has leased some 15 barges for 3 years from the Kingston & Montreal Forwarding Co. to run between Coteau & Montreal with grain. It is announced that the Canada Atlantic will add 2 freighters of from 4,500 to 5,000 tons to its fleet next season, one for the Chicago & the other for the Duluth trade. The Co. also expects to run a boat to Fort William next season. The 5 steamers of the Menominee fleet, running between Chicago & Parry Harbor, the charter of which, to the Canada Atlantic, expires at the close of this season, have not been sold to that Co., as reported.

The Northern Navigation Co. of Ontario, has bought from the Montreal & Cornwall Navigation Co., the str. *Rocket*, a side-wheel steel boat built for the Gulf trade. She is 150 ft. 8 in. long, 25½ ft. wide & 9 ft. 2 ins. deep. Gross tonnage 428, registered tonnage 228. In part payment the N. N. Co. gave its screw str. *City of London*, 120 ft. long, 27 ft. wide & 7 ft. 8 in. deep, gross tonnage 516, registered tonnage 294. The M. & C. N. Co. will put on the Montreal-Cornwall run the side-wheel steamer *Filgate*, recently purchased. She is 158 ft. long, 25 ft. 4 ins. wide, & 7 ft. 8 ins. deep, gross tonnage 263, registered tonnage 153.

The Dominion Parliament has passed the bill to incorporate the Canadian Inland Transportation Co., the principal incorporators of which are Senator Forget, Montreal; A. Lumsden & J. McRae, Ottawa; & W. Christie, Toronto. The Co. proposes to place on

the upper lakes a fleet of steel steamships which will be able successfully to compete with the U.S. carriers. Ten solid steel vessels, measuring 276 ft. in length by 43 ft. beam, will be constructed. Their capacity will be 78,000 bus. of wheat with a 14 ft. depth in the canals, which could be increased to 108,000 bus. with an 18 ft. canal system. The Co. will build its own elevators & terminals, & it is believed that a large business can be done in return freights of coal & other commodities from Montreal & intermediate points. The Co. intends also to go into the business of carrying ore from the head of Lake Superior to the blast furnace at Hamilton.

Quebec Navigation Matters.

The Lake Labelle Navigation Co. has been incorporated; capital \$10,000. Headquarters Labelle.

A. Lumsden, M. L. A., Ottawa, has bought the boats & interests of the Lake Temiscamingue Navigation Co.

It is said a company is being formed in Quebec to run a line of steamers between Roberval, Peribonca and the parish of Honfleur, for the purpose of trading in those districts.

The Quebec Steamship Co. has been empowered by the Dominion Parliament to do a mercantile business. This exceptional privilege was given because the Co. does a large trade with the Windward Islands & proposes tendering for the contract for carrying the Imperial mails, which requires the company holding it to purchase all fruit offered at certain ports.

The Ottawa River Navigation Co.'s steamer *Victoria*, recently built in Toronto, the machinery being made at the Polson Engine Works, is 100 ft. long, with 20 ft. beam, with a speed of 14 to 15 knots. She is specially intended for excursion traffic, having accommodation for 300 passengers, & has been put on the run between Ottawa & Thurso. She cost about \$20,000. A view of her is given on page 183.

A recent Quebec press despatch said: "As soon as the new steamship for the winter ferry across the Straits of Northumberland arrives from Europe the s.s. *Stanley* will be taken to Quebec & placed at the disposal of the I.C.R. authorities. It will be used in winter in keeping open a communication between Quebec & Levis. The present winter ferry boats at Quebec do not cross to Levis after 5 p.m., though the down I.C.R. train only leaves Levis at midnight." The Deputy Minister of Marine recently advised us that he was not aware of any such arrangement as above mentioned.

The Richelieu River Navigation Co. has been incorporated under the Dominion Companies Act, with a capital of \$30,000 & headquarters at St. John's Que., to carry on a navigation business, with power to acquire

land for picnic purposes. The Co. will run a steamboat, the *Majestic*, on the Richelieu River between St. John's & the Noyan wharf at the Lacolle-Clarenceville bridge. The *Majestic*, which is now nearly completed, is being built by the Polson Iron Works, Toronto. Her dimensions are: length over all, 112 ft.; beam, extreme, 22½ ft.; draught, aft, 6 ft. She has fore & aft compound engines, jet condensing cylinders 14 x 28, with a 16 in. stroke; Fitzgibbon boiler, with a working pressure of 160 lbs. of steam, & has a speed of 16 miles an hour. She has a carrying capacity of from 600 to 700 people, & will cost about \$25,000. Ten staterooms have been built on the upper deck for the use of her captain & officers.

New Winter Steamer for P.E.I.

A very full description of this vessel & copious extracts from the specifications were published in our issue of July, 1898, pg. 131. The illustration on page 185 shows the outboard profile of the steamer. We are indebted to Major Gourdeau, Deputy Minister of Marine, for a tracing of the plan from which the illustration has been made. The recently issued report of the Department of Marine has the following references to the winter service:

The *Stanley* has been engaged in the winter service every season since 1887, & has proved a most excellent ice steamer. The severe strain which she has undergone in battling with heavy ice in the Straits of Northumberland has had its effect. She needs extensive repairs, which can only be made in Great Britain, in order to make her thoroughly efficient for winter service. An examination of the hull & machinery has shown it would not be prudent to force her through heavy ice as formerly where lives & property are at stake. It being considered in the public interests to construct a larger & improved steamer, Capt. McElhinney, Nautical Adviser, was instructed to proceed to Great Britain to examine ice vessels under construction there, & to obtain tenders from shipbuilders, for building a steel steamer according to specifications & plans, to class 100 A1 at Lloyds. The tender of Gourlay Bros. & Co., Dundee, being the most advantageous, Capt. McElhinney recommended its acceptance, & a contract was entered into with them to build the steamer & have her completed by the end of Aug., 1899.

The accommodation of the *Stanley* for freight & passengers was insufficient at times. The new steamer will afford greater & better accommodation for passengers, & will have more space for freight. The dimensions of the new steamer will be 225 ft. in length between perpendiculars; breadth moulded, 32½ ft.; depth moulded, 20½ ft. She will be heavily stiffened about the water line with heavy plating & intermediate angle iron framing. Similar plating will be placed on the bows & bottom, extending 70 ft. towards

midships. The engines will be exceptionally strong, of the triple expansion type, having cylinders 26 ins., 41 ins. & 65 ins. diameter, to develop not less than 2,900 indicated h.p. under forced draught. This will exceed the Stanley's power by about 600 h.p. The stern has been specially designed for backing astern in the ice, & will have an ice cutter to protect the rudder stock; the rudder will be solid cast steel. The vessel will be provided with water ballast tanks in the bottom & trimming tanks forward and aft. Experience has been gained by the service of the Stanley, & in designing the new steamer improvements were kept in view. Instead of berths, as in the Stanley, 8 state-rooms will be provided, with 2 berths & a lounge in each. One specially large state-room will be fitted up with beds & other conveniences. The dining saloon will be sufficiently spacious & will be neatly furnished, upholstered & well lighted with incandescent electric lamps. Part of the saloon will be furnished specially for the comfort of ladies, & will have the latest improvements in heating apparatus. The main objects, however, have been to secure strength of hull & powerful engines. The steamer will cost about £38,000, without furnishings.

The schooner Prince Edward, built in 1887, being now unserviceable for delivering light-house supplies, a steamer is being built & will

No. 35, June 12. British Columbia. Shoals southeastward of White Rock, Trincomalee Channel.

No. 37, June 15. Prince Edward Island. Whistling buoy off West Point replaced.

Great Lakes Insurance Policies.

On the 2nd class vessels insurance formerly expired at noon of Nov. 30, & Judge Swan, District Court of Detroit, Mich., some time ago based a decision on the fact, & called that hour the close of navigation on the Great Lakes. Since that time it has held as a precedent in law suits. But since that decision the insurance syndicate have made a concession to the 2nd class boats by calling Dec. 1, or the midnight of Nov. 30, the hour of ending their policies. If these vessels happen to be out at that time they are given an insurance extension, but the rate is much greater than charged the A1 boats. With the 1st class vessels the insurance expires, if they are in port, on the midnight of Dec. 11. If the vessel happens to be on the lake with a cargo contract, departure having been made prior to the expiration of the insurance, her insurance policy is extended

sels are the same. Their keels are 500 ft. long, their length over all or from knight-heads to taffrail being about 520 ft., their beam 60 ft. & their depth 36 ft., with a registered tonnage of 10,000 tons. The engines are of the triple expansion type, 2 sets in each ship driving twin screws. They will be powerful enough to send the mammoth vessels through the water under favorable conditions at a speed of 16 knots. The calculation is that leaving Liverpool on Thursday, say at 4 p.m., they will arrive at Quebec on the following Thursday evening; allowing for delay in landing steerage passengers at Quebec & a loss of 8 hours during darkness in the river, they will reach Montreal on Friday afternoon, or 8 days from Liverpool. For passengers to Canada this will be really as fast a service as a 20 knot ship to New York, not considering the large additional outlay experienced by those who take that route. Indeed, it may be safely said that when the Bavarian, Tunisian, Parisian & Californian are running, not only will Canadians use their own ships, but they will attract a good share of the Western & Southwestern United States passenger business to the more favored Canadian route.

It is intended, too, that these vessels will be models of excellence of the shipbuilder's craft. The hotel portion of a modern steamer

OUTBOARD DRAWING OF STEAMER BUILDING FOR PRINCE EDWARD ISLAND WINTER SERVICE.

be ready early in June. The length will be 95 ft., breadth 19 ft. & depth of hold 8 ft.; speed 9 knots. The cost will be \$15,100 for hull & engines. Both are being constructed in P.E.I.

Dominion Notices to Mariners.

The Department of Marine has issued the following notices:—

No. 29, May 20, Ontario.—Platform buoy south of Duck Islands, Lake Huron.

No. 30, May 20, New Brunswick.—1. Improvements in Jemseg light, St. John River. 2. Improvements in Indian Point range lights, Shiffagan Gulley.

No. 31, May 26, Quebec.—1. Gas buoy on St. Thomas Bank. 2. Uncharted shoal off Ste. Felicite, Nova Scotia. 3. Erratum.

No. 32, June 1, British Columbia.—1. Uncharted dangers off Kinghorn Island, Strait of Georgia. 2. Rocky ledge off Three Islets, east point of Cortes Island. 3. Shark Spit & Channel Rock beacons, Mary Island. 4. Nanaimo Harbor, additional spar buoy. 5. Beacons in Baynes Sound re-erected.

at pro rata rate, which is the smallest the insurance syndicates have been willing to grant & which is so small that the owners have never protested against paying it. The extension continues until her arrival at destination, even if it takes 10 days after the nominal time of ending. If she is held up at a way port by ice & compelled to stay there all winter, insurance ceases on her arrival at that point.—Marine Record.

Additions to the Allan Line.

The following circular has been issued by the Allan Line:—

The S.S. Bavarian, 10,000 tons, twin screw, was successfully launched from the yards of Denny & Co., Dumbarton, on the Clyde, on May 11. The Bavarian is the largest of 606 vessels built by this firm, and is the 12th built by them for the Allan Line. She is in all respects a duplicate of the S.S. Tunisian, now under construction by another Clyde ship-building firm, Alexander Stephens & Son, of Linthouse, near Glasgow. The Bavarian & Tunisian were ordered in Oct., 1897, & their keels were laid down shortly after. Neither time, skill nor money has been spared to produce in these two vessels the finest types of their kind. The specifications for both ves-

has reached a stage of perfection undreamt of "by those who went down to the sea in ships" a quarter of a century ago. The brightest light then was a paraffine candle or an oil lamp. Now thousands of incandescent lights illuminate every part of the ship, even the stoke hole. Then a smoking-room or a bath-room was only found on the best steamers. In these steamers even the steerage passengers are to be provided with smoking-rooms, & the 1st cabin bath-rooms, some of them with needle-bath attachments, & toilet-rooms, with the sumptuously-arranged smoking-rooms, seem as if they were arranged for a nobleman's castle rather than a sea-going vessel, sometimes in legal parlance denominated a "common carrier."

The whole 1st class accommodation of these steamers is arranged on a two-storied steel structure, extending about 180 ft. fore & aft, or say 90 ft. forward & 90 ft. aft, of the exact centre, & the whole width of the vessel, 60 ft. It will thus be seen that the 1st cabin passengers have at once the steadiest and widest part of the ship, & owing to this structure being above the ordinary decks, the cabins will be lighted by large port holes or with oblong windows, giving the possessors of these staterooms a homelike feeling, as well as securing the most ample ventilation. The maximum number of 1st cabin passengers to be carried will be 162,

As the rule will be a seat for each at one sitting at the dining-table, this maintaining the rule at present observed in the Allan fleet. The library & music room on the bridge deck will be found a source of beauty & convenience. Here are many quiet nooks, with lights finding their way through ornate windows, & ports shaded with soft Japanese curtains. The floors covered with rugs of oriental looms, softening the footfalls & giving that quiet elegance & repose that will enable many a wayfarer to really enjoy "his home on the ocean deep." The smoking-room, situated on the upper part of the central tower, & therefore as remote as possible from the library, but on the same deck, is an apartment sufficiently spacious for half a dozen whist parties as well as for many other passengers who love the weed. The space outside the house on the bridge deck is devoted to a covered promenade, & the shade deck or upper promenade, unencumbered in any way, is entirely reserved for 1st class passengers. To adapt them specially for the North Atlantic trade in winter they will be heated throughout with steam, arranged with cut-off valves so that passengers may have their cabins warmed in accordance with their own wishes without reference to others.

But the projectors of these ships have not given their whole attention to the 1st cabin arrangements. The plans show many wonderful improvements in this department of the vessel. Indeed, there is nothing for the comfort of the passengers in the 1st cabin that will not be found in a modified form in the 2nd cabin. There is a ladies' conversation room with piano; smoking room for men; bathrooms of most modern types, with white marbleized toilet rooms, running water in staterooms, dining room on spar deck, electric lights & bells in staterooms—all these, with a good table, will be provided for 2nd cabin passengers. The rates will be so low that a trip to the Old Country will be feasible to many whose purses do not afford the higher rates of the 1st cabin, & yet whose tastes lead them to require superior arrangements to those found in the steerage, or 3rd class. The demand for this middle class accommodation has been steadily on the increase during recent years. It can be truly said that on no Trans-Atlantic steamer has this demand been met in a more complete manner than on the new Allan liners.

"The poor we have always with us," i.e., that class who perforce must take the cheapest & travel not for the love of it. Well, they have not been forgotten, as may be seen from an examination of the plans. It is not usual to find an apartment denominated "Third class smoke-room," nor "Women's sitting-room," on ocean steamers, but here it is; besides there are small rooms for men & their wives, & for families, & no room to accommodate more than 6 persons. Space is also reserved for dining accommodation, & the Allan line rule again observed of a seat at the table for each passenger carried.

The passenger accommodation provides for 300 1st & 2nd class, and say 500 steerage, there is room for 8,000 tons of cargo, water ballast sufficient to make the vessels seaworthy without cargo; & refrigerator chambers for a large quantity of perishable provisions to supply the growing demands of this comparatively new & growing industry. The vessels will be provided with the latest & most improved devices for the handling of cargo,

as well as for the navigation & management of the ships. The twin screws, it is expected, will be of great assistance in the rapid manipulation of the ships in the tortuous river channels, as well as offering an additional security against delay from accidents to the machinery at sea.

These steamers, like the others of the Allan line, are built with bilge keels; these with their great width of 60 ft. will, it is thought, insure great steadiness even in a heavy sea. In addition the vessels are built throughout their entire length with a double bottom, which with the numerous bulkheads, will offer the highest guarantee for safety in case of accident.

The Bavarian is intended to sail from Liverpool July 27, & from Montreal Aug. 10, & every 4 weeks thereafter throughout the season. The Tunisian is expected to be ready the last part of September, the exact date will be announced later, & until that time her place in the fleet will be filled by the R. M. S. S. Tainui, now under charter. The Tainui is a vessel of the highest class, about same size & speed as Parisian. Having been built for the Australian trade her cabins are of more than the ordinary size on Trans-Atlantic vessels & special care has been taken to secure ample ventilation.

The S. S. Parisian, after an almost unprecedented career of successful voyages across the Atlantic, was placed in the hands of the Belfast builders & engineers, Workman, Clark & Co., in Jan. last, to receive new engines & boilers, & to bring her entire passenger accommodation up to date. The contract calls for her delivery early in July, when she will resume her place in the service practically a new steamer. Her speed will be increased by 1 knot an hour, so as to ensure regularity in running with the new steamers. Her 1st & 2nd cabin passengers' accommodation have been greatly improved, especially the latter. A new dining saloon has been added extending the width of the ship. New ladies' room on the spar deck, & also a new smoking room on the promenade deck for the 1st cabin, & one on the spar deck for the 2nd cabin passengers. The 3rd class, known formerly as steerage, has been reorganized. Small rooms for families have been created—a sitting room for the women, play rooms for the children, & a smoke room for the men are amongst the new features. The toilet & sanitary arrangements in all classes have been rearranged after the most recent & best types, all of which will retain for the Parisian the hold she for so long enjoyed on the affections of her patrons.

The S. S. Californian, built in 1891 by A. Stephens & Sons, builders of the Tunisian, has a registered tonnage of 4,500 tons. She is 400 ft. long, 46 ft. beam & 32 ft. 8 ins. deep. She is divided into 8 water-tight compartments, the bulkheads in all coming up to the spar deck, affording the best obtainable protection in case of accident. The engines are on the triple expansion principle, & the speed of the vessel is a little better than 14 knots an hour. She has made the passage from Quebec to Liverpool in 8 days. Her accommodation for all classes of passengers is such as to give the highest satisfaction. During the winter of 1898-99 entirely new 2nd cabin accommodation has been arranged so that the entire appointments of this vessel are equal to the Parisian, but not on quite so large a scale.

ELECTRIC RAILWAYS.

British Columbia Electric Ry. Co.

The 2nd annual report for the year ended Mar. 31 last, has been issued, the main points being summarized as follows:—In Nov., 1898, an issue was successfully made at £11 per share of 12,000 non-cumulative 5% preference shares of £10 each, preferential as to capital as well as dividend, & ranking for additional dividend rateably with the ordinary shares, after such ordinary shares have received 7% per annum. The £60,000 non-cumulative 6% income bonds have been paid off at par out of the proceeds of this issue. The balance of the proceeds is being devoted to the purposes set forth in the prospectus. Most of the extensions & improvements set out in the recommendations of the General Manager & Chief Engineer have been taken in hand, & it is anticipated that they will almost all be completed by Sept. 1 next, from which time the increase in annual profits which is expected from them should commence to accrue. Some of the less important items, such as the 125-light arc dynamo, the new power metallic circuit, the lighting extensions, the re-arrangement of the circuits, the installation of additional & new feeders in Vancouver, & most of the lighting extensions in Victoria were completed about the beginning of 1899. The installation of the plant for utilizing the water-power from the falls of Goldstream at Victoria, has been completed. Much difficulty was experienced in getting it into satisfactory working order, before it could be taken over from the contractors. It was not until the beginning of Sep., '98, that the machinery was first started, & troubles were experienced until the end of Mar., '99. The difficulties have now been got over, & the plant has been running satisfactorily since the beginning of April, but, owing to the delays, no benefit was realized in the year under review. The directors anticipate the benefit will be felt this year.

With a view of enabling the Co., not only to handle the present load, but also to have a considerable margin of power for increase in business, without exceeding the consumption of 4,000,000 gals. of water per day, which, under the lease, is the maximum allowable at the minimum rental, the directors propose the erection of a storage battery to be worked in connection with the water-power plant, & are now taking the best expert advice obtainable as to which of many now in the market is the most efficient & economical form of accumulator for the purpose.

The gross profit for the year amounts to £30,188 14s. 1d. From this the directors have paid the debenture interest & the 6% dividend due on the income bonds up to the date of redemption. Including £207 19s. 9d. brought forward from last year, the accounts show a net balance of revenue of £16,575 10s. 6d., & after deducting from this the sum required to meet that part of the dividend on the preference shares which had accrued due to Mar. 31, viz., £1,018 17s. 5d., there remains £15,556 13s. 1d. available for distribution. From this sum the directors have decided to write off a further 20% of preliminary expenses, £1,218 8s. 6d. To recommend the payment of a dividend of 4% per annum (free of income tax) on the ordinary shares of the

Co., absorbing £8,000. To transfer to reserve account, £6,148 19s. 10d., & to carry forward to the next account £189 4s. 9d. In addition to £6,148 19s. 10d., above mentioned, the directors have transferred to reserve account the surplus of premium received over the expenses of the preference share issue, £1,349 5s. 2d., bringing the reserve fund up to £12,000.

The disastrous fire at New Westminster in Sept., '98, only affected the Co. by the burning down of about ½ a mile of track equipment. The Co. donated \$2,100 to the relief fund. Owing to the large number of sight-seers carried at the time, & the large amount of building materials & general freight carried since, the receipts of the Westminster branch have suffered comparatively little, notwithstanding that the return fare between Vancouver & Westminster has been reduced from 75c. to 60c.

Although the percentage of operating expenses has been considerably reduced, compared with last year, it is not yet satisfactory, but the water power installation at Victoria is looked to to reduce the expenses, & the directors anticipate that on the completion of the works now being erected in Vancouver, the percentage will compare favorably with that of other undertakings of a similar nature. Following is a comparison with the statistics of other leading companies on the London market carrying on the same business:

COMPANY.	Receipts.	Expenses.	Profit.	Percentage of working expenses to gross receipts.	
				1898.	1897.
Montreal St. Ry.....	\$1,471,939	\$ 794,884	\$ 797,055	53.96	53.96
Ottawa Electric Ry.....	231,892	150,138	72,043	68.66	67.67
Toronto Railway.....	1,210,018	578,857	631,709	47.81	48.81
London St. Ry.....	113,811	65,005	48,146	7.66	57.06
Twin City Rapid Transit.	2,179,716	1,019,392	1,151,323	46.96	43.18
B. C. Electric Ry. Co.....	412,368	249,768	162,600	60.57	68.01

Detailed reference is made to the lighting & power branches of the Co.'s business.

The rolling stock has been maintained in good condition, all necessary repairs have been made, & 4 new fully equipped cars with motors have been added. The road bed & track on the Vancouver & Westminster branches have been maintained in excellent condition, & on the Westminster branch works have been commenced with a view to replacing the 4 small bridges by culverts & a permanent railway embankment. This will reduce the cost of maintenance in future. The directors have decided to entirely relay the road bed of the Victoria branch, as it is not in good condition & the rails are light, & they have decided that it will be more economical & wiser to put the track in first-rate permanent condition at once than to follow the system of improvement which was commenced last year, by which the road bed & track were to be renewed over a period of several years. The Co.'s land grants & town lots have again increased in value during the year, owing to the extension of trade which has been experienced. Building operations have been on a large scale throughout the cities in order to satisfy the continued demands for business premises & residences. The population is still increasing along the line between Vancouver & Westminster, & business, consequently, continues to develop in that direction. A complete reorganization & consolidation of the plant & machinery of the Vancouver & Westminster branches has been taken in hand, & will, it is expected, be finished about Sept. 1st. When this is accomplished, with the new installation just completed at Victoria, the Co. will have throughout thoroughly efficient machinery of the latest type, with all the most recent economical improvements, whilst the old plants at Victoria & Westminster will, as heretofore, be carefully maintained for the purposes of reserve. Beyond the regular lighting extensions, the installation of a storage battery, & the reconstructions of the road bed at Victoria al-

ready referred to, there are no new improvements or extensions at present proposed or needed.

EARNINGS & EXPENSES YEAR ENDED MAR. 31, 1899.

The chief officers of the Co. in Canada are: General Manager, J. Buntzen, Vancouver; Chief Engineer & General Superintendent, J. M. Campbell, Vancouver; Assistant Engineer & Superintendent, R. H. Sperling, Victoria; Assistant Comptroller, E. H. Wilcox, Vancouver; Local Manager, A. T. Goward, Victoria; Superintendents of Traffic, H. Gibson, Victoria, D. A. Shiles, Vancouver.

In Vancouver the Denman St. extension & the double tracking between Davie & Georgia Sts. have been completed.

A movement is on foot to secure the building of a line from Government St., Victoria, by Humboldt St., to Ross Bay Cemetery, & another line to the Gorge, by way of Gar-

chanically we find the joints all that could be desired, the resistance being no greater than that of the solid rail; so that by using it it is possible to dispense with the usual copper bond. We have at present one furnace at work, with which we make 75 joints per night on an average. On construction work, where there is no interference from traffic, the number of joints from one furnace per day should be at least 100.

The Montreal Star thus describes the work: "Formerly plates were used at the ends of the rails to make the connection. It is claimed, however, that there is a loss of power or voltage by this arrangement. Hence the Co., to save the power thus lost, is making a solid joint or weld by placing a mould around the ends of the rails, & pouring in molten metal. This can only be done where the streets are paved. A huge portable furnace is brought near the place where the joints are to be made. A wire is thrown over the ordinary street car wire, & power is thus obtained to operate a fan which soon reduces the cast iron thrown into the furnace together with coal to a liquid state. This is run out of the spout into large metal buckets which are carried, everyone by 4 men, to where the joint is to be made. It takes just about a bucket of metal to fill the mould around each joint. The intense heat of the molten iron affects the ends of the rails, & the whole makes a perfect weld. An asbestos covering is used over the mould, & through a hole in this covering the metal is poured into the mould. A few minutes after the iron is poured in the mould is pried off & the red hot mass allowed to cool."

The Sao Paulo R., L. & P. Co.

J. Gunn, Superintendent; J. M. Smith, Comptroller; H. E. H. Vernon, Transfer Clerk; R. S. Gossett, Stenographer, all of the Toronto Ry. Co.; A. J. Sinclair, C.E., of Mackenzie & Mann's staff; A. W. Mackenzie, son of the President of the Toronto Ry. Co., & E. W. McNeill, of Blake, Lash & Cassells' law office, Toronto, have been incorporated under the Ontario Companies Act as the Sao Paulo Railway Light & Power Co., Ltd., with a capital of \$6,000,000, & head office at Toronto, the incorporators to be the first directors. The Co. has sweeping powers to operate in Canada or elsewhere, among them being power to construct & operate works for the production of steam, gas & electricity, & steam, gas, electrical, pneumatic, mechanical, hydraulic & other power elsewhere than in Canada, to obtain governmental, municipal or other authority, to construct & operate railways & branches for cars & other vehicles; also telegraph & telephone lines & works in connection therewith; & to carry telegrams, messages, passengers, mails, express & other freight by power of animals, or by animal, steam, pneumatic, electric or mechanical power; & also there to acquire & operate lines of railway, telegraph & telephone, gas-works & lines, electric light works & lines, steam, gas, electrical, pneumatic, mechanical, hydraulic & other power, works & lines, & the assets, powers, etc., connected therewith, & shares in the capital stock & bonds, debentures etc., of any company owning or operating any of the same, & to acquire real & personal property & estates & interests therein, including water-powers, lakes, ponds, streams & water-courses; to acquire rights, franchises, etc., to enable the Co. properly to exercise & carry on all or any of its rights, & powers; to enter into contracts with governmental, municipal or other authorities, bodies & private individuals, respecting the exercise by the Co. of any of its rights, etc., & respecting the acquisition by the Co. of rights, etc., to obtain from governmental, municipal & other authorities, etc., confirmation, registration & recognition of the Co. & of its rights,

bally Road. The movers want to induce the heavily interested property owners to build the lines on condition that they will be continuously operated summer and winter, with a 5c. fare.

Cast-Welded Joints.

F. L. Wanklyn, Manager & Chief Engineer Montreal St. Ry. Co., has, in response to an enquiry, given us the following information respecting these joints:—"Last autumn 1,000 joints of this kind were made by us in different parts of our tracks, some in paved areas & some where the roadbed is simply macadam, the percentage of failures, due to expansion & contraction, being very small—less than ½ of 1%, & these occurred entirely in that portion of the track running in macadamized streets. We consider the experiment so satisfactory that we are now putting 5,000 joints in. The effect of these joints on tracks which have been in service for some years is most gratifying, as it entirely overcomes the low-joint trouble, which gives so much bother in street-railway systems, & I have no doubt that the introduction of cast-welded joints, if properly made, will materially increase the life of the rails. Electrically as well as me-

effects, etc., within any place outside of Canada, & such additional rights, etc., as may be considered expedient; & to do whatever may be necessary to comply with laws, etc., in any such place; to sell to any persons or corporations any of the works, properties, rights, etc., of the Company.

The Lines in Western Canada.

Nelson.—At a recent meeting the City Council considered the application of the British Electric Traction Co. of London, Eng., for a charter for a tramway system in Nelson. During the term of the previous Council this matter was broached by Capt. Duncan & C. S. Drummond, & the Council passed a resolution setting out that no obstacles would be placed in the way of the Co. securing a charter. Since then the matter has been taken up by the British Electric Traction Co., & W. A. Macdonald, solicitor, asked the Council to again pass in favor of the franchise. He explained it was the desire of the promoters to cable to the directors meeting in London that the Council was favorably inclined to the granting of the franchise, and that it would submit a by-law to the ratepayers authorizing the granting of the charter. If such a resolution was passed he said that the Co. would feel warranted in undertaking a great deal of the preliminary work at once, & so soon as the ratepayers consented to the granting of the franchise work would be proceeded with vigorously, & cars would be running as soon as possible. The Co. desired a charter for 35 years & exemption from taxation upon its property. Mr. Macdonald explained that the British Electric Traction Co. would be the parent company of the company to be incorporated in B.C., & as an evidence of its strength he said that it already controlled about 40 different tramway lines in Great Brit-

ain & other countries. The Council decided to comply with the request to submit a by-law to the ratepayers for their approval, upon the understanding that the Co. should give satisfactory evidence of its ability to carry out the work, & that within 2 months after the granting of the charter the Co. should commence work & continue the same without delay until at least 2 miles of tramway was completed. This was satisfactory to the promoter's solicitor & at a future meeting details of the agreement to be made between the Co. & the city will be gone into when a purchase clause will be inserted, & other conditions deemed necessary will be imposed.—Nelson Miner.

The Winnipeg Electric St. Ry. Co. is equipping its cars with fenders.

Winnipeg to St. Norbert.—C. H. Allen, solicitor, Winnipeg, gives notice of application to the Manitoba Legislature for the incorporation of a company to construct & operate a steam or electric railway from St. Boniface to St. Norbert, on the east side of Red River, with a branch to St. Anne, & to cross any bridges between St. Boniface & Winnipeg, also to build from St. Norbert on the west side of Red River to Winnipeg. It is understood the intention is to build electric lines & to operate pleasure parks.

Ontario Electric Railways.

Ayr to Paris.—A meeting was held recently to consider the question of connecting these points by an electric railway, & possibly extending it to Brantford. Considerable divergence of opinion manifested itself, but a majority favored the proposal.

Brantford St. Ry.—In reply to complaints from the City Council the management states that the track & poles are being attended to & that everything within reason is being done to improve the facilities of the line.

Mohawk Park, owned by this Co. is a delightful resort. It has the only water-chute in Canada, & which cost \$1,200. The base ball grounds & bicycle track are drawing cards. Last year 68 picnics were held there, it being a favorite resort for Sunday schools. The refreshment privileges & those for merry-go-round, water toboggan, boats, etc., are rented. No theatricals are presented, but such attractions as tight-rope walking, tumbling & slack-wire performances drew fairly well last year.

Cornwall Electric St. Ry.—On Queen's birthday some 12,000 passengers were carried. Manager Talbot thinks the prospects very good.

Hamilton.—It is said the Cataract Power Co., represented by J. Patterson, has now secured a majority of the stock of the Hamilton St. Ry. & the Hamilton Radial Electric Ry. & that it is likely to also get control of the Hamilton & Dundas Electric Ry. The stock of the Hamilton St. Ry. is \$205,000, & the bonded indebtedness some \$500,000. It is in contemplation for the amalgamated systems to be added to by the building of lines from Hamilton to Guelph & Waterloo, & by the extension of the Radial to Oakville. Other lines are also talked of, including an extension from Guelph to Owen Sound, the Hamilton, Ancaster & Chedoke project, a line from Hamilton via Brantford to Paris & Ayr, & a line from Brantford to Port Dover.

London St. Ry.'s gross earnings for May, \$5,352.10, a decrease of \$2,542.20 from May, 1898. The strike took place May 23, 1899, & is still in progress. The cause of the difficulty is the refusal of the Co. to formally recognize the union. The Co. offered to submit to arbitration the question as to whether it had or had not lived up to the agreement which settled the strike of 6 months ago, but the men replied that the agreement was unworkable & demanded a new one, which had for its first

A Popular Route to New York

Canadian Pacific, and Toronto, Hamilton
and Buffalo Railways in connection with
the New York Central & Hudson
River Railroad.

Leaving Toronto in the evening at 5.20 p.m. in one of the through sleeping cars of the Wagner Co., you are landed at Grand Central station, in the very heart of the City of New York, 4th Avenue and 42nd Street, at 8.15 next morning, adjacent to all hotels and business houses and avoiding the annoyance of transfer.

This is also the route of the famous
"EMPIRE STATE EXPRESS"
Fastest Train in the world.

clause a provision that none but union men be employed. This the Co. refused to consider.

The Ottawa Electric Ry. has got its desired legislation through the House of Commons despite vigorous attempts to change it. The Co. is given power to extend its line from some point on its present line in the municipalities of Hintonburg or Nepean to Bell's Corners, the extension to be begun within 18 months & completed within 3 years. The most important clause in the Act reads:—"Notwithstanding anything contained in the statutes of 1892, chap. 53, sec. 6, it is hereby declared & enacted that the following words in the Ontario statutes of 1898, chap. 45, sec. 2: 'no car of any description shall be run between midnight of Saturday & midnight of Sunday,' are not & shall not be applicable to the Ottawa Electric Ry. Co."

Owen Sound.—The matter of a summer resort at Balmy Beach, on the Georgian Bay, is being earnestly discussed. It is said that New Orleans & Cincinnati capitalists are looking into the matter, & the people are very hopeful that by next year the plans at present outlined will be put into effect. Property owners at the point named are active in their endeavors to interest outsiders, & offer all the ground & help possible to further the enterprise. One great feature of the culmination of this resort plan will be the construction of an electric railway to the proposed spot. The connection of Owen Sound & Balmy Beach has for a long time been talked of, & if the resort plans go through there will be no question of the road being built at once.—Street Railway Review.

The foregoing refers to the Owen Sound & Georgian Bay St. Ry. Co., particulars of which were given in our April issue, pg. 120.

The St. Thomas St. Ry. Co. has planned to give its patrons one of the most delightful pleasure resorts in the entire Dominion. Yarwood Farm has long been noted for its beautiful lakes & its natural & picturesque scenery. It lies 6 miles from St. Thomas & is reached by the railway. The Co. has recently purchased the farm & has had expert landscape gardeners at work laying out the grounds, & by the combination of art & nature has made a series of parks & amusement grounds rivalling anything in Canada. At the entrance to the resort is Yarwood Park. This is what constituted the handsome grounds around the old family residence. This needed no embellishing at the hands of the gardener; it had already been laid out as attractively as possible. The old farm house is a part of the purchase & from it such supplies as hot water & other aids to the comfort of the picnicker can be obtained. From this point, too, there is a splendid view of Lake Pinafore, a large body of clear, pure water which affords the most ample facilities for boating & bathing. The lake is large enough to make the use of steam launches & sailing yachts entirely convenient. The car line, after winding around & half encircling Yarwood Park, leads up to the pretty station the Co. has built at the entrance to Central Park. Here is where the artist has shown his skill. This park is one of the most delightful spots imaginable. Just enough trees have been left standing to afford shade, while the smooth walks are bordered on either side with the gayest & the choicest flowers. One end of this park reaches to the bank of Lake Pinafore & here has been built a large & airy pavilion which can be used as a luncheon room for those who prefer it to eating out of doors. Over to the right from Central Park is the bicycle track & athletic grounds & close by are the golf links, the tennis court & the baseball grounds. The whole section is indeed but a series of parks & play grounds, the whole constituting one beautiful resort, the equal of which it would be hard to find. The Co. owns & controls it all & takes its passengers there, a pleasant ride in comfortable cars for a 5c. fare.—Street Railway Review.

Toronto Railway.—The gross earnings are:

	1899.	1898.	Increase.
Jan.	\$95,690.12	\$86,502.30	\$9,187.70
Feb.	91,860.30	82,402.19	9,458.11
Mar.	103,234.88	92,318.42	10,916.46
April.	95,212.37	86,898.83	8,313.54
May.	104,866.62	92,670.35	12,196.27
	\$490,864.29	\$440,792.15	\$50,072.14

The City Treasurer's report shows that the city received as percentage from the Co. last year \$162,631, an increase of \$16,958 over the previous year. The estimated percentage revenue for this year is \$164,000.

On Queen's Birthday 158,700 passengers who paid fares were carried, exclusive of transfers. On the King street route there were over 10,000 more people carried than on the same day in 1898.

A proposal to run cars between College & Bloor sts., by way of the University ravine, has been blocked by the University authorities.

Woodstock.—The Council has refused the application of a United States promoter for a 99-year street railway franchise.

Quebec Electric Railways.

The Hull Electric Ry. Co. has met its third defeat since 1896 in its attempt to secure power to bridge the Ottawa River & extend its railway from Hull to Ottawa. On May 16 the Railway Committee of Parliament rejected the Co.'s bill empowering it to build a bridge from Hull to Kent Street, Ottawa. The bill was supported by the Ottawa City Corporation & opposed by the Ottawa Electric Ry. Co. & the Beemer interests.

Montreal Island Belt Line Ry.—After a protracted fight between this Co. & the Montreal St. Ry. Co., the Railway Committee of the Privy Council has granted the M. I. B. L. Co.'s application to cross the Montreal St. Ry. Co.'s tracks on St. Catherine & Notre Dame Sts. in order to build a line to the Dominion Cotton Mills. The M. S. R. Co. wanted the M. I. B. L. Co. restricted to the carrying of freight on this line, but permission to carry passengers was also given. The road, which will be known as the Davidson St. line, is already under construction.

Montreal Park & Island Ry.—M. Connelley, contractor, has taken action against H. S. Holt, Hon. A. A. Thibaudeau, W. Strachan, D. Morrice, A. Brunet & L. S. Beaubien directors of this Co. He says that in 1894 he bought 22 of the Co.'s 1st mortgage bonds of \$1,000 each. The interest warrants upon the bonds were regularly paid until Jan., 1898, when default was made, & has continued since. He alleges the directors informed him that neither the principal nor the interest of the bonds would be paid, as the issue of which they formed part was defective & did not carry any mortgage upon the property of the Co., & that the Co. was insolvent & unable to meet these unsecured liabilities. The declaration sets forth that the defendants, to further their own private interests, have fraudulently hypothecated the property of the Co. with new encumbrances for the express purpose of creating a charge that should have priority over plaintiff's claim & make his recourse against the Co. valueless. The Co. having been authorized to further increase its bonded obligation, the defendants, in 1887, issued certain bonds purporting a 1st charge, & declaring them free & clear of previous encumbrance. To carry out the completion of the road a Co. has been organized called the Montreal Construction Co., which entered into a contract for the construction of the railway & covenanted to receive in part payment bonds of the railway company for \$25,000 a mile. The directors of the Montreal Construction Co. were directors of the M. P. & I. Ry. Co., the President of the M. P. & I. Ry. Co. was President of the Montreal Construction Co., the Secretary was also Secretary of the other company, & the defendants were the chief

proprietors & shareholders of the Construction Co. The issue of bonds at the rate of \$25,000 a mile is alleged to have been excessive, & calculated to render the railway company unable to meet any other liability, & in fact, rendered it virtually insolvent.

Montreal St. Ry.—The gross earnings are:

	1899.	1898.	Increase.
Oct.	\$133,419.69	\$116,093.09	\$17,326.60
Nov.	125,120.10	110,098.98	15,021.12
Dec.	127,678.00	113,029.33	14,648.67
Jan.	125,270.04	110,155.90	15,114.14
Feb.	113,838.02	102,425.99	11,412.03
Mar.	123,754.11	114,476.98	9,277.13
April.	130,405.96	110,619.27	19,786.69
May.	145,466.38	123,308.08	22,158.30
	\$1,024,964.30	\$900,807.68	\$124,156.62

The Co. has voluntarily increased the pay of motormen & conductors, who have been in its service for two years & over, to 15c. an hour. Those who have been 5 years & over will get free uniforms. The Co. has also decided to insure all its operating department & workshop employes in an accident insurance company for \$1,000 each, in case of death from accidents either on or off duty; \$500 for total disablement, & \$5 weekly indemnity for disablement through injuries or specified diseases. Hitherto employes have had to pay their own insurance.

The Co. has decided to double-track the Verdun extension out to Queen's Park, to vestibule all cars front & rear, & to build 3 car sheds with a combined capacity of 224 cars.

Superintendent McDonald, who recently returned from visiting a number of U.S. cities, said he had been investigating the fender question particularly, & would prepare a report on it. His opinion is that a combination fender, which will unite the best points of several of those now in use, will eventually be adopted. In a recent conference with the City Surveyor of Montreal, Manager Wanklyn said the Co. would subject to a thorough trial all the fenders submitted to it, & would adopt for all its cars the one proved by the tests to be the best for the public protection. The present fender was adopted after thorough trial & mature consideration, because the management considered it the best available. Mr. Wanklyn considers it has done its work well, for it has saved many lives. Most of the accidents which have occurred could not have been prevented by any possible kind of fender.

The action of the Railway Committee of the Privy Council in giving the Montreal Island Belt Line Ry. Co. access into the city for passengers, as well as freight, has dispelled the idea that the Montreal St. Ry. Co. has a monopoly, & has somewhat depressed the stock lately. The \$100 shares were up to \$335 early in May, but went down to \$312, since which they have been climbing up again. It is said the Co. is trying to absorb the Montreal Park & Island Ry. Co., which has exclusive franchises from a number of suburbs. It reaches Montreal by 4 different points, & enters by a friendly arrangement over the M. S. Ry. Co.'s rails. But it is in a bad condition financially, & it is obvious that a change in the management might rupture this friendly arrangement. It is understood that it has been offered \$800,000 for all its property & franchises, but it is said to be holding out for a round million. Such a purchase would dispose of a good slice of the new stock of the M. S. R. Co., which at the last session of the Legislature was given permission to increase its capital from \$5,000,000 to \$10,000,000 for the purposes of extensions but has not yet found an opening for the extra capital.

Quebec, Montmorency & Charlevoix Ry.

—We are officially informed that the Co. has abandoned, for the present, its intention to construct the upper road or line on the top of the cliff to Montmorency Falls. (Apl. pg. 121.)

The name of this Co. is to be changed to the Quebec Light & Power Co.

ASSESSMENT SYSTEM.

THE BEST FRATERNAL BENEFIT SOCIETY IN THE WORLD

Or Any Officer or Member of the Order.

Three Rivers to Grand Mere.—The Three Rivers Board of Trade is endeavoring to secure the construction of an electric railway from that town to Grand Mere.

Jamaica Electric Ry.—Lieut.-Col. Henshaw, of Montreal, who has been in Jamaica recently, states that the electric railway, in which J. Ross, Montreal, W. Mackenzie, Toronto, & others are interested, has started operation & is proving decidedly satisfactory.

The Canadian Electrical Association will hold its convention at Hamilton, Ont., June 28 & 29. Among the features will be trips over the Hamilton Radial & the Hamilton, Grimsby & Beamsville Electric Railway & a visit to the Cataract Power Co.'s works.

Tramways in Shanghai.—A cablegram from Shanghai says: "Sir Chas. Ross, representing an American syndicate, has offered to purchase the municipal electric light plants, on condition that the purchaser is given the right to establish tramways." The Sir Chas. Ross mentioned is probably the one who is interested in electric power works & mines in British Columbia, & if so the syndicate is more likely to be a Canadian than a U.S. one.

International Electric Railways.—G. Johnson, Dominion statistician, says the 1st international electric railway operating between Canada & the U. S. was the Calais & St. Stephen, the 1st car of which crossed the bridge over the St. Croix river from Calais, Maine, to Milltown, N.B., in July, 1894; & the 1st car over the bridge between Calais & St. Stephen, N. B., crossed in June, 1895. On July 1, 1898, the Niagara Falls Park & River Ry. sent its first car over the bridge spanning the Niagara river from Niagara Falls, Ont., to Niagara Falls, N.Y.

Street Railway Advertising.—In the recent case of Macdonald vs. Stuffman, in Montreal, the plaintiff had contracted with defendant to have advertisements placed for him in 117 cars of the Montreal St. Ry. for \$350, payable in quarterly instalments. Some cars having been destroyed by fire, the advertisements did not appear in the number of cars mentioned during the 1st quarter, & defendant only tendered a portion of the amount. After the 2nd quarter, however, although the advertisements had appeared in more than 117 cars, he refused payment, alleging he had cancelled the contract. The Court held that he could not thus cancel a contract on his own account, & rendered judgment in favor of plaintiff for \$87.75, full amount due for the 2nd quarter.

St. John, N.B., Ry. Co.—The Supreme Court of N.B. has granted a new trial in the case of Prof. Hesse vs. the Co. In the Lower Court Hesse was given a verdict for \$25,000 on account of an accident by jumping from a car of which the conductor had lost control. Hesse had to have his foot amputated. The Co. appealed. The reason for the judgment is the misdirection of the trial judge as to the inference the jury might draw from defendant's objection to a witness stating the result of his inquiries at Providence, respecting Prof. Hesse's position, & from defendant's not using evidence taken under commission at Providence. The majority of the court held that Judge VanWort's comments in reference to the features of the case were improper, & calculated to affect the jury judicially from defendant's standpoint. Chief Justice Tuck held that the damages were out of proportion to the injuries sustained.

The Gorge Line. The Niagara Falls & Lewiston Ry. has seen a lot of changes recently. J. R. Mcgrue resigned the receivership, being succeeded by G. Morgan, of Syracuse, N.Y. Then the line was sold at sheriff's sale at Lockport, N.Y., to H. P. Bissell, of Buffalo, for \$6,184, subject to a mortgage of \$1,000,000 held by the Knickerbocker Trust

Co., Bissell being said to represent 95% of the creditors & 75% of the stockholders of the old company. This was followed by an announcement that the Co. had been re-organized with Gen. F. V. Greene, of New York, as President & G. Morgan, General Manager, & that an agreement had been made with the International Traction Co., owners of the Niagara Falls Park & River Ry. for the cars of the Gorge line to cross the new bridge from Lewiston, N.Y., to Queenston, Ont., run over the N.F.P.R. Ry. to Niagara Falls, Ont., cross to Niagara Falls, N.Y., & on to the Gorge line again, making a belt line.

Cuban Street Railway.—The Havana, Cuba, street railway system, now owned & controlled by three syndicates, the International Bank of Paris, the Harvey Syndicate of New York, & one in Canada, is to be fully equipped with electricity. Capt. Burrowe, who won considerable reputation as a Rough Rider in the recent war, is General Manager of the system, having been placed in charge shortly after the purchase by the syndicates. He has been introducing American methods as far as possible, but it has been decided to wait until fall, after the rainy season, before beginning the work of equipping the road for electricity. The roads, even under the old methods, have been paying good dividends, & Capt. Burrowe believes that, with the adoption of electricity, the Havana street railways will be among the best paying investments in Cuba.—Street Railway Review.

A recent report that W. Mackenzie & other Torontonians had secured the street railway franchise in Havana, & that the New York syndicate, in which Montreal capitalists are interested, had lost it on the production of proof of bribery, is denied by Hanson Bros., representatives of the syndicate which holds the franchise, who says the report is absolutely untrue. They operate the street railway at the present time, & they give an emphatic denial to the statement of bribery. No such action as that described could be taken before such a charge was investigated by the courts, & at present there are no courts sitting.

TELEGRAPHS & CABLES.

The Yukon Telegraph Line.

On May 22 Sir Adolphe Caron, J. H. Turner, ex-premier of British Columbia, directors; W. V. Laugh, M.P., & Alderman Barker, trustees of the debenture stock of the Canadian, British Columbian & Dawson City Telegraph Co. had a long interview in London, Eng., with Lord Strathcona & Mount Royal, High Commissioner for Canada, in respect to the breach of the charter by the Dominion Government. It is understood that Lord Strathcona was strongly impressed by the representations made by the deputation, especially in regard to the importance of the government keeping faith with investing capitalists under chartered rights. He promised the deputation to forward a full statement of the Co.'s claim to Ottawa.

A petition addressed to the Governor-General-in-Council states that an act was passed by the Dominion Parliament in 1898 incorporating the Co., & sets forth as follows: "On Dec. 9, 1898, an English joint stock company, entitled the Canadian, British Columbian & Dawson City Telegraph Co., Ltd., was organized at great expense to carry out the objects of the above mentioned charter & subscriptions for debentures were opened to the English public. On Dec. 16, 1898, the Co. proceeded to allotment, having arranged with the contractor to construct the line of telegraph as detailed in the prospectus, and as provided in the construction contract. All the foregoing arrangements & contracts have been seriously prejudiced, & it is apprehended

will be rendered null & void by the announcement that the Canadian government has decided to construct a telegraph line to connect the Yukon territory with British Columbia, & that the franchise for a telegraph line to Dawson is too valuable a one, & too important from the standpoint of national safety to be allowed to go into any but government hands. The route selected by the government is said to be practically the same as that provided by the aforesaid act. Your petitioners therefore pray that government work on the telegraph line be stopped forthwith & abandoned, & any authority permitting construction withdrawn. In the alternative, it is submitted that adequate & proper compensation to both companies, viz.: The Canadian, British Columbian & Dawson City Telegraph Co. & The Dawson City & Victoria Telegraph Co. should be awarded."

This is just what we predicted would happen when the Government decided to build the line.

About the middle of May, J. B. Charleson, who is in charge of construction of the Dominion Government telegraph line from Bennett Lake to Dawson City, sent a message from Skagway to Vancouver by steamer to be wired to the Minister of Public Works at Ottawa, stating that the line had been built from Bennett City to Tagish, 52 miles, making with the White Pass & Yukon Ry. Co.'s line from Skagway to Bennett, a total distance of 97 miles from the coast. Mr. Charleson stated he expected the line would be completed to Dawson City by the end of Nov.

C.P.R. Company's Telegraph.

NEW OFFICES:—Noyan Jct. & Rockland, Que.; Port Dalhousie, Queenston, Dinorwic, & C.A.Ry., Station, Ottawa, Ont.; Cowan & Makinok, Man.; Estevan & McLeod, N.W.T.; Moyelle, B.C.

OFFICES CLOSED:—St. Joseph de Levis, Que.; Byron, Colgan & Rockliffe, Ont.; Myrtle, Oakville & Rosebank, Man.

Manager Hosmer has presented the C.P.R. Telegraphers' Institute at Winnipeg with the Encyclopedia Britannica.

Superintendent Wilson, of the Pacific Division, who had a serious illness in the Kootenay district recently, has been granted leave of absence to recuperate & has gone to California.

P. A. Perron, civil engineer of the Dominion Public Works Department, & his assistant, who were engaged last winter in surveying the coast of Labrador for the extension of the telegraph line from Esquimaux Point to the Strait of Belle Isle, have returned to Ottawa, having completed the work. They had a very hard winter in Labrador. It is said the laying of the line is to be proceeded with shortly.

The Dominion Railway Committee has passed the bill to incorporate D. C. Corbin, Spokane, Wash.; Duncan Ross, Greenwood, B.C.; John Dean, of Rossland B.C., & others as the Northern Telegraph Co. The capital stock is placed at \$50,000. The head office is to be at Greenwood, B.C. The Co. may construct and operate lines between such points in Yale, West Kootenay & East Kootenay as it may desire. There was considerable objection to giving a blanket charter, & the bill was greatly amended. Authority was given to connect with or sell out to the Spokane Northern Telegraph Co.

Construction has been started on the Dominion Government telegraph line from Alberni to Cape Beale, B.C., 38 miles. It is to follow the coast line as closely as possible, a trail being cut the entire distance, & the no. 6 standard Government gauge wire being stretched on poles all the distance, except where it skirts Nikasmus Bay, where it will

on iron brackets fixed in the solid rock. The new line will make, with the existing Government wire to Alberni, an alternate loop line, to relieve the pressure on the Carmanah wire, & ensure a connection from the danger points on the West Coast when they are most in demand. It is expected to have the work completed by midsummer.

TELEPHONE MATTERS.

The Bell Telephone Company.

This Co.'s new exchange building in Quebec, which fronts on 3 streets, is 3 stories high, including basement. The whole of the exterior is of granite. The foundation wall up to the base course is of a dark grey, pick-faced granite; the ground floor is a dark grey rock-faced rustic granite; the rest of the building above the string course at the 1st floor level being of rose-tinted, pick-faced coursed granite. The whole of the interior is carried out on a slow burning principle; the joists being carried by steel columns & girders.

The main entrance, which is on St. John St., gives the public access to the Stores Department, the Long Distance & Toll Line Department, the General Office & the Manager's office. At the rear of the building on this floor is placed the room which contains the main distributing frame & power plant. The whole of the 1st or top floor is taken up by the operating room, the operator's retiring & cloak rooms, etc. In the basement are, room for stores department, furnace room & coal cellars, lineman's & inspectors' rooms & their store room. The building is heated by hot water; the plumbing is of a high quality & a special system of interior ventilation is applied which keeps the whole building supplied with fresh air. It is lighted with combination gas & electric light fixtures.

The telephone wires enter the building underground by means of lead-covered cables; each cable containing 150 pairs of wires. These cables are equipped with rubber covered wire ends, which are connected to the main distributing rack. On each rack are

placed the strong current protectors, consisting of carbon air gap arrester & a heat coil for sneak currents. In the same room are the storage batteries used in connection with the switchboard, & the dynamos for charging them. The charging machines are belted to several small induction motors. The wires from the main distributing frame & the lower plant are carried up through the ceiling into the operating room at a point situated under the switchboard, thence they are distributed to the proper points on the switchboard, which is of a type known as the branch terminal self-restoring drop switchboard, the same as in use in Montreal, Toronto & very many large cities in the United States & elsewhere. The switchboard has an ultimate capacity for 3,000 subscribers' lines with the necessary trunk & long distance lines, & the present capacity of 1,800 subscribers' lines & 20 long distance lines.

The Co. is erecting a heavy copper long distance metallic line between Ottawa & Brockville, Ont.

The Columbia Telephone Co. has poles distributed for its line from Cascade to Camp McKinney, B.C., & is setting them up & stringing wires.

The Victoria Telephone Co. has been incorporated with head office at Woodville, Ont., to operate in Lindsay & through Victoria County. J. G. Eyre & C. E. Weeks, Woodville; A. Campbell, Lindsay; J. J. Cave, Beaverton; & W. H. Johnston, Pefferlaw, are the provisional directors. The capital stock is \$20,000.

Application is to be made under the Manitoba Joint Stock Companies Act for the incorporation of the Carman Telephone Exchange Co. to apply a telephone system for the village of Carman, with outside connections. The capital is \$2,000, & the 1st directors are J. E. Campbell, F. D. Stewart, M. E. DeMill, W. H. Hemenway, W. H. Smith, S. McClain & J. H. Haverson, of Carman.

In our last issue, pg. 160, we mentioned some instruments invented by A. T. Smith,

District Superintendent of the Bell Telephone Co. at Kingston, Ont., for communicating between attendants on the surface & divers at the bottom of the river. Mr. Smith, to whom we wrote for detailed particulars, replies: "I am sorry to say that Capt. Lesslie informs me the diving bells are not a success, owing to the heavy pressure of current at that point on the river. While this does not in any way affect the working of the telephones as arranged by me, still I do not care to enter into details under the circumstances."

Among the Express Companies.

The Dominion re-opened its Niagara River Line route May 15.

The Dominion will open offices at Emo & Fort Francis, Rainy River district, Ont.

The Dominion has taken over the business on the St. Catharines & Niagara Central Ry., heretofore handled by the American.

J. C. Stewart has been appointed agent at Sault Ste. Marie, Mich., of both the Western & Dominion, vice T. E. Foard, promoted.

The American has started an express service on all trains on the St. Clair branch of the M.C.R., from St. Thomas, Ont., to Court-right, Ont.

The Canadian has issued General Circular no. 1, recapitulating general circulars nos. A to 24, & containing all the live information in them.

The Alaska Pacific has issued a new tariff between Seattle, Wash., & Skagway, White Pass, Alaska, Atlin Jct., Log Cabin & Bennett, Alaska; Tagish, B.C., White Horse Rapids, N.W.T., Atlin City, B.C., & Dawson City, Yukon, & intermediate points.

The Newfoundland Ry. Express is operating over R. G. Reid's Newfoundland Ry. The rate on all matter from North Sydney, N.S., to all points in Newfoundland, along the lines of the Ry., is \$2 per 100 lbs. The Newfoundland Ry. Express will not handle money.

The Hon. Thomas Greenway.

The Premier of Manitoba is also Railway Commissioner of the province, & in that capacity has had much to do with the development of its railway system. In a recent speech he dealt with this question, saying: One of the most important planks in the platform of the leader of this government dealt with the construction of an efficient railway system in this province. The introduction of other eastern trunk lines into the country, as well as the construction of branch lines, was one of the questions which received the most serious consideration at the hands of this government. It was felt that if this province was to come to the front as it should, & reach that position in our Dominion which its natural advantages entitle it to occupy, the introduction of a more extended railway system was of paramount importance. No other project could do so much to promote the development & the settlement of the province. Success on the part of the people engaged in agricultural pursuits meant the success of the province. As the chief interest is that of agriculture, then the farmers must be given every encouragement, & proper railway facilities securing a market for the produce was the most important matter. In fact, it is necessary to have a railway within a reasonable distance of every harvest field. With that object in view this government secured the introduction of the Northern Pacific Ry. into the province, thereby providing another outlet to the south & Duluth. This system has been extended until now the N.P.R. Co. has 309 miles of railway in operation in the province. The construction of C.P.R. branches to the extent of 235 miles was secured, affording facilities through new districts that previously lacked railway accommodation, & consisting of the extension of the C.P.R. lines from Hartney to Estevan, from Glenboro to Nesbitt, Deloraine to Napinka, Nesbitt to Souris, & Monteith to Reston. Then through that fine section of territory in the northwestern part of the province, we have secured the construction of 180 miles of railway by the Canadian Northern Ry. with 160 miles more to be constructed this season, which will give us 340 miles in that section. In the southeastern part of the province we have built 50 miles last season, with 90 miles to be completed this season, making 140 miles of what is known as the Southeastern Ry., a road which will shortly give us another outlet to Fort William. The result so far of our railway policy is this, that as soon as the lines under construction are completed (which

will be by the end of this season) we will have as a monument of our enterprise in this direction 1,024 miles of railway.

Why, the province of Manitoba has built more miles of railway in the last 10 years than any other province in the Dominion of Canada. Leaving out Quebec, we have built more lines of railway than all the other provinces put together in the last 10 years. It is not my intention to dwell on the benefits & advantages which the people of this province have & will derive from the lines of railway constructed. Our main idea is to render the settlement & development of the country practicable by se-

THE HON. THOMAS GREENWAY, M.P.P.,
Premier and Commissioner of Railways of Manitoba

curing our people facilities for handling & marketing their grain, but many additional advantages have accrued. The rates on freight have declined as a result of competition. The cost of lumber has been greatly reduced in many parts of the country, as well as fuel being cheaper. The value of the lands along the lines has been increased 100 to 150%. Farmers have been enabled to greatly increase their areas under cultivation. Towns & villages have sprung up along the lines, all contributing to the general prosperity of the country. Certainly many millions of dollars would not compensate the province for the

loss of these lines. The actual cost to the province in cash for the 1,024 miles of railroads is only \$934,002.50. It is true that in the case of the Canadian Northern & the Southeastern Ry. we have given a guarantee of interest on bonds, taking the railway as security. If these lines should fail to earn their operating expenses & interest on \$8,000 a mile, then we would be obliged to advance the interest until the earnings were sufficient to repay us. Part of the lines have been in operation nearly two years, & have been so successful that they have not cost the province one cent, & I feel convinced that they never will. Whilst Manitoba has built more lines of railway than any other province in the Dominion, the cash bonuses given by Manitoba are much less than the smallest bonus given by any province to any road within its own boundary.

Manitoba's Railway Policy.

At a Provincial Conservative Convention held in Winnipeg recently, the platform adopted contained these two planks relating to railway matters:

The adoption of the principle of Government ownership of railways, in so far as the circumstances of the Province will admit, & the adoption of the principle that no bonus should be granted to any railway company which does not give the Government of the Province the control of rates over lines used, together with the option of purchase.

That a line of railway be constructed to Hudson's Bay.

Several railway delegations have waited upon Premier Greenway recently, asking for the extension of roads to their respective districts. In the discussion which ensued, the railway policy of the Government was developed to a certain extent. In substance, Mr. Greenway intimated that the policy of the Government heretofore had been to assist in the construction of railways in two cases, 1st, where the lines were competing & concessions in rates were secured as a consideration of the aid, & 2nd, where they were constructed for colonization purposes, or for the purpose of securing an outlet to the markets of the world from districts remote from lines already in operation. Government ownership & operation of railways, from the standpoint of the Province at any rate, was not expedient at the present time. In any event, that question belonged rather to the jurisdiction of the Federal Government, but the question of Government control was another thing, & some solution of that should be reached, so that the rates could not be arbitrarily fixed by the existing railway companies in the Pro-

vince. He considered the fact that these
companies have refused to interchange traffic
except upon onerous terms, & in some cases
have refused to interchange traffic at all, is a
strong argument in favor of Government con-
trol & for the establishment of a railway com-
mission. The policy of the Government
would be to aid in railway construction when
substantial concessions could be secured
thereby. Next to securing facilities for the
marketing of grain, the question of rates to
the lake was the most important of those
affecting the farmer.

Historical Sketch of the G.T.R.

(Continued from last issue.)

It will be seen from this that the scheme was
for a trunk line running from Sarnia to Halifax
on British territory. New Brunswick, how-
ever, insisted on a branch being built to Port-
land, Maine, but the Imperial authorities were
not disposed to view this with favor & abso-
lutely refused to give any guarantee if a
foreign connection was in any way included
in the proposals, or if the main line through
New Brunswick was constructed on any other
survey than that made by Major Robinson in
1848. At that period the Intercolonial Rail-
way as a grand highway to a winter seaport
in British waters was a constant theme of
discussion among the people of the three
provinces of Canada, New Brunswick &
Nova Scotia, &, of course, gave much scope
for serious consideration to their respective
governments. A line from Montreal to Port-
land was already under construction. Hence,
it was with much disappointment, if not cha-
grin, that the great majority of the people saw
their hopes blighted for a time at least. There
were innumerable conferences between Pro-
vincial premiers, several missions to London
& negotiations of a most intricate character,
which it would be impossible to refer to here,
even if desirable.

Suffice it to say that whilst in London, on
one of these missions early in 1852, the late
Sir Francis Hincks, at that time holding the
position of Inspector-General—an office anal-
ogous to that of Finance Minister—learned
that satisfactory financial arrangements for
the building of that part of the line between
Montreal & Toronto could be made with the
firm of Betts & Brassey, railway contractors.
They had just completed extensive works in
France, and having a large quantity of un-
employed plant, were ready to engage in con-
structing all the railways required in Canada.
English capital to any amount that might
be needed would be supplied, provided the
works were entrusted to contractors who
were known to and in the confidence of Eng-
lish capitalists. On the return of Sir Francis
to Canada, he consulted his colleagues in the
cabinet, & the proposals of the contractors,
after being somewhat enlarged, were accept-
ed by the Ministry. The lines to be construct-
ed were those from Montreal to Hamilton, it
having always been contemplated by the Gov-
ernment that the Great Western Ry., whose
terminus was then at Hamilton, should be a
portion of the Grand Trunk line, to which
the public aid was limited. When these pro-
posals were embodied in a bill incorporating
the G.T.R. Co., & introduced in Parliament
during the session held in the autumn of 1852,
they met with considerable opposition from
the supporters of the Montreal & Kingston Ry.
Co., but finally carried on a division vote after
being amended in some important respects.

The Provincial Government guarantee, in-
stead of being for one-half the cost of the
road, was limited to £3,000 sterling per mile,
& the contractors, instead of requiring a Can-
adian subscription of one-tenth of the capital,
undertook to obtain the whole in England.
Later in the session a bill was passed authoriz-

ing the amalgamation of the G.T.R. Co. with
the St. Lawrence & Atlantic, the Toronto &
Guelph, the G.T.R. Co. of Canada East, &
the Quebec & Richmond Ry. Co. On Nov. 10,
1852, it received the Royal assent. It may
be mentioned that the Toronto & Guelph Co.
had power to continue its line to Sarnia. By
a supplementary agreement between the vari-
ous companies, dated April 12, 1853, the de-
tails of the amalgamation were completed, a
contract with Peto, Brassey, & Betts for build-
ing the Victoria Bridge was made, & the At-
lantic & St. Lawrence Ry. from Portland,
Me., to the Canadian boundary line was leased
for 999 years. The amalgamated lines form-
ed 964 miles of railway. The capital was
placed at £9,500,000, & the shares were for
£25 each. Eighteen directors were appoint-
ed, 9 of whom were nominated by the Govern-
ment in consideration of the provincial guaran-
tee, & with a view of protecting the public in-
terests, 4 of these Government directors were
cabinet ministers, 4 were independent gentle-
men of considerable influence, & the 9th was
the Hon. John Ross, Solicitor-General, who
was appointed President in Canada. Six of
the 18 directors were resident in London,
England, & T. Baring, M.P., acted for sev-
eral years as Chairman of the London board.
The 12 directors resident on this side of the
Atlantic composed the Canadian board, &
thus equipped & constituted the G.T.R. start-
ed upon its career.

With the promises & the probabilities in
the matter of dividends, set forth in the pro-
spectus issued by the Co. in 1853, it would be
manifestly unfair at this late date to deal in a
critical spirit, & whatever truth there may have
been in the remark made in 1864 by the late
T. Sturrow Brown, so well remembered as a
stubborn opponent of the Co., to the effect
that "he who would play the part of prophet
before the fact stands in slippery places, for
coincidences & contingencies in the world's
affairs, of which the most far-seeing could
never dream, often laugh to naught the wisest
estimates of studious calculations," there
appears but little reason or sense in the
statements sometimes made upon this sub-
ject. The men of 1852 were engaged in
the task of constructing the longest rail-
way in the world through a sparsely set-
tled country, with wages & material much
higher than they are to-day. They were,
to a great extent, working in the dark,
& none but the most captious or critical
at this date, the experiences of 40 years hav-
ing taught us all many valuable lessons, will
wonder that the period of construction of the
G.T. line, say from 1853 to 1860, was one of
great anxiety & financial difficulty to all con-
cerned.

On July 22, 1853, no. 1 pier of the Victoria
Bridge was commenced, & in the same month
the road from Longueuil, opposite Montreal,
to Portland, Me., was opened. Early in Jan.,
1854, the main line of the Great Western Ry.
from Hamilton to Sandwich, commenced
working as a separate concern, & remained
independent until Aug. 12, 1882. On Nov.
27, 1854, traffic was started over the line
from Richmond to Point Levis, opposite Que-
bec. Early in 1855 the Northern Ry. Co.
commenced operating its line between To-
ronto & Collingwood. On Nov. 19 following
the G.T. began traffic operations between
Montreal & Brockville, & two weeks after
that date business began on the piece of line
from Chaudiere Junction, practically Quebec
City, to St. Thomas, Que. The next import-
ant addition to the mileage took place on Oct.
27, 1856, when the first passenger train ran
through from Montreal to Toronto, & in 3
weeks from that date the road was opened
through to Stratford. In 1857 it was deemed
expedient to dispense with Government direc-
tors, & that step was authorized by Act of Par-
liament. The Board was then re-organized,
& the number of directors fixed at 15, instead

Tons of Freight Carried by Canadian Railways for the Fiscal Years Ended June 30.

of 18, ten of whom were to be resident in Canada & 5 in England. S. P. Bidder had been appointed General Manager of the Company in 1853, & remained in that position until Sep., 1857, when he was succeeded by T. E. Blackwell as Managing Director, Walter Shanly occupying the position of Chief Engineer & General Manager.

On June 28, 1858, the line from Goderich to Fort Erie was opened, & that from Stratford to St. Mary's on Sep. 27, while the Great Western line from Hamilton to Toronto, with that Co.'s Sarnia branch, were ready for traffic in Dec. of the same year. In Nov., 1859, a very important connecting link between the Canadian line & the U. S. roads centering in Detroit was completed from Port Huron to that city, & the Riviere-du-Loup line was almost finished. On Dec. 12, the Victoria bridge was opened for traffic, & on Dec. 17, the first passenger train passed through. So much has been recently written & said about this great undertaking that it would seem superfluous to refer to it here, more especially as it is, at the moment of writing, being reconstructed as an open lattice bridge, the tubular feature of the work being removed. Suffice

it to say that the workmen engaged in removing the stone walls at each of the entrances to the tube are assured beyond a doubt that the builders of the bridge did their work in the most solid & lasting manner.

At the end of the decade in 1859 the Co. had completed a large system of railways, extending literally throughout the whole Province of Canada, from the waters of Lake Huron to Riviere-du-Loup on the St. Lawrence, 125 miles below Quebec, & also to the Atlantic seaboard at Portland, Me., a total of 951 miles. Its authorized capital had increased to £11,462,846. Its receipts for 1859 were a little over £500,000, & expenses £453,000. About this time the Province of Canada postponed its claim to priority of interest on its advance of £3,111,500, thus lifting, for a time, the financial cloud which hung over the operations of the Co. It ought to be mentioned that the entire line was of the 5½ ft. gauge & land was, in all cases, provided for a double track, & in several of the large structures the foundations & the masonry of the abutments were put in for a double line. On May 25, 1860, the Prince of Wales officially opened the Victoria Bridge, & on July 2, the line from

Chaudiere Junction to Riviere-du-Loup was opened for business. The government agreed to waive the condition compelling the Co. to extend the Line from Riviere-du-Loup to Trois Pistoles.

The long-continued commercial depression extending over the U. S. & Canada put a stop to the further construction of railways from 1860 to 1870, & told heavily on the existing lines. When, therefore, Mr. Blackwell retired from the management & C. J. Brydges took charge of the G.T., in 1862, the directors found it necessary to re-arrange the Co.'s finances & staff organization. The legal domicile & seat of management was fixed in London & the number of directors reduced from 15 to 12, seven to reside in England, the 5 in Canada to constitute a committee of the board for local, financial & other purposes. A betterment of the postal service arrangements with the government was secured. An improvement in train service & the renewal & repair of the road were effected & were productive of marked & admitted results.

The Civil War in the U. S. had, at that time, presented features of magnitude forbidding all chance of early peace, a serious obstacle

the development of trade & traffic, & involving complications, commercial & political, which hampered the operations of the Co. until 1865. At the beginning of 1864 they purchased the Montreal & Champlain lines, running from Montreal in the direction of the New York State line. On June 29 in that year the Co. had its first sad experience in the matter of accidents. An immigrant train passing over the bridge at Belœil, Que., went through an open draw & down into the Richelieu River, causing great loss of life amongst the Polish & German immigrants on board. On Aug. 1, 1864, the line known as the Buffalo & Lake Huron Ry. became part of the C.T. system. This brought it to Fort Erie, opposite Buffalo, N.Y., & the work of building the international bridge between the two places was soon after put in hand. The Co. suffered severely during these years from the loss on U.S. currency, not less than \$2,000,000 being charged off on that account during the 7 years ending Dec. 31, 1868. In 1869 alone, the amount lost in this way was \$380,000, or nearly enough to pay the full year's interest on the 2nd & 3rd preference stocks.

No sooner had the war ended than the Co.'s operations were disturbed at frontier points by Fenian raids, & the abrogation of the Reciprocity Treaty between Canada & the U.S., which totally demoralized the international traffic of the road. The Hon. John Ross resigned the Presidency of the Co. in 1862, & was succeeded by Mr., afterwards Sir, Edward Watkin, who for many years ranked amongst the prominent railway men of England. Sir Edward did good work for the Co. during his term of office, & effected many important improvements. He resigned in 1868, & was succeeded by R. Potter, who had been on the Board for some time. In 1870 the construction of the Intercolonial line to a con-

nection with the G.T. at Riviere-du-Loup was being pushed forward with vigor, & Mr. Brydges was one of the three Commissioners appointed by the Government to control that work. In that year also the sleeping car arrangements were placed in charge of the Pullman Palace Car Co., & have so remained to the present time. The question of a change of gauge from the then existing 5½ ft. width to that of the standard, 4 ft. 8 ins., of the U. S. was raised, & the Board decided to fall into line with the other roads without delay. The G.T. cannot be said to have been exceptional in the matter of gauge, for at that time the Erie Ry. was of a 6 ft. gauge.

On November 18, 1872, the tracks of the G.T. Co. between Sarnia & Fort Erie were narrowed, & on Oct. 4, 1873, the 2nd section between Stratford & Montreal was changed. Some misunderstanding having arisen between the Board & the Managing Director, Mr. Brydges, regarding the estimates for this work, he retired in April, 1874, & was succeeded by the late Sir Jos. Hickson, then Secretary-Treasurer of the Co. in Canada. His first act was to complete the change of gauge, & the 3rd and last section—that between Montreal, Portland & Riviere-du-Loup—was successfully narrowed between Sept. 26 & 28, 1874. The line from Port Huron to Detroit was originally constructed on the standard, or 4 ft. 8½ in. gauge, & the operation just recorded brought the G. T. road into uninterrupted connection with the U.S. lines east & west of the system. Additional cars & locomotives were purchased, & the International bridge at Fort Erie was opened in the summer of 1874.

All these advantages secured placed the Co. in a strong position to compete for through all-rail business, & the Michigan Central, then an independent Co., handled all the G. T. traffic between Detroit & Chicago. This,

however, aroused the jealousy of rival U.S. interests, & in 1878, the M.C. was secured by W. H. Vanderbilt. It was at once determined to secure a route to Chicago owned by the G.T., & the first step in that direction was the sale of the branch from Chaudiere Jct. to Riviere-du-Loup, to the Dominion Government, with the proceeds of which several pieces of railway already constructed between Port Huron & Chicago were purchased. After great delay, caused by harassing litigation, as well as by physical obstructions, the line now known as the Chicago & G.T. was opened from Port Huron to Chicago on April 8, 1880, when the first through passenger train in regular service passed over it. The task of securing an entrance into large cities for new lines is one of the difficult problems which railway managers occasionally have to solve, but the solution is not made easier by the additional fact of having to construct or secure over 300 miles of road preparatory to the entrance. The legislative & municipal enactments, decrees, charters, deeds, etc., in this connection fill several volumes in the Co.'s records.

In Jan., 1881, the G.T. commenced the operation of the line running from Lenox to Pontiac, & ultimately extended to Jackson, Mich., with a view of doing business with Toledo, Ohio. During the year it also strengthened its position in the district between Montreal & the New York State Line. In April, 1882, the Midland Co.'s system in central Ontario became incorporated in that of the G.T., & the Great Western Ry. Co. amalgamated with the latter on Aug. 12 following. Both of these amalgamations were considered desirable in view of the fact that the C.P.R. Co., not then long in existence, had determined to depart from its original intention of confining its operations to a line between Eastern Canada & Vancouver, & to en-

The Northey Gas or Gasoline Engine.

In Connection with Pumping Machinery for Tank Duty.

"BUILT FOR HARD WORK."

Railway Officials will find the Northey Engine to be a marked improvement over steam or other forms of power for this duty. It is simple of construction, and easily managed, necessitating only the turn of a fly-wheel to start, while it can be going at full speed in a few seconds and be shut down on the instant. Needs no engineer to look after it, the station hands can do all that is required, while it will run for hours at a time with little or no attention. The Engine is compactly built and of the best materials; it uses either gas or gasoline for fuel, and its safety and economy with either have proved it to be the most satisfactory power in the market.

We will cheerfully send Booklet and every information upon request.

The Northey Mfg. Co., Limited, ¹⁰³²KING ST. SUBWAY, Toronto, Ont.

ter the field for a share of the business originating in the western peninsula of Ontario. In taking over the Great Western Line, the G. T. had also to take the Detroit, Grand Haven & Milwaukee Ry., which was one of its affiliations.

The work of crossing trains over the St. Clair river between Point Edward & Fort Gratiot by means of large ferry boats adapted for carrying cars was at times obstructed by the large number of lake boats passing up & down that rapid stream, & in winter the operation of these car-ferry boats was attended with considerable risk, owing to the running ice. The feasibility of a tunnel under the river a short distance below the town of Sarnia was considered & finally decided upon. Evil prophets there were then, just as there are to-day in connection with the reconstruction of the Victoria Bridge, who cried "disaster" & "failure"; but the same skill & good judgment that stilled the voice of jealousy & mistrust in the successful completion of the great submarine tunnel in Sep., 1891, will undoubtedly re-assert itself in the completion of the work over the St. Lawrence River. The Interstate Commerce Act, passed by the U.S. Congress, took effect on April 5, 1887, & to a certain extent hampered the operations of the leading companies in the U.S. The G. T. running, as it does, through seven States of the Union—Maine, New Hampshire, Vermont in the east, New York State at several points, & Michigan, Indiana & Illinois in the west—had to comply with the requirements of the Act.

In Feb., 1888, the Northern & North Western lines were fused in the G.T. system, & in a few months after the Toledo, Saginaw & Muskegon, & the United States & Canada lines were taken over. The last subsidiary road incorporated in the Co.'s system, under Sir Jos. Hickson's management, was that running from Durand to Saginaw, Mich. This took place in Oct., 1890. On Dec. 29 following, that gentleman laid down the cares of office after having piloted the Co. safely through the rocks & shoals of 17 years, & the Board, in accepting his resignation, expressed its sense & appreciation of the eminent services he had rendered, & of his devotion to the interests of the concern during his term of service. He took a warm interest in the Co.'s welfare up to the time of his death in Jan., 1897. He was succeeded in the management in Jan., 1891, by L. J. Seargeant, formerly Traffic Manager of the Co. In April, 1893, the consolidation of 14 different lines with the parent company was effected, thus dispensing with that number of Boards of Directors, annual meetings, etc.

Early in 1895 a large number of the shareholders, desiring a change in the policy of the Board, tested the question by a vote in the month of May. The result was the resignation of Sir H. W. Tyler, as President, & the election of a new Board with Sir Chas. Rivers-Wilson as President. In Dec. following, Mr. Seargeant was called to London to take a seat at the Board there, & was succeeded by the present General Manager, C. M. Hays, on Jan. 1, 1896. The policy of the Board of Directors since May, 1895, has been one of friendly intercourse with rival as well as connecting lines, in proof of which it may be stated that joint arrangements for running powers over various portions of the line have been made with the New York Central, Adirondack, the Canadian Pacific & the Wabash Ry. companies. The Grand Trunk is well equipped with all the accessories such as express, telegraph & telephone services, cartage delivery, elevators, grain warehouses, cattle yards & ice-houses. Traffic can be carried without transshipment from Chicago, or points west, to the wharves at Montreal or Portland, alongside ocean steamers, & the advantage secured in the construction of long stretches of double track, enabling fast time to be made by both

express & freight trains, is apparent. That the line is popular in the Eastern & Western States is evidenced by the fact that when legislation was sought at Washington with the object of cancelling the bonding & sealing privileges of the Canadian companies, the most strenuous protests have been made against any interference with the G.T. by the mercantile communities of Chicago & Boston through their Boards of Trade. It is the desire & aim of the present Board & management to make the road equally popular in Canada, whilst making it remunerative to those financially interested in it, & this object it is hoped will be secured by a continuance of that co-operation so freely given by the Co.'s employees to the Canadian Executive in the past.

That the Co. is not unmindful of the welfare of those who enter its service, is apparent in the existence of insurance & superannuation funds for the benefit of such employees as may become disabled, or the families of those who die, as also for affording a means of support to such as have grown old in its service. A supplemental advantage was secured in the Co.'s Act of Parliament, 1896, by the authority given to the management to grant pensions in cases not covered by the two funds already mentioned. Comfortable reading-rooms are located at the principal stations on the system, for the convenience of its officers & employees.

Canadian Freight Association.

The Freight Committee met in Montreal, July 6, when special rates & arrangements nos. 1626 to 1638 were agreed to.

The regular summer meeting of the Association was held at the same place July 7, when J. E. Dalrymple, District Freight Agent, G.T.R., Hamilton; W. R. MacInnes, General Freight Agent, C.P.R., Winnipeg; M. H. Brown, District Freight Agent, C.P.R., Detroit; & M. Overend, Foreign Freight Agent, Canada Atlantic, Montreal, were elected active members. J. Pullen stated he now represents the Central Vermont instead of the G.T.R. It being announced that E. A. Chittenden had severed his connection with the Central Vermont & was out of active railway work, tributes were paid to the very important work he had performed for the Association.

Correspondence was submitted from the Department of Railways stating reasons why the new classification no. 11 had not been approved by the Governor-in-Council & the Chairman was instructed to urge upon the Department the necessity of early approval in the interest of the shippers.

Authority was given for the appointment of 2 freight inspectors at Winnipeg in connection with the C.P.R. & N.P.R. there.

In submitting statistical reports the Car Service Committee reported as follows: It is evident that the number of loaded cars handled is steadily increasing, & that the number of cars detained 7 days & over is also steadily increasing. The principal reasons given by local agents for serious delays in making deliveries are: "Insufficient siding accommodation, both public & private," "insufficient engine power to make the number of shunts required for the volume of business handled," "later arrivals placed first." Attention has been called several times to all these difficulties, & to the necessity of having them remedied as much as possible; but, as the conditions appear to be growing worse instead of better, the Committee again urgently recommend that the attention of superintendents, or other general officers concerned, be specially directed to the consideration of the question as to whether it would not be greatly to the interest of their respective companies to provide sufficient power to perform the yard work & shunting required at important trade centres in order to make reasonably prompt

deliveries more practicable. Consignees doing a comparatively extensive business frequently say: "Give us the cars & we will unload them." Agents reply to the effect that they are unable to place the cars promptly for the reasons given above, & very serious delays consequently occur for which consignees cannot be made to pay. Your Committee are of opinion that promptness in handling cars is of the first consideration, & that all practicable means should be adopted to carry this out.

The Manager reported that he attended the Convention of the National Association of Car Service Managers, Niagara Falls, in June. The discussions at this convention were interesting & profitable, showing in part the practice of the various Associations in connection with subjects discussed, which were:

1. "The private car," owned by individuals or car companies, & used by railroads by hire or for mileage, for general traffic. The consensus of opinion was that such cars should be subject to car service charges same as railway companies' cars.

2. "One man's car delayed on the private tracks of his customer." On this subject opinions were divided—some holding that as the railway companies were responsible for the car until it was returned to the owner it should not be held free. Others held that railway companies were justified in holding such cars free if the owner so directed.

3. "What should be considered warehouse freight?" Upon this question there was also considerable difference of opinion. Quite a number of managers were of opinion that it was the duty of consignees to remove their freight within a reasonable time after arrival, ex cars, or ex warehouse, at the option of the railway companies. That it was not the duty of a railway company to provide large & costly warehouses to store freight, & that large expenditures had often been made by railway companies to build warehouses which would not be necessary if the public were given to understand that when the railway companies carried freight to its consigned destination, their duty had been performed, & it was for the owners of the freight to receive it, or have it sent to public store. This had reference to all freight in carloads not handled through an elevator or through-consigned for export. In other words, that the handling of freight through a warehouse should only be in small miscellaneous lots & for the convenience of the railway companies.

4. "Refunding car service charges caused by errors of other roads." It was considered right that the railway company making the error should assume the charge.

5. "Delays through bills of lading in banks." It was not thought right to make any allowance for this.

6. "Prompt release at terminals more than offset by stop-off privileges." The discussion on this subject was very interesting, showing that very serious delays occurred to cars in transit through stop-over privileges; that in many cases the privileges allowed & authorized would detain a car from 20 to 40 days between Chicago & ultimate delivery at eastern points, in addition to the ordinary running time of the car. This was a matter which it was considered well worthy the attention of general superintendents & railway managers.

The question of restricting the payment of customs duties by railway companies was discussed, & a special committee was appointed to consider the matter & report at next meeting.

It was reported that agreed rates were not being observed by boat lines, members of this Association. The Secretary-Treasurer was instructed to call a special meeting of the Freight Committee to investigate the matter as soon as possible.

The following changes on committees were ordered: Classification Committee, J. H.

Hanna, vice J. Pallen. Freight Inspection Committee: J. E. Dabrymple, vice J. H. Hanna.

At a meeting of the Tariff Committee at Toronto, July 18, special rates & arrangements, 1930-1942, were agreed to.

The Chairman said that the principal object for which the meeting had been called was to consider statements which had been made at the last general meeting of the Association in 1898, that some of the boat lines, members of the Association, were not observing rates & arrangements as agreed upon at the meeting held at Montreal, Mar. 3, 1899. He had specially notified the agents of the steamboat lines concerned to be present. Mr. Jaques, of the Merchants Line, Montreal, & Mr. Geddes, of Toronto, had indicated their inability to be present & were not represented. After considerable conversation it was agreed that the representatives of the boat lines, having received ample notice of the meeting called to consider charges made against them of having cut agreed rates, & thereby broken faith with the railway companies, & having failed (with the exception of the R. & O.N. Co.) to attend the meeting, & the charges having been made & not denied (except by the R. & O.N. Co.) or explanations given, the Committee recommend to the traffic managers of the railway companies concerned, that the agreement as to differentials allowed the boat lines be cancelled on due notice, as provided in minutes of meeting of Mar. 3, 1899.

It was recommended that in consequence of shippers at Merriton & St. Catharines being able to ship to Buffalo, & reship thence to North Pacific Coast points, at lower rates than as per tariff from the Canadian points named, the arbitraries to be added to the Pacific Coast Tariff be reduced to the basis of 10c. per 100 lbs., 1st class for all rail traffic, & that lake & rail traffic be at the Buffalo all rail tariff rates.

Freight Traffic Matters.

C.P.R. freight cars are now being run over the electric railway between Vancouver & Westminster, B.C.

A consignment of 100,000 lbs. of Montana wool is being sent from Duluth to New York, via the Canada Atlantic, as an experimental shipment.

It is said Manitoba's wheat crop this year will be 40,000,000 bush. against 32,000,000 last year, which means a lot of additional business for the C.P.R. & N.P.R.

When in Nelson, B.C., recently, W. Whyte, Manager C.P.R. Western lines, said an arrangement for the exchange of traffic between the C.P.R. & the Nelson & Fort Sheppard Ry. had been practically completed. This arrangement will be of great convenience to shippers & especially to the coal mines of the Crow's Nest Pass, as coal & coke lose largely in handling.

The Allan & Dominion steamship lines will divide the Liverpool business of the G.T.R. from Portland next winter. The arrangement made between the G.T.R. & the Dominion line is not an exclusive one. It simply provides for the replacing of the Leyland line from Portland by the Dominion line. None of the other connections of the G.T.R. are affected. The Allan line will run from Portland to Halifax next winter.

The Interstate Commerce Commission will hold a meeting at Chicago Aug. 7, to confer on the export problem in freight traffic tariffs. Recent press reports announce a great improvement in the export tariff, effective on Aug. 1, but the tariff schedules have not yet been filed with the Commission. The presidents of the trunk lines comprising the Western territory will hold a session on Aug. 8 to consider the general situation.

Arthur White, Division Freight Agent G.T.R., Toronto, reports wonderful activity in the northern lumber districts, all the mills employing large staffs & working to their full capacity. This change from the unsatisfactory conditions prevailing last year is, he states, generally conceded to be attributable to the new Provincial regulations, providing for the manufacture in Ontario of logs cut on Crown timber lands by Michigan limit-holders.

Having been shut out of New York by being denied a continuation of its arrangements with the Central Vermont, since that road came under the control of the G.T.R., the Ogdensburg Transit Co. has made new connections. It has established a lake & rail line, consisting of the Murray line from New York City to Troy & the Delaware & Hudson to Ogdensburg, where its own steamers take the freight & carry it to Toledo. This makes an additional competitor in lake & rail traffic, & it will claim the usual differential over the all-rail lines.

The wholesale grocers of Victoria met A. Cameron, Assistant General Freight Agent of the C.P.R., recently, urging upon him the desirability of giving merchants in the coast cities

lower transportation rates to enable them to compete on more equal terms with Winnipeg merchants. They contend that the East Kootenay trade is controlled in a large measure by Winnipeg, because of more advantageous rates given by the C.P.R. Mr. Cameron said a new tariff would come into effect on July 1, but this did not satisfy those present, who wish better rates than those in that tariff. The Kamloops Board of Trade has also been interviewing Mr. Cameron, & wants better rates than the coast cities have.

The trunk line presidents have reached an agreement that eastbound rates shall be advanced on Aug. 1 to the basis, Chicago to New York, of 17c. on wheat, oats & flour, & 15c. on corn—an increase of from 4½ to 5½c. For export shipments from Chicago via New York the advance on corn will be from 10½ to 11c., & on oats from 10½ to 13c. For wheat shipped to the European markets the rate will be 17c. per 100 lbs., the same as now. On provisions, both export & domestic, the rates will be 25c., an increase of 5c. on the export rate. Between now & Aug. 1, when the new rates will go into effect, the local agents of the eastbound roads have been instructed to clean up all cut-rate contracts.—Railway Age.

While the discussion over the traffic arrangement between the G.T.R. & Intercolonial was at its height recently, it was announced that the Grand Trunk had cancelled its agreement of last year with the Leyland line, & once more entered into arrangements with the Dominion line to handle its trans-Atlantic freight business out of Portland. This gave rise to the report that the Dominion line might desert St. John, N.B., altogether, & that the C.P.R. might also virtually abandon its short line to St. John, at least as a through route, & would divert its winter carrying trade to Boston. This has been denied by President Shaughnessy, who states that the C.P.R. has no such intention. There are plenty of other steamers besides those of the Dominion line to be got from St. John, Mr. Shaughnessy says, & the C.P.R. will still do business through Canadian channels.

The output of barked cedar railway ties, which constitutes no inconsiderable source of revenue in Gaspé & the Chaleur Bay, is this year likely to be less extensive than usual. It is found that at the price offered for ties, & the export duty of 4c. a tie, there is not enough in the business.

MICA BOILER COVERING

For Locomotive, Marine and Stationary Boilers

Tested by Mechanical Experts of the C.P.Ry. Co., G.T.Ry. Co., M.C.Ry. Co., Boiler Inspection Insurance Co., and proved to be the

= = Best of All Non-Conductors = =

All Steam users should see the Mica Boiler and Pipe Covering—Flexible, Durable and Highest non-Conductor of Heat in the Market.

Full particulars, reports of trials, testimonials, prices, etc., from

Mica Boiler Covering Co., Limited, 9 Jordan St., Toronto, Ont.

Through Canada to the Yukon.

In discussing the Alaska boundary question in the House of Commons, July 22, Sir Chas. Tupper proposed that the Government should introduce a bill to provide for the construction of a railway from Kitimat Arm, to Dawson, Yukon, & that it should be passed by the unanimous vote of Parliament. He said:—Let that bill provide that it shall only be done on a proclamation by the Governor-in-Council. The moment our Government finds that this unreasonable determination on the part of our great neighbors is persisted in, I have no doubt such a measure would commend itself to the judgment of my hon. friend. It is known that the country from Kitimat Arm in B.C., running up to Telegraph Creek is a very good country. Two charters, I believe, have already been given by the Government of B.C. for building a railway, & I think a subsidy of some \$4,000 a mile has been granted by B.C. to construct a road from Kitimat Arm to Teslin Lake, provided it is found that there are no insuperable engineering difficulties. The very fact that there is water communication from Teslin Lake shows that there is a valley where it would be comparatively easy

he said:—There are only two means of access to the Yukon—one by the Lynn Canal, & the other by one of the lower ports which we have in our own territory. It we had the Lynn canal under our control we would have a shorter way of access to the Yukon, but, unfortunately, at the present time it is in the possession of our rivals in business & our opponents in this controversy; it is in the hands of the U.S. Of course, if we had the water stretch of the Lynn Canal we would have the best means of all to enter the Yukon; but we have not, & having it not, we thought the best thing we could do was to make use at once of the Stikine River, which is not ours, but which, under the terms of the treaty, we have a right of access to for commercial purposes. We thought to use that at first as a basis of operation, to put a railway into the Yukon country, & then afterwards extending it to this very Kitimat Harbor, which my hon. friend now proposes as the terminal. If we had been able last year to pass our bill, which provided for the immediate construction of a railway from the Stikine River to the waters of the Yukon, we would have constructed that line last year, & this year we would have been able to prolong it down to Kitimat Harbor.

Baldwin Locomotive for W. P. & Y. Ry.

The illustration on this page shows a compound consolidation locomotive recently built by Burnham, Williams & Co., Baldwin Locomotive Works, Philadelphia, for the White Pass & Yukon Ry. The general dimensions are as follows:—

GAUGE.....	3 ft.
CYLINDERS.....	Diameter, high pressure..... 11 in.
.....	low pressure..... 10 in.
.....	Stroke..... 20 in.
.....	Valve..... Piston Valve
B-BOX.....	Diameter..... 34 in.
.....	Thickness of sheets..... 9-16 in.
.....	Working pressure..... 200 lbs.
.....	Fuel..... Coal
FIREBOX.....	Material..... Steel
.....	Length..... 11 ft.
.....	Width..... 45 1/2 in.
.....	Depth, front..... 47 1/2 in.
..... back..... 46 1/2 in.
.....	Thickness of sheets, sides..... 3/8 in.
..... back..... 1/2 in.
..... crown..... 1/2 in.
..... tube..... 1/2 in.
TUBES.....	Number..... 120
.....	Diameter..... 2 1/4 in.
.....	Length..... 15 ft. 2 1/2 in.
HEATING SURFACE.....	Firebox..... 65.38 sq. ft.
.....	Tubes..... 1,069.81 sq. ft.
.....	Total..... 1,135.19 sq. ft.
.....	Grate area..... 15.70 sq. ft.
DRIVING WHEEL.....	Diameter outside..... 8 ft.

BALDWIN COMPOUND CONSOLIDATION LOCOMOTIVE FOR WHITE PASS AND YUKON RY.

to run a line of railway down to Dawson. It would only be a light railway that would be required to be constructed; any description of railway, however light, that would give us access from a Canadian port in B.C., about which there can be no question, to Dawson. I am quite certain that if the right hon. gentleman were to call, as he could tentatively, for tenders for the construction of such work with the present position existing, it would involve no very heavy cost. I would have the work constructed & owned by the parties who constructed it, & I would have the rates over the line controlled by the Governor-in-Council. I would put a clause in the bill providing that this act should only be brought into operation by proclamation of the Governor-in-Council. I am quite satisfied that the right hon. gentleman will find, as he will find at an early day, if this proposed legislation does not effect a change of attitude, as I hope it may, that public opinion will thoroughly justify him in this course, in so far as it would give ingress and egress to & from the great Canadian gold country to all British subjects, & in fact, to every person who desires to use it.

In replying, Sir Wilfred Laurier defended the Canadian Yukon Ry. bill of 1898 & denounced its rejection by the Senate. Continuing

By this time or, at all events, at the end of this season, we would have had a line of railway of our own, extending all the way from Kitimat Harbor to the water system of the Yukon. It would be a longer route, I admit, than a railway which would connect the Lynn Canal with the waters of the Yukon; but one thing is certain, & that is that the railway built last year from Skagway to the waters of the Yukon would not have been built if we had obtained the power to build our own railway. There are other reasons why we should have built a railway along that route, for there is every reason to expect that in that territory we would have found valuable deposits similar to those we have in the Yukon, & it is reasonable to suppose that at no distant date we would have a populous territory extending all the way from Kitimat Harbor to the Yukon. I will not say at present what we shall do with regard to this matter, but I may say at once that I shall take those propositions of the hon. gentleman into very serious consideration.

A combined postal & smoking car has been added to the P.E.I. Ry. equipment. A refrigerator car & two 1st class coaches are being built.

DRIVING WHEELS.....	Diameter of centre..... 8 ft.
.....	Journals..... 6 1/2 x 7 in.

The Joughins Car Truck.

On page 201 is an illustration of this truck, which was one of the first freight car trucks made up from structural shapes, & was designed with the idea of abandoning the use of the more expensive pressed steel shapes on that style of truck which has the springs placed on the top of the journal boxes. Each side frame is made up of an I beam, & the transom is formed by two I beams, which are connected to the side frames by vertical angle irons & horizontal gusset plates. A special feature of this truck is the open-ended pedes-

It permits the wheels & axles to be removed after jacking up the car only just enough to raise the springs. Instead of having to jack it up the entire height of the pedestal legs. This pedestal has its outer leg formed as a hinged or removable piece. In one form at each end of the side frame I beams are split horizontally & opened out, the superstructure web being cut away, leaving the top & bottom flanges. A bent steel T bar riveted to the web forms the top & inner leg of the pedestal, the outer leg being an L shaped piece of cast steel hinged to the outer end of the top of the pedestal & bolted to the bottom of the inner leg. In another form of the truck the fixed part of the pedestal is a cast steel piece in the form of an inverted L, riveted to the end of the side frame, while another L shaped piece, secured by a bolt at each end, completes the pedestal. By removing the bottom bolt in either form of truck, the loose outer piece of the pedestal can be swung up clear of the axle box, & the wheels can then be run out. The weight of the truck is about 1,200 lbs. (exclusive of wheels, axles, boxes & springs). Some of the trucks have been in experimental use under tenders on the Norfolk & Southern R.R. (U.S.A.) for over two years, & a number of them are in use on the Intercolonial, of which the inventor, G. R. Joughins, is Mechanical Superintendent.

Increase in Equipments.

That both the great railway systems anticipate a great increase of business in the near future may be judged by the number of freight cars which have been added to the rolling stock of the C.P.R. & G.T.R. recently. These, in the aggregate, reach into the thousands, & still the capacity is taxed to the utmost. The G.T.R. has more demands for freight cars than it can supply, while it has for years past been a complaint on the part of Northwest farmers that the grain crop could not be moved east by the C.P.R. with sufficient despatch to please them. These new freight cars are of almost double the capacity of the former patterns, which have now become obsolete, & large numbers of which have been broken up into firewood. The new make provides for the haulage of 30 tons, but this is not the last word on the subject either of the capacity of the cars or the locomotives. A

newer type still of the latter is possible—a type which will be as much in advance of the present pattern as the present pattern is in advance of the locomotive of 5 years ago. The first thought of the management of the C.P.R. & G.T.R. is, not so much the making fresh connections or affiliations, as providing facilities for the expeditious handling of the business which offers, in order to make, upon a tremendous increase of carrying power, a small margin of profit. This is the new problem, how—with low rates, which will be kept low, & which the managers of the great systems in the U.S. say will be lower still—to make a profit upon a business quadrupling in volume that which was done 10 years ago. The secret is found to lie in the increased capacity, & it is to provide this increased capacity that the shops of the G.T.R. & C.P.R. are kept busy. With regard to the monster locomotives of the latter, although the order for the present is limited, others will be added in the near future for the general service, & of a still greater power. This type will be employed in the haulage of the grain crops in the Northwest. A great freight train will carry double the quantity, will make better time, & will be able to meet the extra demands of the farmers with the increase of the wheat-growing belt, which increase will be felt in the greatly enlarged output of the next few years.—Witness.

Railway Equipment Notes.

Two narrow gauge locomotives have been added to the P.E.I.Ry. equipment.

The Sydney & Louisburg Ry. has ordered twenty 30 ton cars from Rhodes, Curry & Co., Amherst, N.S.

The Great Falls & Canada Ry. is having a narrow gauge passenger car & a narrow gauge sleeping car built in the U.S.

The Canadian Northern & the Manitoba & Southeastern railways have been adding considerably to their equipment recently.

The White Pass & Yukon Ry. is building stock cars 33½ ft. long at its shops at Skagway, Alaska. Two have been completed & 8 are under way.

The Midland Ry. of Nova Scotia has ordered twenty 30-ton flat cars from Rhodes, Curry & Co., Amherst, N.S. They will be

34 ft. long & equipped with Westinghouse air brakes.

The Intercolonial has recently received 30 box cars from Rhodes, Curry & Co., Amherst, N.S., also 6 2nd class passenger cars, & 30 box cars from other works. An order has been given Rhodes, Curry & Co. for 20 Wick's patent refrigerator cars for early delivery. They will be of 30 tons capacity & 36 ft. long.

The Dominion supplementary estimates provide for the Intercolonial railway \$10,000 for changing the draw-bars of cars from the link & pin coupler to the master car-builders' standard coupler, \$13,000 for changing car couplers, \$10,385 for a 1st class passenger coach, & \$30,000 for refrigerator cars. All the foregoing is chargeable to capital account.

The 6 consolidation locomotives for which the C.P.R. recently placed an order, as mentioned in our last issue, will weigh 150,000 lbs. each, & have 21 x 33 in. cylinders. The boilers will be 60¾ ins. diameter, & the working pressure 200 lbs. The fire boxes will be 9 ft. 1¼ long, by 3 ft. 6½ ins. wide, & will have 255 tubes. The steel tender will have a capacity of 4,000 gals. The specifications call for Westinghouse air brakes. The locomotives are to be delivered by Oct. 1.

The G.T.R. has added a new dining-car to its service between Niagara Falls & Port Huron, in connection with the through fast expresses from the east & west. It is known as no. 828, & will be attached to trains nos. 3, 5, 6 & 8. Palatial in its appointments, & containing all the latest improvements that tend to the comfort as well as convenience of the travelling public, the car, it is claimed, is one of, if not the finest, that ever ran over the tracks of a Canadian railway. The interior woodwork is of quartered oak, & the carpets & curtains are of velvet, in a handsome combination of olive & gold. Scores of small bevelled mirrors, between the wide windows, & cunningly enclosed in little nooks around the doors & corridors, add to the attractions of the interior. Both large & individual tables flank the broad centre aisle, & the chairs are all upholstered in leather. The pantries, sideboard and wine closets are magnificent creations in cabinet work. Everything for the holding of glass & silver is lined throughout with plush.

Baldwin Locomotive Works.

SINGLE EXPANSION AND COMPOUND LOCOMOTIVES.

Broad and Narrow Gauge Locomotives; Mine and Furnace Locomotives; Compressed Air Locomotives; Steam Cars and Tramway Locomotives; Plantation Locomotives; Oil Burning Locomotives.

Adapted to every variety of service, and built accurately to gauges and templates after standard designs or to railroad companies' drawings. Like parts of different engines of same class perfectly interchangeable.

*Electric Locomotives and Electric Car Trucks with
Approved Motors.*

Burnham, Williams & Co., Philadelphia, Pa., U.S.A.

RAILWAY FINANCE, MEETINGS, &c.

The Alberta Ry. & Coal Co. has given \$1,000 to the town of Lethbridge to be expended in tree planting.

Brockville, Westport & Sault Ste. Marie.—At the annual meeting at Brockville, July 12, the following were elected: President, E. R. Dick, Philadelphia; Vice-President, Col. W. H. Cole, Brockville; Gen. Manager, S. Hunt, Cincinnati; Supt., G. F. Agt. & Treas.—J. Mooney, Brockville; other directors R. A. Williams, Philadelphia; D. W. Downey, R. Bowie, D. Derbyshire, G. H. Weatherhead, Brockville; R. G. Murphy, Elgin; W. C. Fredenburg, Westport.

Calgary & Edmonton net earnings for May \$7,913.16, against \$14,614.27 in May, '98.

Notice was recently given that the Dominion Government subsidy for the 6 months ended June 30, together with the net earnings of the Co. to Oct. 31 last, permitted of a distribution of 2% on the 1st mortgage bonds in respect of the interest coupon falling due July 1, & that the payment of such interest would be made on & after that date on presentation of the coupons at the office of Morton, Chaplin & Co., London, Eng. The Co.'s scrip will be given for the unpaid balance of 1%.

Canada Atlantic.

On July 14 the House of Commons Railway Committee reported the bill providing for the amalgamation of the Canada Atlantic & Ottawa, Arnprior & Parry Sound railways, under the name of the Canada Atlantic Ry. Co. Both the C.P.R. & the Ottawa & New York Ry. opposed the measure on the ground that as drafted the bill would institute an unfair advantage to the amalgamated companies over all others in connection with the rights of entry to the central station over the canal reserve. Arguments in this direction failed to convince the committee that any injustice would be perpetrated, & no amendment in this connection was allowed.

The Canada Southern has declared its regular semi-annual dividend of 1% payable July 17.

Canadian Yukon Ry.—An Ottawa despatch of July 9 stated that the Dominion Government had decided on a sum to compensate Mackenzie, Mann & Co. for the failure to carry out this contract, owing to its rejection by the Senate.

C.P.R. School Taxes in Winnipeg.—Some time ago a suit was entered on behalf of the city of Winnipeg against the C.P.R. to recover arrears of school taxes from 1890 to 1894. The Co. in its defence set up that it was not liable as under a by-law passed by the city council it was provided that all the Co.'s property within the city of Winnipeg used for railway purposes or in connection therewith should be forever free & exempt from all municipal taxes, rates, levies & assessments of every nature & kind. The city demurred to this, & the matter came before Judge Bain, who decided in favor of the city, holding that the Co. was not exempt from school taxes, & that the council had no authority to pass a by-law exempting it, that tax being handled by an entirely different body, & merely collected with the other taxes as a matter of convenience and to save expenses. The

Co. appealed from this decision to the full court, which held that the appeal should be dismissed with costs, & the decision of Judge Bain upheld.

Central Counties.—The employees of this railway, which runs from South Indian to Rockland, & from Glen Robertson to Hawkesbury, have been notified that the Government receiver of the road will cash their claims for wages. The claims are to be paid out of the subsidy voted last session by the Ontario Legislature. This Co. is a subsidiary of the Canada Atlantic.

Central Ontario.—Two suits, brought by S. J. Ritchie, of Akron, Ohio, one against the estate of Senator Payne, & the other against Judge Burke, of Cleveland, have reference to C.O.R. bonds of the value of \$875,000. The bonds were pledged to the defendants by Mr. Ritchie, who built the road, for advances made. These advances, he claims, have been repaid, & he now seeks to have the defendants declared his trustees for the securities.

Dominion Atlantic.—Earnings for 5 months to 31st May \$204,906, against \$184,894 for corresponding period.

Great Northern (U.S.A.) It is rumored in New York that J. J. Hill, President of the G.N.R., has secured an important interest in

ed by the trustees of the 1st mortgage bondholders to make a final distribution of £3 10s. 6d. from the proceeds of the sale of land warrants & rights to lands.

Cheques have been issued for the outstanding working expense claims contracted prior to the appointment of the Receiver in 1893. The claims have been paid in full without interest.

The Manitoba Legislature has authorized an agreement with the Co., by which the Province will take over about 500,000 acres of land in payment of monies advanced to the Co. for interest, etc. The land is to be selected out of 2,700,000 acres mostly in the Province, & will be sold to actual settlers only.

Minneapolis, St. Paul & Sault Ste. Marie.—The London Stock Exchange Committee appointed June 29 as a special settling day in this Co.'s scrip of \$3,500,000 second mortgage 4% 50 year gold bonds, & ordered the security to be quoted in the official list.

New York Central.—The recent acquisition of the Boston & Albany by the New York Central gave rise to a variety of reports in the U.S. papers affecting Canadian railways. According to one rumor the C.P.R. & the New York Central had entered into a formal alliance, & as part & parcel of their agreement had secured control of the projected Grand Island bridge over the Niagara River, a few miles above Buffalo. That was said to be one part of the deal. The other concerned the working of the two systems in the east, & with the acquisition by the New York Central of the control of the Boston & Albany as a basis, a fantastic web of romance was woven of war between the C.P.R.-New York Central combination & the G. T. R.-Central Vermont system. D. McNicoll, Assistant General Manager of the C. P. R., declared without reserve that there was nothing whatever in the report, so far as the C. P. R.

was concerned. The C.P.R. & the New York Central, of course, had worked together for years, the latter being the C.P.R.'s United States connection, & the C.P.R. the Canadian connection of the Central. They would continue to work together on the same basis, but as for any new alliance between them on the lines indicated in the report from Buffalo, or the other report from Boston, there was nothing in it.

Qu'Appelle, Long Lake & Saskatchewan net loss for May \$321.29, against net loss of \$1,487.35 in May, '98.

Quebec Central net earnings for 5 months to May 31, \$50,816, against \$42,056 for corresponding period.

Traffic receipts for June, \$50,548.78, against \$41,270.41 in June, '98. Traffic receipts for 6 months to June 30, \$219,060.38, against \$199,956.48 for corresponding period.

The Quebec & Lake St. John Ry. Co. has defaulted in the interest due July 1 on its £780,000 5% mortgage bonds which were issued in Feb., 1889, through the Railway Share Trust & Agency Co. at 96, being secured by a first mortgage on the main line from Quebec to Roberval. The other capital issues are city of Quebec preferential stock \$450,000, & capital stock \$4,074,000. The Quebec Government guaranteed the payments of interest

THE JOUGHINS CAR TRUCK.

the new Wisconsin Central Co., which will enable him to carry out a plan long attributed to him—that of forming a new transcontinental line that will extend from the Atlantic to the Pacific. This is to be accomplished by means of the Baltimore & Ohio, in which he is an important factor, & the Great Northern, with the Wisconsin Central as the connecting link. Under this combination the Hill transcontinental system would aggregate 7,499 25 miles, or 3,385 miles from New York to Seattle.

Kootenay Valley Ry. & Navigation Co. A mortgage given by this Co. to secure about \$2,400,000 has been filed with the County Auditor at Rathdrum, Idaho. It is given on the portion of the road extending from the southern end of Kootenay Lake to the International Boundary Line, & from the Boundary Line to Bonner's Ferry, Idaho. The mortgage is to the Stock Conversion & Investment Trust, Ltd., of London, Eng., securing a loan of £480,000. The mortgage embraces the road bed & all equipments. The rate of interest is 5%, payable semi-annually in London. This loan will enable the Co. to carry on its proposed plans. The Co. is composed principally of Scotch capitalists, & works in harmony with the G.N.R. of the U.S.A.

Manitoba & North-Western. The Clydesdale Bank, London, Eng., has been instruct-

The S. bonds for 10 years from Jan. 1, 1888. The gross earnings of the Co. for the year ended June 30, 1898, were \$258,730.00, & the working expenses \$17,802.72, so that it would appear that there is not a very inviting prospect for the bondholders, & the bonds have fallen in London to 23-28. It is announced that the Railway Share Trust & Agency Co. has instructed its solicitors in Quebec to apply for a receiver for the Q. & L. St. J. R. Co. The main line of the Co. from Quebec to Roberval is 102 miles, & the eastern extension from Chambord Jet, to Chicoutimi 53.85 miles. The Co. leases the Lower Laurentian Ry. 30.50 miles, making a total operated of 285.35 miles. The gauge is standard, & the rails are 30 & 40 lbs. Inquiry of the management in Quebec has elicited the reply that "the bond issue of the Co. is being readjusted by a friendly agreement between the bondholders & the Co."

Stewiack Valley & Lansdowne. The trustees for the holders of certified 1st mortgage 6% bonds of this Company, recently gave notice that they would on June 15 be prepared to pay a dividend of 18% on the capital of the bonds.

Sydney & Louisbourg Ry.—It is proposed to lease the Dominion Coal Co.'s property in Cape Breton to the recently organized Dominion Steel & Iron Co., for a term of years contemporaneous with the existence of the Dominion Coal Co.'s leases, on a basis of 6% dividends on the common stock. If the arrangement is carried out the control of the S. & L. Ry., as well as other plant & equipment of the Coal Co., would pass to the lessee. The charters of all steamers & barges now in existence would also be turned over to the leasing company.

C.P.R. Earnings & Expenses.

Gross earnings, working expenses, net profit and increases or decreases over 1898, from Jan. 1, 1899.

	Earnings.	Expenses.	Net Profits.	Increase or decrease.
Jan. S.	\$1,956,281	\$1,416,332	\$540,000	\$101,000.27 +
Feb.	1,824,434	1,674,453	149,981	170,034.12 +

Total.....	£2,468,011	£2,338,277	£129,734

Mail Subsidies.—Clarke Wallace, M.P., recently raised in the House of Commons the question of the amounts allowed railway companies for the carriage of mails which aggregate \$1,352,000 a year. In his opinion the companies were very much overpaid. Last session the Postmaster-General had taken a vote for the purpose of investigating the matter, but so far nothing had been done. The Postmaster-General said that the railway companies, especially the G.T.R. & the C. P.R. companies considered they were very much underpaid, & pointed to the prices paid by the U.S. Government which were very much higher. It was true he had taken a vote last session for a commission of enquiry into this matter, but on the representation of the railway companies that the amounts paid them had been sanctioned by long usage & were not as large as the amounts paid for a similar service in other countries, he had not thought it necessary to proceed further.

ALES, EXTRA PORTER

... AND ...

PREMIUM LAGER.

Most Extensive and Complete Brewery and Malthouses in Western Canada.

CHOICE MALT FOR SALE.

Manufacturer of the Celebrated

Golden Key Brand AERATED WATERS.

THE BARRETT TRACK JACK.

Recommended as a standard by the

Road Masters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low set loads.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting capacity, 10 to 15 tons.

RAILWAY APPOINTMENTS, Etc.

Canadian Pacific.—C. Drinkwater, who has been Secretary of the Co. since its formation in 1881, has been appointed Assistant to the President, & will continue to discharge the duties of Secretary. A. R. G. Heward, for several years Chief Clerk in Sir Wm. Van Horne's office, has been appointed Assistant Secretary of the Co.

There is no truth in a report published in B.C. papers, stating that the offices of the assistant general freight & passenger agents of the Pacific Division were to be removed from Vancouver to Montreal.

L. R. Johnson having been appointed Superintending Engineer of the Co.'s ocean steamships with headquarters at Vancouver, it has been decided that he shall also have charge of the shops at Vancouver reporting to and taking instructions in connection therewith from the General Superintendent of the Pacific Division.

F. E. Hobbs has been appointed Master Mechanic of that Division with headquarters at Revelstoke.

J. Fahey, conductor on the Western Division, has been appointed trainmaster at Winnipeg, H. O'Connor having resumed his former duties as fire inspector for the division.

W. A. Walker, storekeeper at Nelson, B.C., has been transferred to the Montreal stores.

W. O. Miller, heretofore station agent at Kamloops, has been appointed Car Service & Fuel Agent for the Pacific Division.

Central Vermont.—J. W. Shanks having resigned, W. P. Elrod has been appointed General Road Master. Office at St. Albans, Vt.

J. O. Olmstead having resigned, D. A. Sheedy has been appointed Superintendent of Bridges & Buildings. He is a brother of J. A. Sheedy, who recently resigned the position of Master of Bridges & Buildings, Middle Division, G.T.R.

Grand Trunk.—John Henderson has been appointed Roadmaster, 5th & 6th districts, between Vaudreuil and mileage 175 west of Kingston Jct., vice J. McGovern, resigned. Office: Brockville, Ont.

W. W. Ashald has been appointed Train Master 1st & 3rd districts & 2nd district between Richmond & Island Pond, with headquarters at Island Pond, Vt., vice C. S. Cunningham, resigned. P. J. Lynch has been appointed Train Master 6th & 7th districts, with headquarters at Belleville, Ont., vice W. W. Ashald, transferred. D. J. O'Connor, Train Despatcher at Stratford, has been appointed acting Train Master of the 22nd, 23rd & 24th districts, with headquarters at Stratford, vice P. J. Lynch, transferred.

G. T. Bell, Assistant General Passenger Agent at Montreal, has been appointed 1st Assistant General Passenger & Ticket Agent, with headquarters at Chicago, vice E. H. Hughes assigned to other duties. G. W. Vaux, heretofore Chief Clerk in the Passenger Department at Montreal, has been appointed Assistant General Passenger & Ticket Agent, with headquarters at Montreal, vice G. T. Bell promoted. Both appointments date from Aug. 1.

Intercolonial.—Hitherto W. B. Mackenzie has been Chief Engineer, with T. C. Burpee as Assistant Engineer, Mr. Mackenzie having control over both construction & maintenance. In accordance with the practice prevailing on the C.P.R. & G.T.R., the duties of the engineering department have been divided. Mr. Mackenzie remains as Chief Engineer, but with supervision of construction only. The maintenance of ways and works has been transferred to General Supt. Price's department, with T. C. Burpee as Engineer.

Minneapolis, St. Paul & Sault Ste. Marie.—G. R. Huntington has been appointed Superintendent at Minneapolis, Minn., succeeding F. C. Batchelder, resigned.

Ottawa & New York Ry. & New York & Ottawa R.R.—W. Chance, having resigned as Sec. & Treas. of these companies, A. Nichols has been elected Sec. & Treas. Office: 27 Pine Street, New York. G. B. Colpas has been elected 1st Assistant Treasurer. Office: Ottawa, Ont.

Death of C. J. Pusey.

C. J. Pusey, President & Manager of the Irondale, Bancroft & Ottawa Railway, died July 16 at the residence of his son-in-law, R. G. Kingan, Peterboro', Ont., where he had been suffering from an organic affection of the heart since the middle of June. For many years Mr. Pusey had been a prominent figure in railway circles in the north. He was a native of Chester, Pa., & early in life developed the aptitude for railway work that distinguished him all his life. In 1870 he became President of the Hudson Suspension & New England Ry., & later General Manager of the Sodus Point & Southern Ry. From 1873 to 1878 he was interested in mining in the Madoc District, & noting the heavy handicap to mining operations imposed by the absence of railway facilities, he turned his attention to railway development. In 1886 he purchased the nucleus of the present I.B. & O. Ry., 6 miles of line, extending eastward from the junction with the Victoria branch of the G.T.R. His object was to extend the line to Brockville, with connections to Ottawa, to give a U.S. outlet to mining products, & to extend the line westward & north to the Georgian Bay. His idea was the establishment of large smelting works in Hastings County. By his own almost entirely unaided exertions he secured Ontario & Dominion charters, & in the face of great difficulties extended his railway eastward by ten-mile sections, till now 47 miles are in operation, with 5 additional miles to be completed this fall. Mr. Pusey leaves four daughters, Mrs. F. C. Jones, Toronto; Mrs. L. B. Howland, Irondale; Mrs. R. G. Kingan, Peterboro'; & Miss Pusey. The funeral took place to Greenwood Cemetery, Brooklyn, N.Y.

Mainly About People.

S. J. Stratton, Chief Clerk Ontario Department Bell Telephone Co., died in Hamilton June 9.

J. A. Ashe, ex-Train Despatcher of the I.C. R. at Truro, is now on the New York Central at Oswego, N.Y.

C.P.R. President Shaughnessy was indisposed early in July for a few days & was confined to his house.

Lyman Dwight, Superintendent of the G. N.W. Telegraph Co., & Mrs. Dwight are visiting Banff, Alta.

C. R. Hosmer, Manager C.P.R. Co.'s Telegraph, left New York for England July 12, accompanied by his son.

At the monthly meeting of C.P.R. Directors July 10 Sir Wm. Van Horne presided for the first time as Chairman of the Board.

Mrs. W. T. Payne, wife of the C.P.R.'s General Traffic Agent for Japan at Yokohama, is spending the summer at St. Andrews, N.B.

W. A. Kittermaster, General Agent Freight Department C.P.R., Chicago, is posted for membership in the Chicago Board of Trade.

Lady & the Misses Van Horne are spending the summer at Sir William's seaside residence, Minister's Island, St. Andrew's, N.B.

H. P. Bell, C.E., of Victoria, B.C., has gone north to act as inspector of the portion of the White Pass & Yukon Ry. within British Columbia.

The engagement is announced of Miss Blair, second daughter of Hon. A. G. Blair,

Minister of Railways, & W. C. Clarke, of St. John, N.B.

Mrs. G. H. Webster, wife of the Land Commissioner of the M. & N. W. Ry., & her children are spending the summer at Portage la Prairie.

Mrs. W. R. Baker, wife of the General Manager of the M. & N. W. Ry., & her children are spending a few weeks at the Lake of the Woods.

J. McGovern, Roadmaster of the G.T.R. at Kingston for 20 years, & for 30 years in the service of the Co., has resigned to become a railway contractor.

Superintendent J. Wilson, of the Pacific division of the C.P.R. Co.'s Telegraph, is still in California for his health. Mr. Fletcher is acting as Superintendent.

Geo. E. Macdonald, of the C.P.R. traffic department at Vancouver, has been appointed General Agent on the B.C. Mainland for the Union & Wellington collieries.

Manager Whyte, of the C.P.R. Western lines, has been making an inspection of the Pacific Division, including the new lines in Kootenay & Kettle River districts.

Senator Proctor, who represented President McKinley during the presence of the Grand Army of the Republic in Montreal recently, was the guest of Sir Wm. Van Horne.

W. G. Reid, of Montreal, contractor & part owner of the Midland Ry. of Nova Scotia, was, on July 16, reported as confined to his house in Truro, N.S., threatened with typhoid.

After making an inspection of the G.T.R. system, President Sir C. Rivers Wilson & the Hon. Lady Rivers Wilson sailed from New York July 1, and are in town at 1 Point St., London, for the season.

Prior to leaving Winnipeg early in July for Montreal, C.P.R. Passenger Traffic Manager Kerr was tendered a dinner at the Manitoba Club, & was presented with a dinner set by the Traffic Department staff.

T. Tait, Manager C.P.R. eastern lines, returned in the middle of July from a two months' trip to Europe. Mrs. Tait is visiting her parents, G. R. & Mrs. Cockburn, at their summer place at Birch Point, Muskoka.

The engagement is announced of C. A. McGrath, Land Commissioner Alberta Ry. & Coal Co., at Lethbridge, to Miss Mabel Galt, daughter of the late Sir A. T. Galt, & sister of E. T. Galt, President of the A.R. & C. Co.

Capt. C. Goodall, senior member of the firm of Goodall, Perkins & Co., of San Francisco, who control the Pacific Coast Steamship Co. operating between San Francisco, British Columbia & Alaska, died suddenly in England recently.

W. E. Mullins, formerly chief clerk to Superintendent Fitzhugh, of the Middle Division of the G.T.R., & now occupying a similar position with Mr. Fitzhugh on the Central Vermont, was presented with a purse & a travelling bag on leaving Toronto recently for St. Albans, Vt.

The receivership of the Baltimore & Ohio Ry. terminated June 30, a reorganization having been effected without foreclosure. F. D. Underwood, formerly of the Minneapolis, St. Paul & Sault Ste. Marie, was appointed 2nd Vice-President, in addition to the position of General Manager he previously held.

W. R. MacInnes, recently appointed General Freight Agent of the C.P.R. western lines at Winnipeg, is but 32 years of age. He entered the service of the C.P. in June, 1885, as clerk in the Purchasing Department, & in Nov. of the same year was transferred to the solicitor's office. In Sept., 1886, he was again transferred to the office of General Traffic Manager Olds, & was appointed chief clerk to him in May, 1887. He remained in

on Saturday, March, 1890, when he went to Chicago as General Agent of the Freight Department of the Canadian Pacific "Sea" & Pacific South Shore & Atlantic, & also as agent of the Canadian Pacific Dispatch.

D. D. Mann, of Mackenzie, Mann & Co., left Montreal July 25 for Vancouver, to sail by the R.M.S. Empress of India for Shanghai. Before starting he said to a Star reporter:—"I shall look over the ground, while in China, & if there appears to be an opening, it is quite possible we will take a hand in, & build a few railways in that country. We have, however, received no concessions, nor have we had anything to do with the schemes which certain New Yorkers desire to carry through. There is a very wide field for railways in China, & if possible we intend to do our share in constructing them." Mrs. Mann & family accompanied Mr. Mann as far as Banff, where they will spend the remainder of the summer.

By a unanimous vote Eben E. McLeod, Assistant General Passenger & Ticket Agent of the Chicago, Rock Island & Pacific Ry., has been selected Chairman of the Western Passenger Association, to succeed Mr. Caldwell. The selection is hailed as an admirable one from all quarters, & probably the most surprised man of all is the young "dark horse" himself. Mr. McLeod has made an enviable record in the railway service. He is only 33 years of age. He was born in Newport, Nova Scotia, from where his father moved to Charlottetown, Prince Edward Island, when he was a child. He was graduated from Prince of Wales College & went to Boston as a clerk in the G.T.R. offices in 1885, & into the Boston & Albany ticket office in 1887. Dec. 1, 1889, he was made Travelling Passenger Agent in New England for the Chicago, Rock Island & Pacific Ry., & in 1892 he was given the Canadian territory in the same position, & afterward the Pittsburg territory. In Jan., 1898, he was made Assistant General Passenger Agent at Topeka, Kan., & was promoted to First Assistant at Chicago, Dec. 1 last. He is the son of the Rev. J. M. McLeod, of Vancouver, B.C.

Immigrant Traffic Conference.

The Special or Advisory Committee of the Western Passenger Association in charge of immigrant traffic, headed by Chairman McLeod, held extended sessions in New York in the middle of July for the purpose of rendering effective the agreement regulating that class of business through the port of New York. The committee held conferences with representatives of the transatlantic, trunk

lines & others, including the Canadian Pacific & Southern Pacific. There was a general disposition to co-operate on the part of the two transcontinental lines, & the outlook is regarded as extremely bright for the new compact. The new compact which is to govern the Western Passenger Association lines in the matter of immigrant traffic, provides for the management of the bureau by an advisory committee, which also has the general supervision of the carrying out of the agreement. The advisory committee is to promptly provide for European supervision of the business, & is to arrange with the steamship lines for the handling in Europe of bureau orders, upon which is to be shown the names of each line in the bureau, under the terms of a contract heretofore made with the steamship companies. Split orders are prohibited, & the committee has full authority to arrange for the through ticketing of the business subject to the bureau, from seaboard to destination. The officers of each line, it is declared in the agreement, "are bounden to do all they can to aid the Chairman to locate & properly describe the tickets used by any immigrants, to the end that such passengers may be properly charged to the roads that carry them, provided that no road shall be bounden to furnish any record or information for the purpose of making such charge against other roads." Withdrawals may be made from this agreement upon 30 days' notice to the Chairman of the advisory committee.

These rules are supplemented by a memorandum which provides that in the event of failure to arrange satisfactorily with the steamship companies in regard to European supervision of the business, the advisory committee may, within 90 days from July 1, establish an agency or agencies, for the sale of bureau orders, in Great Britain & on the continent of Europe, in order to secure the business for the lines; if, however, for any reason it proves impossible to place these immigrant orders on sale in Europe, or for any reason the orders have to be withdrawn, & the advisory committee fails to promptly accomplish European supervision in some other manner, then, in order to meet the competition of the Southern Pacific, the Canadian Pacific or other roads, any line or group of lines may exercise the right to place orders of their own in Europe for sale through any agency that may be deemed best, provided that the business subject to the agreement thus secured on such orders shall be subject to the rules & regulations of the agreement in the same as they apply to the business handled by the steamship lines & the Southern Pacific.

Negotiations are to be opened with the

Southern Pacific by the advisory committee to at once secure its co-operation with its connections via Ogden & its participation with them in the division of rates & commissions on current or agreed ticket divisions when normal rates are reduced, or normal commissions increased. The arrangements heretofore in force between the bureau & A. E. Johnson, an outside immigrant agent, are to be discontinued. In the revision of percentages for the division of any or all of the business, if the advisory committee is unable to reach a unanimous conclusion, the subject may be submitted to arbitration. If the bureau cannot, by unanimous action, agree upon a single arbitrator, there are to be 3 arbitrators—1 chosen by the applicant for revision, 1 by the bureau without the vote of the applicant, & these 2 to select a 3rd. The decision of the sole arbitrator, or a majority of the 3, is to be final.

The most important features of this agreement are the provisions relative to European supervision & requiring steamship companies to use the bureau immigrant orders, together with the independent action allowed the lines if this is not accomplished in 90 days; the settlement of percentages by arbitration, if not otherwise agreed upon, restriction of authority to be exercised by the Chairman, & the discontinuance of all arrangements with all outside immigrant agents. These agents will, of course, continue to do business abroad, but if the agreement can & is carried out to the fullest extent of its provisions, especially with reference to control the traffic in Europe, they are likely to suffer big losses. In this much depends upon what the steamship companies do. They have always insisted that they could control the traffic, & they now have the best opportunity ever accorded them to prove this.—Leonard's Railway News.

Passenger Traffic Matters.

The Passenger Department of the Dominion Atlantic Ry. has issued *The Story of Acadia*, by Dr. Hannay, in book form.

Think of being able to go from Victoria to Dawson in 10 days; 14 days from Montreal, if you please, & on a pinch 20 days from London. These are assuredly days of progress.—Victoria, B.C., Colonist.

A San Francisco telegram says the C.P.R. has withdrawn from the California Passenger Association on the ground that the purposes of the Association were in conflict with the provisions of the Interstate commerce law.

W. D. Reid, General Manager of the Newfoundland Ry., predicts that Newfoundland as

a summer resort will see more visitors this year than ever before. Its beauties are only just beginning to be known, & it will attract in constantly growing numbers the tourist travel of not only Canada & the U.S., but of Europe as well.

The G.T.R. has announced positively that it will not withdraw its summer tourist rates to Boston so long as the Vanderbilt lines make summer tourist rates via Albany & Boston to New England points. At the meeting of the Central Passenger Association all the lines except the G.T.R. assented to a resolution that tourist rates to Boston be withdrawn.

Central Passenger Association lines have agreed to adopt a form of ticket on all east-bound business from Chicago to trunk line territory requiring the holder to travel on a particular train, the leaving & arrival times of which will be specified in the margin of the ticket. This action was taken upon the recommendation of the trunk lines, & is designed to prevent the scalping of through tickets to the East by brokers at Pittsburg & Buffalo. The change went into effect July 1. Many of the roads previously used such a ticket, & its general adoption is expected to prove a great benefit.

H. R. Charlton, Advertising Agent of the G.T.R., states that the results of the exhibition of Canadian pictures by the G.T.R. throughout the U.S. are showing themselves in a marked degree. Down South, where the Muskoka lakes & the highlands of Ontario were unknown, people are talking about them, & in a recent trip to St. Louis, Mo., he met lots of people either going up or about to take a trip to the northern country. He also states that owing to the vigorous policy of the G.T.R. in advertising Canada, & the playgrounds that are reached by the system in Ontario, applications are being received from the continent of Europe, including Italy, France, Germany, & even Russia.

The fight between Eastern U.S. roads over passenger rates may be said to be fairly on. The Wabash & the Nickel Plate gave notice at the end of June that they would meet the \$5 reduction in round-trip tickets between Chicago & Boston made by the Erie. The Michigan Central practically has announced that it will cut its fares \$5, although no official notice has yet been given. The Erie's cut was made to preserve its differential, & if it be fighting for principle its only course is to make another cut below the standard lines. The Michigan Central's policy all along has been that no competitor is entitled to make lower rates than itself for summer tourist business. Hence, if it is fighting for principle it may be expected to meet any reductions made by the differential lines. — *RailwayWorld*, July 7.

Summer travel on the railways & steamboats is now in full blast, & officials are up to their ears in the rush of business that began with the opening of July. Officials of all lines say that the volume of travel has been greater than at the same period of any other year within memory. Almost every car in the possession of the several roads has been in service, & as for the steamboats they have been filled practically to the limit of their capacity. The summer travel by the St. Lawrence route from Niagara Falls & Ontario points began much earlier this year than last, & every boat arriving in Montreal from the west is crowded. The tourist travel on the railways is especially heavy, & of course, the Christian Endeavor Convention at Detroit & the Educational Convention at San Francisco have added to the numbers of the travellers.

The Tramway Incorporation Amendment Act passed by the British Columbia Legislature in 1898 has been disallowed by the Governor-General-in-Council, as it prohibits Chinese and Japanese being employed on any undertaking authorized by the act.

The C.P.R.'s Train Service.

The Winnipeg Commercial says: "The train service which recently went into effect on the C. P. Railway main line & numerous branches, is a source of unbounded satisfaction throughout the West. It is simply far beyond expectations. We have now from ocean to ocean, through Canada, by all odds the best transcontinental train service on the continent. The Imperial Limited, as the new C. P. R. transcontinental service is called, is something which this country has reason to be proud of. It is sure to result in a large increase in transcontinental travel of the better class. Tourists & others who travel for pleasure, will hardly fail to avail themselves of the superb service afforded by the C.P.R. when selecting a route for such a trip. Add to this the grandest trip on the continent in point of scenery, & there is nothing left that could be desired for the Canadian route. With a splendid trans-Pacific steamship service in connection with the railway, & equal advantages compared with any other route for connection with Atlantic steamships, the C.P.R. should be right in the field for a large share of around the world travel.

"The residents of the West who were here during the early days of the railways in this country, will feel specially gratified at the wonderful growth of travel here. It is not a great many years to look back to the opening of the C.P.R. through to the Pacific coast. During the few years following the opening of the road, those who had occasion to travel much will well remember how the transcontinental trains jogged along over open prairie or through the mountains, with often scarcely half a dozen passengers. The writer once travelled some distance on one of these trains, with only one other passenger as a companion in the first-class coach. This one passenger, it transpired, was riding on a second class ticket. As he was the only other passenger on the train, he was allowed to invade the first class carriage. How things have changed in these few brief years. The lonely prairie now has a line of prosperous towns & villages along the railway, while comfortable rural residences abound. Evidences of advancement & civilization are to be seen on every hand. Now the transcontinental trains speed along with a full complement of passengers, local & through. While the splendid train service now provided is to some extent due to the favor with which the Canadian route is now regarded by tourist travellers, the great improvement is mainly due to the development of the country served by the road. It is but an indication of the general progress of the country. This is shown by the fact that the service on the branch roads, where tourist travel is not a factor, has been improved in keeping with the main line. As it is now, an excellent train service has been established on the branch lines as well as on the main line."

Piece Work on the I.C.R.

Mechanical Superintendent Joughins recently issued the following circular to foremen in the Moncton shops:—"The management of the Intercolonial wish you to assure all those who will adopt the piece work system, that their desire is to have the work so done & prices so made as to be of mutual advantage, that it be more of a profit sharing than a piece work system, believing that the men have an interest in the prosperity of the road & of the town in which they live. With this end in view each man on piece work will have the full benefit for 6 months of all improved methods he may use to turn out work, no matter how much wages he may earn within reason.

"On Jan. 1 & July 1 each year prices will be revised to a usual fair & just basis as be-

tween the men & the railway by mutual agreement. The expectation & object of the management is to see every able-bodied man in its employ busy, prosperous & contented, doing a fair day's work for a fair day's pay or wages. This is not piece work on the ordinary plan, but on a co-operative mutual benefit plan. There will be no unfair crowding to get a lot of work done at cheapest possible rate. No one will be compelled to accept piece work, & any one may drop it whenever he sees fit to do so, while those who are old & feeble will not be expected to undertake it. There may, of course, be exceptions to the above where there appears to be any glaring mistake. The prices will then be raised on behalf of the workmen, or lowered on behalf of the railway, or cancelled as may be necessary; the idea being to share the profits of any improved method which may be introduced by the foremen or the men, so as to make it really an industrial partnership."

Railway Operating Matters.

The C.P.R. is said to be contemplating a change in its operating department by which the B.C. branch lines will be despatched from Nelson instead of from Nakusp & Trail as at present.

On July 25, G. T. R. Superintendent of Motive Power Morse announced that the negotiations which have been going on for some time now between the locomotive drivers & the G.T.R. management were proceeding to a satisfactory conclusion. Mr. Morse added it was quite possible that the terms of the new agreement might be made public in the course of a few days thereafter.

The C.P.R. has brought a number of machinists from Great Britain recently, principally from Liverpool, & has distributed them among its shops. The new arrivals say the Co. is advertising extensively for this class of skilled labor in the press of Great Britain, & it is probable more will follow. A Winnipeg paper says the old sodders received a cordial welcome from their fellow craftsmen there, as it is felt there is work enough for all.

At the convention of the Train Dispatchers Association of America at Milwaukee recently, W. M. Goodwin, of the G.T.R. at London, Ont., who has been instructor on the standard code on that road for the past year, brought up a number of points of difference between the recently adopted revision of the standard code, & that which it superseded, & animated discussion of the various questions followed, which was participated in by many members. Mr. Goodwin was elected a member of the Executive Committee.

The Wabash has advanced wages as follows: Freight enginemen will receive \$3.90 per 100 miles, in place of \$3.75; freight firemen \$2.90, instead of \$2.79; freight conductors \$2.90, instead of \$2.80; brakemen \$1.17, instead of \$1.10; passenger conductors running from 3,000 to 4,000 miles monthly will receive \$90; 4,000 to 5,000 miles, \$100; 5,000 to 6,000 miles, \$105; 6,000 to 6,500 miles, \$110; over 6,500 miles, \$115. Baggage men get 55 & brakemen 30% of their conductors' pay. Passenger engineers receive \$3.35 per 100 miles' run; firemen \$1.90 per 100 miles. — *Railroad Gazette*.

The Whitney syndicate which controls the coal fields at Glace Bay, N.S., is making a big effort to introduce coke for firing purposes on the railways of the New England States. Heavy shipments of coal for gas manufacture at Boston will give an almost unlimited supply of coke. Experiments made with coke on the Dartmouth branch of the Intercolonial Ry. are said to have been so satisfactory that an extension of the trials will be extended to U.S. roads. The syndicate has sent C. Wilson of the Intercolonial to make tests on the Boston

& A. J. J. the Maine Central & other roads. Should the results be to the satisfaction of those interested Mr. Whitney will have solved the problem of securing a market for a big output.

The employees of the Canada Atlantic have renewed the negotiations which were commenced last fall in order to procure if possible a higher scale of wages & a 10-hour day. The officials last year told the members of the deputation which waited upon them that the road was not in a position to grant the request, but that negotiations might be renewed this spring. The trainmen claim that taken all around the wages paid them average about a-third less than on the C.P.R., & that as the Co. now operates about 700 miles of road it is in a position to pay a higher schedule. There are about 300 train hands on the line. It is expected that increases will be given the trainmen & that the matter will be settled without any difficulty.

A Winnipeg despatch of July 25, said: The C.P.R. drivers, firemen & trainmen are in consultation with General Superintendent Osborne in connection with proposed changes in the schedule. There are three principal points in dispute, the men claiming as follows: 1st, since the big engines have been introduced the trains have been longer & slower, owing to the heavier loads & delays; as the men are paid by the mileage they do not get so much & want an increase. 2nd, trainmen want more brakemen with their long trains; & 3rd, is the complaint against reduction of the number of baggagemen & the requirement of express messengers to do the work, as the express messengers are tied to their trains & cannot give the necessary assistance in case of mishap. It is likely everything will be amicably settled.

G.T.R. Train Rules.

The new train rules for the G.T.R. based on the standard code of the American Railway Association, which were approved of by the Government last year, & in which the men have been instructed & examined for some time past, went into effect on the lines of the system west of the Detroit & St. Clair Rivers on July 10, & will very soon be put in force on the whole of the rest of the system. In a recent interview General Superintendent McGuigan said: "It will only be a short time now when we will have the new rules in operation. The men seem to understand them pretty well now. They are to-day in force on the western district of the G.T., that is the Chicago & G.T. line, as it is known. While in Canada we have not put the rules into effect, you can easily see that it is necessary to have

the one system of train-running over the entire line of the G.T. These rules are the ones adopted by the American Railway Association representing the principal roads in the U.S. There are 180,000 miles of railway in the U.S., & roads representing 162,000 miles have adopted these rules. At sea, ocean steamships, no matter what country they hail from, have the same rule of the road, & this is the system that should obtain on the railways. There is no question that the new rules will, within a few weeks, be enforced all over the G.T. system."

Railway Committee of Privy Council.

A number of cases were heard at a meeting in Ottawa July 4.

Bedlington & Nelson Ry.—In the application of this Co. for power to run over a portion of the C.P.R.'s Crow's Nest Pass Ry., the parties being unable to agree, the committee fixed the rent to be paid by applicants at \$475 a mile per year, with conditions as to renewal, etc.

Toronto Matters.—A deputation from Toronto City Council was heard in reference to the crossing of the C.P.R. & G.T.R. tracks at Lansdowne Avenue, Parkdale, which the city wants to be declared a public crossing. The Postmaster General said, after examining the site, he had come to the conclusion a subway was necessary. It was contended that this would cost \$80,000 & the city wanted to avoid the expense. It having been pointed out that in Jan. 1898, the committee had given instructions that a subway, a foot bridge or an overhead bridge be constructed by the City, the Minister of Railways said the order should have been obeyed. Counsel for the City asked to have the matter reopened. The Minister of Railways said the Chief Engineer of the Department had reported that a level crossing would be dangerous. Decision was reserved.

A request of the city that gates & watchmen be placed at the G.T.R. crossings of Dunn, Jamieson & Dowling Avenues, was left over till the next meeting so that counsel for the City & for the G.T.R. could confer with a view of arriving at an arrangement.

A similar request was made by the City in regard to the crossings of Cherry street by the G.T.R. & C.P.R. The Co.'s claim is that the street was only opened up by law in 1890, & that the City should therefore foot the bill. The City Surveyor said that Cherry street had been opened at the point in question as far back as 1855. Counsel took issue on this point, & the committee decided to defer the consideration of the question until its next sitting.

The City of Toronto applied for the extension of the Toronto Ry. Co.'s Bloor St. line west of Lansdowne Avenue to Dundas Street. The City Council had ordered the Ry. Co. to extend the line, but the Co. declined to do so. The Council contended that a population of about 3,000 would be served by the extension. Manager Keating, of the Ry. Co., stated that there was no public call for the new line, & that if completed it would not pay. He saw no probability that the line could be utilized in the future as part of a belt line. Mr. Bicknell, on behalf of the Co., claimed that the act provided that applications for permission for electric lines to cross steam lines must come from the former, & not from municipalities. He gave notice that in case the Committee granted the city's request he would call into question the Committee's jurisdiction. Counsel for the C.P.R. said another set of gates would have to be placed at the C.P.R. & G.T.R. crossings at Bloor St. It cost the two companies \$1,000 a year to guard these crossings. He hoped that if the city's request were granted the railway companies would be enabled to continue the arrangement at the same annual charge. He thought a level crossing would be undesirable. The Committee reserved decision.

G.T.R. Crossings in Frontenac.—Frontenac County Council asked the Committee to compel the G.T.R. to place electric alarms or other protection at the crossings at Collins Bay, Cataraqui & Perth Roads. The petition was allowed to stand, the Committee deciding to send a Government Engineer to inspect these crossings.

The Portage & Northwestern, a subsidiary of the Northern Pacific, had 3 applications, the 1st for permission to run its line along Pacific Avenue, Portage la Prairie, & to cross the C.P.R. on the Avenue; the 2nd to secure approval of the place & mode of junction of its railway with the Manitoba & Northwestern Ry., near Portage la Prairie, & the 3rd for leave to cross the tracks of the Manitoba & Northwestern Ry., near the same town. All the applications stood over after argument had been heard, the parties representing agreeing to appear on a week's notice.

The Toronto, Hamilton & Buffalo Ry. applied for permission to run a branch along Trolley Avenue, Barton Township, crossing the G.T.R. Counsel for the G.T.R. offered to allow shunting privileges on the G.T. tracks along Trolley Avenue to the T., H. & B. on payment of a reasonable wheelage. Counsel for the T., H. & B. said that the G.T. had refused to allow this two years ago, the figure then mentioned being \$5 a car. Counsel for the G.T. replied that the G.T. would agree to whatever the Committee

thought fair. The question of the 7 ft. clear headway above freight cars under bridges was involved in this case, & Counsel for the T., H. & B. asked for a ruling as to whether the exception made in the case of trains of cars under air-brake control applied to trains of cars some of which were not so equipped. Mr. Blair replied this was a question to be considered. Decision was reserved. Judgment on another application of the T., H. & B. Ry. for authority to build a branch from a point in the 3rd concession of Barton to Wellington St., Hamilton, north of the G.T.R., was also reserved.

Allandale Crossing, G.T.R.—An agreement was filed between the G.T.R. & the Township of Innisfil, in relation to the Allandale crossing, this matter having been enlarged for the agreement of the parties. The agreement calls for a slight deviation of a highway. The Committee sanctioned the arrangement.

Canada Atlantic Crossing.—In reference to the complaint of G. M. Loy, of Valleyfield, that the C.A. crossing on Grand Ile Line road, Valleyfield, was in a dangerous condition, Messrs. Bethune & Mountain, on behalf of the railway, stated that the cause of complaint would be removed.

G.T.R. Crossing at Richmond.—Strong opposition was made to the application of the Town of Richmond, Que., for permission to open Stanley Avenue across the G.T.R. track. The Co.'s Counsel stated that a land-booming scheme was the cause of the application. Decision was reserved.

G.T.R. Trackmen's Wages.

The G.T.R. management has announced that, effective July 24, it has raised the minimum pay of the trackmen on its main lines of heavy traffic from \$1 to \$1.10 a day. The increase affects the following lines:—Portland, Me., to Sarnia Tunnel; Rouse's Point, N.Y., to Montreal; Toronto to Hamilton; Niagara Falls to Sarnia Tunnel; Niagara Falls & Fort Erie to Stratford; Fort Erie to Kingscourt Jct., via St. Thomas & Glencoe; Kamoka to Windsor. The men on the branch & other lines do not receive any advance. In an interview on the subject General Superintendent McGuigan said:—"I have been authorized to state that the trackmen on the main lines have had their salaries advanced to \$1.10 a day, & that is as far as the Co. is prepared to go. The reason why no increases have been granted on the branch lines is that the cost of living is much less on those branches. The increase, of course, only affects those who have been receiving \$1 a day. Those whose wages are more than that are not affected. We have on the main lines some 486 men receiving \$1.25 a day & about 200 receiving \$1.20 a day. There are from 1,200 to 1,500 who are working on the main lines & who will benefit by the increase, while the trackmen on the branch lines number from 600 to 800."

The demand made by the men when they struck on May 22 will be found in full in our June issue, pg. 171.

The Chilcoat Pass Tramway.

It is said this concern has been sold to the White Pass & Yukon Ry. A Tacoma, Wash., paper, referring to the return there of H. C. Wallace, one of the originators & a heavy stockholder in the enterprise, says the aerial tramway operates between Canyon City & Crater Lake. Canyon City is 6 miles distance from Dyea, & prior to the completion & operation of the railway to the summit, this short pack was considered as next to nothing by the traders & prospectors who had endured the fearful toil & hardships incident to getting their outfits & goods over the en-

tire length of the trail from Dyea to Lake Bennett. With the inception of the railway, however, transportation affairs on the Chilcoat Pass assumed a different phase. With the railway, the necessity of making the pack to Canyon City was obviated. The matter finally resolved itself into the tramway people extending their line on to Lake Bennett or selling out to the White Pass Ry. The tramway had cost \$200,000 to build. To make a terminus at Lake Bennett would cost \$300,000 more. But with this extension added the tramway would be enabled to carry freight at a cost of about 12% of what the railway tariff must be to make the road profitable. The railway people, so it is rumored, offered \$150,000 for the tramway plant with other minor concessions added. It became a question with the tramway stockholders whether to go to the further expenditure of \$300,000, build on to Lake Bennett & control the freight business over the Chilcoat Pass or sell out to the White Pass railway. To arrange a settlement of these matters is the errand on which Mr. Wallace left for the north, & from which he has just returned.

Grand Trunk Betterments, Etc.

An up-to-date station is to be built at Point St. Charles, Que.

A passenger station is to be built at Queen St. East, Toronto.

A track is being built along Goderich harbor front to the beach.

It is said an improved round-house is to be erected at Fort Erie, Ont., & that work will be started at an early date.

On July 16, General Traffic Manager Reeve & party drove across the Victoria Jubilee Bridge, in the first vehicle to pass over it. The bridge is not yet, however, completed for vehicular & pedestrian traffic.

Work is in progress to complete the double track between Montreal & Toronto. What is being done includes four miles between St. Anne & Vaudreuil, & 3½ miles between Sidney & Murray Hill, Ont. A mile & a half is also being double tracked between St. Lambert & St. Hubert, Que.

A recent press despatch stated that the management was considering the advisability of double tracking the Midland branch, owing to the expected increase in grain carrying & the erection of a smelter at Midland. We are officially advised that at present no action of that character is contemplated.

A recent press report stated that a joint passenger station would be built at Durand, Mich., for the G.T.R. & the Ann Arbor railways, that the work would probably be begun so as to enclose the structure before Jan., 1900, & that the building would probably cost \$30,000. On July 21 we were officially informed that nothing definite had been concluded in regard to the matter.

In regard to the International Bridge between Fort Erie, Ont., & Buffalo, we are officially informed that it is the intention to replace the present structure, which is too light for modern rolling stock, with one that will meet all present requirements & provide a reasonable margin of strength for future increase of weights of rolling stock. There will be no change made in the piers & abutments. The work will not be completed until next summer, but the draw spans will be built during the coming winter as that work cannot be well done during the navigation season.

Owing to the difficulty in procuring iron girders & columns, work on the general office building, McGill st., Montreal, has been postponed until next year. In a recent interview on the subject the architect said: "The demand for iron is far greater than the supply. We practically cannot get it for love or money. Carnegie's mills are working 7 days a week, & 24 hours a day, & yet they find it

impossible to keep pace with the demand. They are probably turning out \$1,000,000 worth of iron work a day, & from these figures you may be able to form some idea of the nature & dimensions of the present demand. The railways of Canada find it absolutely impossible to secure rails for their tracks. At the present moment they want 64,000 tons, & can't get a pound. The English & French foundries can hardly provide enough iron for their local markets, so that the question of importation cannot be entertained. Within the past year the Russian government has ordered 1,800,000 tons of rails for its great Siberian railway; the French Exposition has utilized another 1,000,000 tons in the construction of the exhibition buildings in Paris, & an additional 500,000 tons will yet be used before these structures are completed. The Russian government has ordered from U. S. locomotive manufacturers upwards of 482 engines for the railway to which I have already alluded. Then there are the bridges & public works in Canada & the U.S. to be taken into consideration. When you add to these the recent order of the British Government for 500,000 tons of armor plate, you will gain some idea of the tremendous proportions which the demand for iron has assumed during the present year. The scarcity of the material has enhanced its value, & this is another feature which has caused us to postpone the erection of the walls of the offices until next year. You will scarcely believe me when I say that the British government is paying \$500 a ton for its armor plate, & yet such is the case. As Canadian nickel enters largely into the construction of such, you will see how valuable this industry will yet become to the Dominion. With regard to the future I do not know what we are going to do. Every modern public building is constructed in the main of iron, & with the increase in the number of such will come a proportionate increase in the demand for iron. What to do under the circumstances is a question hard to solve."—Star.

Canadian Pacific Betterments, &c.

Mattawamkeag to Princeton.—With reference to the unconfirmed report mentioned in our last issue to the effect that surveys are being made for a connecting line from the Co.'s main line at Mattawamkeag, Me., some 50 miles southeast to Princeton, Me., to connect with the St. Croix & Penobscot, we are officially informed that there is no foundation for the report. (June, pg. 172.)

Windsor St. Station, Montreal.—Work is rapidly proceeding upon the extension of the station. All the houses on the south side, which have been acquired for the purpose, have been raised, & the foundations will soon be ready to be placed. The new plans provide for a double entrance & a great extension of the frontage from the original design. Internally, the changes will be radical. The present suites of offices will be altered to suit the more pressing need of space & facility for the expeditious conduct of business. At present there is great overcrowding. In the new building the President will have a handsome suite of offices. Arrangements will be made not merely for the better carrying on of the clerical labor, but for the general business of the station, which has overtaken the space originally allotted to it.

Arnprior.—The new station is to be completed by September. A large freight shed is being erected, & the yards are being extended & improved.

Fort William.—Extensive improvements are to be made in the Kaministiquia hotel, including a stone foundation. A number of improvements will also be made to elevator B.

Rat Portage.—Arrangements have been completed between the Co. & the town coun-

& the contemplated improvements are to be gone on with. They include a station building, a 20 stall round house with turn table, & large extension of track & yard accommodation. (May, pg. 130.)

Fort William to Winnipeg.—Engineers H. D. Lumsden & F. P. Busteed are still at work on surveys for the proposed double track between these points. (May, pg. 139.)

Winnipeg Terminals.—The Co.'s solicitor has served notice on a number of owners of property near the Winnipeg station, that their land will be required for the Co.'s purposes. This is in connection with the station & hotel, the erection of which has been decided on. It has not been announced how Main st. will be crossed, whether by a level crossing or a subway. It is said an overhead bridge is impracticable. (June, pg. 172.)

Snowflake Branch.—It is understood this branch will run from the 1st siding west of La Riviere, on the Pembina Mountain branch, to Snowflake. An act empowering the Co. to construct it was passed at the recent session of the Manitoba Legislature. (June, pg. 172.)

Deloraine to Waskada.—It now appears as if the C.P.R. had forestalled the Northern Pacific in regard to the construction of a branch to the Waskada district. A charter given by the Manitoba Legislature for the construction of a line in that direction is held by a resident of Waskada in the interest of the N.P.R., but at the recent session the Legislature also granted a charter to the C.P.R. to construct a line from or near Deloraine, southwesterly & westerly in townships 1, 2 & 3 to the western boundary of the Province. The life of the charter is limited to one year,

& the Co. is required to permit the loading of grain in cars from farmers' vehicles or flat warehouses. (June, pg. 172.)

Pipestone Branch.—A Winnipeg telegram says G. H. Strevel has been given a contract for building some 40 miles from last year's terminus, some 19 miles west of Reston, into the Moose Mountain district. (May, pg. 139.)

Crow's Nest Pass Ry.—It is rumored that a preliminary survey will be run immediately from the Crow's Nest line to the Windermere mining district following the Kootenay River to Canal Flats, thence down the west side of the Columbia lakes, tapping the principal creeks, to connect with the Arrowhead branch via Toby Creek, from the Lardo-Duncan-Trout Lake country.

A Vancouver despatch says:—"On July 20 the first sod was turned for the Cranbrook-North Star mine branch. The road will be 20 miles in length. The work of construction is being done by the C.P.R. itself. Tenders were called for, & several contractors figured on the job, but when the tenders were opened the management decided they were too high."

The Nelson Miner says that the western portion of the Crow's Nest line between Nelson & Balfour, on Kootenay Lake, is likely to be built this year, & that the line is required to overcome the difficulty experienced last winter in taking barges to Nelson through the ice from Balfour. Beyond that point no trouble was met with. The same paper says the C.P.R. may try & get running powers over the Nelson & Fort Sheppard Ry., between Nelson & Five Mile Point, which is the heaviest part of the line between Nelson & Balfour. We were officially informed on July

28 that nothing had been decided as to building between Nelson & Balfour this year. (June, pg. 172.)

Vancouver Terminals.—Coal bunkers are being built & additional tracks laid at False Creek.

Kaslo Wharf.—Pending hearing, the Co. has been restrained from building a wharf at Kaslo, on ground claimed by one Foster.

Arrowhead to Kootenay.—Poupore & McVeigh, contractors, have some 600 men at work on this line. The engineer in charge is A. E. Doucet, not H. B. Walkem, as stated in our last issue. (June, pg. 174.)

Columbia & Kootenay.—Work is progressing satisfactorily on the improvement of the alignment, etc., of this branch between Nelson & Robson. (May, pg. 139.)

Columbia & Western.—The narrow gauge rails are being taken up between Trail & Rossland. The short ties will be used at the Trail smelter as fuel. The narrow gauge rolling stock and rails are for sale. The road-bed is in splendid condition, for a new line, & passenger trains are making the runs on excellent time. (June, pg. 173.)

The station on Second Avenue, Rossland, is completed. Track has been extended up to the Le Roi shipping point at Rossland, so that supplies for the mines on Red mountain can be unloaded at the crossing above the Centre Star hoist.

Rapid progress is being made with the extension from West Robson to Midway. Twenty-six miles of track were laid in June. The track is expected to reach Cascade during the 1st week in August & Grand Forks 10

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the odd-numbered sections along the Main Line and Branches, and in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North-West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6 an acre.

Lands in Assiniboia, east of the 3rd meridian, average \$3 to \$4 an acre.

Lands west of the 3rd meridian, including the Calgary District, generally \$3 per acre.

Lands in Northern Alberta and the Lake Dauphin District, \$3 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest is divided into ten instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or grazing lands.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions:

160 acres at \$3.00 per acre, 1st instalment \$71.90, and nine equal instalments of \$60.

160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.

160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.

160 acres at \$4.50 per acre, 1st instalment \$107.85, and nine equal instalments of \$90.

160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.

160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.

160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the usual cash instalment.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

Write for maps and full particulars.

L. A. HAMILTON, Land Commissioner,
F. T. CRIFFIN, Asst. Land Commissioner,
WINNIPEG.

ENAMELED IRON SIGNS

For Steam & Electric Railways, Steamship, Express, Telegraph, Telephone and Advertising purposes.

Railway Station Names, Street Car Route Signs, Express, Telegraph and Telephone Office Signs, Semaphore Arms, Switch Targets and Advertising Signs of every description of size and color made to order.

Railway, Steamship and Ferry Signs

For doors, etc., 23 x 3½ inches, blue letters and border on white ground, carried in stock with following lettering.

Waiting Room	Ladies' Toilet	Private Office	Dining Room
General Waiting Room	Men's Toilet	Freight Office	Lunch Room
Ladies' Waiting Room	Baggage Room	Ticket Office	Smoking Room
Men's Waiting Room	Agent's Office	Telegraph Office	No Admittance

The following are carried in stock, size 10 x 2½:—

Men Women Exit Fire Escape

Railway numbers for bridges, mile posts, signal houses, etc.; single figures on plates 8½ in. high.

These signs last practically for ever, they never fade or tarnish, they are ever bright and attractive, they are absolutely impervious to heat or cold, they are the only signs that will withstand the effects of weather in all climates.

For Prices, Illustrated Catalogues, etc., address

29 Melinda Street, Toronto, Canada.

BRANCH OFFICES—107 Lombard Street, Winnipeg. S. A. Erskine, Resident Agent;
28 Broad Street, Victoria, B.C., D. H. Macdowall, Resident Agent.

days later. The completion of the balance of the line will be rapid, as few impediments will stand in the way of continuous track-laying. McLean Bros., contractors for the big tunnel, gave up the work, which is now in the hands of O. Olson, who has 120 men at work. They are piercing through the rock 3,100 ft. Working from both ends, they are now in over 1,200 ft. A compressor plant is in operation. Recently 11 ft. of rock in the tunnel was blown out at one shot. Pending the completion of this big undertaking, trains overcome the mountain by a switchback, there being 6 legs on each side. The grades are 4%, with curves of 22 degrees without compensation. The Co. is now receiving freight for Cascade, Grand Forks, Greenwood & Midway, via West Robson, taking it in by construction trains. (June, pg. 174.)

Duluth, South Shore & Atlantic.—Press reports say that surveys are being made for an extension from Houghton, Mich., southwest some 45 miles to Ontonagon, along the lake shore.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—It is said a contract has been let for the construction of a branch from Rapid River, near Gladstone, north-west some 30 miles through agricultural & timber lands.

The Bradley-Watkins Lumber Company is said to be building a spur from a point on the main line east of Hermansville to Spaulding, Mich., about 8 miles.

Surveys, Construction, Betterment, &c.

The Algoma Central Ry. is projected to connect Sault Ste. Marie with the main line of the C.P.R. at Missanabie, with a branch line from Missanabie to Michipocoten harbor. We are officially informed that the Michipocoten branch is now under construction & that about 10 miles of it will be built this year. Tenders were recently advertised for for cutting ties, grubbing & clearing right of way, grading road & rock cutting. It is also intended to build 40 miles on the main line from Sault Ste. Marie northward. The branch line is intended to develop a most important mining district, the ores of which are of a very low grade, & many of which could not be worked at a profit unless they could be taken out at Michipocoten Harbor, on Lake Superior. The main line will run through a hitherto inaccessible wilderness, which, topographically speaking, consists of rough formation, making the road expensive to build, but, nevertheless, much of the soil is said to be most excellent for the cultivation of grain and root crops. There is a vast area of timber lands, suitable for the manufacture of pulp and other purposes, & the region abounds in mineral wealth, especially in sulphate of copper, sulphate of iron & sulphate of nickel. F. H. Clergue, the President of the Co., who is also President of the Sault Ste. Marie Pulp Mills, proposes to erect reduction works for refining copper & other ores, & for the production of nickel steel. (June, pg. 175.)

The Canada Atlantic will this fall commence the erection of large car shops at Ottawa in addition to those already put up. The new shops will be located near the Rideau roundhouse, where the machine shops & repair works are situated. The buildings put up this spring at the foot of Elgin st., & which are now being used, will be discarded after the proposed structure at Ottawa East is up. They will then be used by the Co. for storage, or may be available for manufacturing purposes. When the new car shops, which will be erected & equipped at a heavy cost, are completed, all the works of the Co. will be adjacent to each other, instead of being $\frac{1}{2}$ a mile apart, as at present. They will consist of erecting, woodworking, drying & painting shops, & will run by electricity. In order to make a foundation a great deal of filling in

will have to be done, & work on this will commence in the near future in time for the erection of the shops to start in Nov. & be completed early in the spring.—Ottawa Citizen.

Canadian Northern.—When in Winnipeg recently, on his way to China, D. D. Mann was asked if it was true that this Co. had in view a transcontinental line running through the Saskatchewan valley to the Pacific coast. In reply he said that no such scheme had yet become a feature of the plans, though he could not say what might ultimately occur in that respect. In the meantime all talk of a transcontinental line was visionary. The Co., however, intended to build into the Saskatchewan valley, its objective point being Prince Albert, beyond which it had no charter. (June, pg. 157.)

Cassiar Central.—A commencement is said to have been made on this line within the last month. However, recent arrivals at Vancouver from Glenora say that a disagreement has occurred between the employees & the Co. in regard to a demand for higher wages, which the management declined to accede to, as the men were fully aware of the pay offered at the time of their entering into the contract either at Victoria or Vancouver where most of them were engaged. (Jan., pg. 11.)

Central Ontario.—A contract has been let to R. Weddell, Trenton, for the extension of this line from Ormsby, 5 miles from its northern terminus at Coe Hill to Bancroft, about 21 miles. Work will be proceeded with at once. (June, pg. 175.)

The Coast Ry. of Nova Scotia has been extended this year from East Pubnico to Lower East Pubnico, 5 miles, & the grading & masonry are about completed to Barrington, 15 miles further, to which point it is expected to have the line completed by Sep. (June, pg. 175.)

Edmonton to the Stikine.—The Government survey party, in charge of C. F. K. Dibble, C.E., which left Edmonton July 12, 1898, to survey a route for a railway through the Rockies to the head waters of the Stikine, returned to Edmonton on July 15. Mr. Dibble commenced his survey on the Peace River where the Parsnip & Finlay join & empty into the Peace. He then followed the Finlay for about 15 miles to the Omineca, & up the Omineca to Black Canyon. He reached Black Canyon Oct. 22 & put up winter quarters, but on Jan. 22 determined to push on in winter & if possible reach the Stikine before spring. The party started on snow shoes & sleds, each man hauling about 200 lbs., & making a survey as they went. After two unsuccessful attempts, they discovered a very easy pass through the Rockies & reached the head waters of the Stikine Mar. 3, a distance from the head of Omineca of about 225 miles. They found the country very heavily timbered, most of the way with balsam & spruce, but a very easy & most practicable route for a railway, in all probability the easiest & cheapest route for construction yet discovered through the Rockies, there not being a single serious obstacle from Black Canyon to the Stikine. They also discovered that the maps are in error in regard to the head waters of the Stikine & Skeena & discovered that both rivers take their source in the same muskeg about 3 miles apart.

Great Northern.—A correspondent at Lachute, Que., writes that the final survey has been completed & a definite line decided upon. It was first thought that the road would pass to the south of Lachute town, crossing the C.P.R. tracks at the eastern end of the town, following the high land & crossing the North River just south of the paper mills. This line has been abandoned on account of the heavy grade on both sides of the river & the cost of constructing a bridge at that point. The road as now decided upon will follow the bank of

the North River from the eastern end of the town, crossing it at Barron's Point, where the river is comparatively narrow, & crossing the West River at the western end of the exhibition grounds. A. S. McKown, of Cornwall, & J. E. Valois, N.P., of Lachute, have purchased the right of way from Grenville East as far as Lachute. (June, pg. 175.)

Intercolonial.—Detailed particulars of the amounts provided in the Dominion supplementary estimates for betterments, &c., will be found on pg. 216.

In regard to the Government elevator to be built at Montreal the unanimous opinion on the Corn Exchange there is that it should be of at least 1,000,000 bus. capacity, & so constructed as to admit of enlargement to 2,000,000.

Inverness & Richmond.—Contractors Ryan & Macdonald are vigorously pushing work on the first 30 miles from the Strait of Canso, & have about 1,000 men & a large number of teams at work. A. Sinclair is in charge of the Co. (June, pg. 175.)

Kootenay Valley Ry. & Navigation Co.—On July 12 it was stated that the grading for this Co.'s subsidiary line, the Bedlington & Nelson, was completed from the International Boundary north & ready for track-laying.

On July 19 we were officially informed that this Co.'s other subsidiary, the Kaslo & Lardo-Duncan Ry., was under construction from Kootenay Lake to Howser Lake, a distance of about 12 miles. Construction had only recently commenced, & no decision had been reached as to further construction this year on that line. The character of the work is light for a mountain country. C. O'Donnell, purchasing agent for G. A. Carlson & Co., contractors, reports that the clearing of the right-of-way has been practically completed from Argenta to the canyon beyond Duncan City. The construction camp is situated above the canyon, & men are grading both above & below the canyon.

Lake Erie & Detroit River.—On June 20 a by-law to grant this Co. \$20,000 towards an extension from Ridgetown to St. Thomas was defeated in St. Thomas by 207 votes. This is the 3rd time the by-law has been voted upon. It carried last fall, but was quashed on a technicality. The township of Aldboro' has voted a bonus of \$7,000 for the same purpose. (June, pg. 175.)

Manitoba & Northwestern.—About 150 men are at work improving the roadbed, etc. An improved station & a section house are being built at Millwood & the stock shipping facilities at Yorkton, Russell & Shoal Lake are being improved.

Manitoba & Southeastern.—The portion of the line built last year has been ballasted this season & a passenger service has been inaugurated. (June, pg. 176.)

The Midland Ry. of Nova Scotia, now under construction, has been connected with the I.C.R. at Windsor, N.S. (May, pg. 134.)

Northern Pacific.—The remains of the Manitoba hotel at Winnipeg have been cleared away. The station & division offices are being rebuilt. (June, pg. 176.)

The main line between Winnipeg & Morris is being ballasted & the Morris yard is being enlarged. The Winnipeg yard has been considerably extended.

Nova Scotia Southern. It is said H. G. Harvey, promoter of this line, expects to have it opened this fall from Shelburne to New Germany, via Caledonia, to connect with the Nova Scotia Central, which connects with the Dominion Atlantic at Middleton. (May, pg. 130.)

Ontario & Rainy River. It is expected that E. F. Fauquier's contract for the first 20 miles will be completed early in Aug. It was recently stated in the daily press that a con-

tract had been given A. B. Mann for grading the miles in the neighborhood of Lake Shebandowas. We are informed that the contract is for 4 miles only & work is already proceeding on it. The same report stated that Mr. Johnstone, of Pelly Sound, had been awarded a contract for clearing the right of way. On July 22 we were informed that no contract had been signed with Mr. Johnstone, but that one was in contemplation. Chief Engineer White is reported to have stated in Winnipeg recently that 80 miles will be completed this year. (June, pg. 1700.)

A temporary pile trestle, strong enough to carry a train & to be used as false work in erecting the permanent bridge, has been built over the Kamistiquia River. The crossing is only 250 ft. wide & it will probably be spanned by two 135 ft. steel trusses just clear of high water.

It is said the Co. has bought no. 5 dock at Port Arthur, from T. Marks & Co.

A recent despatch from Fort William gives information of a pending sale of iron ore land in the Atikokan range. The parcel under negotiation has an area of 1,200 acres, embracing 15 locations. The Atikokan range lies to the south-west of Lake Shebandowas, nearly 100 miles west of Fort William. It is to be tapped by the O. & R. R. Ry., & is only 32 miles from the line of the C.P.R. It rises 60 to 125 feet above the level of the plain, it runs in two veins—the one 30, the other 60 ft. wide—is described as from 300 to 400 ft. in thickness, & can be traced 4 or 5 miles. This body of high-grade iron belongs to the magnetite variety. Fifty miles nearer the lake shore are the famous hematite deposits on the Mattawin River.

The Ottawa & New York Ry. has two gangs of men at work on the bridge over the St. Lawrence at Cornwall, & it is expected the structure will be completed by Nov., when the road will be in a position to run through trains between Ottawa & New York. Most of the rolling stock is south of the river & will not be brought into service until the bridge is completed. (May, pg. 136.)

Pontiac & Pacific Jet.—On July 25, nine men started work a short distance west of

Deschene on the extension of this line from Aylmer to Hull. It is said the force will be increased shortly. The City of Hull is likely to give the Co. a bonus towards the cost of its terminals. (May, pg. 137.)

Prince Edward Island.—The Dominion supplementary estimates provide \$250,000 towards the construction of a branch from Charlottetown to Murray Harbor, including a bridge over the Hillsborough River. The Provincial Government has agreed to pay \$12,000 a year towards the interest on the cost of the bridge. Murray Harbor is on the s. e. coast of the Island. The estimated cost of a combined railway & traffic bridge over the Hillsborough River is estimated at \$800,000. The length of the branch would be about 50 miles, its estimated cost, narrow gauge as is the rest of the line, being from \$7,500 to \$8,000 a mile. The branch would pass through one of the best & most prosperous districts of the Province, & the Hillsboro' River bridge would be a great convenience to people living east of the river, who now have difficulty in reaching Charlottetown when the ferry traffic is interrupted by ice. A preliminary survey of the proposed line was made for the Department of Railways some 5 or 6 years ago, & a more complete one was made in 1897 by H. J. Mackenzie, C.E. (July, '98, pg. 130, May, '99, pg. 137.)

The Rutland-Canadian Ry. Co. is building a line from Rouse's Point to Burlington. There are 600 men employed on the work, which, it is expected, will be completed by Sept. 1, after which date the Co. will run through trains from Montreal to Burlington, & also from Sorel, Que., to New England points. The company will also construct a line from Lacolle to connect with the Richelieu Valley Ry., giving a through service from Sorel to New England points. Besides this it is almost decided to construct a line from St. Lambert, opposite Montreal, direct to Rouse's Point, to connect there with the Rutland Co.'s system; that also includes the railway from Burlington, Vt., to Bellow's Falls. —Railway World (June, pg. 176).

White Pass & Yukon.—On July 6 the first train reached Bennett from Skagway, the

event being fittingly celebrated. The last spike, of gold, was driven by Mrs. E.C. Hawkins, wife of the Chief Engineer, & was withdrawn & presented to her. With rail from the ocean to the head of navigation on the Yukon, the problem of Northern transportation is vastly simplified. It is said to be the intention of the Co. to extend the road as rapidly as possible, the objective point being Fort Selkirk, at the mouth of Pelly River. It is hoped that before navigation opens next year the line will be built as far as White Horse Rapids, which will render the transfer of freight from small to large steamers unnecessary. There are no serious difficulties in the way of construction beyond Lake Bennett. There is doubtless the usual amount of heavy work, but it is of such a character that a large force of men can be used to advantage.

A press report says H. B. LeFevre, of the Co.'s engineering department, has reached Skagway after a hard trip up the Watson river & along the foothills to the Fifty-Mile, below White Horse Rapids. Most of the country through which he passed is entirely new to map-makers, & no signs of trails, mess debris, chopping or other evidence of previous visitation could be found. As a consequence a number of important streams, lakes & prairies were discovered & named. Some of the lakes are quite large & teeming with trout. The lower lands of the country explored are almost entirely devoid of rock, & show no signs of mineral. On the Fifty-Mile river declivity the country is cut up with large potholes. Many of these contain lakes of the purest water. A curious peculiarity lies in the fact that their outlets & inlets are altogether subterranean. They receive their supply from the bottoms of lakes above, & their overflow percolates through their lower banks to lakes below.

The Canada Ry. News Co. gives notice that it will apply to the Governor-General-in-Council for supplementary letters patent extending its powers so as to enable it to carry on the business of catering & keeping restaurants & hotels. The Co.'s head office has been removed from Montreal to Toronto.

Dominion Railway & Bridge Subsidies.

The resolutions introduced in the House of Commons towards the end of July provide for subsidies to the amount of \$6,590,295, as follows:

Revotes, 499½ miles at \$3,200.....	\$1,597,120
New votes, 878¾ miles at \$3,200.....	2,812,000
Ontario & Rainy River Ry., 140 miles at \$6,400.....	896,000
Quebec Bridge.....	1,000,000
Other bridges, Quebec.....	201,425
Bridges, Nova Scotia.....	33,750
Revotes for bridges.....	50,000

Total.....\$6,590,295

The resolutions as usual provide for a subsidy of \$3,200 a mile for the railways mentioned, not exceeding the number of miles stated in each case, which shall not cost more on the average than \$15,000 a mile. Where the average cost exceeds \$15,000 a mile there is granted a further subsidy of 50 per cent. on so much of the average cost of the mileage subsidised as shall be in excess of \$15,000 a mile, the subsidy not to exceed in the whole \$6,400 a mile. The expression "cost" is declared to mean the actual, necessary & reasonable cost & shall include the amount expended upon any bridge, not exceeding \$25,000, forming part of the railway subsidised not otherwise receiving any bonus, but shall not include the cost of equipping the railway nor the cost of terminals & right of way in any city or incorporated town; and such cost shall be determined upon the report of the Chief Engineer of Government Railways. In arranging the list of lines aided, as follows, we have classified them by Provinces, which will be found much more convenient for reference than as they are given in the resolutions.

NOVA SCOTIA.

From Port Hawkesbury to St. Peter's, 30 miles. Revote.

From Windsor to Truro, via Township of Clifton, 58 miles, in lieu of subsidy granted by 57-58 Vic., chap. 4. Revote.

From or near Brookfield Station, I.C.R., to Eastville, 25 miles, in lieu of subsidy granted by 60-61 Vic., chap. 4. Revote.

From a point on Central Ry. in County of Lunenburg, to Liverpool via Caledonia, or to Caledonia, via Liverpool, or for any part thereof, the whole not exceeding 62 miles. Revote.

From Indian Garden to Shelburne, 35 miles. Revote.

Port Hawkesbury to Caribou Cove, 10 miles.

From Sunnybrae to Country Harbor, and from Country Harbor Cross Roads to Guysboro', to make up deficiency in mileage between points mentioned and subsidised by 60-61 Vic., chap. 4, 15 miles.

Port Clyde to Lockport, 20 miles.

From I.C.R. at or near Halifax to Central Ry. in County of Lunenburg, 20 miles.

NEW BRUNSWICK.

St. John Valley & Riviere du Loup Ry. from Fredericton to Woodstock, 59 miles. Revote.

From Cross Creek Station, Canada Eastern Ry., to Stanley Village, 6 miles. Revote.

Central Ry. of N.B., extension from Newcastle coal fields to Gibson, 30 miles.

Extension of St. Francis Branch of Temiscouata Ry. to mouth of St. Francis River, 3 miles.

Canada Eastern Ry. from Nelson, to connect with main line running into Chatham, to complete connection from Nelson to main line, 2¼ miles.

Restigouche and Western Ry., in addition to 20 miles granted by 60-61 Vic., chap. 4, & in continuation from westerly end of the 20 miles towards St. John River, further distance not exceeding 15 miles, and for the line from a point on the St. John River, at or near or be-

tween Grand Falls or St. Leonards, easterly towards Campbellton, such point to be approved by the Governor in Council, 12 miles, in all 27 miles.

QUEBEC.

Great Northern Ry., between Montcalm & St. Tite Jct., on Lower Laurentian Ry. 53½ miles; & for branch from main line to Shawenegan Falls, 6½ miles. 53½ miles revote.

Philipsburg Ry. & Quarry Co., shortage in extension of railway from a point on the line at or near end of subsidised section, to Government Wharf, Philipsburg, 66-100 of a mile. Revote.

From village St. Remi to Stottsville or some point on the Delaware & Hudson Ry. (G.T. R.), in the parish of St. Valentine, 19 miles, of which 12 miles is a revote.

Pontiac Pacific Jct. Ry., from Aylmer to Hull, in lieu of subsidy granted by 60-61 Vic., chap. 4, 9 miles. Revote.

Portage du Fort & Bristol Branch Ry., branch from Pontiac Pacific Jct. Ry. at or near Quyon toward Portage du Fort, 15 miles, in lieu of subsidy granted by 60-61 Vic., chap. 4. Revote.

Orford Mountain Ry., branch from between Lawrenceville & Eastman to Waterloo, 30 miles. 4½ miles revote.

Atlantic & Lake Superior Ry., extension from Caplin to Paspebiac, 30 miles. Revote.

From Paspebiac to Gaspé, 32 miles.

United Counties Ry. from St. Robert Jct. to Sorel, 6½ miles, & from Mount Johnson to St. Gregoire Station, 1 mile. Revote.

Quebec & Lake St. John Ry., for 12 miles from end of line at deep water on Chicoutimi branch to Ha! Ha! Bay, in lieu of subsidy for 12 miles granted by chap. 4 of 1894. Revote.

South Shore Ry. from Sorel Jct. along South Shore to Lotbiniere, 82 miles.

Massawippi Valley Ry., for extension to Stanstead Plain, 2½ miles.

From Labelle, north-westerly to Nominiguet, via Notre Dame de l'Annoncation, 22 miles.

Ottawa & Gatineau Ry. line in & through City of Hull, 4 miles.

ONTARIO.

Central Ontario Ry. extension from or near Coc Hill or Rathburn station, to or near Bancroft, 21 miles, in lieu of subsidy granted by 55-56 Vic., chap. 2. Revote.

Strathroy & Western Counties Ry., from Strathroy via Adelaide & Arkona, to either Forest, Tedford or Park Hill, 24 miles, in lieu of subsidy granted by 57-58 Vic., chap. 4. Partly revote.

Between Pontypool & Bobcaygeon, via Lindsay, 40 miles. 32 miles Revote.

Bay of Quinté Ry., for such extensions, branches or additions as will enable it to connect its lines or connecting lines with iron or other mines or mineral or wood lands in the counties of Peterboro', Northumberland, Hastings, Lennox & Addington, Frontenac or Leeds, payable in instalments regulated by the length of each of the extensions, &c., in lieu of part of the balance remaining unpaid of the subsidy granted to the Kingston, Napanee & Western Ry. by 55-56 Vic., chap. 5, but not exceeding \$3,200 a mile for 10 miles, not exceeding in the whole \$32,000. Revote.

Bay of Quinté Ry. extension westerly from Deseronto 2 miles; also extension from Tweed northerly 5 miles, in all 7 miles.

From Hawkesbury to South Indian, 35 miles.

From Sault Ste. Marie towards Michipicoten River & harbor & to main line of C.P.R., 40 miles.

From main line of Ottawa, Arnprior & Parry Sound Ry. to town of Parry Sound, 5 miles.

From Haliburton village via Whitney, towards Mattawa, 20 miles.

Extension of Tilsonburg, Lake Erie & Pacific Ry. from Tilsonburg to Ingersoll or Woodstock, 28 miles.

Fort Francis, westerly to or near mouth of Rainy River, 70 miles.

From Owen Sound to Meaford, 21 miles.

Ontario, Belmont & Northern Ry. extension, from Iron Mines north-westerly 5 miles; also extension southerly from present southern terminus to Central Ontario Jct. of the C.P.R. 2 miles, but the aid for the 2 miles shall not be granted in case the Railway Committee of the Privy Council finds that adequate running powers on fair terms can be secured to the Co. over that portion of the line of the Central Ontario Ry. between the present southerly end of the Ontario, Belmont & Northern Ry. & the C.P.R. line at Central Ontario Jct.

From the Pembroke Southern Ry. at or near Golden Lake, towards the Irondale, Bancroft & Ottawa Ry. at or near Bancroft, 20 miles.

Lake Erie & Detroit River Ry. from Ridgetown to St. Thomas, 44 miles; to be payable only in the event of adequate running rights over the Canada Southern Ry. between the points mentioned not being granted to the L. E. & D. R. Co. on terms to be approved by the Railway Committee of the Privy Council.

Kingston & Pembroke Ry., branches from main line to iron mine at Bluff Point & to the Martelle Mine in the County of Renfrew, 5 miles.

From the Village of Parry Sound northerly towards Sudbury, 20 miles.

The subsidy which the Ontario & Rainy River Ry. is entitled to receive under 60-61 Vic., Chap. 4, for 80 miles from the Port Arthur, Duluth & Western Ry. to Rainy Lake, shall be \$6,400 a mile.

Ontario & Rainy River Ry. Co., for a railway from Stanley Station, on P. A., D. & W. Ry., to Fort Francis, for a distance of 140 miles, at \$6,400 a mile, not exceeding in the whole \$896,000.00.

NORTHWEST TERRITORIES.

Canadian Northern Ry., from present line of Winnipeg Great Northern Ry. north of Swan River to Prince Albert, 100 miles.

From near Antler Station to south of Moose Mountain, 50 miles.

Western Alberta Ry., from U.S. boundary, west of range 27, north-westerly towards Anthracite, Alta., 50 miles.

Edmonton, Yukon & Pacific Ry., from South Edmonton to North Edmonton, thence westerly towards Yellow Head Pass, 50 miles.

There are no subsidies for lines in Manitoba or British Columbia. Prince Edward Island gets a vote of \$250,000 for a branch line from Charlottetown to Murray Harbor, as will be seen by reference to pg. 250.

The following provisions are embodied in the resolutions. They contain a number of important new stipulations:—The subsidies granted to the Ontario & Rainy River Ry., the Canadian Northern Ry. & the Edmonton, Yukon & Pacific Ry., are granted upon the condition, & shall be received upon the condition, that those companies shall not, nor shall any of them, at any time amalgamate with any other railway company, or lease its line to any railway company; nor shall any of those railways be leased to or operated by any other company; nor shall any of those companies make an agreement for a common fund or for pooling its receipts with any other railway company, & any such lease, amalgamation or agreement shall be absolutely void, excepting in so far as it may extend to traffic or running arrangements which have been approved by the Governor in Council.

The subsidies hereinbefore mentioned as to be granted to companies named for that purpose shall, if granted by the Governor in Council, be granted to such companies respectively; the other subsidies may be granted to such companies as shall be approved by the Governor in Council as having established to

the satisfaction of their ability to construct & complete the said railways respectively; all the lines for the construction of which subsidies are granted, unless they are already commenced, shall be commenced within 2 years from Aug. 1, 1899, & completed within a reasonable time, not to exceed 4 years from Aug. 1, 1899, to be fixed by Order in Council, & shall also be constructed according to descriptions & specifications, & upon conditions to be approved by the Governor in Council, on the report of the Minister of Railways & Canals & specified in an agreement to be made in each case by the company with the Government; the location also of every such line of railway shall be subject to the approval of the Governor in Council.

The granting of such subsidies, & the receipt thereof by the respective companies, shall be subject to the condition that the Governor in Council may at all times provide & secure to other companies running powers, traffic arrangements & all other rights as will afford to all railways connecting with those subsidised reasonable & proper facilities in exercising such running powers, fair & reasonable traffic arrangements with connecting companies, & equal mileage rates between all such connecting railways, & the Governor in Council shall have absolute control at all times over the rates & tolls to be levied & imposed by any of the companies or upon any of the railways hereby subsidised.

The subsidies shall be payable out of the Consolidated Revenue Fund by instalments, on the completion of each section of the railway of not less than 10 miles, proportionate to the value of the portion so completed in comparison with that of the whole work undertaken, to be established by the report of the Minister, or upon the completion of the work subsidised—except as to subsidies with respect to which it is otherwise provided.

Every company receiving a subsidy under this act shall each year furnish to the Government transportation for men, supplies, material & mails over the portion of its line in respect of which it may have received such subsidy, & whenever required shall furnish mail cars, properly equipped, for such mail service, & such transportation & service shall be per-

formed at such rates as may be agreed upon between the Minister of the Department of the Government for which such service is being rendered & the company performing the same, & in case of disagreement, then at such rates as may be approved by the Governor in Council, & in or toward payment for such charges the Government of Canada shall be credited by the company with a sum equal to 3% per annum on the amount of subsidy received by the company under this act.

It is reckoned that 3% per annum, which is a new condition in the contract, amounts to \$96 a mile per year; whilst the 8c. a mile reckoned for mail dues comes to about \$35 a year.

BRIDGES.

To Quebec Bridge Co., towards construction of bridge over St. Lawrence River, at Chaudiere Basin, near Quebec, \$1,000,000, payable 40% on monthly progress estimates, approved by Government engineers, of materials delivered & work done.

South Shore Ry., towards restoration & renewal of railway bridge over Yamaska River at Yamaska, Que., (Revote) \$50,000.

For the other bridges 15% of the amount expended thereon is granted not to exceed the sums mentioned.

Towards construction of bridge over Richelieu River at Sorel, Que., (Revote) \$35,000.

Towards construction of bridge across St. Francis River, \$50,000.

Towards construction of bridge across Nicolet River, \$15,000.

Midland Ry., towards construction of bridge across Shubenacadie River, \$33,750.

Great Northern Ry., towards construction of bridge across St. Maurice River, \$16,425.

Towards construction of bridge across the Rivière du Loup, \$15,000.

Towards construction of bridge across Lac River, \$15,000.

Great Northwest Central Transfer.—Chief Justice Killam has issued an order at Winnipeg for the payment over of \$27,000 to Mr. Delap, on behalf of the bondholders of the G. N.C.R. Co. This is one of the preliminaries

to the transfer of the road to T. G. Shaughnessy & others who have purchased it in the C.P.R. interest. The order of the court stipulates that the receiver can be dismissed on three days' notice.

Government Ownership of Railways.—At a meeting at Neepawa, Man., Hon. H. J. Macdonald, leader of the Manitoba opposition, was asked as to the plank in the opposition platform respecting Government ownership of railways. He said he was strongly in favor of it. It was impossible, however, to apply it to railways now in operation. They could not be forced to sell out to the Government. His policy would only have reference to future projects. When bonuses are asked for, aid should only be given on condition that the Government gets control of the freight rates over the line.

W. Shanks, Roadmaster at Carleton Jct., having resigned, has been succeeded by J. Jelly, on division 4, between Brockville & Chalk River.

Land Commissioner Hamilton, of the C.P.R., says that the Boundary Creek district town sites in B.C. are being quickly purchased, & that the influx of people into the country is little short of remarkable.

J. E. Parker, C.P.R. ticket agent in Ottawa for the past 15 years, & previously in the G.T. office, died July 27, aged 44. He had been in poor health for the past few years, although he was able to hold his position until a couple of months ago. He leaves a widow & 6 children. He was a major in the 43rd Battalion, & came from St. Andrews, Que.

At Neepawa, Man., recently, Hon. H. J. Macdonald, in speaking of his relations with the C.P.R., said he would resign his solicitorship as soon as the writs were issued for the Provincial elections. He would also sever his connection with his firm. He did not think any man present would be unreasonable enough to have him throw away the salary in connection with it until it was necessary for him to do so. If he did not draw it some one else would.

To the Land of Sunshine.

Take the Sunshine Route from Chicago to Los Angeles, San Francisco and other points in California, and escape the rigors of winter in the East and North.

Pullman Tourist Cars for first and second class passengers leave Chicago every Saturday at 2 o'clock p.m. via the Chicago, Milwaukee and St. Paul Railway to Kansas City, thence to California via the Atchison, Topeka and Santa Fe Railway—a real Sunshine Route.

This is the earliest afternoon train leaving Chicago for the West after arrival of morning trains from the East, thus avoiding tedious delay.

The Sunshine Route is essentially the best and most patronized through car-line for men, women and children. Every attention paid to the needs of passengers en route.

Send for a Sunshine Route time-table folder. It costs nothing.

RIPANS

THE WONDERFUL MEDICINE

They relieve Distress from Dyspepsia, Indigestion and Too Hearty Eating: are a perfect remedy for Dizziness, Nausea, Drowsiness, Bad Taste in the Mouth, Coated Tongue, Pain in the Side, TORPID LIVER.

They regulate the Bowels.
They Cure Sick Headache.
A Single One Gives Relief.

WANTED

A case of bad health that RIPANS will not benefit, will be sold for 25 cents, or 12 packets for 48 cents, may be obtained from the proprietor, who is willing to sell a few priced medicine bottles, and a few packets of the medicine, and a long list of testimonials.

Send 5 cents to Ripans Chemical Co., No. 10 Spruce St., New York, for 14 samples and 1,000 testimonials.

SHIPPING MATTERS.

Prince Edward Island Winter Steamer.

The str. *Minto*, illustrated & described in our June issue, pg. 185, was launched at Dundee, Scotland, July 13, & was then towed to the fitting out berth. A Dundee paper says:—"The vessel, beautifully modelled & built of steel throughout, has been specially designed for the winter mail & passenger service between P.E.I. & the mainland. She is of the flush deck type, with a long citadel deckhouse, & has been constructed to the highest class in Lloyd's Registry & under their surveyor's special survey, as well as to the Board of Trade requirements. The principal dimensions are:—Length, 225 ft.; breadth, 32½ ft.; depth, 20½ ft.; gross tonnage, 1,100 tons. As she will encounter immense quantities of ice, the ship's form & scantling have been specially arranged to meet this, the stem being boldly cut away from the water-line, & the shape of stern designed to prevent jamming in the ice fields. The hull is flush, plated & heavily belted all fore & aft in wake of the water-line, & there are seven transverse bulkheads. Water ballast is carried in a cellular double bottom, & there are large trimming tanks aft for the purpose of sinking the stern & lifting the fore foot to get on top of ice. Accommodation is provided for about 30 passengers in the fore end of the deck-house on the upper deck, the saloon being extended right across the house, panelled in polished oak & handsomely upholstered. The officers are also berthed in the deckhouse, the seamen forward on the lower deck, & firemen aft, convenient to the engine-room. The mail-room is situated in the 'tweendecks, & a complete system of steam heating is supplied in all the accommodation, besides an installation of electric light throughout the vessel. The deck machinery consists of steam windlass, winch, & capstan, & steam & hand steering gears. The ship will be available in time of war for a fast unarmored cruiser, as four 6 pr. Q.F. Hotchkiss guns will be mounted, 2 forward & 2 aft. With her smart schooner rig & gunboat stern, the *Minto* has quite a warlike appearance. As she is expected to attain a high rate of speed, she should be a useful auxiliary to the North Atlantic Squadron."

The *Minto* will be commanded by Capt. Finlayson, now in command of the *Stanley*.

Maritime Provinces Shipping.

The Nova Scotia Steel Co. is having a steam launch built for its iron mines at Belle Isle, Nfld.

The Manhattan S.S. Co. is said to have gone into bankruptcy, but a new company will take its place & push business.

Capt. E. Kenney has been appointed in command of the Dominion Atlantic Ry's new steamer *Prince Arthur*. F. Ross is Chief Engineer.

The Steamship *Pydna* Co., Ltd., has been incorporated under the New Brunswick Companies Act, capital \$160,000; head office, Rothesay, N.B.

The Government str. *Newfield* left Halifax July 18, on her regular supply trip to the light-houses at Sable Island, & other points in the Maritime Provinces.

The Tidal Survey Branch of the Department of Marine & Fisheries has issued, in pamphlet form, the tide tables for Charlottetown, P.E.I., Pictou, N.S., & St. Paul Island, C.B., for 1899.

The office of Canadian Agent of the Plant Line has been abolished. H. L. Chipman, who has heretofore held that position, is appointed Superintendent, with office at Halifax & with full charge of all operations, reporting to the President and Manager.

At a recent meeting of directors of the Star Line Co., in place of electing a manager, J. Manchester was elected President, T. P. Taylor Vice-President, & R. Orchard Secretary-Treasurer. The resignation of R. C. Elkin as a director was accepted, & Capt. C. C. Taylor was elected in his place.

The Halifax Board of Trade has asked the Minister of Marine that a whistling buoy be immediately placed 5 miles s. w. of Pennant, at the entrance to Halifax harbor, & that the bombs now discharged every 20 minutes on Sambro Island during foggy weather be discharged every 5 minutes. The Government will also be asked to place a lightship off Sambro Island, equipped with a powerful steam whistle.

Arrangements have been made by the Imperial & Dominion Governments with Pickford & Black, of Halifax, for increased service between Halifax, St. John, N.B., the British West Indies & British Guiana, for 5 years. The vessels are to be of not less than 1,000 tons burden, & accommodation is to be provided for at least 40 cabin passengers. They are prohibited from calling at any U.S. port. The Imperial & Canadian Governments will each pay an annual subsidy of \$65,000. At present the steamers make 13 trips, receiving \$5,000 a trip, and this service is to be doubled. There will be 26 trips, & the governments are to pay \$5,000 subsidy each trip, the Dominion Government paying the same amount as at present, and the Imperial Government a like amount, thus giving a double service. The Taymouth & Duart Castle, the present steamers on the route, are to have their speed increased, have new boilers, & to be thoroughly overhauled, fitted with increased passenger accommodation, & one or two other boats will be secured. The boats will have a speed of about 12 knots. They will run on regular scheduled time; the date of arrival & departure at & from each place will be rigidly adhered to, as far as practicable, and the service will be most complete in every respect.

Ontario & The Great Lakes.

E. C. Walker, Walkerville, & others have been incorporated as the Lake Erie Navigation Co., capital \$40,000.

The Calvin Co's. new str. *India* had a trial trip at Kingston, July 27, & afterwards cleared for Cleveland, to load coal for Fort William, whence she will go to Serpent River, Wis., to load iron ore for Deseronto.

Capt. Noonan, of the str. *James Swift*, has decided to build another steamer for the Rideau route, at Kingston. Work will be begun in Oct., & she will be ready for business next spring. The two boats will make four round trips each week.

Lieut. Stewart, who is in charge of the hydrographic survey on the south shore of Manitoulin Island, reports that the work has been greatly hampered by unfavorable weather, & that this season is the worst for hydrographic work that he remembers.

The new schooner *John Smeaton*, owned by the Bessemer Co., sailed from Duluth July 21, with her maiden cargo. She carried 7,372 gross tons of iron ore & a draft of 18 ft. 1 in., forward & aft. This is the largest cargo ever carried by a lake boat, breaking the record made by the *Manila* by 145 tons.

Steamboat travel on the Ottawa River is decidedly cheap, in consequence of the rate war between the Ottawa River Navigation Co. & the smaller companies. A trip from Ottawa to Thurso & return, 60 miles, may be made for 5c. The str. *Princess Louise*, owned by a rival concern, charges 25c. for the return trip from Ottawa to Thurso.

At a recent meeting of the New York Legislature's Committee to investigate the decline of the commerce of the port of New York, G. E. Macy, representing P. D. Armour, Chicago, said that his firm exported grain via Montreal & Philadelphia. Montreal is now the cheapest route from Chicago & the Northwest. The Montreal competition had a tendency to lower rates. Last year there was a pool at Buffalo & rates were cut to meet Montreal's rate, but this year there is no competition here. If the New York elevating rates were lowered, there would be no trouble at that port. Mr. Macy said that recently, on a shipment of 500,000 bus. of grain to Montreal, he saved five-eighths of a cent a bushel by using that route. He said the Montreal people usually watch the Buffalo rate very closely & frequently make a cut of ½c. a bushel in order to get the business.

Capt. Symes of the str. *Seguin*, which was driven ashore near Ashtabula in the recent gale on Lake Erie, displayed rare judgment in everything pertaining to the accident to his vessel. When he found he could neither weather the gale nor get her into port, he put her on to a sand beach with her head pointing directly to the shore. With the storm over & his vessel apparently not injured in the least, he found that she rested on a sand bar aft but was entirely free forward. Then he secured the assistance of a steam lighter. The *Seguin's* boiler was blown off to lighten her aft, and some water let into a forward compartment (she is a small steel vessel). In addition to the water taken in forward, quite a large quantity of coal was also taken aboard from the steam lighter. The coal was readily transferred to the stranded vessel, as the lighter is equipped with a derrick for this purpose, & it was of sufficient weight, with the water, to put the vessel down forward. When sufficiently weighted at the head, the *Seguin* was released aft, & she was afloat a few hours after the job was begun.—Marine Review.

B. C. Dry Dock Charges.

The Boards of Trade of Victoria & Vancouver have protested against a recent reduction of charges for the use of Esquimalt dry dock made by the Dominion Government, on the ground that it is unfair to private concerns. The News Advertiser gives the following statement showing dock charges in the competing ports of San Francisco & Tacoma, the dock charges at Hong Kong on the other side of the Pacific, the charges on the Atlantic coast & the present charges at Esquimalt. A 2,000-ton vessel is taken as an illustration, the first day & one lay day being shown:

San Francisco—2,000 ton vessel, gross tonnage, 1st day 40c. a ton, \$800; lay day 20c. a ton, \$400—\$1,200.

Tacoma—1st day 30c. a ton, \$600; lay day \$400—\$1,000.

Hong Kong—Empresses, \$850 1st 2 days, after that \$250.

Esquimalt—Empresses, \$520 1st 2 days, after that \$120.

Quebec (Government dock)—1st day \$350; lay, 4½c. a ton, \$90—\$440.

Halifax—1st day, 20c a ton, \$400; lay, 12½c. a ton, \$250—\$650.

Kingston—1st day, \$250; lay, 7c. a ton, \$140—\$390.

Esquimalt—Old rate: 1st day \$350; lay, 4½c. a ton, \$90—\$440.

Esquimalt—Cut rate: 1st day, \$200; lay, \$50—\$250.

From this it will be seen that the old rate charged at Esquimalt dry dock was considerably less than half the rate charged at San Francisco & Tacoma, less than in Halifax & the same as in Quebec.

British Columbia Shipping.

The F. & N. Ry. Co.'s str. City of Nanaimo has been overhauled & greatly improved.

The C.P.N. Co. has put the str. Transfer on the Vancouver & Steveston run for the summer.

The C.P.R. str. Athenian reached Vancouver July 18 from the Orient, after her second trip across the Pacific.

The Upper Columbia River Navigation Co.'s str. Duchess has been a good deal impeded lately by logs in the river.

The Union Canneries, Ltd., has been incorporated under the B.C. Companies Act, capital \$5,000, head office, Vancouver, to acquire & operate the str. Lapwing.

The freight steamer Clansman has been completed for McKenzie Bros., Vancouver, to operate in connection with the str. Fingal & Staffa. She is about 100 ft. long over all.

The ferry service between New Westminster & South Westminster has been resumed by the str. Surrey, which has had her hull reconstructed & her machinery & fire pumps overhauled.

It is said the following lights will be erected this year:—Lighthouses on (1) Start Point, Laura Pass, Fitzhugh Sound; (2) Lawyer's Island, Chatham Sound, or Green Top Island, Chatham Sound; (3) Ballanac Islands; Pole Light on Turn Point, Seaforth Channel.

The str. Glenora, which was built in Tacoma for the Stikine River route, has been bought by New Westminster parties to ply between there & Chilliwack & other points. She is an up-to-date river boat, 126 ft. long, with a 28-ft. beam, & draught of 5 ft. She is fitted with powerful engines with a 6-ft. stroke, the steam being generated in 2 boilers, each of which gives a pressure of 175 lbs. The Glenora replaces the Gladys, which was burned at her wharf in the great fire.

The coal supply service between Union, Vancouver Island, & Vancouver is now being performed by the big barge transfer no. 1 & the tug Czar. They carry coal principally for the C.P.R., which has built large bunkers near the roundhouse on False Creek. The transfer carries 12 cars of coal across the Gulf each trip. The cars are run along the C.P.R. tracks, from the slip at the western end of the docks, to the roundhouse, dumped into the bunkers & brought back to go back on the barge again on the return trip.

Seal fishing in the north Pacific is picking up, according to reports from Japan. A few years ago the business became so bad that Canadian vessels were no longer fitted out for the seal trade, & the Japanese became prac-

tically the only sealers in the far northwest. This year their catches are said to be something wonderful, breaking all previous records for the country, & so it is likely that next season the Canadian fleets will again be in evidence. One Japanese vessel came to harbor recently with 840 skins, another with 375, while three others had about 600 between them. Recently it was rare for 200 to be caught during a season, but this number is now the rule rather than the exception.—Victoria Times.

The Canadian Pacific Navigation Co. has offered to have built & place upon the line between Victoria & Vancouver a steamer with all modern appliances, & first-class in every respect, which will be capable of making the trip between Victoria & Vancouver, either way, under ordinary circumstances, in 4 hours or under. This the Co. states would require a steamer costing not less than \$400,000, & the time required to procure such a vessel under existing circumstances would be 18 months, at least. The Co. cannot undertake this expense unless it receives financial assistance, & proposes that the city of Victoria give a bonus of \$25,000 a year for 10 years. It is proposed to build the steamer in Great Britain. She will be a side wheeler, somewhat similar to the English Channel boats.

Early on the morning of July 12 a fire broke out in the river steamer Nahleen, on Turples' ways at Victoria, & rapidly spreading to the adjacent str. Louise and the tug Badger, destroyed the three. The fire started in the engine-room of the Nahleen. She was 356 tons register, 143 ft. long & 23 feet beam. She was built in Victoria last year, being intended for the Stikine River route, but after making one trip was laid up for lack of business. She had recently been thoroughly overhauled, renovated & strengthened, & was to have started at once for Dawson via St. Michael, under her own steam, convoyed by the Amur. The intention was to run the Nahleen between Dawson & White Horse Rapids in conjunction with the boats of the Bennett Lake & Klondike Navigation Co. The Louise ran on the Stikine last year & was an old boat. The burned vessels were partially insured, the loss to the Klondike Mining, Trading & Transportation Co. over & above the insurance being estimated at \$15,000.

Dominion Notices to Mariners.

The Department of Marine has issued the following notices:—

No. 38, June 19, Quebec.—Change in buoyage between Lake St. Peter & Varennes.

No. 39, June 23, Ontario.—1. New buoy in western approach to Kingston. 2. Proposed change in position of Snake Island shoal light-

house. 3. Amended description of Corunna range light buildings. 4. Hand fog-horn at Port Arthur.

No. 41, June 21, Ontario.—Platform buoy south of Bear's Rump Island, Georgian Bay.

No. 42, June 23, Quebec.—1. Semaphore at St. Jean des Chaillons blown down. 2. Period of occultation St. Thomas bank gas buoy.

No. 43, July 1, Quebec.—List of ship channel buoys.

No. 44, July 3, New Brunswick.—Improvements in Green Head & Sand Point lights, St. John River.

No. 45, July 7, Quebec.—Upper Traverse pier

No. 46, July 12, Prince Edward Island.—Change in Cascumpeck harbor lights, Newfoundland, Channel head & Port-aux-Basques.

The S.S. Baltic Insurance Case.

As this case has been finally decided, it may be of interest to review it. The s.s. Baltic, originally the Frances Smith, was owned by the Great Northern Transit Co., of Collingwood. There were originally seven insurance companies which had issued policies on the Baltic; but one of these, the Guardian, paid the amount of its policy before action was brought, and another, the Alliance, made a settlement which was satisfactory to the plaintiff after judgment had been given in the Court of Appeal. The companies which continued the contest were the Commercial Union, the London Assurance, the Atlas, the Waterloo Mutual, the National of Ireland, & the Keystone. The Baltic had been running on the Upper Lakes for a number of years, & was always in commission until the close of the season of navigation in 1893, having been employed during the latter part of that season in running to Chicago during the World's Fair. By the following year the G. N. T. Co. had completed another steamer, the Majestic, to compete with the City of Collingwood, which had been built by the rival line. It was found, therefore, unnecessary to use the Baltic, nor did the traffic in subsequent years justify her being put into commission again, although, as was said by Judge MacLennan in the Court of Appeal, she was a vessel capable of being put in use as a passenger & freight steamer whenever required. These facts must have been well

UNIFORM CAPS Manufactured by
W. H. CODDINGTON,
HAMILTON, ONT.
For Railways, Steamboat Officers,
Telegraph Messengers, Fire Brigades, &c.
Embroidery in Gold and Silver Bullion.

LELAND HOTEL, Winnipeg Man., W.
D. Douglas, Proprietor. Rooms en suite with baths and all modern conveniences. Rates \$2 to \$4 a day. Special rates for families and large parties, according to accommodation and length of time. Though moderate in price the Leland is first-class in every respect. It is especially adapted to please the commercial trade. It is in the centre of the wholesale and retail district. It is in direct communication with all parts of the city by car lines. It is supplied with the purest spring water from flowing well on the premises.

Sole Agents for Canada

15 Adelaide Street East, Toronto

known to the insurance companies, for they appeared in the Inland Lloyds Vessels Register constantly referred to by companies. The agent for the Alliance was also Secretary of the Inland Lloyds. No application & no representations were ever made by the G. N. T. Co. to any of the insurance companies, nor did the latter attempt to prove this at the trial. Each of the policies contained the same description, namely, "On the hull of the s.s. Baltic, including engines, boilers, &c., on board said steamer whilst running on the inland lakes, rivers & canals during the season of navigation. To be laid up in a place of safety during the winter months from any extra hazardous building." It was never disputed that the Baltic was laid up in a place of safety, or that she was a boat running on the inland lakes, rivers & canals, & that when running she ran only during the season or navigation. The defendants, however, based their resistance to the claim of the plaintiff on the ground that the words "whilst running" contained a condition that the boat must be running. The defendants did not attempt to prove at the trial that there was any greater danger from fire when the boat was laid up than when she was running, nor did they ask the jury to find that it was material that the boat should be running all the time. The policy of the Commercial Union was issued as far back as May 1, 1893, when the Baltic was actually running, & the first policy of the London Assurance on this boat had been issued on Jan. 24, 1893, though the amount of its policy had been subsequently reduced. The policies of the other companies had also been in force for some time, & it is to be noted that the policy of the Atlas was issued on Feb. 1, 1895, at a period of the year when the Baltic was laid up, as would be necessary in the winter. In brief, the plaintiff contended that the defendant companies knew very well what they were insuring, & that it is not equitable that they should seek to insert into the policy by the words "whilst running," a hidden condition, which should have been properly inserted as a variation of the statutory conditions, if it was to bear the meaning which the defendants endeavored to force into it. As was said by one of the Judges of the Court of Appeal, the ship was "a valuable property, & insurable on some terms," & the policies were all time policies for one year, & the defendants had received full premiums for the year, so that this time limit ought not to be cut down by words of very dubious meaning. The meaning attributed by the plaintiff to the words of the policy is an equally satisfactory one, namely, that it was intended to stipulate not that the Baltic must run, but that whilst running she must run "on the inland lakes, rivers & canals," i.e., that she should not go out to the ocean, & that whilst running she must run "during the season of navigation," & not at other periods of the year.

The case was argued before the Supreme Court in March by B. B. Osler, Q.C., & W. M. Douglass for the G.N.T. Co., & by W. Nesbitt, for the insurance companies, & judgment was recently delivered by Judge Sedgwick, no other judgments being delivered, the other judges simply concurring. Judge Sedgwick gave his reasons for judgment as follows:

On Sep. 5, 1896, the steamer Baltic, owned by the Great Northern Transit Co., Ltd., the present respondents, was burned while in dock at Collingwood, Georgian Bay. At the time of the fire she was insured against fire to the amount of \$11,000, in 7 companies, all of them, except the Alliance Assurance Co., being the present appellants. The companies having disputed their liability, actions were brought, & one of these cases was tried before Armour, C.J., with a jury at Toronto in Sep., 1897. Judgment was there given in favor of plaintiffs, which judgment was sus-

tained upon appeal by an equally divided court, MacLennan and Moss, J.J., being of opinion that judgment should stand, the Chief Justice & Osler, J., dissenting. The appeal is from that judgment to this Court. It is an admitted fact that the last trip of the Baltic was made in the season of 1893. In Sep. of 1893 she was laid up at Collingwood, & from that date she never again went to sea. It also appeared that during 1894, 1895 & 1896 she never obtained a certificate of inspection provided by the Dominion Act, without which she could not have been run; that her planking, her frames and her engine bed were in such a condition that it would have been impossible for her to have been moved from her position by her own motive power; that her electric light plant & certain portions of her furniture had been removed, & that she was in such a condition that she could not in any sense be described as a running boat. Only two questions are raised; 1st, as to whether, at the time of the fire, the vessel insured came within the risk described in the policy; & 2nd, as to whether the provisions of the Ontario Fire Insurance Act in regard to conditions had been or should have been complied with.

The wording of the description of the risk in each of the policies is identical & is as follows: "On the hull of the s.s. Baltic, including engines, boilers & appurtenances thereto, anchors, chains, masts, spars, rigging, sails, cabin & office furniture, beds, bedding, linen, silverware & plateware, cutlery, china, glassware & earthenware, looking-glasses, mirrors, wheelbarrows, trucks, clocks & apparel on board said steamer whilst running on the inland lakes, rivers & canals during the season of navigation. To be laid up in a place of safety during winter months from any extra hazardous building. Ordinary outfit to be allowed in winter & spring. It is understood & agreed that the steamer insured under this policy has permission to carry merchandise, hazardous & non-hazardous, as freight from port to port, with one barrel of coal oil for steamer's use."

And the controversy mainly turns upon the interpretation to be given to the words "whilst running on the inland lakes, rivers & canals during the season of navigation." Three contentions have been put forward. The 1st (& it is that upon which the judgment of the trial Judge is based, & is followed by Mr. Justice MacLennan in the Court of Appeal) is that the clause was intended to confine the risk to fire whilst the vessel was inland, whether on the lakes, rivers or canals during the season of navigation, & not upon the ocean, the emphatic word being inland as distinguished from ocean. In other words, that the clause might read "whilst being (whether running or laid up) in the inland lakes, rivers & canals during the season of navigation, but not on the ocean or in any ocean port." Another interpretation is that the phrase "whilst running, etc.," applies to & qualifies not the s.s. Baltic itself, but only some of the property & articles intended to be included in the risk. The 3rd interpretation is that by the words in question the companies undertook to insure, not a vessel laid up during the season of navigation, but a vessel actively engaged or employed during that period upon the inland lakes, rivers or canals; that during the season of navigation she must be a vessel in use, or as they say, "in commission" (a term only applicable to national ships of war), with the necessary ship's papers & properly provided with master, crew & everything requisite for the ordinary prosecution of the business of a merchant vessel.

I am not able to agree with the view of the learned Chief Justice of the Queen's Bench Division. It is true that the word "inland" is an emphatic word confining the risk so far as locality is concerned to inland lakes, rivers & canals, so that, if a loss should occur while the vessel happened to be, say at Halifax, or

any other Atlantic port or on the high seas, she would not be covered. But there are, it seems to me, other equally emphatic words, & one of these words is "running." The learned Chief Justice's interpretation gives no effect to it. But not only that; it necessarily introduces into the clause an idea which is opposed to the idea conveyed by the word "running," namely, the idea that whether the ship was "running," that is, in active employment or use, or whether she was laid up either at anchor or in dock, or upon dry land, she was still within the words of the policy.

This, I think, is not interpreting the contract, but enlarging it, making a contract not contemplated by the parties. I have not been able to appreciate the second interpretation given to this clause to which I have referred. It is a clause qualifying either the word "Baltic" or the word "steamer." It contemplates not engines, anchors, office furniture, etc., running, but a steamer running—nothing more, nothing less. The 3rd interpretation is, I think, the correct one. It is an element of importance that this is a fire policy, not a marine policy. Two elements much more important in a fire policy than in a marine policy are those of locality & mode of use. The risk of a thing being burned depends not so much upon the thing itself as upon its location & the uses to which it is put. A wooden building used for the manufacture of dynamite in a crowded city surrounded by factories continually emitting sparks from their chimneys or smokestacks, may be absolutely uninsurable. The same structure removed for farming purposes to the open prairie might be insured at almost a nominal sum. Now this is not a "time" policy. A time policy is a phrase used only in marine insurance to distinguish it from a voyage policy. It in no material respect differs from a policy upon a building or upon anything else capable of insurance against fire. Neither is it a policy insuring the subject matter from one definite period to another. It is rather a policy insuring it during such periods within two defined points of time as she may happen to come within the description & terms of the risk. In the present case, she is insured, 1st, whilst running upon the inland lakes, rivers & canals during the season of navigation, & 2nd whilst she is laid up in a place of safety during winter months (removed) from any extra hazardous building. There may be within the year many periods, longer or shorter, in which she is not covered at all. She may, during the season of navigation, be running on the high seas. Whilst so occupied she is not insured. So likewise, during the winter months, she may be running either on the high seas or upon the unfrozen waters of the inland lakes, or, as at the City of Quebec, engaged as a ferry boat from one side of the St. Lawrence to the other. Still she is not insured. I do not know, & it is not material to determine, to what extent the element of locality influenced the insurance companies in making these policies. I do not know whether navigation upon salt water is carried on at a greater risk than on fresh water, or why the operations of this steamer were confined to the latter; but, admitting that the parties, in limiting the operations of the vessel to inland waters, had in view the prohibition of navigation in ocean waters, it is perfectly clear that they had also in contemplation two distinct classes of risk, namely, the risk of fire whilst she was in actual use during the season of navigation, & likewise the risk of fire whilst she was not in use, but laid up in a place of safety during the winter months. The mode of use in both cases was material to the risk. In the summer months no special provision was made for her safety. Then she would be running. She would have her master & crew; she would have her life-saving and fire-saving apparatus; she would be under constant supervision & the danger of fire would be reduced to a minimum. In the winter months, how-

one. She must be laid up. She may be laid up anywhere, whether in an inland port or an ocean port—but, wherever laid up, it must be in a place of safety, & removed from an extra unenclosed building. Looking at the whole clause, it seems to me that the words "running during the season of navigation" are mainly used in contrast with the words "laid up during the winter months." She is only covered by the clause whilst, during the season of navigation, she is running, & whilst, during the winter months, she is laid up in a place of safety. This it seems to me, is the true construction of the clause. It gives a natural & reasonable meaning to each of its words, & it does not necessitate, as the 1st interpretation does, the insertion of the additional stipulation to which I have referred in order to give effect to it. In the view I take is incorrect, & the 1st interpretation is the right one, if it is not necessary that during the season of navigation the vessel should be in actual use, if all that was contemplated by the parties was that during that season the vessel should exist in situ whether running or laid up, then she might be laid up anywhere, whether in a place of safety or not; she might be anchored or even left to run adrift upon the open lakes; she might be moored or hauled up high & dry in immediate proximity to any factory or building, no matter how dangerous such proximity might be. Surely as I view it, this consideration alone shows the untenable character of the ground upon which the judgment below is based.

One other point remains. It is contended that the stipulation contained in the words "whilst running, etc.," is a condition within the meaning of the Ontario Insurance Act; & inasmuch as it varies from or is in addition to the conditions by that Act made statutory, the policy should comply with sec. 115 of the Act, which provides that such variations or additions should be printed in conspicuous type & in ink of different color. So far as this point is concerned, I entirely agree with the view taken by the learned Chief Justice of the Court of Appeal & Mr. Justice Osler. The stipulation in question is in no sense a condition, but rather a description of the subject matter insured. It is & is descriptive of & has reference solely to the risk covered by the policy & not to the happening of an event which by the statutory conditions would render the policy void. The statute therefore does not apply. On the whole, I am of opinion that the appeal should be allowed & the action dismissed, all costs to follow in the usual course.

The Chief Justice & Gwynne, King & Girouard, J. J., concurred.

The G.N.T. Co. has since been refused special leave to appeal to the Judicial Committee of the Privy Council, though we do not know on what ground. In perusing Judge Sedgwick's judgment it will be noticed that nearly the whole of it deals with the construction of the clause under the policy "whilst running, etc.," while what appears to be one of the most important points in the case is

disposed of in the two concluding paragraphs. Plaintiff's counsel contended that the stipulations contained in the words "whilst running," if of sufficient force to override the fixed time limit of one year mentioned in the Act, must be a condition, & that, being a condition, it was a variation or addition of the statutory conditions & should, therefore, have been endorsed in accordance with the provisions of the Insurance Act. The Supreme Court disposes of this by saying that though these words have this very powerful effect they are nevertheless merely a description of the subject matter insured. Plaintiff's answer to this has always been that if these words have the force of a condition they must be treated as a condition. It would seem that if stipulations of this nature are binding when inserted as a description, it would be possible to get round the Insurance Act in a great many cases, & logically it would be possible to insert a stipulation as to incumbrances in a similar manner, & so the Baltic might have been described as "while unincumbered & while running, etc." The point has, however, in spite of full argument, received such scant attention both from the Supreme Court & from the Chief Justice of the Court of Appeal & Mr. Justice Osler, who took the same view, that it is a very great question whether the decision will carry much weight in this respect in future.

Dominion Supplementary Estimates.

The supplementary estimates recently submitted in the House of Commons contain a large number of items especially relating to the transportation & allied interests, which are extracted as follows:—

ADMINISTRATION OF JUSTICE.

Counsel & solicitor's fees before Privy Council, Madden vs. Nelson & Fort Sheppard Ry. Co.; intervention of Attorney-General of Canada \$ 2,000 00

INTERCOLONIAL RY.—CAPITAL ACCOUNT.

Increased siding accommodation \$90,000 00
Increased station accommodation 15,000 00
Sea wall & cribwork protection to banks on line of Cape Breton Ry. 10,000 00
Increased accommodation at Levis (revote \$34,000) 80,000 00
Elevator at St. John, N.B. (revote \$40,000) 114,000 00
Increased accommodation at St. John, N.B. (revote) 49,500 00
Indiantown Branch, to pay amount of award of W. Shanly of \$34,675.23 & interest from Dec. 1, 1886, to July 1, 1899, to Hon. J. Snowball 52,148 44
Changing drawbars of freight cars from link & pin coupler to master car builder's standard couplers 10,000 00
Improvements at Mulgrave 15,000 00
Providing larger & stronger turntables & strengthening some old ones to meet requirements of modern heavy engines, at various points 12,425 00
Improvements at Point Tupper 8,500 00
To improve water service for fire protection at Moncton 9,000 00
Improving telegraph service 13,000 00
New engine houses & enlarging others 40,000 00
One 1st class passenger coach 10,385 00
Extension to deep water at North Sydney (revote) 9,500 00

Gross earnings April 1 to May 31.....	\$59,427	\$62,148	\$2,721+
Net profit April 1 to May 31.....	\$21,270	\$24,187	\$2,917+
+ Increase. — Decrease.			

At the annual meeting in London, Eng., June 19, the report published in our last issue was unanimously adopted. The chairman R. M. Horne-Payne, who presided, referred with satisfaction to the fact that the first dividend was being paid, & that the Co. had had a very satisfactory year. The preference shares had been sold at a very good price, at 10% premium. With the proceeds the extensions & improvements announced had been gone on with. The smaller items such as could be bought have already been completed. The terminal buildings at New Westminster & Vancouver have been built, & are now used, the sites being in very central positions. In Vancouver connection has been made with the main line of the C.P.R. Water-power installation at Victoria has been completed, & all the difficulties have now practically been mastered. On this point the Chairman said: "Although there is at present a somewhat larger use of water than was estimated for, we are now fairly deriving the benefit from the plant which we anticipated, and we are considering the best steps to be taken for limiting the consumption of water. Under our lease we have the right to use 4,000,000 gals. of water daily for a certain minimum rental from the Goldstream Falls, but we are not at present quite able to carry our load with the 4,000,000 gals. The directors are, therefore, taking expert advice as to the installation of a storage battery, the immediate effect of which will be to enable us to work not only below the mini-

...have a substantial balance of ...
...the Chairman said: "There ...
...amongst our share-
holders that the dividend should only have
been ... & that we should only have distrib-
uted £8,000, the earnings having amounted,
after paying the preference dividend, to £15,-
... but which appears to be a very sub-
stantial & fine profit in any other undertak-
ing. It is not so satisfactory in an electrical en-
terprise, because of the fact that electrical
machinery needs renewing so early. After 10
years in a well-placed plant requires to be renew-
ed & replaced, & we have to see that, as the
time comes round for renewing our machin-
ery, we have saved sufficient from the profits
to replace that machinery. For this reason
we have to transfer a larger percentage of
our earnings to the reserve fund for the pur-
pose of renewals than is necessary, probably,
in any other class of enterprise. We have
adopted a system, upon the advice of some of
the most competent & experienced men in
electrical matters in the City, which will, we
think, satisfactorily provide for the main-
tenance of capital year by year; and if the
resolution which will be submitted is adopted,
the reserve fund will be increased to £12,000.
By the adoption of this system the Co. will
have at all times a sufficient capital in hand
to account for any depreciation which may
take place in the value of the plant, etc., from
year to year."

In regard to the construction of the pro-
posed Sapperton branch, the Chairman said:
"We have not done that because our organ-
ization was not large enough, but we hope to
take it up before long."

The resident director in British Columbia,
F. S. Barnard, in seconding a resolution for
the adoption of the report, testified to the effi-
ciency of the local management. On the sub-
ject of operating expenses, he said: "The
cost of labour is very much higher in B.C.
than in the Eastern States, & the cost of ma-
terial & fuel is very much higher; & it is very
satisfactory to learn that we are providing
light in Vancouver & Victoria at a rate on an
average with that of the Eastern States, that
we are carrying passengers at rates quite as
low as in the larger Eastern cities, & that
both our railway fares & lights are supplied
at less cost, probably, than that at which sim-
ilar undertakings here supply the people of
London."

The Co. is spending about \$400,000 this
year in extending & improving its local lines.
Extensive work is being done on the inter-
urban line to fit the road for the heavy traffic
that the trade between Vancouver & New
Westminster involves. The officials have un-
der consideration a scheme for enabling the
trip to be covered in 30 minutes instead of 45.
The Denman St. extensions alone figure up
about \$40,000. In addition the Co. is having
a car-barn & power-house built; several
switches are being improved by the laying of
a heavier type of rail, & at the same time the
Co. is bestowing a great boon upon cyclists

by filling in between its rails with cinders.
Two large open motor cars have been added
to the equipment. The wages of the track-
men have been voluntarily raised from \$1.75
to \$2 a day.

Nelson, B.C.—The British Electric Traction
Co. having completed arrangements with the
City Council, construction work is to be pro-
ceeded with at once. At the date of our last
advices, June 30, the route had not been de-
finitely announced, but it was expected a line
would be built between the Government
wharf & the C.P.R. station, by way of Baker
Street, & between Baker St. & the rink at the
top of Stanley St., with a probable extension
to the mountain station of the N. & F.S. Ry.
The greatest difficulty the Co. will have to en-
counter will be the heavy gradients. It is ex-
pected 2 miles of line will be built at once
within the city limits, & probably a mile out-
side. Rails, fastenings & other material have
been ordered. (June, pg. 188.)

Winnipeg Electric St. Ry.—A line is to
be built on Sherbrook St. this year. A short
line of second track has been built recently on
Portage Avenue, between Main St. & Notre
Dame Avenue, so as to make the Portage
Avenue & Belt lines independent of each other.
Six motor cars have been added to the equip-
ment.

Ontario Electric Railways.

Barrie.—It is said that the Royal Electric
Co. has made application to the town council
for a franchise for an electric railway between
Barrie & Allandale, a distance of about a
mile, with the privilege of extending.

Berlin & Waterloo St. Railway.—W. H.
Breithaupt, on behalf of this Co., has made a
proposition to Berlin town council to extend
the line to Galt via German Mills, Doon &
Blair, if the town of Berlin will guarantee
\$100,000 of bonds.

Cornwall Electric St. Ry.—The Ontario
Divisional Court has dismissed the appeal of
this Co. from the judgment of Chief Justice
Armour, authorizing foreclosure of a mortgage
made by the Co. to J. T. Kirkpatrick & D. B.
McLennan in June, 1896, securing debenture-
holders of the railway to the amount of \$100,-
000. A reasonable time is, however, allowed
in which to meet the liability.

**Hamilton, Ancaster & Brantford Electric
Co.**—A meeting of shareholders called for
June 21 was postponed pending definite
information as to New York capital which it is
said will be put into the enterprise.

**Hamilton, Grimsby & Beamsville Electric
Ry.**—Government Engineer McCallum is to
give instructions as to the repairs necessary
to be done on the line in accordance with
Judge Street's decision in the action of Salt-
fleet township against the Co.

**Kingston, Portsmouth & Cataraqui Elec-
tric St. Ry.**—Ontario Park is to be divided,
one part for recreation with free admission,
the other for baseball, lacrosse, horse races,
etc. A race track will be made & a grand
stand erected.

London St. Ry.—The earnings for June
were only \$1,042.17 & the operating expenses
\$4,666.62, a deficit of \$3,624.45. In June, 1898,
the earnings were \$9,790.86 & the expenses
\$4,177.94, a profit of \$4,177.94. The strike
still continues, the details of which, including
the calling out of the military, have been fully
given in the daily papers.

London to Goderich.—A proposal has been
made to connect these points by an electric
line about 66 miles long, running through Lu-
can, Crediton & Bayfield.

**The Metropolitan Electric Ry.'s extension
to Newmarket** has been completed.

The Niagara Falls Park & River Ry. Co.
recently sued the Town of Niagara Falls to
recover \$120.42 for taxes for 1898 levied upon
a part of the Co.'s roadbed, & paid under
protest. The part in question is upon the 66-ft.
strip of reserve running along the bank of the
Niagara river, & is vested in the commis-
sioners for the Queen Victoria Niagara Falls
Park, or in the Crown, & the Junior Judge
of the York County Court held it is not liable
to the defendants for municipal taxes. On
appeal by defendants to the Divisional Court,
it was held that in every aspect of the case
the assessment as made in the first instance,
& confirmed by the Court of Revision & the
Judge of the County Court of Welland, was
right, & should not have been disturbed by the
County Court of York in this action. The
taxes paid under protest were well paid, &
should be retained by the municipality. The
appeal was allowed with costs, & the action
dismissed with costs.

Ottawa Electric Ry. Co.—It is rumored the
Co. will soon take the preliminary steps to
secure entrance to Aylmer. Park property
will, it is said, be secured at the summer re-
sort, a large hotel will be erected, & various
attractions will be provided. Right of way
from Ottawa, it is understood, will be secured
over the Pontiac & Pacific Jct. Ry. It is likely
that, should an understanding be arrived at
between the two companies, the construction
work on the railway & interprovincial bridge
will be hastened to completion.

The City Council has given the Co. power to
run on Sunday on the same terms as hereto-
fore existing between the City & the Co., on
condition that the Co. pays the City in addi-
tion to the sum heretofore paid per mile, a
proportionate amount for each Sunday & is-
sues tickets for use on Sundays only at the
reduced rate of 28 for \$1, or 7 for 25c., &
children's tickets at 40 for \$1 & 10 for 25c.
The Sunday service was inaugurated July 23,
when the cars were largely patronized.

Preston & Berlin.—The Berlin town coun-
cil has extended the franchise for the electric
railway between these points till Jan. 15 next.
The Co. has the power to enter the town from
the south via King St., & to build to a point
near the Market Square.

St. Thomas Street Ry. Co.—At the annual
meeting, July 11, the following were re-elec-
ted: President, J. H. Still; Sec.-Treas., Col.
Stacey; other directors, C. D. Hunt, J. Far-
ley, M. A. Gilbert.

Improved Halladay Outlet Pipe, Spout and Fixtures

Outlet Valves,
Tanks, Windmills,
Steel Towers,
Pumps and General
Water Supply
Material.

given by local and connecting line ticket agents.

C. G. DIXON, G.P. & T.A., Spokane, Wash

Toronto Railway.—The gross earnings are:

	1899.	1898.	Increase.
Jan.	\$95,090.12	\$86,502.36	\$8,587.76
Feb.	91,860.30	82,402.19	9,458.11
Mar.	103,234.88	92,318.42	10,916.46
April.	95,212.37	86,898.83	8,313.54
May.	104,806.62	92,670.35	12,136.27
June.	109,063.18	94,119.32	14,943.86
	\$599,867.47	\$534,911.47	\$64,956.00

Toronto Suburban St. Ry. Co.—The Town Council of Toronto Jct. is negotiating with the Co. for the relinquishment of its franchise on Dundas St., between Keele St. & Humber-side Av., in order that the privilege to run cars over that route may be granted to the Toronto Ry. Co.

Quebec Electric Railways.

Canadian Electric Light Co.—At the annual meeting in Quebec, June 27, the directors' report stated that \$200,000 capital had been subscribed, that the Chaudiere Falls water power would be acquired immediately, that the directors were in negotiation with the council of the town of Levis for furnishing light & power, that R. Girouard, of Cumberland, Me., had been secured as Manager, & that A. R. Henry, M. E., of Quebec, would probably be appointed electrical engineer. The directors have plans under consideration for the development of the water power of the Chaudiere Falls, according to which a minimum of 5000 h.p. is obtainable. Arrangements are said to have been made with the Chaudiere Valley Ry. Co. to construct & operate electric railways in the counties of Levis, Bellechasse, Dorchester and Lotbiniere, obtaining power from the Canadian Electric Light Co. The following were elected: President, J. Breaky; Vice-President, Hon. L. P. Pelletier; other directors H. M. Price, G. Lemoyne, J. King, R. Audette, R. Wilson-Smith, H. S. Holt and H. T. Machin.

Hull Electric Co.—The following directors have been elected: A. Fraser, D. McLaren, W. J. Conroy, J. B. Fraser, R. H. Conroy and T. Viau. The Co.'s equipment in the power house at Deschenes is now said to be among the best in Canada, enabling the road to give an excellent service. The traffic this year has been satisfactory and considerably exceeds that of the corresponding periods of previous years.

Montreal Mountain.—A proposition is before the Westmount town council for the construction of an electric railway up the Montreal Mountain.

Montreal St. Ry.—The gross earnings are:

	1898-9.	1897-8.	Increase.
Oct.	\$133,419.69	\$116,093.09	\$17,326.60
Nov.	125,126.10	110,608.98	14,517.12
Dec.	127,678.00	113,029.33	14,648.67
Jan.	125,276.04	110,155.96	15,120.08
Feb.	113,838.02	102,425.99	11,412.03
Mar.	123,754.11	114,476.98	9,277.13
April.	130,405.96	110,619.27	19,786.69
May.	145,466.38	123,308.08	22,158.30
June.	156,858.34	132,964.61	23,893.73
	\$1,181,822.64	\$1,033,772.29	\$148,050.35

It is said the Co. will build three large car barns on St. Denis St.

The City Council has refused an application from the Co. to be allowed to build a line up Beaver Hall Hill, because the Co. will not build up Cote des Neiges Hill, and will not put down tracks on Frontenac & Amherst sts.

The Co. has adopted a life-saving fender, which has been approved by the City Surveyor.

It is proposed by the City Council to have cars stop at the near side of streets, instead of at the far side as at present, to prohibit cyclists crossing streets, except at their intersections, & to make bicycle riding on the devil-strip an offence punishable by imprisonment without the option of a fine.

In the House of Commons recently the Postmaster General said the privilege of letter carriers to ride on the Montreal street cars had been taken away owing to a difficulty be-

tween the Government & the Ry. Co. as to the price paid for the privilege. Until last year \$2,400 a year was given the Co. for allowing the letter carriers to ride on the cars, but when the contract terminated last winter the Co. refused to renew it at the old figure & asked \$800 a month. The department did not deem it in the public interest to pay this amount & an arrangement had been made with the Co. for special tickets for letter carriers at a low rate. Under this system there was a slight saving on the old contract price of \$2,400 a year.

West India Electric Co.

The U.S. Consul at Kingston, Jamaica, reports as follows: "For some years there has been a mule railway in Kingston, but an electric road covering the lines of the old cars, & other thoroughfares as well, has just been completed. This line has about 25 miles of track in & around Kingston, divided into three districts, viz., the lines north of the city, those east of the city, & those in the city. It is a private enterprise, started by Canadian capital, & is called the West India Electric Co. The government license is for a period of 30 years, & renewable for further periods at the pleasure of the Governor. The Co. pays 4% of its gross earnings to the government, & assumes the maintenance of the roads & streets occupied by it to the extent of 18 ins. on each side of the tracks. The rates of fare are 4c. for each passenger from any point within a district to another point in the same district by most direct route; that is, the fare is practically 4c. for each section of the line, & from the end of the line to the east, through the city to the end of the line north, would be 3 fares, or 12c. In addition, the Co. reserves 3 front benches on each car, on which a 1st class fare—6c.—is charged. The tickets are sold as follows: Seven 4c. tickets for 24c., five 6c. tickets for 24c., & ten children's tickets, for under 12 years, for 24c. Passengers are allowed to stand. There are no restrictions as to number of passengers carried, & the same complaints of overcrowding are heard. Cars run every 15 minutes in the city. In addition to regular motors, the Co. runs market cars before 9 a.m. & after 5 p.m. for country people who carry produce. These are trailers, & the fare on them is 3c."

The Kingston, Ja., Gleaner recently published a long description of this line from which the following is extracted: The license for a system of electrical trolley tramways in Kingston was granted to the W.I.E. Co. on Mar. 10, 1898. The Co. started construction on May 2, beginning with the erection of poles to carry the trolley wires. On June 23 track-laying was commenced on the Constant Spring line. It was the original intention to work the line by electrical power generated by steam. But it was suggested that possibly water power could be used as the prime motor, & Mr. Holgate was sent to Jamaica in Jan., 1898, to inquire into the feasibility of this. Shortly after his arrival he was joined by N. L. Cooper, hydraulic expert, & together they investigated the question & recommended the use of the waters of the Rio Cobre for the development of the necessary power. Property rights were at once secured, & the work upon the plans commenced. It is conceded that whenever water power can be obtained at a reasonable capital outlay, it is superior to steam power, inasmuch as its greater reliability and consistency give it a decided advantage, while from a financial point of view its advantages over steam are very great, especially in a country situated like Jamaica, where the cost of importing coal is a most serious consideration.

The question of the hydraulic development was by no means a simple one. In ordinary

cases of this kind the dam is built with probably a short head race & a power house situated close to the dam. This description would apply to 99 out of every 100 applications of water-power. But in the valley of the Rio Cobre, though there is a succession of rapids, there is no place where a dam of this character could be built to be of commercial utility, without raising the water to such a height as would flood enormous districts of cultivated land & render the highways at times impassable. To overcome this difficulty a scheme was evolved by which the available fall of the river was utilized without in any way interfering with private or public property. The dam has been built across the river immediately opposite the mouth of the long tunnel on the railway near Bog Walk station. For such an immense development of power this dam seems very insignificant. It is only 9 ft. high, but it can, if necessary, be raised 3 ft. higher by the placing of flash boards between steel posts built in the concrete dam for the purpose. On the left bank of the river, at the dam, a skimming basin has been formed, into which the waters of the river pour, entering thence into the steel conduit on their way to the power house. This steel conduit, or pipe, forms the head race for the power house. It is 10 ft. in diameter at the dam & its entrance is protected by a double screen which effectually prevents the entrance of weeds & debris with the water. The distance from the dam to the power house is 6,200 ft. & along the whole of the distance extends this huge pipe 8 ft. in diameter. It is entirely built of steel & for the greater part of its length is embedded in rock or compact earth, well protected from the river even in its highest stage during the May and Oct. floods. At places the pipe is supported on concrete piers, & every possible precaution has been taken to make it of the most substantial construction. It is said to be the largest pipe in the world. It weighs 1,742,894 lbs. of solid steel, held together by 259,102 rivets. The pipe arrived in Jamaica in the shape of curved plates, was transported to Bog Walk by railway, & taken to the site by teams. The plates were assembled, placed in position, erected, & riveted entirely by native workmen, under the supervision of M. Peppard. The capacity of the pipe is 2,205 galls. of water per second. This flows into the power house by passing through 2 pairs of twin horizontal turbine wheels, each pair being enclosed in steel casings. The water, after passing through the wheels, flows back to the river into the tail race through draught tubes. The turbine wheels work on horizontal shafts at a speed of 400 revolutions a minute. These shafts are coupled direct to the shafts of the electric generators, which therefore revolve at the same speed. At present there are two generators, each of which is capable of developing 500 h.p. There are also 2 smaller water wheels, each developing 25 h.p., which are used to drive the direct current generators, whose purpose is to excite the larger generators connected with the turbine wheels. The generators are of the latest type, known as the three-phase alternators, & develop current at the comparatively low pressure of about 500 volts. If these generators were near the point where the current is consumed it would not be necessary to raise the voltage or pressure, but, owing to the distance—the 22 miles between Bog Walk to Kingston—it is a commercial necessity & raise the pressure so that as little loss as possible may be sustained in the transmission of the current. The means used at the power house for effecting this object are what are technically known as step-up transformers. The current goes into them at a pressure of about 500 volts, & comes out to enter the transmission wire at a pressure of about 14,000. The poles carrying these wires are all made of steel, & are set 2 chains apart along the highway. The wires are of almost pure

...served to the cross arms on porcelain insulators. When the lines reach Kingston, they are connected to the Tramway Company's station in Orange St., & are led through a similar set of transformations to those at the power house at Bog Walk, but with an opposite effect. The current enters them at the high pressure of the transmission line, & comes off them at the low pressure of about 350 volts. Passing through & being controlled by the apparatus on the switch-board, the power enters the rotary converters, by whose action the high-pressure alternating current is converted into a direct current flowing in one continuous stream. From the rotary converters the current passes to the feeder cable on the system of tramways throughout the city, from the feeders, thence to the overhead trolley wires, & thence to the cars & motors.

The system of tramways in Kingston needs very little description, as it is already familiar to everyone. But this may be said for it—that in the point of substantial construction, improved appliances & general adaptability to its purpose, there is nothing of the kind to excel it, or even equal it, in America or elsewhere. The Co. has throughout prosecuted its work in the most liberal spirit. Expense has not been spared where necessary, with the result that to-day we see the practical completion of an admirably constructed & useful system of tramways.

Mechanical Traction by Electricity.

G. C. Cunningham, formerly Manager of the Montreal St. Ry., & now Manager of the Birmingham, Eng., Tramway Co., recently read a paper on this subject before the Institution of Civil Engineers, in which he gives his preferences in power house equipment & summarizes the results obtained in the plants

under his management. It is pointed out that the financial superiority of electric traction all lies in the saving in power, & for this reason the power house is the point on an electric system to which the skill & intelligence of the engineer should be mainly devoted.

Horse traction—by which is meant the cost of horse-keep, wages of grooms, shoeing, veterinary expenses, but excluding drivers' wages—is $3\frac{1}{2}$ d. per car-mile in Glasgow & 5d. in Liverpool. Glasgow is level & the annual car mileage is 7,000,000; Liverpool is hilly & the annual car mileage 4,000,000. As opposed to these figures the cost for fuel, wages, oil & maintenance of the plant is placed at a little less than $\frac{1}{2}$ d. per car-mile for a level city & a little more than $\frac{1}{2}$ d. for a hilly city. Mr. Cunningham continues: "But in order to insure this low cost of working, every care must be taken in the power house. In choosing its site, it should be placed close to a plentiful supply of water, where all that is requisite for condensing purposes may be had at a nominal charge, or merely for the cost of pumping. A river, canal, pond or the sea, would afford what is needed. It should be conveniently situated for the supply of coal from railway line, canal, or wharf, so as to save the charges of handling fuel. One shilling a ton saved in cartage would amount to a very considerable sum in a year in a large traction station. But, needless to say, the most important matter is the type of engines, boilers & heat-savers to be used. The writer favors low-speed (70 revolutions) compound condensing engines, such as are built by numerous firms; boilers of the Lancashire or Galloway type, with Green's economizers. A plant of this character was constructed & worked under my charge on the Montreal Electric St. Ry., with the result that the cost of producing current was a little under one farthing per kilowatt-hour, & the cost per car-

mile less than a half-penny in the open months of the year, when coal could be obtained for 9s. a ton. The consumption of coal was 3.38 per kw. h., or 2.60 lb. per e. h.p.h., & this was maintained during months of working. The average for a whole year was only 2.75 lb. per e. h.p.h. It is not pretended that this is a phenomenally low rate of consumption. On board many of the large ocean-going steamers as low as 1.50 lb. of coal per h.p. has been reached with triple-expansion engines, but I believe that few electrical power houses have been able to show better results than those mentioned. Nor is the result to be attributed to a very large output; precisely similar results can be obtained by using similar appliances on a smaller scale. In the Montreal house there were six 800-h.p. engines, & the daily output of current averaged 43,000 units. But I have recently obtained similar results with a small cable plant on the Birmingham cable system. In 1897 this plant consisted of a pair of single-cylinder engines running at 53 revolutions of 287 maximum horse-power, with Galloway boilers, & no special heat-saving appliances. It was necessary to increase the engine power to meet increased traffic. I put in a pair of superposed compound condensing engines of 400 h.p., running at the same speed as before, & obtained condensing water from a well in conjunction with a tank & cooling tower. The result was that the consumption of fuel was reduced from about 325 tons a month, or 8.9 lb. a car-mile, to 6.5 lb. a car-mile; & the introduction of Green's economizers has further reduced the consumption to 4.7 lb. per car-mile, or to about 3 lb. per h.p.h. On the Birmingham small cable system, the saving does not amount in money to a large sum, but on a great electric system running, say, 7,000,000 car-miles in the year, 4 lb. of coal saved per car-mile, at 9s. a ton, amounts to £5,625 a year, & it is this

A Popular Route to New York

Canadian Pacific, and Toronto, Hamilton and Buffalo Railways in connection with the New York Central & Hudson River Railroad. ♦♦♦♦♦

Leaving Toronto in the evening at 5.20 p.m. in one of the through sleeping cars of the Wagner Co., you are landed at Grand Central station, in the very heart of the City of New York, 4th Avenue and 42nd Street, at 8.15 next morning, adjacent to all hotels and business houses and avoiding the annoyance of transfer.

This is also the route of the famous
"EMPIRE STATE EXPRESS"
Fastest Train in the world.

Call on nearest ticket agent of the C.P.R. or T.H. & B. for further information, or address

consideration that gives emphasis to the plea for an economical power-house plant.

"To return to the previous line of argument. Note what a large saving is effected when a cost of $\frac{1}{2}$ d. a car-mile for power is substituted for 5d.; on a car-mileage of 7,000,000 it means no less than £131,250 a year! & indicates the source whence the increase of net earnings may be obtained to pay for the heavy cost of electrical installation. The whole cost of working a large electric system, including working charges of all kinds, should be under 5d. a car-mile, but this can only be obtained with a carefully constructed power house, where the works-cost of the current is cut down to a minimum.

"The limits to which this note had to be confined prevent the introduction of any more elaborate figures or statistics than those given, but enough has been said to indicate that, in my judgment, it is to the power house that the chief attention should be directed in order to insure the financial success of an electric system. Other parts of the system claim attention, but it is on this that success or failure mainly turns. More money can be lost on the one item of power than would pay all the other working charges, & whether the high potential system with transformers, or the multiple unit system be adopted, the successful working ultimately depends upon having engines & boilers that will do their work with a low consumption of fuel."

The Hamilton Consolidations.

When the Cataract Power Co., through J. Paterson, began to try & secure control of the Hamilton St. Ry. stock, a number of shareholders formed a syndicate to protect their interests, being afraid that if the Cataract Co. got a majority of the shares without them they might have to accept less than par for their stock. Enough combined to prevent the Cataract Co. getting control, & forced it to pay them a shade over par for their stock. For some of the other stock bought previously the Cataract Co. paid as high as 110. Before there was any talk of the Cataract Co. endeavoring to get control, some of the holders of the stock held it at 60 or 70. J. Paterson recently stated it was too early to say just what changes would be made, but in time the system would be greatly improved.

The acquiring of the street railway franchise is only one of a number of enterprises that the capitalists of the Cataract Co. are going to carry out. The syndicate has completed arrangements for the control of the Hamilton & Dundas Ry. & also has control of the Hamilton Radial Ry. The Radial Ry. will in the near future be extended to Oakville. Considerable money will also be spent in beautifying the Beach, the plan being to build a big hotel.

It is said the Cataract Co. will not negotiate for the Hamilton, Grimsby & Beamsville Ry., it being the intention to build a fast electric line parallel with the G.T.R. to Niagara Falls. This line is wanted for the nickel steel plant which will be established if the government can be induced to put a duty on nickel.

Plans have been completed for lines from Hamilton to Guelph & Waterloo. The York St. line will be used to the cemetery, from where it will run along the high level road to a point beyond the old canal. Then the line will be carried over on a big bridge, & will run to Rock Chapel. It will be double track to Rock Chapel, from where the Waterloo & Guelph lines will diverge. The Guelph line will run through Freeleton, Aberfoyle & Morris-ton. The other line will run through Greensville, Galt & Preston to Waterloo & Berlin. It may be that a spur will be built from the Guelph line to Watertown. It is expected that the grading of these lines will be commenced this year, but as it is impossible to

get rails until next year, the construction cannot be completed until then. It is proposed to make the run from Hamilton to Guelph in 45 minutes, & from Waterloo in an hour.

The Cataract people have been asked to take over the proposed Hamilton, Ancaster & Brantford Electric Ry., but nothing definite has been decided on.—Hamilton Spectator.

Moncton, N.B., St. Ry.—It is said negotiations for the transfer of this property are progressing favorably.

Passenger Traffic.—The Dominion Statistician states that the number of passengers carried by the electric railways of Canada last year reached the 100,000,000 mark.

Lewiston & Youngstown Frontier R.R. Co.—F. G. Lott has succeeded W. A. Heller as Superintendent. He was formerly with the Buffalo & Niagara Falls Electric Light & Power Co. in a similar capacity.

The International Traction Co. hopes to have connection made between its Falls St. tracks at Niagara Falls, N.Y., & the upper steel arch bridge at Niagara Falls before Aug. 1. Plans have been submitted to the Commissioners of the New York State Reservation covering the proposed track on the river way from Falls to Niagara St., & as soon as the Commissioners approve the plans the work of track-laying will commence. The Suspension bridge between Queenston, Ont., & Lewiston, N.Y., having been completed, an electric car service across it will be started almost at once.

Niagara Gorge R.R.—The Niagara Falls & Lewiston Electric R.R. Co., which built & for 4 years operated the electric railway through the Niagara gorge along the N.Y. bank, has passed out of existence & been succeeded by the Niagara Gorge Railroad Co. as the result of a sale of the road by the sheriff of Niagara County. The purchaser was H. P. Bissell, of Buffalo, the chief promoter of the new company, & the only one of the old company remaining in the new one. The capital of the new company is \$1,000,000, whereas the old company was capitalized at \$1,400,000. During May & June large forces of men were employed in the reconstruction of the road-bed, removing fallen rock, & putting in new trestles & bridges. New retaining walls were built at several points. The roadbed was re-ballasted & the overhead construction repaired. The incorporators of the new company are: Gen. F. V. Greene & A. D. Andrews, New York; H. P. Bissell, J. H. Metcalf, J. T. Jones, W. C. Cornwell, C. M. Bushnell, E. W. Eames, J. A. Kennedy, G. A. Ricker, A. C. Coffey, H. H. Hewitt, G. C. Riley, G. V. Turner & B. L. Jones, Buffalo. The board of directors includes all of the incorporators mentioned excepting Messrs. Kennedy, Ricker, Coffey & Riley. The officers of the Co. are: President, Gen. F. V. Greene; Vice-President, H. P. Bissell; Secretary, H. H. Hewitt; Treasurer, B. L. Jones; General Manager, G. Morgan; Chief Engineer, G. A. Ricker. W. A. Heller, who recently resigned the superintendency of the Lewiston & Youngstown Electric Ry., has been appointed Superintendent. The line commenced running under the new management on July 1.

Great North-Western Telegraph Co.

The improvements to the Co.'s building, at the corner of St. Sacramento and St. Francois Xavier Sts., Montreal, which have been going on for the past 10 or 12 months, are completed. The building, which was constructed by the Montreal Telegraph Co. in 1873, is of Ohio sandstone, 5 storeys, covering an area of 7,200 sq. ft., was considered one of the most substantial & imposing business structures in Montreal, until recent years, the advent of

the sky-scrappers with their modern conveniences & elegant interior appointments having put the building in the shade, in this respect. All this, however, has been changed. About a year ago the management believing that there was something to be gained thereby, resolved to remodel and refit the structure in a manner that would put it abreast of the times. A glance at the tenant list, & from the increased activity about the place, gives the impression that the expectations have been realized. The work has been done most thoroughly. Necessarily the progress has been slow, owing to the fact that the Co.'s business could not be interfered with, & care had to be taken that this was adhered to. Entirely new systems of drainage, plumbing, lighting & heating of the latest approved kind have been introduced throughout. An electric passenger elevator of the most recent design has been installed, much to the joy of the toilers on the upper flats. The main entrance is in inlaid mosaic & marble wainscoting, the interior fitting being quartered antique oak, chipped plate being used in the partition work. The transformation has not only brought the building up to date, providing for all requirements of the G. N. W. T. Co. which have been put in more conveniently than ever before, but also provided room for a number of tenants, including some of the great steamship lines. The telegraph receiving office is on the main floor, also the offices & board room of the Montreal Telegraph Co., the rest of the space being rented as offices. On the 2nd floor, east side, is the main operating room, pronounced to be one of the finest for that purpose in America. The basement, not before utilized to any extent, has been transformed into airy, light offices. A stock broker occupies the St. Sacramento st. front, & the G. N. W. stores are at the rear.

Dominion Telegraph Company.

At the 30th annual meeting at Toronto, July 5, the following statement was presented:

ASSETS.	
Capital expenditure	\$1,281,819 47
Toronto Grey & Bruce Ry. Co. 1083 bonds, & interest thereon	1,506 24
Cash in bank & on hand	30,142 23
	\$1,313,557 94
LIABILITIES.	
Capital stock paid up	\$1,000,000 00
Dividends unclaimed	912 70
Dividend 92, payable July 15, 1899	15,000 00
	\$1,015,912 70
Balance at credit of profit & loss	297,645 24
	\$1,313,557 94

The directors reported the payment to the Co. by the lessees—the Western Union Telegraph Co.—of the guaranteed interest of 5 per annum on the capital stock of the Co., up to & including June 30, 1899, the proceeds of which have been promptly distributed quarterly to the shareholders.

The following were re-elected: President, T. Swinward; Vice-President, Sir Frank Smith; other directors, Genl. T. T. Eckert, C. A. Tinker, A. G. Ramsay, H. Pellatt, H. MacKenzie, T. F. Clark, T. R. Wood.

C.P.R. Company's Telegraph.

The Co. has established communication between Rossland & Spokane, Wash.

J. Kent, Superintendent of the Eastern Division, is acting manager during C. R. Hosmer's absence in England.

The Acton Burrows Co., Toronto, are getting out large enamelled iron signs, lettered on both sides, with flange, for this department. They will be different from those heretofore used & will be very striking, plain & easily read.

A building for commercial telegraph purposes is to be built by the Co. on Hastings

Oronhyatekha, M.D., S.C.R., Toronto, Ont.

James Marshall, 24 Charing Cross, London, Eng.

John A. McGillivray, Q.C., S.S., Toronto, Ont.

A. E. Stevenson, 6436 Kimbark Ave., Chicago, Ill.

Or Any Officer or Member of the Order.

St., Vancouver. It will be 3 storeys high, with stone front. The ground floor will be devoted to general business, the floor of which will be laid in blocked marble; the 1st floor will be for offices & the 2nd, or top floor, will be devoted to the operating & kindred departments. Every modern idea will be taken advantage of & utilized in the erection of the building & its laying out for business purposes. Work on construction will begin shortly. It is the intention to open an office in the Hotel Vancouver, & in one or two other sections of the city, in addition to the headquarters and the office in the new terminal building.

General Telegraph Matters.

It is said D. C. Corbin, who recently secured a charter from the Dominion Parliament, will build a telegraph line to Greenwood, B.C., at once.

The telegraph line between Kalispell, Montana, & Fort Steele, B.C., has been extended from Fort Steele to Cranbrook where it connects with the C.P.R. system.

A magistrate at Dundas, Ont., recently fined some telegraph linemen \$20 & costs & awarded \$30 damages for trees having been cut owing to their interfering with the wires. The case has been appealed.

A contract for the construction of a telegraph line between Kamloops & Nicola, B.C., has been given by the Dominion Department of Public Works to J. H. Latremouille. The Dominion supplementary estimates for 1899-90 contain \$2,550, a revote for this work.

Work is nearly completed on the Dominion Government telegraph line between Cape Beale & Alberni, B.C. This line will take the place of the present one, & be of great value to Alberni, as the new route follows the canal from Cape Beale to Alberni, & will be much easier to keep in repair during winter.

At the recent bi-annual Convention of Railway Telegraphers at Peoria, Ill., F. J. Reynolds, of Medicine Hat, Assa., was selected to represent the Canadian membership. The organization is in a highly satisfactory condition, the membership having doubled during the last year, being especially numerous in Canada. There were over 20 Canadian delegates.

The Dominion Government telegraph line to the Yukon was completed on June 29 to Lake Labarge, 128 miles from its starting point at Lake Bennett & 173 miles from Skagway. It is expected to have it completed to Dawson by Oct. 15. The Dominion supplementary estimates for 1899-90 provide \$147,500 for the line from Bennett to Dawson, with a branch to Atlin City, & \$225,000 for a line from the end of the present Government line at Quesnelle, B.C., via Stikine River & Teslin Lake to Atlin, which will give a through line to Dawson entirely through Canadian territory.

A U.S. syndicate is said to have secured a controlling interest in the North American Telegraph Co., which has been in existence for 20 years, the controlling stock having been held by the Rathbun Co., of Deseronto, & the Folger Brothers, of Kingston, Ont. The Co. has over 1,000 miles of poles, & from 3,000 to 4,000 miles of wires. The Co. owns & operates the telephone & telegraph wires in Prince Edward, Hastings, Frontenac, & several other counties in Eastern Ontario. It is proposed by the new owners to extend the system. W. Bampfield, of Montreal, has been appointed General Manager, with headquarters at Kingston, succeeding R. C. Carter, who has held the position of Manager since the Co.'s organization. It is said those who sold their stock realized well, & are quite pleased to let it go. Messrs. Folger & Rathbun are said to be still interested.

The Canadian, British Columbian & Dawson City Telegraph Co. has forwarded to the Dominion Government through Lord Strathcona a statement of claims for compensation on account of the Government having virtually repudiated the concession to the Co. for the building of a telegraph line to the Yukon & having proceeded with it as a Government work. We are informed that unless the Government awards liberal compensation the whole question of the abrogation of the charter & of the breaking of faith with English capitalists will be ventilated in the Imperial House of Commons. One of the trustees for the debenture holders, Mr. Clough, is M.P. for Portsmouth, & he has pointed out to Lord Strathcona the damaging effect which would result to Canadian credit should the question have to be raised in the Imperial Parliament. The directors of the Co. very forcibly say that while the breaking of engagements with foreign powers may sometimes be looked for, the same treatment is not expected from British Colonial Governments.

Nova Scotia Telephone Co.

At the annual meeting in Halifax, June 15, the following statement was submitted, for the year ended Jan. 31, 1899 :

ASSETS.

Exchanges and plant.....	\$278,997	29

	\$334,740 00

PROFIT AND LOSS, JAN. 31, 1899.

Feb. 1, Balance	\$ 21,939 91	
Jan. 31, Net earnings	16,652 72	\$ 88,592 63
Jan. 31, Dividend 16, paid Sep. 1, '98 " 17, payable Mar.	\$6,000 00	
" 1999.....	6,000 00	
Jan. 31, Transferred to sinking fund	<u>3,000 00</u>	
		\$ 15,000 00
Balance forward		\$ 23,592 63

The directors were unanimously re-elected as follows : President, B. W. Chipman ; Vice-President, R. Uniacke ; Secretary, C. E. Harris ; other directors, C. F. Fraser, Dr. A. C. Cogswell, Dr. L. Borden, M.P., Dr. A. Haley, M.P., C. F. Sise.

The Co.'s long distance lines are not being extended to any great extent this year, owing to the extremely high price of copper wire. Metallic circuits are being installed in Halifax as fast as possible & steps are being taken to install the most modern system of switch boards there.

The Bell Telephone Company.

The Co. has bought Pare & Pare's telephone system at Granby, Que.

Conduits for underground wires are being laid in Main & some other principal streets in Winnipeg.

The people of Portage La Prairie want the Co. to establish long distance service with Winnipeg.

The Ottawa City Solicitor has given an opinion in regard to the conditions that sur-

round the use of the streets by the Bell Co. He says the charter of the Co. authorizes it to construct its lines in the public highways, provided the rights of travelers are not interfered with and "provided that in cities, towns & incorporated villages the location of the line or lines & the opening up of the streets for the erection of poles or for carrying wires underground shall be done under the direction & supervision of the engineer or such officer as the council may appoint & in such manner as the council may direct, & that the surface of the street shall in all cases be restored to its former condition by & at the expense of the company." From this he draws the conclusion that the Co. has the right to place its wires underground on any of the streets of the city & to open up the streets for that purpose, but in so doing must not interfere with the public right of travelling on or using such highways, & must locate its underground lines in such portion of the street as the council may direct & must carry on the work of opening up the streets and placing its wires underground also in such manner as the council may direct under the supervision & direction of the City Engineer.

B. C. Telephone Lines.

The Vernon & Nelson Telephone Co. has secured connection with the Inland Telephone Co. at Cascade City B.C., the latter Co. having built a line from Bossburg, Wash., to Cascade. Formerly the V. & N. Co. worked with the Spokane & B. C. Co. The Inland Co. has two metallic lines between Spokane, Wash., & Rossland, B.C., & direct connection with Republic, & throughout all the Western States. A person in Greenwood can now speak to Portland, Vancouver, San Francisco, or even Los Angeles.

The Columbia Telephone Co. is building a line from Cascade, B.C., to Camp McKinney, passing through Grand Forks, Columbia, Niagara, Summit, Eholt, Greenwood, Anacanda, Boundary Falls, Midway & Rock Creek. At the eastern end connection is made with the Spokane & B. Columbia Telephone Co. now operating to Spokane & Republic, Wash., & Rossland, B.C. To complete necessary connections the Columbia Company will also build a line from Trail to Rossland & thence to International Boundary. The intention is to establish exchanges at Rossland, Trail, Grand Forks, Greenwood, Camp McKinney & Cascade City, B.C.

General Telephone Matters.

The American Bell Telephone Co. has declared its regular quarterly dividend of 3% & 1½% extra, payable July 15.

The Callender Telephone Exchange Co. has had its capital stock increased from \$100,000 to \$450,000 under the Dominion Companies Act.

The Victoria Telephone Co. held its first meeting at Woodville, Ont., recently, & elected these officers: President, J. G. Eyres; Vice-President, J. G. Campbell; Treasurer, C. E. Weeks; Secretary, Wm. A. Robinson. The directors have, it is said, decided to build lines to Beaverton, Orillia, Midland, Barrie, Lindsay, Peterboro, and other places as soon as possible.

At the annual meeting of the New Brunswick Telephone Co. in Fredericton, June 13, the following were elected: President, Hon. A. G. Blair; Vice-President, J. L. Black; Managing Director, F. P. Thompson; other directors, A. A. Stockton, C. Fawcett, W. T. Whitehead; Sec.-Treas., W. E. Smith. It was decided to put in a metallic circuit between Fredericton & St. John & to extend the trunk line from Fredericton to Chatham & the north shore.

The County of Ont., Standard, speaking of an examination recently held by the County Judge, there, says: "The Dundas Telephone Co. was organized nearly 6 years ago, & quickly spread over nearly the whole of Dundas Co., extending into several adjoining counties. The organizers were enthusiastic, & the people were excited over the prospects of participation in the telephone business. But the tide came quickly, & the whole concern collapsed like a bubble, in Aug., 1895. Since that time the members of the Co. have been before the courts to settle who shall finally bear the liabilities of the concern, amounting to away up in the thousands of dollars. The result has been more than one law suit without final issue. The present examination has been on for over a year, & it is not considered likely that this will bring the matter near a completion. The costs are heavy & the whole affair is a significant object lesson."

A correspondent asks: "In telephonic communication is it the machine & not the actual voice that is heard? Or is it not the voice itself that is heard through the medium of the machine?" In telephonic communication, the sound waves produced by the voice of the speaker cause the diaphragm of the transmitter to vibrate. These vibrations have the same period as the waves of the voice. The vibrations of the diaphragm cause the electric current through the line to vary in the same periods. The variation of the electric current sets the diaphragm of the receiver into vibration, and this vibration is received by the ear of the listener as sound. The voice is not transmitted. A current of electricity is transmitted through the line. A voice could not be heard from Chicago to New York. It is, however, very wonderful that the vibrations of the diaphragm of the receiver reproduce the qualities of the voice of the person speaking so perfectly that the person can be recognized by the reproduced tones.

The Wire & Cable Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of \$500,000 & headquarters in Montreal, the incorporators being C.

F. Sise, R. Mackay, C. Cassils, R. Archer, H. Paton, L. B. McFarlane & C. P. Sclater, all of Montreal, nearly all of whom are connected with the Bell Telephone Co. The primary object of the Co. is to manufacture & deal in apparatus, etc., for telephone, telegraph, light, power, railway, cable, hydraulic or compressed air companies, but it is given very extensive powers to engage in other branches of business.

Among the Express Companies.

The U.S. Ex. Co. has located a soliciting agent in Toronto.

The Western Ex. Co. has reopened its summer route to Mackinac Island.

The Canadian Ex. Co. has opened offices at Edwards, Ont., Jonquiere, Que., & Whitebread, Ont.

The Canadian & Dominion Co's have both recently placed large orders for enameled iron signs for their general as well as their money order business with the Acton Burrows Co., Toronto.

In the Dominion Ex. Co. R. Helme has succeeded A. Devitt as Route Agent, with headquarters at Nelson, B.C. F. H. McKay has been appointed Route Agent at London, Ont., succeeding Mr. Helme.

The following changes have been made in the Canadian Ex. Co.: W. T. Anderson, Superintendent of Money Order Department, is appointed Assistant Treasurer, vice A. Maxwell assigned to other duties. W. H. Bryce, Assistant Auditor of Money Order Department, is appointed Superintendent of the same, vice W. T. Anderson transferred.

The White Pass & Yukon Ex. Co., Ltd., has been incorporated under the B. C. Companies Act, with a capital of \$100,000 and head office at Victoria. The Directors are A. C. Flumerfelt, W. Wilson, H. M. Hills, & J. H. Greer. The primary object of the Co. is to do an express business over the White Pass & Yukon Ry., but it has very general powers to extend in any direction.

Since June 19, the Canadian Ex. Co. has been running a special train 6 days a week between Niagara Falls & Montreal, which it calls its special fruit flyer. Niagara Falls is left at 1.30 p.m., 12 stops are made at fruit points and Toronto is reached at 8 p.m. After a stop of 10 minutes the train leaves for Montreal arriving there between 5 and 6 on the following morning, so that early delivery of the fruit is made. During the strawberry season the Dominion Ex. Co. ran a special train between Toronto & Montreal, leaving Toronto in the evening & reaching Montreal early the following morning before the passenger train. The putting on of these special trains has been caused by the impossibility of handling the largely increased fruit shipments on the regular passenger trains without delaying the latter, and shows how largely the fruit traffic has grown.

Assistant Secretary Spaulding of the U.S. Treasury, has made a ruling on the application of I. M. Clarke, of Port Huron, Mich., representing the American Ex. Co., for the privilege of consolidating consignments of goods intended for transportation to Canada, for the purpose of making a single entry & giving a single bond on all such shipments made within one week. Such a practice, if allowed, would greatly reduce the expense to the express companies, but the Department believes that it would be detrimental to the interests of the Government. Mr. Spaulding is willing, however, to make a concession from the letter of the regulations heretofore in force, & has forwarded the following instructions to the Collector: "After inquiry into the practice at other ports on the frontier, and careful consideration of the matter, the Department declines to authorize the consolidation in one entry of consignments covering a period of several days, as proposed by the applicant, but perceives no objection to the inclusion in one entry & bond, for immediate transportation & exportation to Canada via a common port, of all merchandise arriving on the same date & train, or other conveyance, consigned to one party, but destined for two or more places in Canada."—Express Gazette.

RAILWAY FINANCE. MEETINGS, &c.

Boston & Maine.—A combination on the part of the B. & M. & C.P.R. would not be the most unlikely & unnatural thing in the U.S.—Leonard's Railway News.

In a recent interview Senator Chandler, of New Hampshire, said he felt convinced that the B. & M. system would be acquired either by the New York Central, or by the C.P.R. Among other things he said: "The C.P.R. has greater need of those lines than the N.Y.C. will have after it obtains access to Boston through Albany. The C.P.R. must have access to more important seaports than those of Canada. It must have access to the ocean through New England, and it not only needs that access at Portland, but also at Boston. The C.P.R. managers have of late largely dominated the B. & M., & doubtless will soon make a move towards the possession of the latter's lines. The C.P.R. will not, indeed, dare much longer hereafter run the risk of seeing the B. & M. go into the hands of the N.Y.C. We may therefore expect to see for a little while a lively competition between the C.P.R. & the N.Y.C. for the acquisition of the B. & M., & shortly the surrender of the latter to the ownership & control of one of the great combinations. It is impossible now to tell exactly which, but the C.P.R. has the most at stake, and will make the highest bid, therefore quite likely will be the winner."

C.P.R. officials say there is nothing in the rumors above mentioned.

L. Tuttle, formerly Passenger Traffic Manager of the C.P.R., is now President of the B. & M., & T. A. Mackinnon, formerly Manager of transportation on the C.P.R., is Vice-President & General Manager.

Calgary & Edmonton.—Net earnings for June, \$12,424.66, against \$5,434.20 in June, 1898.

Canadian Northern Ry. Notice is given that a mortgage deed, dated Feb. 1, 1899, made by the Co. to the Hon. T. Greenway & Hon. R. Watson, trustees & mortgagees, securing a bond issue named by the Co., has been deposited in the office of the Secretary of State. In a speech at Morden recently, Premier Greenway stated that the Government had not been called on to pay a cent under its guarantee of this Co.'s bonds. On Aug. 1 the Co. paid over between \$38,000 & \$39,000 as interest thereon.

C.P.R. Land Grants.—R. B. Angus, G. M. Clark, & J. Turnbull, trustees under the mortgage dated Sept. 1, 1881, securing the payment of 5% land grant bonds, desire to receive proposals for the sale to them of such bonds up to the amount of \$225,000 par value, funds for that purpose being in their hands from sales of lands. The mortgage provides that the trustees may purchase bonds at the

lowest price offered, not exceeding 10% premium on the par value & accrued interest.

Chicago & G.T.—At a special meeting of directors at the G.T.R. general offices Montreal, Aug. 1, there were present, C. M. Hays, President; C. Percy, Secretary; Messrs. Dixon & Howe, of Chicago; Skinner, of Valparaiso, Ind.; Middaugh & Spicer, of Detroit, & Reeve, of Montreal, directors.

Dominion Atlantic.—Earnings for 6 months to June 30, \$255,766, against \$234,972 for corresponding period.

A G.T.R. Suit.—Matthews Bros. & Co., Toronto, are suing for \$8,000 damages for the

the gross receipts for the year ended June 30, 1899, were \$3,738,331, & the working expenses \$3,675,686, including \$211,000 rental for the Drummond County line. This leaves a surplus of \$62,645.

Kaslo & Lardo-Duncan.—The annual meeting will be held at Kaslo, B.C., Sept. 5.

Manitoba & Southeastern Ry. Notice is given that a mortgage deed dated Feb. 1, 1899, made by the Co. to Hon. T. Greenway & Hon. R. Watson, trustees & mortgagees, securing a bond issue named by the Co., has been deposited in the office of the Secretary of State.

Montana Railways Assessment.

The Montana State Board of Equalization has raised the railway assessment nearly \$3,000,000, fixing it at \$16,651,821, as compared with \$13,793,581 for last year. This assessment includes only tracks, roadway & rolling stock, while the assessment upon yards, depots & other realty & improvements will bring the total taxable valuation of the several roads up to \$26,000,000. The most notable increase was on the line of the Great Northern, which was assessed at \$6,250 a mile, or \$1,550 more than last year. The Northern Pacific's assessment was raised from \$5,200 to \$6,500, an increase of \$1,300 a mile. The Burlington's assessment was raised from \$3,500 to \$5,000, & the Oregon Short Line was increased from \$6,000 to \$7,000. For the first time in its history the board assessed the Pullman Palace Car Co. Each car of the Co. in the State, except those on the Northern Pacific, was assessed at \$4,000. As the N. P. Co. claims to own one-half interest in its sleepers, the Pullman Co. was assessed \$2,000 for each car operated by that line in Montana.

New Brunswick Ry.—At the annual meeting at the C.P.R. offices, St. John, N.B., Aug. 3, the following were elected:—President, R. Meighen, Montreal; Vice-President, J. K. Todd, New York; other directors, Lord Strathcona, J. Turnbull, J. Hardisty, Montreal; J. S. Kennedy, S. Thorne, D. W. James, New York; E. R. Burpee, J. McMillan & H. H. McLean, St. John; Sec.-Treas., A. Seely, St. John; Land Agent, W. T. Whitehead, Fredericton.

Pembroke Southern. At the annual meeting Aug. 8, the following were elected:—President, T. Murray; Vice President, R. W. Kenning; Sec.-Treas., J. A. Thibodo; other directors, S. R. Poulin, I. Martin, R. W. Gordon, F. E. Fortin, W. Russell.

Port Arthur, Duluth & Western.—The official referee at Osgoode Hall, Toronto, has accepted the tender of E. Jarvis, of Toronto, in the neighborhood of \$500,000 for this line. The referee refused to give any information regarding the other tenders, as did Mr. Jarvis regarding who his clients were, but we have no doubt he was writing for the Ontario &

D. B. HANNA,
Superintendent Canadian Northern Ry. & Manitoba & Southeastern Ry.

destruction of their lumber mill & picture frame factory, which they claim was set on fire by a spark from an engine.

The Great Northern Ry. Co. (U. S. A.), has declared its now usual quarterly dividend at the rate of 7% per annum, payable Aug. 1.

The gross earnings for the year ended June 30 were \$24,997,013, an increase of \$2,434,812 over corresponding period.

The usual quarterly dividend, at the rate of 6% per annum, is announced on the St. Paul, Minneapolis & Manitoba, 6% guaranteed shares, payable Aug. 1.

Intercolonial. The Minister of Railways recently stated in the House of Commons that

—With reference to this Co.'s 1st mortgage
sterling bonds, it is announced that the Gov-
ernment subsidy for the 6 months ended June
30, together with the net earnings for the 6
months ended May 31, will permit of a distri-
bution of £1 % in respect of interest due Aug.
1, which is the same as last year.

Net loss in operating for June \$952.97,
against net loss of \$6,689.33 for June, 1898.

Quebec & Lake St. John.—The Railway
Share Trust & Agency Co., of London, Eng.,
states that as soon as the legal formalities
have been complied with, probably some time
during August, a meeting of the bondholders
will be held in connection with the Co.'s de-
fault in interest on its bonds.

Rutland & Noyan.—The 1st annual meet-
ing will be held at Noyan Jct., Que., Sep. 6.

St. Lawrence & Adirondack.—The annual
meeting will be held in Montreal, Sep. 6.

Tilsonburg, Lake Erie & Pacific.—The an-
nual meeting will be held at Tilsonburg Sep. 12.

Grand Trunk.—On Aug. 11 the Directors
declared a dividend for the ½ year on the 1st
preference stock, at the rate of 2% per annum,
increasing it from 1½%, & carrying forward
£2,000. The increase caused quite an ad-
vance in the stock, & cables reported a good
deal of excitement in London. On the day of
the declaration the 1st preference opened at
83¼, advanced to 83¾, then to 84 3-16, &
wound up at 84½ at the close. The 2nd pre-
ferred opened at 54¾, & advanced to 56¼,
& the 3rd preferred shares went from 22¾ to
23¼.

C.P.R. Earnings & Expenses.

Gross earnings, working expenses, net
profit and increases or decreases over 1898,
from Jan. 1, 1899.

	Earnings.	Expenses.	Net Profits.	Increase or decrease.
Jan.	\$1,864,570.36	\$1,247,036.50	\$617,533.86	\$101,906.27+
Feb.	1,753,382.82	1,153,681.34	599,701.48	176,034.12+
Mar.	2,109,667.58	1,280,772.01	828,895.57	75,662.06+
Apr.	2,196,312.40	1,276,008.91	920,303.49	203,212.80+
May	2,402,151.29	1,369,392.68	1,032,758.61	106,006.30+
June	2,362,278.67	1,339,218.47	1,023,060.20	205,664.83+

\$12,688,363.12 \$7,666,109.91 \$5,022,253.21 \$868,576.38+
+ Increase.

Approximate earnings for July, \$2,367,000,
as against \$2,024,000 in July, 1898; increase,
\$343,000.

SUBSIDIARY LINES.

DULUTH, SOUTH SHORE & ATLANTIC.—
Approximate earnings for July, \$238,438; in-
crease over July, 1898, \$64,513.

Net earnings for May, \$744,113, against
\$60,513 for corresponding period, making for
5 months to May 31, \$282,903, against \$185-
847 for corresponding period.

MINERAL RANGE, HANCOCK & CALUMET.—
Approximate earnings for July, \$48,503;
increase over July, 1898, \$13,447.

**MINNEAPOLIS, ST. PAUL & SAULT STE.
MARIE.**—Approximate earnings for July,
\$387,324; increase over July, 1898, \$96,581.

Net earnings, for 10 months, to April 30,
\$2,232,088, against \$2,218,427, for correspond-
ing period.

Canadian Pacific Railway Land Sales.

	Acres.		Amount.

Grand Trunk Earnings, Expenses, &c.

The following statement of earnings sup-
plied from the Montreal office, includes the
G.T. of Canada, the Chicago & G.T., & the
Detroit, Grand Haven & Milwaukee Rys.:

	1899	1898	Decrease	Increase
Jan.	\$1,956,281	\$1,916,332	\$ 39,949
Feb.	1,824,434	1,674,453	149,981
Mar.	2,186,359	2,048,970	137,389
April	1,942,543	1,918,477	24,066
May	2,039,239	1,940,980	98,259
June	2,062,137	1,880,402	181,735
July	2,105,493	1,860,884	244,519
	\$14,116,396	\$13,240,498	\$875,898

The following figures are issued from the
London, Eng., office:

GRAND TRUNK RAILWAY.

Revenue statement for May, 1899:

	1899	1898	Increase	Decrease
Gross receipts	£344,300	£322,932	£21,368
Working expenses	208,600	197,744	10,856
Net profit	£135,700	£125,188	£10,512

Aggregate for 5 months, from Jan. 1 to
May 31, 1899:

	1899	1898	Increase	Decrease
Gross receipts	£1,633,200	£1,560,938	£72,262
Working expenses	1,102,500	1,075,699	26,801
Net profit	£530,700	£485,239	£45,461

CHICAGO & GRAND TRUNK RAILWAY.

Revenue statement for May, 1899:

	1899	1898	Increase	Decrease
Gross receipts	£59,300	£61,679	£2,379
Working expenses	50,500	46,669	£3,831
Net profit	£8,800	£15,010	£6,210

Aggregate for 5 months, from Jan. 1 to
May 31, 1899:

	1899	1898	Increase	Decrease
Gross receipts	£339,000	£317,010	£21,990
Working expenses	285,300	251,764	33,536
Net profit	£53,700	£65,246	£11,546

DETROIT, GRAND HAVEN & MILWAUKEE RY.

Revenue statement for May, 1899.

	1899	1898	Increase	Decrease
Gross receipts	£15,400	£14,219	£1,181
Working expenses	14,000	10,753	£3,247
Net profit	£1,400	£3,466	£2,066

Aggregate for 5 months, from Jan. 1 to
May 31, 1899:

	1899	1898	Increase	Decrease
Gross receipts	£71,800	£73,653	£1,853
Working expenses	63,500	59,643	£3,857
Net profit	£8,300	£14,010	£5,710

DETAILS OF G.T.R. RECEIPTS JAN. 1 TO JUNE 30.

	1899.	1898.
Passengers, number	2,857,987	3,007,710
" amount	£ 488,782	£ 439,421
Immigrants, number	5,310	7,659
" amount	£ 3,414	£ 3,505
Mails, express, &c.	94,007	91,909
Freight, tons	4,841,475	4,509,053
" amount	£1,329,052	£1,280,338
Miscellaneous receipts	65,544	49,172
Total receipts	£1,980,799	£1,870,605

TRAFFIC RECEIPTS OF THE SYSTEM.

Traffic receipts, Jan. 1 to June 30.

	1899.	1898.	In-crease.	De-crease.
Grand Trunk	£1,980,799	£1,870,605	£110,194
Chicago & G.T.	397,436	380,786	16,650
D. & G. H. & M.	86,776	86,886	£2,890
Total	£2,468,011	£2,338,277	£129,734

Railroad construction in the Lardeau-Dun-
can country, the Boundary district & the
Crow's Nest Pass is stimulating the general
prosperity prevailing throughout the Kootenay
districts. The opening up of the Crow's
Nest coal fields, & the establishment of coke
manufacture are other factors in the progress
of that section. All this activity in mining &
railroad undertakings is giving an enormous
impetus to trade generally, & is creating an
ever growing demand for the products of
British Columbia farmers.—Inland Sentinel.

RAILWAY APPOINTMENTS, Etc.

Canadian Pacific.—S. P. Howard, who has been with the Co. 16½ years & has heretofore been City Freight Agent at Montreal, has been appointed Assistant General Freight Agent, with office in Board of Trade Building, Montreal. For the present he will also discharge the duties of City Freight Agent.

W. Shanks, Roadmaster at Carleton Jct., having resigned, has been succeeded on division 4, between Brockville & Chalk River, Ont., by J. Jelly, heretofore Roadmaster of the Sault branch at Algoma. Mr. Jelly has been succeeded on the Sault branch by W. Kelly, who has been Roadmaster from Cartier to North Bay for a number of years. W. S. Smith, Section Foreman at Nairn Centre, has been appointed Roadmaster from Cartier to North Bay, succeeding Mr. Kelly.

Central Vermont.—W. T. Sutphen has been appointed Chief Dispatcher, Northern Division.

J. M. Morrison has been appointed Resident Engineer. Office at St. Albans, Vt.

Duluth, South Shore & Atlantic.—C. E. Lyttle, heretofore Superintendent, has been appointed General Superintendent, & has also been given a similar position on the Mineral Range, Hancock & Calumet line.

Grand Trunk.—J. E. Dalrymple, heretofore Division Freight Agent at Hamilton, has been appointed Division Freight Agent, with headquarters at Detroit, Mich., vice Sumner Hopkins, Commercial Agent, Detroit, resigned, & has been given charge of traffic as follows: Eastbound—From Detroit & Port Huron, from connecting roads at Detroit & Port Huron, or from points south of Toledo forwarded via Durand. Westbound—From points East of Niagara frontier destined to points west of Detroit & St. Clair Rivers. J. H. Hanna, heretofore Division Freight Agent at Stratford, has been appointed Division Freight Agent at Hamilton. C. E. Dewey has been appointed Division Freight Agent at Stratford. Mr. Dewey has recently been Chief Clerk to Mr. Dalrymple at Hamilton.

A joint circular signed by General Traffic Manager Reeve, of the G.T.R., & General Traffic Manager Todd, of the West Shore R. R., announces that J. E. Dalrymple has been appointed Manager of the Grand Trunk Dispatch, vice Sumner Hopkins, resigned.

First Assistant General Passenger & Ticket Agent Bell, at Chicago, has appointed E. H. Hughes, heretofore Assistant General Passenger Agent there, as Western Passenger Agent, with headquarters there.

H. G. Elliott, heretofore in charge of the excursion department, has been appointed Chief Clerk of the General Passenger Department, succeeding G. W. Vaux, appointed Assistant General Passenger & Ticket Agent. Mr. Elliott was for many years City Ticket Agent of the Central Vermont in Montreal. G. A. Morency succeeds Mr. Elliott.

G. A. Mitchell, heretofore Master of Bridges & Buildings on the Northern Division, has been appointed to a similar position on the Middle Division, with headquarters at Toronto, vice J. Wilson, who has been Acting Master of Bridges & Buildings since J. A. Sheedy's resignation & who has been assigned to other duties. Mr. Mitchell is succeeded at Allandale by E. Brown as Acting Master of Bridges & Buildings. Mr. Brown has been Bridge Inspector at Lindsay.

Lake Erie & Detroit River.—T. Marshall has been appointed Assistant General Freight & Passenger Agent, & K. R. Cameron, Trainmaster; both with offices at Walkerville.

H. W. Foster, M.P., of London, Eng., Chairman of the Kootenay Valley Ry. & Navigation Co., is visiting British Columbia.

Mainly About People.

Mrs. McNicoll, wife of the Assistant General Manager of the C.P.R., has gone to Europe.

J. J. Wallace, General Freight Agent I.C. R., Moncton, N.B., has been confined to his house by illness.

Mrs. C. R. Hosmer, wife of the Manager of the C.P.R. Co.'s Telegraph, is staying at the Algonquin, St. Andrews, N.B.

D. D. Mann is accompanied on his trip to China by E. F. Fauquier, the railway contractor, & by A. M. Burns, who goes as Secretary.

Mrs. Osborne & her four children, who still reside in Montreal, are paying a month's visit to General Superintendent Osborne, of the C. P.R., at Winnipeg.

President Shaughnessy returned to Montreal July 25 from the west, after attending a meeting of the Western Traffic Association & visiting his father at Milwaukee.

E. W. Kelk, agent of the Hamilton & Dundas Ry., is said to have received an appointment on the Newfoundland Ry., to take charge of the express & telegraph business.

E. M. Taussig, Freight Superintendent of the Terminus R.R. Association at St. Louis, Mo., was married recently at Kingston, Ont., to Miss Maggie Turnbull, of that city.

Capt. A. N. McGray, former commander of the Dominion Atlantic Ry. steamer Prince Edward & Prince George, is now first officer on John Drexel's steam yacht Sultana.

General Passenger Agent McPherson & General Freight Agent MacInnes have been making their first trip over the Western & Pacific divisions, to which they were recently appointed.

J. A. Cameron, Superintendent of the C.P. R. at Fort William, Ont., has gone to California on account of ill health, accompanied by his family. W. A. Brown is acting Superintendent in his absence.

Major Percy Girouard, formerly of the C.P.R. Engineering Service, & now Director General of the Egyptian Government Railways, arrived in Montreal July 29, on a visit to his father, Judge Girouard.

On leaving Kamloops, B. C., recently, where he had been station agent, to become C.P.R. Car Service & Fuel Agent at Vancouver, W. O. Miller was tendered a steamboat excursion on the Thompson River, & was given a farewell dinner by the Masonic Lodge.

Manager Whyte, of the C.P.R. Western Lines, has recently gone over all the Co.'s lines in British Columbia accompanied by Land Commissioner Hamilton, General Superintendent Marpole, of the Pacific Division, & Commissioner Chipman, of the Hudson's Bay Co.

On Aug. 1 President Shaughnessy started from Montreal for an inspection of the C.P.R. lines to St. John & other points. He was accompanied by D. McNicoll, Assistant General Manager; G. M. Bosworth, General Freight Agent; R. Kerr, Passenger Traffic Manager, & T. Tait, Manager of Eastern lines.

When Assistant General Manager McNicoll, of the C.P.R., returned recently from an inspection trip over the Atlantic division, he found at his residence at Westmount a handsome grandfather's clock with chimes, as a present from the officials of the Passenger Department, from which he was recently promoted.

E. G. Russell, formerly of the I.C.R. train despatcher's office, Truro, N.S., and later Superintendent of the Rome, Watertown & Ogdensburg Ry. until last April, when he went into the service of the Delaware, Lackawana & Western Ry., as Superintendent of

the Morris & Essex division, has been appointed General Superintendent of the D.L. & W., with headquarters at Scranton, Pa.

M. C. Laven, who died in San Francisco Aug. 6, aged 53, was once Superintendent of the Dominion Telegraph Co. for Western Ontario, but for a number of years past has been Auditor of the Pacific Postal Telegraph Co. He was a brother of J. G. Laven, of Hamilton, who until recently was Canadian Passenger Agent of the Michigan Central Ry. Deceased, who was one of the best known citizens of Hamilton in the 70's, left there in 1878 & went to Chicago as Manager of the Western Union Telegraph Co., subsequently going to San Francisco in its interest. There he left the Western Union to become Superintendent of the Postal Telegraph Co., which post he filled for a number of years until appointed Auditor. Appendicitis was the cause of death.

Before leaving Montreal recently to assume his duties as First Assistant General Passenger & Ticket Agent of the G.T.R. system, G. T. Bell was presented by the staff with a handsome tea service. Mr. Bell was born in Montreal in 1861, & commenced his railway career at London, Ont., in 1878, with the Great Western Ry. He was subsequently with that Co. at Hamilton until its fusion with the G.T.R. in 1882, when he removed to Toronto as chief clerk to the Assistant General Passenger Agent, & in 1884 was transferred to Montreal, becoming shortly thereafter chief clerk to the former General Passenger Agent, W. Edgar. Upon the latter's death, in 1892, he was made Assistant General Passenger Agent. In 1896, under the present management, he was advanced to the position of Assistant General Passenger & Ticket Agent.

D. Blythe Hanna, whose portrait appears on pg. 225, was born Dec. 20, 1858, at Thornliebank, Scotland, & his railway service is as follows: 1874 to 1879, Clerk & ticket agent with the Glasgow, Barrhead & Kilmarnock Ry. of Scotland, at Kinnishead, Pollokshaws & Barrhead stations; 1879 to 1882, Cashier Stobcross station, Glasgow, Caledonian Ry. of Scotland; 1882 to 1884, Clerk in Auditors' office & Travelling Auditor G.T.R., Montreal; 1884 to 1886, Clerk General Auditor's office, New York, West Shore & Buffalo Ry., at New York, N.Y.; 1886 to 1892, Chief Accountant Manitoba & North Western Ry. Co., at Winnipeg; 1892 to 1896, Treasurer & Land Commissioner, in addition to the duties of Chief Accountant with the same Co.; 1896 to date, Superintendent of the Canadian Northern Ry. (previously called the Lake Manitoba Ry. & Canal Co.), & the Manitoba & South Eastern Ry.

Canadian Railway Appeal Cases.

Two Canadian cases came before the Judicial Committee of the Privy Council in London, Eng., July 22.

MADDEN & ANOTHER & THE ATTORNEY-GENERAL for British Columbia (intervenant) v. The Nelson & Fort Sheppard Ry. Co. & the Attorney-General for Canada (intervenant). This was an appeal from a judgment of the Supreme Court of British Columbia of Aug. 18, 1897, reversing a decision of Judge Forin in the County Court for Kootenay. The action was brought to recover \$110, the value of 2 horses belonging to the appellants, R. & A. Madden, livery-stable keepers at Nelson, which having strayed on to the respondent company's railway, were injured by a passing train. The company were liable only if they were under an obligation to fence their railway under the Cattle Protection Act of B.C. It was admitted that the railway was not fenced in accordance with the provisions of that statute. The question raised on the appeal was whether the Cattle Protection Act, 1891, was intra vires the Provincial Legislature to

The Nelson & Fort Sheppard Ry. Co. was incorporated by an Act of the Legislature of B.C., but by petition prayed that the railway be declared to be a work for the general advantage of Canada, & the Co. a body corporate within the jurisdiction of the Parliament of Canada. Accordingly the railway was so declared by statute, & it was provided that the Railway Act of Canada should apply instead of the B.C. Railway Act. In 1891 the Legislature of B.C. passed the Cattle Protection Act, which, after reciting that railway companies incorporated under the authority of the Parliament of Canada or approved so for the general advantage of Canada, did not recognize any obligation to fence their lines against cattle, & that it was just that, in the absence of proper fences, the companies should be held responsible for cattle injured or killed, proceeded to make enactments with that view. In the present case the County Court Judge decided that the Cattle Protection Act applied, & that the Co. were liable to appellants for the loss of their horses. The Supreme Court, on appeal, reversed that decision, holding that Provincial legislation, so far as it purported to extend the liability of the Co. beyond that imposed upon them by the Canadian Railway Act, was ultra vires. From that judgment the present appeal was instituted, & the Attorney-General for British Columbia & the Attorney-General for Canada were permitted to intervene in the interests of the Province & the Dominion respectively.

The Lord Chancellor, in delivering the judgment of the Board, said their Lordships were of opinion that the judgment of the Supreme Court ought to be affirmed. The course of the argument had been rather to suggest that there was no express direction of the statute to create any erection or construction of the works of the railway & thus to avoid

the objection of its being ultra vires. But their Lordships were not disposed to yield to that suggestion, even if it were true to say that that was only an indirect mode of causing the construction to be made, because it was a very familiar principle that one could not do indirectly what one was prohibited from doing directly. It was an understatement of the difficulties in the way of the appellants to speak of it as an indirect operation of the statute to enact that the companies should erect fences & provide against the particular class of accident which had happened in the present case, because the Provincial Legislature which passed the enactment seemed to have been under the impression that they were proceeding directly, & the preamble of the statute pointed out what they were intending to do. The Provincial Legislature pointed out by that preamble that the Dominion Parliament had neglected proper precautions, & that they were going to supplement the provisions which in their view ought to have been made, & they thereupon proceeded to do that which they recited & which the Dominion Parliament had omitted to do. It would be impossible, in their Lordships' opinion, to maintain the authority of the Dominion Parliament if such a proceeding were allowed. The law seemed to have been laid down with sufficient precision in the Bon Secours case, where it was decided that, although any direction of the Provincial Parliament to create new works on the railway & make a new drain, & to alter its construction, would be beyond the jurisdiction of the Provincial Parliament, they were not exempted from the municipal law, as it then existed, that all landowners, including railway companies, should clean out their ditches so as to prevent a nuisance. In the present case there was the actual provision that there should be a liability on the railway company unless they created such & such

works upon their line. That was manifestly & clearly beyond the jurisdiction of the Provincial Legislature. For those reasons their Lordships would advise her Majesty that the appeal should be dismissed.

It was intimated by counsel that as the railway company had not entered an appearance, & the case had been argued as between the Province & the Dominion—the respective Attorney-Generals intervening—no costs would be asked for.

ESQUIMALT & NANAIMO RY. CO. v. HOBBS. This was a petition by the Esquimalt & Nanaimo Ry. Co. for special leave to appeal from a judgment of the Supreme Court of Canada of May 30, 1899, to decide whether, as petitioner contends, the mines & minerals under the land should be reserved to it. Their Lordships granted the petition, intimating that the petitioner must pay the costs if it was so decided after hearing the appeal.

Recent Dominion Legislation.

Among the acts passed at the recent session of Parliament, & assented to Aug 11, are the following:—

Respecting the Ontario & Rainy River Ry. Co.

Respecting the Temiscouata Ry. Co.

Respecting the Manitoba & South Eastern Ry. Co.

To incorporate the Niagara, St. Catharines & Toronto Ry. Co.

Respecting the Edmonton District Ry. Co., & to change its name to the Edmonton, Yukon & Pacific Ry. Co.

To incorporate the Algoma Central Ry. Co.

To incorporate the Belleville Prince Edward Bridge Co.

Respecting the Montreal Island Belt Line

The Northey Gas or Gasoline Engine.

In Connection with Pumping Machinery for Tank Duty.

"BUILT FOR HARD WORK."

Railway Officials will find the Northey Engine to be a marked improvement over steam or other forms of power for this duty. It is simple of construction, and easily managed, necessitating only the turn of a fly-wheel to start, while it can be going at full speed in a few seconds and be shut down on the instant. Needs no engineer to look after it, the station hands can do all that is required, while it will run for hours at a time with little or no attention. The Engine is compactly built and of the best materials; it uses either gas or gasoline for fuel, and its safety and economy with either have proved it to be the most satisfactory power in the market.

We will cheerfully send Booklet and every information upon request.

The Northey Mfg. Co., Limited, ¹⁰³²KING ST. SUBWAY, Toronto, Ont.

Ry. Co., & to change its name to the Montreal Terminal Ry. Co.

Respecting the Buffalo & Fort Erie Bridge Co.

To incorporate the Zenith Mining & Ry. Co. To amalgamate the Ottawa, Arnprior & Parry Sound Ry. Co. & Canada Atlantic Ry. Co. under the name of the Canada Atlantic Ry. Co.

Respecting the Great Northern Ry. Co., & to change its name to the Great Northern Ry. of Canada.

To incorporate the Yale-Kootenay Telegraph Co.

To provide for the establishment of direct submarine telegraphic communication between Canada & Australasia.

To encourage the construction of Dry Docks.

To amend the Act respecting the Sale of Railway Passenger Tickets.

To authorize the acquisition by the Dominion of the Drummond County Ry.

To confirm an agreement entered into by Her Majesty with the G.T.R. Co. for the purpose of securing the extension of the Intercolonial Ry. system to Montreal.

Further to amend the Act respecting the Protection of Navigable Waters.

To amend the Act passed at the present Session of Parliament intitled: "An Act respecting the jurisdiction of the Exchequer Court as to Railway Debts."

To authorize the construction of a branch railway from Charlottetown to Murray Harbor, as a public work.

Further to amend the Railway Act.

Respecting the safety of Ships.

Respecting the Quebec Harbor Commissioners.

Respecting the Harbor Commissioners of Montreal.

To authorize the granting of subsidies in aid of the construction of the lines of railway therein mentioned.

A list of acts assented to earlier in the session was given in our June issue, pg. 177.

American Railway Earnings.

The Financial Chronicle's reports of gross earnings for the first half of 1899 makes a very favorable exhibit, compared as they are with a half year of great prosperity. The largest share of the gain in railroad revenues of the half year has been due to the increased manufacturing output & general business activity. This was already marked even before 1898, but in that year, as in the two previous years, the large crops & their free movement to meet the excellent foreign demand for them, continued to be the determining factor in larger railroad revenues. In the first months of this year the movement of grain was more restricted than in 1898; although the totals have held up pretty well to the figures of previous years.

In June, however, there was a material expansion in this traffic, which accounts for the fact that the gain in gross revenues in that month, \$5,988,000, or over 14% for the roads whose returns were at hand when the figures were compiled, is about twice as large as for any other month this year. The better comparison made by the grain deliveries of June, however, is partly due to the fact that a year ago the movement of cereals was severely contracted as a result of the collapse of the Leiter speculation. That attempt to corner wheat had caused an unprecedented rush of grain to market. With the 1898 grain shipments so largely swelled on this account it is in the nature of things that a large decrease is shown in comparing this year's totals with those of last year. The receipts of grain at the seaboard in the 6 months of 1899 are reported as 184,584,000 bus., against 298,010,000 in the same period last year.

The deliveries of wheat, corn & small grains at the chief western markets reverse these comparisons, for a small gain is shown instead of a loss. The receipts are given as 298,010,000 bus. this year against 283,152,000 in the 6 months to June 3, 1898. The improvement has been due, however, to the free movement of spring wheat; other grains show a loss, corn receipts falling off nearly 7,500,000 bus. for instance, & all the markets outside of the spring wheat district reporting smaller deliveries of grains.

With the activity in industrial affairs contributing so heavily to railroad revenues, it is to be expected that the gains will be shared in pretty generally by roads in different parts of the country. This in fact is shown; no particular group makes a decidedly favorable showing as compared with any other, though the granger lines & the Southern roads, which have been benefited by the activity in the iron industry along their lines, make perhaps the largest gains. It is significant that practically every company reporting its gross earnings for the 6 months reports a higher total than in any of the previous 5 years. Since railroad revenues began to improve in 1895 the railroads whose figures are included in the reports have made an aggregate gain of fully \$120,000,000. The list of companies reporting gains for the half year in excess of \$500,000 show that railroads in every section gained by the heavier tonnage of the year. The companies which report gains of \$500,000 or over in the 6 months are the Chicago, Milwaukee & St. Paul, \$2,220,900; Southern, \$1,090,208; Canadian Pacific, \$1,082,065; Great Northern, \$937,456; Louisville & Nashville, \$895,040; Lake Shore & Michigan Southern, \$714,860; Mexican Central, \$650,499; Grand Trunk system, \$631,381; Wabash, \$606,783; N.Y. Central, \$790,887; Northern Pacific, \$555,004; Denver & Rio Grande, \$537,900. Those lines for which the June figures are not yet obtainable but which report a gain in excess of \$500,000, include the Pennsylvania, \$2,311,800; the Reading Railroad & Coal Companies, \$1,865,105; Lehigh Valley, \$1,537,756; Southern Pacific, \$926,107; Chicago & Northwestern, \$865,297; Jersey Central, \$827,055; St. Paul & Omaha, \$625,376; & Union Pacific, \$578,127.—Railroad Gazette.

A Water Diversion Case.

In the Trial Court of the High Court of Justice of Ontario, July 31, Judge MacMahon gave judgment in Ross vs. C. P. R. Co., an action tried without a jury at Rat Portage & Toronto. The plaintiffs, W. Ross & M. Brown, are owners of mill location 227 P. in the municipality of Rat Portage. They alleged that they & their predecessors in title were entitled to enjoy the free & uninterrupted flow of the waters of the Lake of the Woods into & upon the lands for all purposes, including the development & maintenance of water-power for their mill, & that the defendant, without any right or title, took possession of the lands to the south of the mill location & used them for the purposes of its railway, & constructed a bridge over the arm of the lake extending into the lands of the plaintiffs; & they claimed damages for defendant's wrongful acts. Held, that even if there was a natural watercourse across the river, & even if riparian rights existed as to the location in question prior to 1878, they were absolutely destroyed by the Dominion Government in that year, when it took possession of the ravine for the use of the railway & built the breakwater, & the rip-rap foundation for the bridge or trestle, & any damage resulting from the construction of the railway would be recoverable only by the Province against the Dominion, such damages, if any, having been caused more than three years prior to the railway being transferred by the Dominion to

defendant in 1881. Even had the plaintiffs a valid claim for damages arising out of the embankment being placed across the ravine, their action is too late, not having been brought within six months after the damages were sustained, & besides, their remedy must be by arbitration.

Freight Traffic Matters.

During June 1,665,250 lbs. of ore were shipped over the Kaslo & Slocan Ry., destined for Kaslo, B.C., Everett, Wash., & Omaha, Neb.

The Fitchburg Ry. Co.'s new elevator at Boston, with a storage capacity of 1,000,000 bus., is open & prepared to receive Canadian grain for storage.

In the middle of July the White Pass & Yukon Ry. announced a reduction in freight charges between Skagway & Bennett, of from 5c. to 3c. per 100 lbs.

The Crow's Nest Pass Coal Co. is already providing a lot of freight for the C.P.R., its shipments last month having been 10,000 tons of coal & 2,000 tons of coke.

The Canada Atlantic is carrying about 200 cars of grain a day from Depot Harbor. Up to the end of July over 5,000,000 bus. of grain had been received at Depot Harbor since spring.

The Dauphin district, tributary to the Canadian Northern Ry., has shipped 653,000 bus. of wheat of the '98 crop, a pretty good record for a district which has only been shipping for two seasons.

The British Columbia Government has approved of a freight tariff issued by the B. C. Yukon Ry. Co., for the portion of the White Pass & Yukon line, between White Pass Summit & Lake Bennett.

Freight traffic officials of the C.P.R. have been conferring with representatives of the English syndicate, which is about to erect a mammoth lumber mill at Tobique, N.B., as to the shipment of its output, which will be made either from St. Andrews or St. John, N.B.

This year's enormous harvest in Manitoba will provide a tremendous amount of freight, principally for the C.P.R., & also for the Northern Pacific. Estimates of the wheat yield range from 40,000,000 to 50,000,000 bushels, & it is said 8,000 extra laborers will be required for the harvest work.

A Chicago despatch of Aug. 10, said:—"A sensation was caused at the meeting here yesterday of executive officers of western railways by the announcement that the G.T.R., in connection with the Burlington Road & the Maine Steamship Line, has established a rate of 80c. per 100 lbs. on 1st-class freight from New York to Kansas City. This is the same as the rate from Chicago to Kansas City by the Burlington & other direct lines."

On Aug 1, eastbound freight rates from Chicago were advanced from 1½ to 5c. per 100 lbs. The latter advance is on provisions & the smaller on grain & grain products. The export & domestic provision rates are on the basis of 25c., Chicago to New York. Export corn & wheat rates went up from 9 to 11c., & export oat rates from 11½ to 14c. The domestic rate on all kinds of grain (except corn) & grain products is 17c., instead of 13c. Domestic rates on corn were put up from 11 to 13c.

Parliament has voted \$2,000 to pay expenses of witnesses before the Railway Committee of the Privy Council to give evidence regarding the alleged discriminating of Canadian railways in favor of the Standard Oil Co. Last autumn the Railway Committee cited the representatives of the C.P.R. & G.T.R. to appear & answer charges that they had been giving discriminatory rates to the Standard Oil Co. & against the smaller Canadian &

U.S. concerns. The Railway Committee will probably meet in Sept. to hear evidence in the case.

The C.P.R. has introduced a barge for live stock shipping in Montreal harbor. It is similar to the one introduced by the G.T.R. 2 or 3 years ago. Two large scows have been parked together, after the style of a catamaran, & fittings like stock fittings on a steamer, are erected for about 400 cattle, & an upper deck for sheep. The newest feature is that the Company has situated a stock-yard in the harbor just above the coal shoots in the east end, having about 300 ft. frontage, where large numbers of live-stock may be kept until wanted. Then the barge is brought into use, & the stock may be taken quickly to any steamer desired, thus avoiding the detention of cars on the docks.

Contracts which have been signed by the G.T.R., promise to give Portland, Me., a big shipping business, the schedule as it stands at present providing for a foreign steamer every

day in cold weather. The contracts include the following: Weekly boats to Liverpool, Allan & Dominion Line; to London, Thompson Line; fortnightly boats to Glasgow, Donaldson Line; to Glasgow, Allan Line; to Bristol, Elder-Dempster Line; to Hamburg, Hamburg-American Line; to Antwerp, Leland Line, & to Manchester, Manchester Line. The fortnightly boat to Antwerp & the boat to Manchester are entirely new to Portland. Other lines not mentioned here may sign contracts later.

The General Traffic Manager of the G.T.R. says:—"It is a fact that nearly every railway in the country is short of cars, & that makes it appear so extraordinary that the roads running east of Chicago should continue the unreasonably low rates that they have had in effect for the past four years. Further, it is doubtful whether the low tariffs have been strictly maintained by some of the lines. We have ceased sending empty cars west beyond the Canadian divisions for some time, as I am

glad to say that the business throughout Ontario & Quebec is keeping our rolling stock fairly well engaged."

The Board of Trade & Town Council of Meaford, Ont., have been in correspondence with the Botsford-Jenks Co., of Port Huron, Mich., with a view to erecting a 500,000 bus. grain elevator at Meaford. Having visited Meaford, the Port Huron people offered to build an elevator to handle not less than 10,000 bus. an hour & to have storage capacity for 500,000, with power & equipment sufficient for a house of 1,000,000 bus. capacity, should the business warrant an enlargement to that size, on condition that a site on the east side of the harbor, 300 ft. square, with harbor frontage, be given free; that there be no taxes levied on the house (except for schools) for 2 years; that the town guarantee to have the harbor dredged to sufficient depth & channel width & provide railway service to the elevator, & that the town pay the Co. a bonus of \$25,000 when the elevator is ready to receive & handle

MICA BOILER COVERING

For Locomotive, Marine and Stationary Boilers

Tested by Mechanical Experts of the C.P.Ry. Co., G.T.Ry. Co., M.C.Ry. Co., Boiler Inspection Insurance Co., and proved to be the

Approved Motors.*

Burnham, Williams & Co., Philadelphia, Pa., U.S.A.

grain. The proposition was favorably received, & a committee was appointed to negotiate with the Government for the dredging & with the G.T.R. for the railway facilities asked for.

At a recent meeting of the Eastern Association of Officers in Charge of Car Service, of which the G.T.R. & Central Vermont Ry. are members, & of which W. H. Rosevear, of the G.T.R., is Vice-President, it was announced that about all the members of that Association had agreed to report to one another the receipt as well as the delivery of cars. This is one of the subjects the Association has been hammering at for several years, & it seems that its work has not been in vain. The new plan now only waits for the members to carry it into effect. Once fairly started by any considerable number of roads it will likely demonstrate its superior usefulness, & other roads will recognize its value & join in the agreement. The small amount of labor entailed will certainly repay the effort by vastly reducing the number of errors & avoiding much unnecessary correspondence.—Equipment Register.

Electrical Lighting of Cars.

It has long been only a question of time when electricity should invade the field of pas-

senger cars.—Railroad Car Journal.

Railway Equipment Notes.

Additional machinery is being placed in the Canadian Northern Ry. shops at Dauphin, Man.

Three locomotives are being built in the M. C.R. shops at St. Thomas, Ont. The shops are overcrowded with work & the men have been placed on a 10 hour a day schedule, which has not been in force since 1893. Additional hands are also being employed.

The Canadian Northern Ry. has recently purchased 100 box cars & 50 platform cars, all of 40,000 lbs. capacity, for its cordwood & sand business. The Co. has also purchased 2 additional locomotives, cylinders 16x24. These purchases are in addition to those mentioned in our June issue, pg. 169.

Following are the general dimensions of the 2 locomotives mentioned in our last issue as being built for the P.E.I. Ry..

GAUGE.....	3 ft. 6 in.
DRIVING WHEELS.....	48 in. in diameter
CYLINDERS.....	15 in. diameter, 20 in. stroke
FUEL.....	bituminous coal
WEIGHT OF ENGINE.....	65,000 lbs. in working order
TANK CAPACITY.....	1,800 Imperial gallons
DRIVING WHEEL, —base.....	7 ft. 9 in.
TOTAL WHEEL—base.....	38 ft. 6 in.

Passenger Traffic Matters.

The Kingston & Pembroke Ry. has had to put on an extra train to accommodate increased travel.

The latest record in landing passengers at Dawson, Yukon, is 10½ days from Ottawa & 6 from Vancouver.

Excursion & passenger traffic is very large over the Canada Atlantic Ry., especially on the Parry Sound end where the beautiful islands of the Georgian Bay are attracting tourists from every part of Canada and the U.S.

It is probable that the C.P.R. will soon inaugurate a 2-hours service between Ottawa & Montreal, & of course the Canada Atlantic will also reduce its time half an hour. The C.P.R. short line roadbed is in excellent shape for fast running.

The British Columbia-Yukon Ry. Co., under which title the White Pass & Yukon Ry. operates on the Canadian side of the line, has issued a passenger tariff between White Pass Summit & Lake Bennett, which has been approved by the B.C. Government.

The C.P.R. time table shows that the Imperial Limited, the through daily transcontinental passenger train, runs from Montreal to Vancouver, 2,906 miles, in 102 hours 45 minutes actual time, 99 hours 45 minutes apparent time; and on the eastbound trip the train

burden of the cost, which the other two roads were unwilling to share.

The first week of August, the great Canadian tourist season, is reported by Toronto railway & hotel officials to have brought forth a great influx of U.S. visitors. The registrations at the various hotels were very heavy, & almost wholly of a transient character. The objective point of the majority of the visitors was Muskoka. The traffic to the north is the heaviest in the history of railroads. Every Muskoka hotel is filled to overflowing, & the influx still continues. Up to Aug. 8 the G.T.R. had carried 13,448 passengers to Muskoka this year, an increase of 6,311 over the corresponding period of last year.

The Charlottetown Board of Trade has petitioned General Manager Pottinger for a reduction of passenger fares on the P.E.I. Ry. from 3c. a mile & for a 2nd class return fare. The petition alleges that owing to the great amount of curvature on the line, the distances to be travelled by rail are much greater than by highway, that the line did not cost anything like as much as the I.C.R. on which similar rates prevail & that the loss in operating the road is largely attributable to the rates charged. The cost of the P.E.I. Ry. is given at \$17,850 a mile & of the I.C.R. at \$50,275. Between Georgetown & Charlottetown the railway distance is 46 miles, the highway 30 miles.

Hamilton Incline Ry.—The new owners of the East End incline railway have started out on a vigorous policy & propose to make the railway & grounds attractive to the public. If business warrants it, the road will in all likelihood be kept open all the year round.

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the odd-numbered sections along the Main Line and Branches; and in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North-West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6 an acre.

Lands in Assiniboia, east of the 3rd meridian, average \$5 to \$8 an acre.

Lands west of the 3rd meridian, including the Calgary District, generally \$3 per acre.

Lands in Northern Alberta and the Lake Dauphin District, \$3 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest is divided into ten instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or grazing lands.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions:

160 acres at \$3.00 per acre, 1st instalment \$71.90, and nine equal instalments of \$60.
160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.
160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.
160 acres at \$4.50 per acre, 1st instalment \$107.85, and nine equal instalments of \$90.
160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.
160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.
160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the usual cash instalment.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

Write for maps and full particulars.

L. A. HAMILTON, Land Commissioner,
F. T. CRIFFIN, Asst. Land Commissioner,
WINNIPEG.

The following leading railroads of Canada are using Page fencing in quantities from 1 to 300 miles: Canadian Pacific; Grand Trunk; Intercolonial; Lake Erie & Detroit River; United Counties; Canada Atlantic; St. Lawrence & Adirondack; Michigan Central; Manitoba & Northwestern; East Richelieu Valley; Toronto, Hamilton & Buffalo; Thousand Islands; Crow's Nest Pass, and Pembroke Southern.

This fence is made to wear. The horizontal wires of special steel & coiled.

C. P. Betterments, &c.

Power to Build Branch Lines.—In the House of Commons recently J. G. Rutherford, M.P. for Macdonald, Man., asked whether the C. P. R. has the power by simply depositing plans to build branch lines from points on the main line to any point within the Dominion. The Minister of Railways replied that the question was one involving a legal interpretation, & in the absence of any judicial determination he hardly thought it well to give any decisive opinion.

Windsor St. Station, Montreal.—Work on the enlargement of this building shows marked progress. All the old buildings along Osborne street have been torn down, & the rubbish has been largely removed or utilized. The foundations have been begun, & the walls will soon rise, a large gang of men being engaged upon the work. The station arrangements for passenger accommodation will be greatly improved, the waiting rooms and arriving sheds both being on the plans for extensive enlargement. The illustrations on this page show the Windsor St. & Osborne St. fronts of the present building & also the building as it will be when the extension which has been decided on has been completed. A pretty full description of the general lay out of the building was given in our May issue, pg. 138. (July, pg. 207.)

Kaladar to Marble Lake. The Railroad Gazette, New York, recently published the following:—

"It is proposed to build a branch from Kalabar (B. C.) Station to the marble quarries on Marble Lake, via

Flinton, Harlowe & Cloyne, giving access also to the gold, iron & mica mines in those regions."

There is no such place as Kalabar in B.C., but there is a Kaladar station on the Ontario & Quebec division of the C.P.R., 190 miles west of Montreal, & Flinton, Harlowe & Cloyne are points tributary to it in the counties of Addington & Frontenac. C. P. R. officials deny any knowledge of the alleged proposal & we do not think there is anything in it.

Norwood to Apsley. A delegation will go to Montreal shortly to urge on the C.P.R. management the construction of a branch in Peterboro' County, Ont., from Norwood to Apsley. The route was gone over recently in the interest of the Co. by H. W. D. Armstrong, C.E. (May, pg. 139.)

Woodstock, Ont.—The handsome new station has been completed & is now occupied for business.

Owen Sound Branch.—It is not probable that the reduction of the grades will be gone on with this year. (June, pg. 172.)

Fort William to Winnipeg. The sidings between these points are being extended to 4,000 ft. long, double their present length, & are so arranged that they will form part of the second track which will soon have to be built. East of Rat Portage the work will be done direct by the Co., west of Rat Portage J. Sinnot has the contract for. (May, pg. 130.)

Rat Portage.—Considerable work is being done at this division point & lake port. The wooden station is being replaced by a modern stone & brick building, & a 20 stall stone round-house is also being erected. Work on both

buildings is well under way & it is expected the roofs will be on by the middle of Oct. The round-house will be provided with sufficient machinery to perform what light & specific repairs are necessary to the engines running out of Rat Portage. The freight shed will be removed to a more convenient location, & warehouse sites will be staked out so as to permit of the business men establishing themselves at convenient points to enable them to handle their goods without cartage. The freight & terminal yards will be rearranged & their capacity more than doubled. (May, pg. 130.)

Winnipeg Station & Hotel. Surveyors have been at work on the site. It is said two more tracks will be laid across Main St.,

WINDSOR STREET STATION AND GENERAL OFFICES C.P.R., MONTREAL.

WINDSOR STREET STATION AND GENERAL OFFICES C.P.R., MONTREAL, SHOWING ADDITION TO BE BUILT.

—Collected in 1898, as a subway is talked of. (June, pg. 176.)

Snowflake Branch.—E. C. Egan has the contract for building this branch from the first siding on the Pembina Mountain branch, 118 miles southeast of Winnipeg, to Snowflake, a distance of 10.3 miles. The character of the country is swampy & the line will be completed in time to take out this year's crop. (June, pg. 176.)

Deterioration to Waskada.—It is said a contract for this branch in Manitoba, some 23 miles, has been let to E. C. Egan & that it will be built this year. (July, pg. 208.)

Pipestone Branch.—Track has been laid this season from Reston, 18 miles west to Antler, which is 40 miles from Menteith Jct. It is expected that 50 miles more will be built on this extension this year, into the Moose Mountain district. G. H. Strevel has the contract. The Dominion Parliament has voted a subsidy of \$3,200 a mile for a line from Antler to Moose Mountain, but the Government declined to name the C.P.R. in the resolution, leaving itself free to deal with the Northern Pacific if it should feel so inclined. In the course of the discussion the Premier said the C.P.R. Co. had not applied for a subsidy for this line. (July, pg. 208.)

North Star Mine Branch.—Work was started July 20th on this line, which leaves the Crow's Nest Pass Ry. 2 miles east of Cranbrook, & will be 20 miles long. The North

Star Mining Co. will contribute \$50,000 towards the cost, which amount will be refunded by a rebate of 33 1/3% of the charges on all freight going over the line until the \$50,000 is fully repaid, when the C.P.R. will own the branch. (July, pg. 208.)

Vancouver to Steveston.—W. Whyte, manager of the Co.'s western lines, recently drove over the route from Vancouver to Steveston to see what the business prospects for a line are. He subsequently stated he could not say whether the Co. would seriously consider an extension to Steveston.

Arrowhead to Kootenay Lake.—A strike of good ore was made recently 1 1/2 miles from Duncan City. After the men had stopped work several blasts were fired, with the result that they uncovered some fine looking gold ore. J. McVeigh, one of the contractors, located a claim, & A. L. Dolan another. Since then there have been 8 claims located on the lead, which is about 20 in. wide. Samples of the rock were sent to Nelson & high assays are said to have been obtained.

Columbia & Western Ry.—Rapid progress is being made with the extension of this line from West Robson to Midway, & work is also being pushed on the branch lines described in our May issue, pg. 139. (July, pg. 208.)

A correspondent writing from Grand Forks, B.C., says:—"After many months of surveying & the expenditure of much money, the

C.P.R. engineers have discovered a feasible route for a railway over the divide between the Kettle & Okanagan River valleys & to the south of Camp McKinney. Strange as it may seem, it is said the crossing of this divide at the point indicated has offered the greatest difficulty to engineering skill met with west of the Columbia River, & this was owing not so much to the elevation attained as to the sudden drop off from the summit to the valley of the Okanagan, necessitating a circuitous route or zig-zagging down the mountain. Even this seemed difficult to attain, until lines were run to the north of what is known as Camp McCuddy; but, as apparently engineering skill has triumphed over nature, it may be inferred that the C.P.R. will now take this route over which to build its main line from Midway to Penticton. Should such be the case, branch roads will be run to tap the main & western tributary of the Kettle River, & a junction formed at some point near to & yet east of Rock Creek."

Minneapolis, St. Paul & Sault St. Marie.—Winston Bros. & Halverson have the contract for grading the branch from Rapid River, Mich., near Gladstone, to run northwest 30 miles into Alger County. The maximum grade is 35 ft., & the maximum curvature 4 degrees. There will be ordinary pile & trestle bridges. There are about 200 men & 20 teams at work. The road will tap an agricultural & hardwood timber country.—Official Railroad Gazette.

AMHERST, NOVA SCOTIA.

Grand Trunk Betterments, Etc.

The two round-houses which are being built at Sarnia & Port Huron are making good progress & will be completed early in Sept. Each will contain stalls for 36 engines.

In regard to the new round-house for Fort Erie, Ont., we were officially informed on Aug. 2 that the plans & location had not been definitely decided upon, nor had it been decided when work would be commenced, but that the erection of the building might be looked upon as a certainty.

The Co. has steam shovels at work in Komoka pit, where a mile of gravel is being removed every day. Another will be put on this work at St. Regis pit on the south side of the St. Lawrence river to provide ballast for the track between St. Anne's & Vaudreuil. Seven work trains, employing over 600 men, are thus given employment, which will continue for some time.

The galvanized iron sheeting for the completion of the Victoria Jubilee bridge has arrived, & is about to be placed in position. This structure has been finished, to all appearances, for some time past, & in use for trains, but the contractors have been waiting for galvanized iron sheeting to prevent the horses from seeing the trains while crossing on the roadways set apart for vehicular traffic. The road for foot passengers, which is on a level with the vehicle roadways, will be opened for traffic when the sheeting is completed.

Good progress is being made on the double tracking of the line between St. Anne's & Vaudreuil & between Murray Hill & Trenton. Between St. Anne's & Vaudreuil a steam shovel, 2 work trains & 75 men are employed. Between Murray Hill & Trenton there are 2 steam shovels, 3 work trains & 100 men. Some 175,000 cubic yards of earth have to be moved between the last two points, where the grades are being improved, so as to do away with the pusher engine & save at least \$10,000 a year. When double track is laid on the two sections above mentioned the only single track remaining on the Montreal-Toronto line will be between Port Hope & Port Union, 46 miles.

Improved stations are to be built at St. Anne's & Vaudreuil. They will be of limestone & pressed brick & will cost \$14,000 to \$15,000 each. Work is expected to be gone on with at once. General Manager Hays has notified the Mayor of St. Hyacinthe that the Co. cannot now undertake the construction of an improved station there, but hopes that something will be done in that respect before long. Mr. Hays suggests that perhaps the town may be prepared to make some proposals as has been done in other places of placing the assessment on a fixed basis, say for 25 years, so that the Co. would know how it stood. He is prepared to consider any offer made by the town in this respect.

Surveys, Construction, Betterment, &c.

The Alberta Ry. & Coal Co. is said to be considering the standardising of its line from Lethbridge to the International Boundary, which would of course involve the standardising of its allied line the Great Falls & Canada from the Boundary to Great Falls, Mont. All the work done & all the ties put in the line during the past five years have been such as to prepare it for widening. This has been done without any aid being solicited from the Dominion, but now that Parliament has subsidised the Alberta Southern, which is projected to run from Anthracite to the International Boundary west of range 27, it is likely the A. R. & C. Co. will ask for aid to standardise its line to the extent of the difference between the small subsidy already given to it for a narrow gauge line & that granted for standard gauge ones.

Algoma Central.—We are officially informed that 50 miles are to be built this year, 40 on the main line from Sault Ste. Marie towards Missanabie & 10 on the Michipicoten branch. Work on this branch has commenced at the Lake Superior end. About 50 men are employed & the force will be increased as fast as men can be secured. The southern terminus of the branch will be at Sand Beach, on Michipicoten Bay, about a mile east of Gros Cap & 3 miles west of the mouth of the Michipicoten River. Here, in a nice harbor, will be built a commercial dock, 50 x 700 ft., & 2 ore docks, each 100 x 800 ft. The central ore dock will accommodate 4 of the larger lake vessels & the other one 2 vessels. Work on the docks has been commenced. A large boarding house has been erected & additions will be built as needed. Temporary stables have been erected. A month ago Sand Beach was an unbroken wilderness. Now it presents a scene of great activity & enterprise. H. E. Talbot, of Dayton, Ohio, is Superintendent of Construction & E. V. Clergue, Superintendent of the line. The latter says it is expected to complete the docks & the railway as far as the Lake Superior Power Co's mine by the middle of Oct., when the shipment of ore can be commenced. (July, pg. 209.)

Atlantic & Lake Superior.—E. Berryman, C.E., arrived in Montreal Aug 4, having completed an exploration survey between Port Daniel & Gaspé Basin. The railway will reach Gaspé Basin by the valley of York River, following that stream for about 20 miles. The length of the projected railway from Paspebiac, where the rails now end, to Gaspé will be about 90 miles. Mr. Berryman says that many surprises are in store for those who visit the Gaspé peninsula for the first time, as the timber resources of that district are a revelation to even those who are familiar with the Lake St. John & St. Maurice regions. It is, he adds, a province all to itself, & with a trunk line built down through the peninsula & 2 or 3 short feeders stretching out north & south an era of remarkable development will undoubtedly set in. He added that now that the subsidies for the railway have been voted, work on both ends will be commenced at once & that he will at once locate a section westward from Gaspé. He speaks highly of the quality of the soil along the St. John & York rivers, & expresses the opinion that with a railway & a market at their back, room will be created for a large and thriving agricultural population. (May, pg. 132.)

Bay of Quinte.—Parliament having revoked \$3,200 a mile for 10 miles to enable this Co. to connect its line with iron or other mines or other mineral or wood lands in the counties of Peterboro, Northumberland, Hastings, Lennox & Addington, Frontenac or Leeds, Ont., it is said that if iron is found in paying quantity & of good quality there is a probability that the road will be extended at an early date.

The Canada Atlantic is filling up a large gully at its Rideau yards, Ottawa. It is a 2 month's job for a steam shovel & 2 trains, which are hauling the earth from Eastman's springs.

Heavy steel will soon be laid from Ottawa to Bearbrook, 20 miles, which will complete the heavy rails to Coteau & will permit of faster running time.

Canadian Northern.—Doubts are expressed in Winnipeg as to whether the 25 mile branch from Dauphin into the Gilbert Plains district, for the construction of which arrangements were made with the Manitoba Government, will be built this year. When in Winnipeg recently D. D. Mann said it would depend upon whether rails could be obtained. (June, pg. 175; July, pg. 209.)

Grading beyond Cowan, the terminus of last year's construction, is going ahead, although perhaps not with the same rapidity as

the Co. may wish, owing to heavy rains. Track laying is being proceeded with & up to Aug. 15 10 miles had been laid beyond Cowan. If the conditions continue favorable the Swan River should be reached early in Sep., & it is expected that Red Deer Lake will be reached before snow flies. Nothing definite has been decided as to the point at which the Saskatchewan River will be crossed. Surveys to decide this are being made. (July, pg. 206.)

Repair shops are being erected at Dauphin.

Central of New Brunswick.—The Dominion Parliament having voted a subsidy for an extension of 30 miles from the Newcastle coal fields to Gibson, there is a prospect of work being gone on with this year, though no definite information is obtainable. A preliminary survey has been made. (May, pg. 133.)

Coast Ry. of Nova Scotia.—We are officially informed that the grading to Barrington, on the 20 miles extension from East Pubnico to Barrington, is practically all completed & will be finished by the end of Aug. Seven miles of track have been laid from East Pubnico to Upper Wood's Harbor, & ballasting has commenced. An extra engine has recently been bought for facilitating construction work. The contract for fencing has been let, & the work is being done. Contracts for the bridges were let some time ago & the shipment of the superstructures is daily expected. Work is being pushed on the station buildings. It is expected to open the road to Barrington Passage by Oct. 1, & it is likely some work will be done beyond Barrington this season. (July, pg. 209.)

Great Northern of Canada.—Work on the extension from Shawenegan westward, is advancing rapidly. The work of the sub-contractors, who have charge of 5 or 10 mile sections along the line, is far advanced. Work on the bridge over the Ottawa River at Hawkesbury, which is the most important structure on the whole line, has been started, & although there are 7 spans of 204 ft. each, the 8 piers will be ready to receive the steel superstructure before cold weather sets in. For some time past, men have been at work preparing the stone for this bridge, & already 800 of the 2,700 yards of stone required, have been cut & put in position. Besides the stone works, about 2,000 yards of concrete will be used in the construction of this bridge. It will not be necessary to go down very far to secure rock bottom, but the water where one of the piers is to be constructed is about 15 ft. deep, & in 2 or 3 instances caissons will have to be built. The section from St. Jerome to Hawkesbury, the last portion given under contract, which is 35 miles long, & takes in 2 important bridges near Lachute, is also very far advanced. Stone is being rapidly quarried for these structures, & will be completed this season. The grading of the portion between Shawenegan & Montcalm, a distance of 53 miles, is far advanced also, & fully 9-10 of it is completed. About 11,500 tons of rails will be required & 9,000 tons have already reached Canada. The laying of them is progressing rapidly, the first having being put down east of Joliette. As fast as the rails are down the ballasting is begun by 4 ballast trains, a steam shovel & many laborers. The station buildings & the fencing are also being attended to. The Joliette station is to be commenced immediately. Right of way has been procured east of Montcalm, & probably for $\frac{2}{3}$ of the remaining distance west of St. Jerome. From all indications trains will be running from the St. Maurice to the Ottawa before March, although the contractors have until May to complete the work. Had it been possible to secure the superstructures for the bridges in time, the line would have been complete before the end of 1899. (July, pg. 209.)

Under power conferred on them at the re-

Quebec Harbor.—The Dominion Parliament the Quebec Harbor Commissioners have decided to guarantee interest on bonds for \$200,000 for the purpose of all covered by this Co. at 5%.

Great Northwest Central.—The promise of *Vancouverian*. Springiness of the C.P.R. (and possibly could be extended this year is *likely*. The line now runs from *Vancouver* to *Brantford*, on the main line of the C.P.R., to *Manitoba* 50 miles. *Construction* of the line to *L. D. McArthur* & *Manitoba* is extension 25 miles further. *Construction* to *Parkinson*, south of the *Assiniboine* River. Work has already been commenced. The engineering for the construction is being done by *G. H. Webster*, Engineer of the *Manitoba & Northwestern Ry.* (June, pg. 188.)

Winnipeg advises say that construction has been started on a line from *McGregor*, on the main line of the C.P.R., 22 miles west of *Portage la Prairie*, to a point near *Forrest*, or *Vancor*, on the *Great Northwest Central*. It is expected this line will be completed next year. It will run between the main line of the C.P.R. & the *Manitoba & Northwestern Ry.*, & will occupy the ground over which the *Northern Pacific* intended to build a branch from *Portage la Prairie*. In view of this construction it is hardly likely that the *Northern Pacific* will extend its branch very far beyond *Portage la Prairie*.

Intercolonial.—After many delays work is said to be progressing rapidly on the elevator at *Halifax*. On July 29 the *Chronicle* stated the roof was on the main building & the greater portion of the frame of the cupola was in position, the lower part of it being covered in. The conveyer was also all covered in & the engine beds were nearing completion.

The crib work for the wharf at the deep water terminus at *St. John, N.B.*, is being placed in position. When all is completed there will be a mass of birch timber $\frac{1}{4}$ of a mile long, 60 ft. deep & 50 ft. wide.

James Bay. The Dominion Parliament having voted subsidies towards the construction of 5 miles from the main line of the *Ottawa, Arnprior & Parry Sound Ry.* to the town of *Parry Sound*, & for 20 miles from *Parry Sound* northerly towards *Sudbury*, negotiations are in progress for going on with the work. It is understood a by-law will be submitted to the rate payers of *Parry Sound* to grant a cash bonus of \$12,000, exemption from taxation for 21 years, & such water frontage as the town holds. (June, pg. 175.)

Kingston & Pembroke.—The Dominion Parliament having voted a subsidy towards the construction of 5 miles of branches from the main line to the iron mine at *Bluff Point*, & to the *Martelle* mine, *Renfrew County*, it is said the work will be done at once & that one will be moving to *Kingston* en route to the furnaces before navigation closes.

Manitoba & Southeastern.—Considerable work has been done lately in improving the roadbed of the completed portion, between *St. Boniface* & *St. Anne*, & it is now in good condition. Construction is in progress toward the *International Boundary* & it is hoped to have the line finished to that point before the close of the season. (July, pg. 209.)

Michigan Central.—A local paper says that should the proposed running arrangement be made between the *L.E. & D.R. Ry.* & the *M.C.R.*, whereby the former will run over the *Canada Southern* from *Ridgetown* to *St. Thomas*, the *M.C.R.* will likely be double tracked from *Dutton* to *Ridgetown*.

Midland of Nova Scotia.—Grading is reported to be completed 45 miles from *Windsor, N.S.*, towards *Truro*. It is expected the remaining 15 miles will be completed by *Sep. 1*. Track laying is progressing rapidly. (July, pg. 209.)

Northern Pacific.—The Railway Committee of the *Privy Council* having granted this Co.'s subsidiary, the *Portage & Northwestern Ry.*, permission to cross the *C.P.R.* & *M. & N.W. Ry.* tracks near *Portage la Prairie*, a contract has been let to *A. Guthrie*, of *St. Paul, Minn.*, for the construction of 20 miles of line from *Portage la Prairie* northwesterly & a spur to *Lake Manitoba*. (June, pg. 176.)

Speaking at *Rapid City* recently *Premier Greenway* said: "When the *N. P. R.* asked the Government for a bonus to build west from *Portage la Prairie*, the Government had asked for some concessions, one of which was that there must be a reduction in rates charged in distributing lumber. The Co. refused this & would rather build the road for nothing if the Government would legislate & secure the crossing of the *C.P.R.* track. This was done & the crossing secured at *Ottawa* at the instance of the *Greenway* Government, & this is how matters stand."

The remains of the *Manitoba Hotel* in *Winnipeg* have all been pulled down & the rebuilding of the Co.'s offices is being proceeded with rapidly. It is expected they will be ready for occupancy by *Sep. 1*.

The survey party working on the proposed *Waskada* branch in southwest *Manitoba* has been withdrawn, & it is understood this field will be left to the *C.P.R.*

Ottawa & Rainy River.—Since the Dominion Parliament voted the subsidy for this line the management has been very active. Warehouses have been established for the supply of material for construction at *Finmark*, on the *C.P.R.*, 30 miles from *Stanley*, & at *Kashaboie Portage* & *Baril Portage*, about 65 miles & 90 miles, respectively, from *Stanley*. Tugs have been put on *Lac-des-Mille Lacs* & *Kushaboie Lake*; scows have been built & supplies are being delivered to the above points. Contracts for grading beyond the 20 miles already under construction by *E. F. Fauquier* have been let as follows: *John O'Neal* & *J. R. Turnbull*, 6 miles each; *A. R. Mann*, 4 miles; *McGillivray* & *Leeson*, 20 miles, & 10 miles in 2 contracts; *L. Madigan*, 5 miles; *H. Mann*, 5 miles, in the order named going west; & all these are to be finished at dates to permit the track to be laid over the 1st 80 miles by next June. The first 20 miles from *Stanley* is graded practically now, & track-laying will be begun on it as soon as the rails arrive, which will be within a few days. Forty miles of ties are delivered ready for track-laying. The bridging has been let to *J. R. Turnbull*, late *Assistant-Manager* *Crow's Nest Pass Ry.* construction, & the timber is being furnished by *J. Conmee*, *M.L.A.* Owing to the impossibility of obtaining a steel bridge for the crossing of the *Kaministiquia River* in time to permit of proceeding with track-laying, a temporary crossing of the river has been obtained by making the false work for the steel structure strong enough to carry trains. This structure when finished will consist of two steel spans of 125 ft. each. The contractors to whom the aforementioned works are let have their outfits en route to the work, & some part has already arrived. Arrangements have been made with *A. Calder*, of *Winnipeg*, to supply the labor, & men are already arriving in considerable numbers on the work. (July, pg. 209.)

Ottawa & Gatineau Valley.—The proposed extension from the present terminus at *Gracefield*, 60 miles from *Ottawa*, to *Maniwaki*, 28 miles, is not likely to be built this year, but it is expected that about 15 miles will be finished, which will carry the line from *Gracefield* to *Blue Sea Lake*. (June, pg. 176.)

The Ottawa & New York Ry. expects to complete the bridge over the south channel of the *St. Lawrence* at *Cornwall* in *October*, which will enable it to provide a through service between *Ottawa* & *New York*. The structure is one of the largest in *Canada* & when completed will cost in the neighborhood of \$750,000. It would have been completed

A. O. Norton, Manufacturer, Coaticook, Quebec.

months ago but for the accident in Aug. last when one of the piers collapsed, resulting in the death of several workmen & seriously impeding the progress of the work. Operations had to be entirely gone over & to do the work thoroughly a great deal of time & expense has been necessitated. The bridge over the north channel is completed & work is being proceeded with day & night on the remaining portion, the men working in 3 gangs, 8 hours each. It is expected that the through service will be established in Oct. or Nov. (July, pg. 210.)

St. John Valley Railway.—J. H. Miller, of New York City, states that construction will begin this fall & that it is expected to have the road finished by July 1900. The route will be from Fredericton to Lower Woodstock, thence to Houlton, Me., to connect with the Bangor & Aroostook R.R. The line will be operated as a local institution. (May, pg. 137.)

White Pass & Yukon.—We are officially informed that a large force is still at work on the line between Skagway & Lake Bennett, 42 miles, ballasting & perfecting the grade & alignment. Work has not been commenced upon construction beyond Bennett towards Fort Selkirk, but the management anticipates that a force will be located on that line before winter opens. A large amount of freight is going in over the line & there is considerable tourist travel in addition to that of miners & prospectors. The line has been built by the Pacific Construction Co., & is expected to be turned over to the railway company about Aug. 20. The 42 miles between Skagway & Lake Bennett are said to have cost about \$2,000,000 exclusive of equipment. (July, pg. 210.)

The management has no information respecting the proposed line to be built by Capt. W. Langley from Taku City to Atlin. (June, pg. 176.)

Railway Operating Matters.

More than 2,000,000 trees have been planted along the line of the Northern Pacific in Dakota, to serve as protection from snow-drifts.

The Central Ontario Ry. has placed an order with the Acton Burrows Co., Toronto, to equip its stations & station platforms with enameled iron "No Smoking" signs.

On Aug. 2 some 250 men in the G.T.R. shops at Port Huron, Mich., struck, owing to the employment of a non-union man. They returned to work the following day without having obtained any concession.

We unhesitatingly endorse the following from the Sarnia Observer: "Now that the Port Huron, Mich., authorities are enforcing the alien labor law with respect to Canadians employed in the G.T.R. shops in that city, it behooves the authorities here to pay the same kind of attention to the men who work in Sarnia but reside in Port Huron."

The last two clauses of the Minister of Railways bill to amend the general Railways Act, which proposed to empower the Railway Committee of the Privy Council to order the location of stations to suit the public convenience & to frame running rules for use by all railways, were abandoned. The last mentioned provision should never have been introduced.

It was stated in Winnipeg on July 31, that the C.P.R. locomotive drivers & firemen had come to an amicable arrangement with general Superintendent Osborne as to the changes desired in their schedule, & the delegates were returning to their respective divisions. The trainmen were likely to settle matters that day. One of the principal points they urged, that express messengers should not be required to handle baggage, in place of the regular baggage men, was expected to be agreed to.

The locomotive drivers & firemen of the G.T.R. have been notified by their committee, which has been in almost daily consultation with F. W. Morse, Superintendent of Motive Power, for the last couple of months, that an increase of wages has been agreed to by the management. Concessions, it is said, have been made on both sides, & the good feeling existing between the employees of this branch of the railway service & Mr. Morse remains unimpaired. The members of the Grievance Committee have returned home.

The difficulty between the G.T.R. & its trackmen appears to be at an end. After the announcement of the increase of 10c. a day to the men on the main lines of heavy travel as detailed in our last issue, pg. 207, the Executive Committee of the Trackmen's Association reassembled in Montreal. Those of them who were employees of the Co. had an interview with Mr. Hays in which he stated that no further concession could be made. The Committee then issued circulars to the trackmen, but the number & tenor of responses was such that it was evident another strike was not desired & on Aug. 12 the members of the committee returned to their homes.

Quebec and Lake St. John Railway.

A meeting of the holders of the 5% 1st mortgage bonds of this Co. was held in London, Eng., Aug. 2, for the purpose of appointing a committee of holders of the bonds "to consider the position of such bondholders, to confer with the trustees, & to take such steps as the committee may think best to protect the rights & interests of such bondholders, & to organize for unity of action." C. C. Macrae, a director of the Railway Share Trust & Agency Co., (the trustees), who presided, stated that the bonds were issued in London, over the complete main line of the railway, about 10 years ago, with a guarantee of interest for 10 years, by the Province of Quebec. That period had run out, & the bondholders were now in the position of having to look for any return on their capital to the earnings of the road. The working of the railway had shown that only on something like half of the line were the prospects for earnings at all good. In addition to the 190 miles from Quebec to Lake St. John, which formed the main line, & upon which the bonds were secured, various extensions had been made, which served as feeders. The bondholders had a valuable asset in the terminal property situated in the city of Quebec. Analyzing the accounts of the railway for the past 10 years it would be seen that the line had only about paid its way, & in common with so many lines operating without working capital, the directors had been compelled to take the cost of betterments out of the revenue of each year. From all the information he could obtain he was strongly of opinion that, in this instance, there had been no bad faith on the part of any one connected with the management in Canada, everything having been done on the other side to make the line successful. The Canadian Government had not seen its way to grant any further assistance, & in view of the termination of the guarantee & the inevitable default, the trustees, through their solicitors, had done all that was needful to protect the rights of the bondholders. The effect of the action of the trustees would be to keep the railway intact. The present meeting, however, was quite informal, as no legal gathering could be held until six months after the default had taken place. The bondholders could not expect to obtain their full interest for some time, but when the Co. had turned the corner they might, he considered, obtain a return on their capital during the next year or two. Some of the gentlemen in Canada, more sanguine than he was, thought that in the near future the

actual earnings of the road would be sufficient to pay something like the full interest on the bonds. He then moved a resolution appointing a committee of bondholders.

In reply to the comments of bondholders the Chairman said that the capital stock of the Co. was given at \$4,074,000, but he had never attached any value to it, as he had always considered that much of it represented "water," as was usual with so many transatlantic railways. He did not know who were the present holders of that stock.

Mr. Hanson pointed out that the line had not been exclusively built out of the money of the bondholders, but that an appreciable portion of solid cash was put into the undertaking. He moved that F. Ross, A. S. Jecks, S. Gardiner, J. W. Ballance, & E. F. Coates be appointed as the committee for the object stated, words instructing the committee to report to the bondholders being added to the original motion. The resolution was adopted. —Railway Times.

Proposed Topographical Survey.

M. J. Butler, C.E., of Deseronto, Ont., says that a strong effort will be made to have a topographical survey made of the Dominion. The Government has been memorialized on several occasions by the Land Surveyors' Association, & the matter has been agitated in journals of scientific societies; but for the most part the public is quite ignorant of the matter.

"Canada alone among all the civilized nations I can think of," says Mr. Butler, "is without an accurate topographical map of its territory. No water-power development can be undertaken, for instance, on any intelligent basis under the present conditions. Its future must be estimated by guesswork pure & simple. The same is true of many other departments of enterprise. What is needed is a topographical & geodetic survey, which will ascertain all the physical features of each section of the country; its geology, the character of its soil, the extent & age of its forests, the areas of cleared land, the public improvements, roads, & so forth; in fact, all the features, natural & artificial. Most important of all would be exact information as to the watersheds & the catchment area in relation to statistics of the rainfall. As I have said such maps are to be found in every country except Canada; even the lesser countries of Europe & the petty Republics of South America have them. What Canada needs is an enterprise similar to the U.S. Coast & Geodetic Survey, which is conducted at the expense of the Federal Government at Washington. In the past, when Canadians did not realize the value of their natural possessions & there was little competition for their waterways, the lack of such information was not felt. From this time on the evils arising from the absence of such information will be more & more recognized. Every stream in Ontario is being studied with a view to its possibilities as a source of power, & information as to the watershed is essential. We know hardly anything about the rainfall & run-off of our waterways. The water supply of them can only be estimated on the basis of accurate information as to the catchment areas. Take the Trent Valley canal, for instance, which is to be a series of artificial waterways connecting the natural waterways already existing. So far as I can see, there is no way of knowing whether the water supply is to be permanent throughout its length as the settlement of the country increases. The matter is one of great importance in lake navigation also. Our knowledge of the coast-line of Lake Ontario is far from accurate, based as it is on old charts. Until two years ago, when Col. Anderson had a topographical survey made of the Bay of Quinte, it was impossible for a

scheme to go from Kingston to Belleville without a port. A chart now exists showing the streets & indentations of the land. The scheme we propose for the accomplishment of the work is that the Federal Government should do the preliminary 'triangular' work, to use a technical term; then the data as to features, natural & otherwise, should be collected by the Provincial Governments. The new organization of engineers & members of other scientific professions recently formed in Toronto at once appointed a committee to take up the matter. This was on the suggestion of Kivas Tully, C.E., who is fully convinced of the importance of such a work."

Railways in Canada.

One of the earliest references to a transcontinental Canadian Railway was that of Carlyle. His New Downing Street, one of the Latter Day Pamphlets, published in 1850, is full of allusions to the rebellion losses bill, the annexation movement & other burning questions of half a century ago. The favorite notions of the Seer are exhibited in this essay. Of the constitutional remedies which it was proposed to apply to Canada he spoke with his usual scorn. The Governor of Canada was to be one of Carlyle's "strong men." Downing street was to be reorganized, British men-of-war were to be employed carrying to British colonies "our war soldiers industrial," & the prisoners in the jails were to be shipped off & set to work building a railway "quite across America," a suggestion which Carlyle obtained from a pamphlet by Major Carmichael Smith. "And surely were the colonies once enfranchised from red tape, & the poor mother country once enfranchised from it; were our idle seventy-fours carrying out streams of British industrials, & those scoundrel regiments all working under divine drill sergeants at the Grand Atlantic & Pacific Junction Railway, poor Britain & her poor colonies might find that they had true relations to each other; that the Imperial mother & her constitutionally obedient daughters were not a red-tape fiction, provoking bitter mockery as at present, but a blessed God's fact, destined to fill half the world with its fruits one day."

To the Land of Sunshine.

Take the Sunshine Route from Chicago to Los Angeles, San Francisco and other points in California, and escape the rigors of winter in the East and North.

Pullman Tourist Cars for first and second class passengers leave Chicago every Saturday at 2 o'clock p.m. via the Chicago, Milwaukee and St. Paul Railway to Kansas City, thence via California via the Atchison, Topeka, and Santa Fe Railway on the Sunshine Route.

This is the earliest attention train leaving Chicago for the West after arrival of morning trains from the East, thus avoiding tedious delay.

The Sunshine Route is essentially the best and most patronized through car line for men, women and children. Every attention paid to the needs of passengers en route.

Send for a Sunshine Route time-table folder. It costs nothing.

The "Atlantic & Pacific Junction" was built, but under somewhat different circumstances from those conceived by the great philosopher. The strong Governor never arrived, while the Parliamentary institutions, for which in the colonies as in Great Britain he had so little respect, grew more powerful & more democratic. But in the strong Imperial spirit which pervades the essay, Carlyle was in advance of his day; one transcontinental railway is now an accomplished fact, & we are beginning to talk of another. The route of the new line will contribute to a new conception of the extent of this country. It has been jokingly said that it fulfilled the geometrical idea of length without breadth, or that it resembled a string of fishing-poles tied together at the ends. But recent events have been working against the scoffers. Draw a line north from Pelee Island to the latitude of Dawson, & you will find that it is not very different in length from a line drawn west from Pelee Island to the Rockies. The gap in settlement between old Ontario & Manitoba is being rapidly filled up by the development of northwestern Ontario; & the Rainy River Railway will give an immense impetus to this movement. From Lake Superior to Manitoba there will be two railways, & apparently plenty of business for both. The western peninsula of Old Ontario, extending, say, from Toronto to Windsor, has for some years been a network of railways, but the multiplication of railways in the eastern portion is a more recent development, the latest step in which is the Ottawa, Arnprior & Parry Sound. It is not many years since Gravenhurst was the terminus of the Northern Railway; to-day, at a point more than twice as far north, there is railway connection with Montreal, Toronto & Winnipeg; and it is only a question of a few years when the locomotive will reach the shores of Hudson's Bay.

The same extension of settlement north is to be seen in the prairie country. The northwestern part of Manitoba has recently been opened up, & the country is so promising that settlement has pushed on ahead of the railway, which has now reached the border of Saskatchewan. From this point

the new railway is to run to Prince Albert, & thence to Edmonton. Passing through Alberta in a north-westerly direction, the railway will strike the Yellow Head Pass in the Rockies, & then will come the most novel & difficult part of the undertaking—the construction of the line through British Columbia to Fort Simpson, some 500 miles north of the western terminus of the C.P.R. To realize what an extension of our railway system this will be, consider that a straight line drawn from Vancouver to Fort Simpson is as long as one drawn from Toronto to James Bay.

What will be the result of opening up the northern part of British Columbia, now inaccessible except to hardy explorers, is largely a matter of speculation. But when all this work is finished the possibilities of railway development in this country will be by no means at an end. A railway 150 miles long from Prince Albert to Edmonton would give communication into the great territory of Athabasca. The projectors of the new line seem to have their eye on Hudson's Bay, the western shore of which is less than 400 miles from the eastern limit. It would not be surprising if "the study of small maps," that fascinating but sometimes misleading occupation, should have suggested the dream of a transcontinental railway of an entirely new kind, connecting the Pacific Ocean and Hudson's Bay. It looks like a dream now; but perhaps not more of a dream than the C.P.R. seemed to be 50 years ago.—Globe.

The Chilkoot Pass Tramway, which has been sold to the White Pass & Yukon Ry., is said to have been closed down for a time at least.

The Great Eastern Ry., which runs from the C.P.R. at St. Michel de Yamaska to St. Gregoire on the G.T.R. in Nicolet county, Que., & is 23 miles in length, is to be sold by the sheriff at Sorel Aug. 29, at the instance of Mayor Prefontaine, of Montreal, in his suit against the Co. & C. N. Armstrong. This line is included in the Atlantic & Lake Superior system, having been purchased in 1894 for \$115,000 cash, \$150,000 1st mortgage bonds & \$420,000 in paid up capital stock.

Canadian Roadmasters' Association.

The 3rd annual convention will be held at Toronto Sep. 20 & 21. The meetings will be held in court room no. 2 of the I.O.F. Temple Building, starting at 9 a.m. daily, & the members will make their headquarters at the Grand Union Hotel, corner of Front & Simcoe streets, opposite the Union Station, where special rates will be given to them.

The special topics selected for discussion at the convention are the following, the names given being those of the committees appointed to prepare reports on each subject:—

1. TRACK TOOLS.—J. Drinkwater, A. McAuley, W. Shanks.

2. EXPANSION OF DIFFERENT WEIGHTS OF RAILS.—J. Shanks, J. Graham, J. Leslie.

3. PLACING OF TIES & TRIMMING BALLAST.—E. Murphy, T. Hickey, J. Malloy.

4. RAIL JOINTS.—J. Drinkwater, W. Shanks. This matter was reported on at the last convention & partly discussed, to be again taken up at the forthcoming meeting.

A number of other subjects will, doubtless, be discussed, & exhibits will be made by railway supply manufacturers. There is every reason to believe that the meeting will be an interesting & useful one, & we hope to see a good attendance, not only of those who are already members of the Association, but of all roadmasters who can be present & who will join, as we are satisfied they will find the membership of advantage to them. Roadmasters are invited to contribute papers on any subjects they choose, whether on the programme or not.

The following reports of committees are given in advance, so that they may be considered before the meeting by the members, who will thus be in a better position to discuss them.

EXPANSION OF DIFFERENT WEIGHTS OF RAILS.

The committee, J. Shanks, J. Leslie & J. Graham, report as follows: The expansion required in 30-ft. rails at different temperatures is as follows:

30° below zero, 5-16 of an inch.		
0°	1-4	" "
30° above zero, 3-16	" "	" "
60°	1-8	" "
90°	1-16	" "

The above expansion applies to rails from 56 to 73 lbs. per yard.

PLACING OF TIES AND TRIMMING BALLAST.

E. Murphy, Roadmaster C.P.R., Woodstock, Ont., Chairman of the Committee, reports as follows. Thirty-foot rails should have ties uniformly spaced as follows:

70 lbs. a yard or lighter, 18 ties	
70 to 80 " "	16 "
80 to 100 " "	14 "

Ties in main side tracks should be 24 in. centres, & in other than main side tracks 30 in. centres. In reference to trimming ballast I cannot give a better idea than to consult the C.P.R. standard. I have had my ballast for the past 16 years trimmed according to our present standard, & have found a great benefit from it. We all agree that the quicker we can get the water from the roadbed the better it is for the road.

RAIL JOINTS.

The committee, J. Drinkwater & W. Shanks, reported last year as follows, the discussion on the report being adjourned until this year: In connection with our work there is no one thing of so much importance or that affects tracks so much as the joints. Considering from this fact the importance of the subject & the amount of money, time & study that has been expended on attempting to perfect rail joints, & yet your committee are strongly of the opinion that the best that has been produced that they have had practical experience with is still lacking, or has failed to

fully meet the requirements. Our experience is from the old wrought iron chair to the plain fish plate with the tie directly under the joint. Then came the 2-tie angle bar, & later the 6 hole 40 ins. angle bar supported with 3 ties, & later still the 44 ins. angle bar supported the same as the 40 ins. with 3 ties, & at present we have a 4 hole angle bar supported on 2 ties.

Our experience has been that wherever joints have been supported with a tie directly under them, whether with the plain fish plate or the 3 tie 6 hole angle bar, the results have been better than with the 4 hole angle bar with the joint suspended between ties. The new angle bar with 4 bolts & 2 ties suspended joint is, we consider, a decided improvement over the old one in its general make up. Instead of slats in the edges for spikes the holes are through the web or flange. This gives the full benefit of the 4 spikes against spreading, but with the improvements in this joint over the old 2 tie suspended joints we have been unable to see where the defect has been remedied, or the cause removed, or the necessity provided for that we have found to exist with a suspended joint.

The 40 & 44 ins. angle bars have the appearance of a waste of material & this, of course, means expense for which no benefit is derived.

Up to the present our experience is, & we beg to report based on experience, that the suspended joint has been a failure & even with the improvements on the present suspended joint we do not feel free to recommend it as being all that it should be, but, to the contrary, believe that they must get their support from underneath & we consider that the energy spent & the efforts put forth to produce a satisfactory joint have not been productive of the result desired.

The annual convention of the Roadmasters' Association of America will be held at Detroit, Mich., Sept. 12, 13, & 14. The Hotel Cadillac will be the headquarters of the members.

Railway Projects.

Burk's Falls to Saultsburg.—R. Forbes, of Duluth, Minn., Vice-President of the Parry Sound Copper Co., states that the Co. thinks of building a railway to Loring, Ont., by way of Burk's Falls & Saultsburg where it has properties.

Ha Ha Bay to Roberval, Que.—Among the objects of the British American Pulp & Paper Co., which is applying for a Dominion charter, is the construction of a railway from Ha Ha Bay on the Saguenay River, to Grand Falls, on the Peribonka River, thence to the first falls on the Mistassini River, thence to the Chutes à l'Ours, on the Chamouchouan River, & thence to Roberval on Lake St. John. It is further sought to run branch lines from this system, & lines connecting the various pulp & paper mills it is intended to establish at the different falls; also to generate electricity & distribute it. The capital stock is to be \$3,000,000. The applicants are R. Prefontaine, R. Bickerdeke, A. A. Thibault, D. A. McCaskill & Edward Goff Penny, of Montreal.

Owen Sound to Meaford, Ont.—Although the Dominion Parliament has voted a subsidy for a line of 21 miles between these points, no company has been chartered to build it, & no application appears to have been made for the granting of the subsidy. General Manager Hays has informed the Mayor of Owen Sound that the G.T.R. is not likely to undertake the work of construction, & it is admitted that no other company could successfully operate it.

Pyramid Harbor to Fort Selkirk. A San Francisco despatch of July 27 said:—"Pierre Humbert, jr., a Boston banker, who is at the head of a project to construct a railroad from

Pyramid Harbor to Fort Selkirk, is in the city. 'We have made our filings,' said he, 'and have practically secured a charter for that portion of the road traversing American territory. We are now waiting on Ottawa for a Canadian charter, & right-of-way from the boundary to the Yukon. As soon as this is accomplished, we will begin construction.'"

Mr. Humbert will probably have to wait some time "on Ottawa," in view of the Dominion Government's decision not to grant any more charters to lines into the Yukon, starting from ports owned or claimed by the U.S.

Trail to Sayward, B.C.—A press report credits F. A. Heinze, who built the Columbia & Western Ry., between West Robson & Rossland, & sold it to the C.P.R., with a desire to build some 8 or 10 miles of line from Trail to connect with the Spokane Falls & Northern at Sayward, the second station north of the International Boundary. As Trail is on the west side of the Columbia River & Sayward on the east a ferry transfer would be necessary.

Vancouver Island & Port Angeles.—F. Higgins, barrister, Victoria, B.C., gives notice that application will be made to the Dominion & Provincial Parliaments for the incorporation of a company to establish a railway ferry between Port Angeles, Wash., & the harbor of Victoria, Pedder Bay, or Beechy Bay, Vancouver Island, with power to build a railway from either of the named harbors to Langford Station, & along the west coast of Vancouver Island. It is said the company interested is the Port Angeles Eastern Ry., which is now building in the state of Washington.

In our June issue, pg. 171, we gave full particulars of the negotiations between the Port Angeles Eastern Ry. Co. & the city of Victoria for a railway car ferry & passenger boat service between Port Angeles, Wash., & Victoria. The committee of citizens of Victoria to which the matter was submitted had before it a proposition to bonus the Railway Co. \$17,500 a year for 10 years, on the basis of 5% on the estimated cost of the car ferry & steamboat. The committee decided against the proposition by a vote of about 2 to 1, the mayor having taken the ground that the city had no power to bonus a foreign corporation.

C.P.R. Dividend.—At a meeting of C.P.R. directors Aug. 14, a dividend for the half year ended June 30, of 2% on both preference & common stocks was declared payable Oct. 20. The earnings of the past six months would have warranted a larger dividend, but the directors considered it inexpedient to increase it. Some disappointment may have been felt, but the general opinion, both in Canada & Europe, is that the board has acted wisely in pursuing a conservative course. The Westminster Gazette voices London opinion in saying:—"The cautious policy of the directors is no doubt wiser in view of the exceptional condition of the farming industry during the past year or two, & the necessity of providing in fat years for adversities in lean years. It is better to have a safe & continuous 4% than the larger dividend now & the collapse of the latter."

Canadian Ticket Agents' Association. Secretary De la Hooke has issued a breezy & up-to-date circular, announcing the 13th annual meeting to be held at Winnipeg Oct. 10, instead of Oct. 13, as first arranged. The members will leave Toronto, Sunday, Oct. 8, at 1 p.m. via G.T.R. to North Bay, where members from the east will join them, & proceed via C.P.R. to Winnipeg, arriving there Tuesday, Oct. 10, at 6.30 a.m. The meeting will be held on that day, & a banquet will take place at the Clarendon Hotel in the evening. The party will leave Winnipeg Wednesday, Oct. 11, travelling by the Northern

Pacific, Chicago, Milwaukee & St. Paul, & Grand Trunk lines via St. Paul & Chicago. It is probable a stop will be made at Grand Forks, that Thursday, Oct. 12, will be spent in St. Paul & Minneapolis, that a stop will be made at Milwaukee, & that Chicago will be left on Friday evening, Oct. 13.

Railway Committee of Privy Council.

At a meeting of the Railway Committee of the Privy Council at Ottawa, July 29, the application of the Portage & North Western Ry. Co., a subsidiary of the Northern Pacific, to cross the C.P.R. tracks near Drummond & Brydges streets, Portage la Prairie, & to make a junction with the M. & N.W.R., was considered. The Town Council of Portage la Prairie has given the P. & N.W.R. Co. power to run along Pacific avenue, Portage la Prairie, & this has been ratified by the Legislature, subject to a provision that on a certain defined portion of the street no switches be allowed to be laid. On the application for the crossing coming up at Ottawa, counsel for the C.P.R. objected, unless the P. & N.W.R. Co. was forbidden to lay switches on any part of the street. Judgment was reserved, the matter being referred to a sub-committee to deal with, & on Aug. 10 it was announced that the Committee had decided to grant the application, without the limitations asked for.

Western Agencies of Atlantic Steamships.

—For some years past the general agencies of practically all the Atlantic steamship companies for the territory west of Lake Superior have been held by W. Stitt, chief clerk of the C.P.R. Passenger Department at Winnipeg,

who has recently been promoted to the position of Assistant General Passenger Agent of the Western Division. Mr. Stitt has issued a circular announcing that W. P. F. Cummings has been given charge of the business in connection with the Atlantic steamship lines, that remittances must be sent to him, care of the General Passenger Agent's office, at Winnipeg, & that all communications on the business of the Atlantic steamers should be so addressed.

Dominion Iron & Steel Co.—Advices from Sydney, N.S., state that the Dominion Iron & Steel Co. has begun work at the International pier, making preparations for a railway tapping the I.C.R. so as to take building material, etc., to where it will be needed. Contractors are getting things ready preparatory to the building of the shed. Over 100 men are employed. Quarrying stone at South Bar is progressing, though it may be given up on account of the softness of the stone.

Sir Sandford Fleming Interviewed.

In a recent interview in England Sir Sandford Fleming, after referring to the position of Canada as he found it on coming to the country in 1845, dwelt on the Imperial instinct, after which the interviewer continues:—Now we come to the Pacific cable, & Sir Sandford pointed out that Canadians attach the highest importance to it as another bond of Empire. It might be expected to expand trade between Canada & Australia, not at present very extensive. That, however, was quite overshadowed by the value it would have in the Imperial sense. Sir Sandford has given years of study to this question of an all-British cable, & his ideas thereon quite girdle the globe.

"Granted the present scheme," he remarked, "& you will reach Australia without having a foot of your wire on foreign territory. Why not have another cable bringing you back to London by Western Australia, Cocos Island, Mauritius, & South Africa? At Cocos Island you could establish branch lines to Singapore & Colombo, so joining up with the whole of Asia & India. From Cape Town go to St. Helena, Ascension Island, Barbadoes, & Bermuda, where you are in near relation to the present Atlantic cables. Measuring the cable as you put it into the sea at Vancouver, you would need 23,000 knots of it to reach Bermuda. The expense would be between £5,000,000 & £6,000,000, and just think what you would have for the money."

Sir Sandford hardly needed to explain to me that he struck across the Atlantic from Cape Town in order to avoid the shallow waters of North Africa, & the shores of Europe. "In the event of war," he laid it

down, "the cables would be most likely to be cut near Europe. A home-coming cable, according to my plan, would be in deep water all the time, and therefore difficult to cut. Once at Bermuda or Halifax, you would have a number of cables to take messages on to England. They would not all be cut at once, and it might be that the getting through of a single despatch, after war had broken out, would be worth more than the whole of the cost of the suggested cable." These views have already been submitted to the Colonial Office, & Sir Sandford thinks the scheme at present in hand a basis towards a complete, all-British girdle of the globe.

"You would," he observed, "be able, having a circular line, to communicate by two ways with any part of the Empire. If one road failed, the other would be there, so making us very secure. Apart from anything else, I look forward to the electric cable becoming the great means of communication between the various quarters of the world. I can see, in the dim distance, the day when a newspaper will be able to publish intelligence concerning the most distant parts, as fully & as promptly as if it related to its own city. We do not yet fully realize the value of electricity as a means of communicating over long distances. You telephone from the Strand to Piccadilly, but you could accomplish your purpose by sending a messenger. Not so when thousands of miles intervene; then the supreme value of the electric telegraph is apparent. The expense lies in constructing a line, & that once done, all is simple. Here it is, use it to the utmost; keep it going every minute of the twenty-four. If you can send a telegram for sixpence in England, why should it so quickly cost you six shillings if you go outside England? The next great advance of the world will probably be in respect of quick and cheap communication between all parts of it."

Sir Sandford has had visions before, & happily he has lived to find some of them realized. It had been laid down by certain experts that the interior plains of Canada could not be connected by rail with the Pacific & Atlantic coasts. In 1871 British Columbia came into the Canadian Dominion, asking, as part & parcel of the bargain, for a road to unite it with the other provinces. The splendid response was the Canadian Pacific Railway, which thus had its origin.

"The thing just had to be done," Sir Sandford remarked, "although the survey presented great difficulties in the Rocky mountains & elsewhere, there were various places at which the line could have been cut through. Every man on the survey was imbued with the importance of the task, which was not merely the finding of a way for a railway, but the seeking out of a trunk road destined to do much to build up Canada as a nation. That

The Canadian Pacific Railway Company.

Dividends for the half-year ended 30th June, 1899, have been declared as follows:

On the Preference Stock two per cent.

On the Common Stock two per cent.

Warrants for the Common Stock dividend will be made out or about 2nd October to Shareholders of record at the closing of the books in New York and London respectively.

The Preference Stock dividend will be paid on Monday, October 2nd, to Shareholders of record at the closing of the books at the Company's London Office, 1 Queen Victoria Street, London, E.C.

The Common Stock transfer books will close in London at 3 p.m. on Friday, 25th August, and in Montreal and New York on Friday, 8th September. The Preference Stock books will close at 3 p.m. on Friday, 1st September.

All books will be re-opened on Tuesday, October 3rd.

By Order of the Board.

CHARLES DRINKWATER,

Secretary.

MONTREAL, 14th August, 1899.

LELAND HOTEL, Winnipeg Man. W. D. Douglas, Proprietor. Rooms en suite with baths and all modern conveniences. Rates 8s to 8s 4d a day. Special rates for families and large parties, according to accommodation and length of time. Though moderate in price the Leland is first-class in every respect. It is especially adapted to please the commercial trade. It is in the centre of the wholesale and retail district. It is in direct communication with all parts of the city by car lines. It is supplied with the purest spring water from flowing well on the premises.

TO THE DEAF.

A rich lady, cured of her Deafness and Noises in the Head by Dr. Nicholson's Artificial Ear Drums, has sent £1,000 to his Institute, so that deaf people unable to procure the Ear Drums may have them free. Apply to Department O. B., The Institute, "Longcott," Gunnersbury, London, W., England.

was something to think of—occasionally, anyhow, as you lay in bed after a day's work."

The last rail in the C.P.R. was laid at the point then christened Craigellachie, situated amid the lonely grandeur of the Rocky mountains. Lord Strathcona, Sir Wm. Van Horne, & others who had worked for the great venture, were there, as the sections of steel coning from east to west met, & became the Canadian Pacific. Why the name "Craigellachie"? It was identified not only with a place in Scotland, but with an old Scottish clan slogan. "Stand fast, Craigellachie!" Endless difficulties had to be faced in carrying through the Canadian Pacific scheme, & on one occasion Lord Strathcona & Lord Mount Stephen had to console each other across the Atlantic about some hitch. The word which the cable flashed from the one to the other was "Craigellachie"—that is to say, the inspiring counsel, "Stand fast, Craigellachie!" This Sir Sandford told me, & it is a picturesque footnote to history.

"The joining up of the railway," he went on, "was a ceremony very impressive & suggestive in its simplicity. Afterwards our train went down to the Pacific side, & from there I remember sending a cable to Lord Mount Stephen in London. I wired that we had taken ten days to cross the continent—that I fancy was the time—but that the day would arrive when a passenger could journey from London to Vancouver in 10 days. As I speak, we have practically reached that celebrity in travelling, though when I telegraphed, some people in London regarded me as rather a wild prophet. Within a week of the completion of the C.P.R. several cars of naval stores for Esquimalt, the British depot on the Pacific, passed over it from Halifax. This was an object lesson on the uses of the road as an Imperial highway, & there have been many others since then."

Sir Sandford looks forward to seeing weekly lines of steamers leave Vancouver for Australia & Asiatic ports. He conceives them as connecting with the terminus of the Siberian railway, so forming a continuous trunk artery about the world. It is a fine conception, all the more that it will mean the possibility of going round the globe in less than half the 80 days which Jules Verne, in his daring narrative, allowed for the trip.

THE SOULANGES CANAL.

Lake St. Francis is 33 miles long; it is merely an expansion of the St. Lawrence River; a pool above the rapids between it & Lake St. Louis. The fall between these lakes is $8\frac{1}{2}$ ft. at mean water, & in a distance of about 16 miles there are the Coteau, Cedars, Split Rock & Cedars Rapids. At extreme low water, there is a depth of not more than 6 ft. in the channel at some places, & it is to surmount these rapids that the Soulanges Canal has been constructed. The canal is 14 miles long, & leaves the foot of Lake St. Francis at Macdonald's Point, just below the village of Coteau Landing. For $1\frac{1}{2}$ miles it runs straight, touching the margin of the river about a mile from the upper entrance, & from the end of this tangent the line sweeps round to the north-east, behind the village of Coteau du Lac, for about 3 miles, on a curve of 14,324 radius. It is then continued by a 2nd tangent, of some $8\frac{1}{2}$ miles long, passing about a mile inland from the Cedars village. Thence, the line bends slightly to the north, & is led into the Ottawa River, about 2 miles from its junction with the St. Lawrence, at Cascades Point. The canal is, for all practical purposes of navigation, a straight line throughout, & is 2 miles shorter than the route by the river. The fall of $8\frac{1}{2}$ ft. is overcome by 4 locks; $70\frac{1}{2}$ ft. of this is at the Cascades end, where the bluff forming the right bank of the Vaudreuil branch of the Ottawa gives an oppor-

tunity of locating 3 of the locks in the 1st mile, each having a rise of $23\frac{1}{2}$ ft. There is an interval of over 2 miles between the 3rd & 4th locks, the latter being about 3 miles from the lower entrance. Here the lift is variable; it is about $12\frac{1}{2}$ ft. at mean water of Lake St. Francis, but, at extreme high periods, it would, if this water were allowed to enter the canal, be about 15 ft. About 1,000 ft. above lock no. 4, there are a pair of guard gates, placed for safety to the lower locks in case of accident. At the upper, or Lake St. Francis entrance, there is a guard lock, by which the surface level of the summit can be regulated, without interruption or danger to navigation. At periods of high water, this will be used as a lift lock, but, at ordinary stages of the lake, its surface level will be that of the canal. The distribution of lockage is supplemented by a series of weirs for the passage of the necessary supply.

There are 7 road bridges & 1 railway bridge across the canal, the latter of which traverses the lower wings of the guard lock, & carries the Canada Atlantic Ry. It swings over the lock & raceway, & is about 180 ft. long. At the head of this lock there is another swing bridge, to pass the main road between Coteau Landing & Cascades Point, & a similar structure will be erected at lock 3, in connection with the Quinze Chiens Road. The remaining 5 road bridges cross the full width of the canal & have been designed to permit a full & free flow for the water & so as not to impede rapid navigation. This is effected by building the pivot pier in a line with the toe of the south slope, between which & the foot of the north slope there is an opening of 100 feet. The bridges are 246 ft. long, & the south half swings partly over the land & partly over a channel formed in rear of the pivot pier to give additional water section. Thos. Monro, M. Can. Soc. C.E., Chief Engineer of the canal, from whose paper on the subject we quote, believes that this is a considerable improvement on the old method of placing the pivot in the middle of the canal, with a narrow channel on each side of it, where vessels have to slow up, & often find it difficult to get safely past.

To pass the drainage of the country, lying to the north, across the line of the canal, has necessitated a very large outlay. The first stream met with in descending is the River Delisle. This has its source some 60 miles inland. Its catchment basin has an area of about 180 square miles and during spring floods the flow is something over 200,000 cubic feet a minute. The river is passed under the canal through 4 lines of cast iron tubes, 10 ft. in diameter, laid in a trench 50 ft. wide, excavated in the rock to the depth required. The next stream is called the Rouge River, & its flow during floods is about half that of the Delisle. It is carried under the canal by 2 lines of tubes of the same diameter as those of the Delisle. The excavation for the foundation of this structure was carried down to the boulder clay, through a stratum of soft blue material, which gave a good deal of trouble, through sliding during the progress of the work. At the River la Graise, the water is carried by a single line of tubes, 10 feet in diameter. The foundation of this structure is on piles, driven some 25 or 30 ft. to hard material. There are also 2 pipe culverts of small dimensions towards the lower end of the canal.

The canal throughout is about 100 ft. wide at bottom, & was designed to have side slopes of 2 to 1, but because of the slipping of the clay banks in some places the slope is now partially 4 to 1. The banks are first formed to the slopes, & then a notch is cut to receive the stone protection lining. This is about 3 ft. wide at the base, tapering up to about 1 ft. on top, where it is finished by a rough coping. Between this coping & the top of the bank the surface is sodded, the sodding being returned about 5 ft. on the level.

On the north side of the canal a macadam road, 15 ft. in width, will be formed throughout its entire length, the centre of which is 33 ft. from the edge of the cut or bank on that side.

At the Cascades' end the excavation is in rock of the Potsdam formation, which affords a solid foundation for locks 1, 2, & 3. The upper extension walls of the latter lock are, however, of piles & concrete. The reach between locks 3 & 4 is in clay, upon which the piers & abutments of the St. Antoine road bridge are founded. The road bridges at St. Fereol & St. Dominique are also built upon clay. The surface of the blue clay along the summit reach gradually rises towards the west & culminates at the crossing of the St. Emmanuel Road, where it is almost level with the top bank, being only covered with a thin layer of sandy soil. Wherever this clay was cut into by the canal there was danger of slides, roughly in proportion to the depth of the cutting. This danger was greater on the north side, which intercepted the natural drainage towards the river, so that in time the slope became so saturated as to break loose & slip into the canal. That is to say, by the excavation of a deep trench of such dimensions a similar condition of things was set up as that existing along the bank of the St. Lawrence between Coteau & Cascades, where from time immemorial deboulements have occurred, causing in many places a wearing away, which in some places is measured by hundreds of feet. One of these slides took place in Oct. 25, 1897, when, without any perceptible warning, the north bank of the canal, for over a $\frac{1}{4}$ of a mile in length, slid into the canal, taking with it the abutment of the St. Emmanuel bridge, which was thrown bodily forward about 50 ft. into the centre of the canal. Other slides have occurred about a mile or so to the west of the St. Emmanuel road, & one of these took place only the other day. Towards the crossing of the River Delisle the surface of the blue clay lowers rapidly. At the river itself, rock of the calciferous is encountered, & this alternates with the clays & sands of the drift formation for some 2 miles to the west. At the upper entrance the guard lock & surrounding structures are all founded upon solid rocks. There are about 6,750,000 cubic yards of clay of all sorts, & 300,000 cubic yards of rock of various kinds in the excavations for the canal.

The site chosen for the power-house, to generate electricity for the operating of the docks, bridges, etc., and the lightening of the canal throughout, is where the River la Graise crosses under the canal & joins the St. Lawrence about 400 ft. to the south of it. The amount of electrical power required to operate the locks, bridges & other structures, & to light the canal satisfactorily throughout its entire length of fourteen miles, was carefully determined by experts, who also worked out the details of the distribution & application of this power. The power-house is connected with a regulating weir, which is intended to control the summit level of the canal, without discharging a great volume of water through the Cascade locks.

At the ordinary level of Lake St. Francis there will 180 ft. of water in the canal, equal to a cross sectional area of 2,524 sq. ft. Propellers of the type now being built on the upper lakes to navigate these canals will have a submerged midships section averaging $42 \times 14 = 588$ sq. ft., or less than $\frac{1}{4}$ of that of the water area at mean level. This will permit of a fairly high rate of speed, as full depth under the keel of a vessel is of great value, both for speed & safety. Mr. Monro believes that the single individual lock is better than the fleet lock & can be operated more quickly & the maximum facilities may be provided by duplicate locks. "The lift of locks should be made as great as possible," he says "where conditions permit, as time is consumed by

the number of locks rather than by the lift. And this is the policy he has pursued in building the Soulages canal.

The general features of lock 12, which is typical of the others, are as follows: The lock is filled & emptied through culverts in the side walls, from which cast iron pipes 30 inches in diameter, 100 ft. each side, lead into the bottom of the chamber. The pipes have 40% greater discharging capacity than the culverts themselves. The lock will be filled in about 5 or 6 minutes, & this will be effected without subjecting the vessel to much surging or strain. At the head of each culvert there is placed in an 8 by 4 ft. shaft, operated from the coping, a 6 by 6 ft. sluice of the Stoney pattern. These are for the first time introduced into a Canadian canal, their operation is very simple, & they have given the highest satisfaction in controlling large bodies of water in Europe, where they are in extensive use, being employed for that purpose on the Manchester ship canal. The method of emptying & filling locks through tunnels in the side walls is considered to be very much the best; filling & emptying through valves in the gates, as in the Welland canal, having proven decidedly objectionable. Each lift lock is provided with a heavy breast wall at its upper end, corresponding in height to that of the lift. These walls have been reintroduced for the purpose of removing the cause of about $\frac{1}{10}$ of the accidents that have occurred on the enlarged canals, namely, vessels carrying away the upper gates of the locks by striking them whilst entering from the lower reach. If a vessel goes ahead too far in a Soulages canal lift lock, it will strike against the breast wall, & damage itself instead of the gates. The gates are built on what is called the 'solid' plan, which consists of a number of superimposed timbers shaped to the required horizontal pattern & fastened together. The method is simple, & in this case the strength is superabundant. One leaf of the lower gates of the high lift locks at the Cascades' end of the canal weighs over 90 tons in the air. The timber used is principally Douglas fir, which was hauled across the continent for the purpose.

It is proposed to work a lock from one point on the south side & about 20 ft. back from the coping, where a switch cabin will be placed. This will be connected with the motors actuating the sluices & operating bars. When a vessel enters the lock from the lower level & her stern is up to the breast wall she will signal & the lower gates will be closed. The machinery will effect this in a perfect manner. The gates will shut precisely & synchronously, & avoid any trouble from overlapping, which often occurs now in other locks. This should be done in 1 minute. The lower sluices are then dropped & the upper ones hoisted, the lock being filled as indicated. When the water has risen to the full height, the upper gates are opened & the vessel passes out. The lockages are expected to be made easily in from 12 to 15 minutes. The capacity of the canal, at 4 lockages an hour, on the basis

of $\frac{1}{2}$ westbound freight, would be about 20,000,000 tons in an ordinary season.

In the construction of these locks, concrete has been used to a greater extent than in any previous works of this kind in Canada. Mr. Monro specified that cement of a certain quality should be supplied by the government to the several contractors, and should not be purchased by them at all, & thus there was no inducement on the part of the latter to use cement of an inferior quality. In the preparation of the cement some 70,000 briquettes have been made for testing purposes in a quantity of about 200,000 barrels. Good, clean sand and properly broken stone have been insisted upon, & it is believed that this work is excellent throughout. Mixing has been done both by hand & by machine, but in either case the product when carefully laid & rammed make an exceptionally good hydraulic wall, while its cost per cubic yard was less than half that of masonry, on the Soulages canal. There its use was clearly suggested by the fact that in the excavations for the prism, about 300,000 cubic yards of rock had to be taken out which was unfit for masonry, but excellent for concrete. This supplied the 15,000 cubic yards required for concrete; also, about 120,000 cubic yards for stone protection lining; together with over 50,000 cubic yards for macadam, repairs, etc., leaving a large surplus to be thrown away.

Mr. Monro was transferred from the Welland canal at the close of 1888 & assigned the duty of determining the best location for a canal, having a navigable depth of 14 ft., between Lakes St. Louis & St. Francis. After extensive surveys & examinations, he submitted a report in 1889 to the late J. Page, Chief Engineer of Canals, in which reasons were given why the new canal ought to be constructed on the north side of the St. Lawrence. Mr. Page died in 1890, & in June of that year, a second report was addressed to the Secretary of the Department, confirming the views previously expressed. In that document the projected work was for the first time named the Soulages canal. In a memorandum in Jan. 1891, prepared for Sir John Macdonald, by T. Trudeau, Deputy-Minister & Chief Engineer of Canals, the scheme submitted by Mr. Monro was approved of in general terms. This view was subsequently confirmed by the government, and, in Aug. 1891, \$300,000 was voted by Parliament towards the construction of the Soulages canal, which was then estimated to cost \$4,750,000. Plans and specifications were prepared, and, in May, 1893, all the 13 sections between Cascades Point & Coteau Landing were under contract. Between the time of Mr. Monro's report of June 18, 1890, & the letting of the works, however, the bottom plan of the summit level, 10 $\frac{1}{2}$ miles long, & the foundations of the structures on it, were lowered about 1 $\frac{1}{2}$ feet, largely increasing the quantities, & adding about \$500,000 to the cost of construction, making the total estimated cost \$5,250,000, instead of \$4,750,000.

For the sake of clearness in showing the present condition of the different sections,

they will best be described in the order visited by the writer.

Section 13.—Contractors Manning & McDonald, Toronto. Date of contract, Sep. 24, 1892. Approximate value of work, \$635,000. This contract, comprising entrance walls, guard lock, waste weir & two swing bridges, is now complete, & has been partially tested.

Section 12.—Contractor M. J. Hogan, Montreal. Date of contract, April 5th, 1897. Approximate value of work \$220,000. Before Mr. Hogan took hold of it, this work had been twice under contract & in each case the contractor failed to prosecute the work to completion owing to its costly character. This work is composed of hard clay, intermixed with nests of boulders of large sizes, fissured rock & quicksand. He expects to get finished by the end of August. He is already beginning to move his machinery out of the cutting.

Section 11.—The first contractor for this was G. Goodwin, & the contract was dated May 11, 1892. This was afterwards transferred to T. Feeney, & later to Poupore & Fraser, of Ottawa. Approximate value of work, \$325,000. This section, which was composed of rock & hard material, is completed.

Section 10.—Contractors Rogers & Taylor, Montreal. Date of contract, Dec. 24, 1892. Approximate value of work, \$292,000. This work was practically all earth, the only structure upon it being one large road bridge, & it was completed last fall. Small slides occurred upon the north side of this section, but these were soon repaired.

Section 9.—Contractors Manning & McDonald. Date of contract, Jan. 30, 1893. Approximate value of work, \$180,000. Rather extensive slides took place on this section, but these have been repaired & the work is now finished. The restoration was effected by placing stone for support & drainage at the base of the slopes, & then filling in. The slope of the north bank was also altered from 2 to 1 to 4 to 1.

Section 8.—Contractor C. H. Raynor, Syracuse, N.Y. Date of contract, Dec. 29, 1892. Approximate value of work, \$312,000. This, with the previous section, has given the contractors & the engineers a great deal of trouble, owing to the slides. A heavy slide took place on the north side of this section on Oct. 25, 1897, at the crossing of the St. Emmanuel road. This swept the abutments of the road bridge, containing 1,100 cubic yards of concrete, off its pile foundations, & threw it bodily some 50 ft. into the bottom of the canal, where it sank into the soft blue clay for a depth of about 19 ft. About 40,000 or 50,000 cubic yards of earth accompanied it. This was being repaired & the slope was changed from 2 to 1 to 4 to 1, but, much to the surprise of all concerned, without the least warning, another extensive slide took place the day before the writer visited the canal, carrying away the bank for about 350 ft. Men & teams were working upon it at the

time, & these were carried bodily into the canal. Fortunately, all the men escaped without injury, but one horse was smothered to death. On this section, too, the power house to operate & light the canal by electricity, is being built, & much remains to be done before this structure can be finished.

Sections 4, 5, 6 & 7.—These sections are all comprised in one contract, which was first let to G. Goodwin, & afterwards re-let to A. Onderdonk in April, 1897. Approximate value of contract, \$957,000. When Mr. Onderdonk took over the contract there were approximately 850,000 cubic yards of earthwork to complete. About 1,200,000 of the easiest part had been taken out by the previous contractors, & the work then abandoned. The masonry & concrete, of which there were about 40,000 cubic yards, were untouched, not a stone having been prepared or delivered four years after the signing of the contract. The lower part of the prism is chiefly in blue clay, difficult to handle, especially in wet or frosty weather, & in some cases the material has been hauled over 4 miles. The masonry of lock no. 4, which rests on a pile foundation, has been completed, & the work is excellent. The other masonry on these sections is about completed, but much remains to be done to the iron work, gates, etc., & there is still considerable earthwork to remove. It will be almost impossible to finish this work this season.

Section 3.—Contractors, J. & M. O'Leary, Ottawa. Date of contract, March 27, 1893. Approximate value of work, \$200,000. This work is completed, & was accepted from its contractors in the fall of 1897.

Sections 1 & 2.—This contract was first let to A. Stewart, of Ottawa, on Sept. 24, 1892, & was re-let to Ryan & Macdonell, on Dec. 1, 1897. Approximate value of work, \$983,000. Upon these sections are 3 locks, with waste weirs, basins, etc. This has been one of the heaviest pieces of work on the canal, & has been carried on very vigorously, night & day. It is hoped by the Government that these sections may be finished by about the beginning of Sep., but this is very doubtful, indeed, as much remains to be done. If, indeed, the canal is finished in time for the passage of vessels drawing 14 ft. of water at the opening of navigation next year, it will be quite as soon as is generally expected by many on the spot.

The full staff of engineers in charge of the canal is as follows: T. Monro, chief, assisted by A. J. Grant, S. J. Chapleau & R. A. Dufresne, from no. 13 to no. 7, inclusive; Mr. McNaughton, who resides at Cedars Rapids, has charge of nos. 8, 7, 6 & 5; & Mr. Coutlee, assisted by Messrs. Matthewson, Wise & Davey have charge of the remaining 4 sections & entrance at Cascades Point.—Montreal Witness.

An Ottawa despatch of Aug. 15 says:—The Minister & Deputy Minister of Railways, Mr. Collingwood Schreiber, were over the Soulanges canal works yesterday. They found that another slide has occurred in the clay banks of the prism of the canal on Raynor's section. A large quantity of clay was precipitated into the bottom. As the water has been let in the canal the slide will be taken out as soon as a dredge can be had, & it is hoped that the water in may obviate further mishaps. Should no further slide occur the canal may be opened to navigation by the end of the first week in September.

Through the St. Lawrence Rapids.

The recent trip through the rapids of the steel str. Mae, the largest vessel ever transferred from the great lakes to the Atlantic coast, via the St. Lawrence, has proven a most interesting event of the present season of navigation. The Mae was built at Toledo, Ohio, for the Porto Rico trade & is 250 ft.

keel, 42 ft. beam & 24 ft. depth. She has triple expansion engines of 19, 30 & 52 ins. diameter of cylinders & 40 ins. stroke; 2 Scotch boilers, 12 by 12½ ft., allowed 175 lbs. steam pressure. As she was too large to pass through the St. Lawrence canals she had to attempt running the rapids. After discharging a cargo of grain in Kingston, she proceeded under her own steam to Ogdensburg, arriving there July 16. From there she was taken in tow of the str. Chieftain, & proceeded as far as Coteau Landing, arriving there July 17. Something having gone wrong with the Mae's steam steering apparatus, it was given a thorough overhaul & the defective part repaired, & on July 18 the steamer, drawing 7 ft. 9 ins. of water, started on her perilous journey down the Coteau Rapids in tow of the Chieftain. She swept past the Coteau railway bridge without mishap. Upon taking her first plunge in the Coteau rapids, however, her steam steering gear again gave out, leaving her to the mercy of the waves, but the plucky commander of the Chieftain, realizing the danger, at once swung his steamer around in the current. He brought the Mae head to current & her anchors were thrown just below the big shoal known as "La bature de franc coeur," where she fetched up all safe in the eddy formed by this shoal. The steering gear was once more put in repair, & on July 20 the anchors were raised & another start made. Arriving opposite the great swells known as La chute aux boulevaux (the largest in the whole chain of rapids), the vessel took a sheer northwards, straight for the big shoal where the Standard Oil Co.'s barge stranded a year ago, but the Chieftain crowded on full steam & pulled her clear of it. The next place where trouble was expected is called La bature a Lachinette, but the steamer, as if to atone for her previous shortcomings, made this winding descent as beautifully as any of the mail steamers could have done. Split rock, Grecian's shoals & Cascades were then successively passed in safety, & without further adventure the largest & deepest draught steamship ever attempted through the rapids glided safely into the still waters of Lake St. Louis.—Marine Review.

Heavy Lake Traffic.

The shipping business on the great lakes has expanded enormously this year. On both sides of the lakes vessel owners are being offered more business than their boats can handle & rates have advanced considerably already, & promise to go higher. U.S. vessel owners claim to be getting higher rates than in any year for 10 years back. Coal & ore shipments seem to engage most of the vessels from southern parts. The boom in the iron & steel trades has no doubt brought about this activity. Iron mining companies are endeavoring to get as much ore as possible to points of manufacture before the season closes, but the consumption has increased so largely that the furnaces are devouring shipments almost as fast as they are unloaded. One Chicago concern is said to be 250,000 tons short of its usual stock of ore at this time of the year, & other companies are no better off. It is predicted that when navigation closes it will be found that stocks of coal at north-western & western lake ports are not nearly adequate to the demands which will be made upon them next winter. Coal shippers have been very reluctant to pay the rates being asked by vessel owners this year, & in consequence, the boats are going in for other more profitable business. Vesselmen say that it is now impossible with the ships available to replenish the stocks of coal at the head of the lakes before navigation closes. How far this is true remains to be seen.

Canadian vessel owners are experiencing a no less active demand for their services than

their U.S. competitors, & are making substantial profits out of the business. No one will begrudge them this, as the business has been to a large extent unprofitable for a number of years. Sailors & all classes of employees are also benefited by the increased business, as wages have been advanced 10 to 15%. The carrying of Canadian lumber to U.S. ports is a new source of revenue this year, due to the new regulations of the Ontario Government regarding log exports. Hitherto the logs have been rafted to U. S. ports & sawn there. Now they are being sawn in Canada & Canadian vessels get the business of carrying the lumber across. The grain carrying trade is also yielding large revenues to Canadian vessels this season, & the delays caused by the backward spring & the Buffalo strike are now being fully compensated for.

Dominion Notices to Mariners.

The Department of Marine has issued the following notices:—

No. 47, July 24, Quebec.—St. Jean semaphore again in operation.

No. 48, July 26, Nova Scotia.—Liscomb whistling buoy.

No. 49, July 27, U.S.A.—Inland waters contiguous to International Boundary Line. 1. Galloo Island shoal gas buoy no. 1; 2. Presqu'île fog signal station; 3. Kelley's Island south shoal gas buoy no. 2; 4. Peach Orchard point gas buoy; 5. Detroit River—Limekiln Crossing channel—depth signals; 6. Lake St. Clair twenty-foot channel lights; 7. Lake St. Clair—Grosse point—new buoy; 8. River St. Mary—Lightbuoy established off Gros cap; 9. Light buoys in Vidal shoal channel.

No. 50, July 27, Newfoundland & Labrador.—Improved fog signals at Belle Isle.

No. 51, July 27, Ontario.—Improvements in Rainy River range.

Richelieu & Ontario Navigation Co.

The Co.'s hotels are reported to be all doing well, including the new one at Tadoussac.

The directors have decided to invite plans for an hotel at Murray Bay, to be built next year.

On July 16 the Co. inaugurated its double service between Montreal & Quebec, adding a day service to the night one. The day service is performed by the strs. Columbian & Caspian.

On the str. Toronto's trip from Toronto to Prescott & return, Aug. 1 to 3, her coal consumption was tested. On the down trip it was 1.80 per horse-power per hour on a speed of 17 miles, & the up trip was 1.76 on a speed of 17.6 miles.

A union wharf at Montreal for the Co.'s boats is talked of, so that shippers may have the advantage of cheap freight transfers, light storage & sharp connections. The Toronto & Hamilton steamers now dock in the canal basins, & the other boats at another wharf. Through freight for points below Montreal could be much more easily transferred by all boats going to one wharf.

At a meeting July 20, the General Manager informed the directors of a marked increase in receipts, which, owing to the lateness of navigation opening, were about \$20,000 behind at the start. In comparison with last year, the boats had been running less time, yet the receipts were not only sufficient to recoup the \$20,000 loss at the beginning, but to place \$20,000 additional to the amount.

Levels of the Great Lakes.

L. E. Cooley, C. E., Chicago, estimates 10,000 cubic feet a second as the probable outflow of water at Chicago, for the sanitary

Prof. Abbe, Chief Meteorologist of the U.S. Weather Bureau, who has been making a study of the rainfall & outflow of the Great Lakes, says, in this connection: "The effect on the general level of Lake Michigan & Lake Huron, practically the same body of water, will be to increase the present outflow about three inches annually, so that the future outflow will be about 70 instead of 67 inches a year. The effect upon the depth of water & navigation in Lake Michigan & Lake Huron, & on the outflows of the Lakes St. Clair, Erie & Ontario will be barely appreciable & of no practical importance whatever in comparison with the uncertainty, the variability, & the great importance of the rainfall & evaporation. This slight drain upon Lake Michigan will be supplied by Lakes Superior & Huron, without affecting the surface level of St. Clair or Erie by more than a small fraction of an inch. The deepening of the channel through St. Clair & Detroit rivers will diminish the resistance to the flow of water, so that more will pass per second than before, provided the head of water, viz., the difference in level between Lakes Huron & Erie, remains the same; but this will not be the case. The effect will be felt at first mostly in the very center of the channel, & the total annual discharge at first will be much less than 1% more than at present. It may increase from 230,000 to 232,000 cubic feet a second, or from 67 to 67.6 inches a year, but the final result will be the same as if we opened a wider & easier communication between the two lakes, & they will come to the same level & act as one lake just as Huron & Michigan do now. As the influence of these two proposed engineering improvements on the regime on the lake is so small compared with that of the natural forces at work, it is especially important to accumulate & improve the climatological data, rainfall & evaporation, barometric pressure & winds, all of which affect the supply & the outflow."

Favors the Montreal Route.

The committee on canals appointed by Governor Roosevelt, of New York State, has been asking representatives of the transportation interests: "What is best to be done about the canals?" President J. J. Hill, of the Great Northern Ry. (U.S.A.), replied as follows:

"The entire question of canal communication between the great lakes & the port of New York is one that deeply interests the whole country north of the Ohio river, & particularly the north-western states. A canal which would take less time & greatly less money to build would follow the River St. Lawrence to the vicinity of Montreal, & there turn south by way of Lake Champlain, but during the time of open water for such a canal the port of Montreal would be open to seagoing vessels, & I see no reason when a canal was built to within sight of Montreal harbor, where it could reach seagoing ships & with harbor dues much less than those in the

port of New York, why any traffic other than such as might be locally required for consumption at intermediate points or in the city of New York should bear the additional expense of transportation for say 400 miles from Montreal to New York. I do not think the national sentiment would be enough to pay the financial cost. If the present Erie canal were enlarged & deepened to a depth of 10 ft., so that canal boats of 3,000 tons might be used, it is more than likely that the best practical results would be obtained in this way. I do not know whether it would be possible to take water from Lake Ontario by way of the Oswego & Erie canals to the Hudson river. The low rates of rail transportation have at times made it impossible to operate the canal boats now in use profitably in the grain traffic between Buffalo & New York, & it is not by any means certain that with improved facilities for handling grain at terminal points & other favorable conditions, the rail rates have reached their lowest limit."

The Deep Water Ways.

The U.S. Deep Water Ways Commission is approaching the completion of its work, a large force being engaged at Detroit, tabulating & arranging results, and it is expected the final report will be presented early next year. Major Raymond, C. E. of the Commission, estimates the cost of the proposed waterway at about \$200,000. In a recent interview he said:—

"The route to be followed will be through the Sault St. Marie Canal to Lake Huron, through the river to Lake Erie, thence by ship canal around Niagara Falls to Lake Ontario. The question confronting the commission at this point is whether or not the Welland Canal, which is Canadian property, should be utilized by deepening, as it is now totally inadequate for use in ships of deep draught, or a new canal built in U.S. territory. This may be found the more desirable for international reasons. A depth of 30 ft. through the waterway should be sufficient to carry any vessel to the ocean. The entire scheme contemplates some very serious engineering problems, partly as to the system of locks. From the point above mentioned, two canal routes are suggested, both using the Hudson River. One is known as the Oswego-Mohawk Route, and the other as the Champlain-St. Lawrence Route. The Oswego-Mohawk Route is to start at Oswego & proceed along the Mohawk Valley, taking in such cities as Syracuse, Rome, & Utica, going thence to Troy, where it will connect with the Hudson, necessitating a deepening of the Hudson. This route will practically obliterate the Erie Canal, though it will take up some of its waterways. The Champlain-St. Lawrence Route has been surveyed from Lake St. Francis, which is an arm of the St. Lawrence River, diametrically across to the Richelieu River, which flows into Lake Champlain, & through this lake by means of a

canal to Troy. In addition to the consideration of the above suggestions, the commission will discuss the question of an increase of the locks of the Sault St. Marie Canal."

Province of Quebec Shipping.

The Montreal Warehousing Co. has installed a conveyor at its elevator there with which vessels can be loaded at the rate of 8,000 to 10,000 bus. an hour, without lighterage.

The twin screw ferry steamer Levis, to ply between Quebec & New Liverpool or St. Romuald, 8 miles above Quebec on the south side of the river, has been launched at Levis.

The str. Majestic, built by the Polson Iron Works, Toronto, for the Richelieu River Navigation Co., of St. Johns, Que., & which was described in our June issue, pg. 184, was launched at the Polson shipyard, Toronto, July 13. Her trial trip was made July 26; a few days later she left for the east to start running on the Richelieu River.

The str. Mistassini was burned to the water's edge at her wharf at Roberval, Lake St. John, July 24. She was owned by H. J. Beamer, said to be valued at \$50,000 & not insured. The press despatches spoke of her as a new boat, which is probably a mistake, as the only str. Mistassini registered up to Dec. 31, 1898, was built in 1891, at Roberval. She was a side-wheeler, 130 ft. long, 22 ft. 4 ins. wide & 8 ft. 2 ins. deep, gross tonnage 249.

There is to be another shake up in the underwriters' rates for the St. Lawrence, & when the various agents receive notification of the customary increase for Sept., they will notice a decided excess over the rates of any previous year. This was stated to a Witness representative by one of the leading insurance representatives in the marine business. Some

of the elements explained as partly responsible for the increase were reports of heavy ice, numerous misfortunes continuing during the season, & the autumn weather setting in shortly after September.

The shipping season of 1899, at Montreal, which gave so much promise at its opening is not turning out so busy as was confidently expected at the outset. Business is especially dull about the wharves. Up to the end of July both the number of ships, their tonnage, as well as the harbor revenue, has fallen off considerably, when compared with the business up to the corresponding date last year. Some blame the exceedingly low freight rates prevailing as the cause of the business inactivity. Prominent shippers complain especially of the manner in which the trade with London has fallen away.

The new pier at the foot of Jacques Cartier square, Montreal, is ready on the upper side to accommodate a vessel. The wharf, which is part of the harbor improvement scheme embraced in plan 12 a-2, will be 850 ft. long on the upper side, 850 ft. long on the lower side & 300 ft. in width. The pier will accommodate 5 large vessels. The crib work was begun last spring, & the superstructure about the middle of June. Over 800 ft. of crib work has been placed in position on the upstream side & about 600 ft. on the lower side. The pier, when completed, will be covered by 8 inches of black rock & 4 inches of macadam.

British Columbia Shipping.

The C.P.R. steamship Athenian is said to have been chartered to take a load of U.S. cavalry horses from Seattle to Manila.

Capt. McCroskie is now in charge of the C.P.N. Co.'s str. Princess Louise, while Capt. Foote will have command of the Danube, vice Capt. Meyers, who leaves shortly for England.

Capt. Cates has returned to steamboat business at Vancouver, after two years in the Yukon. In partnership with W. Haywood he has bought the Puget Sound str. Defiance, which has been transferred to the Canadian registry & will be used for short up the coast trips.

Now that traffic is increasing to points on the west coast, the necessity for its improved lighting is becoming more urgent. At present there are no light-houses on the whole western Island Coast north of Cape Beale, & mariners are strongly commenting on the fact. A light, they say, at the entrance to Barclay Sound, on Amphrite Point, would be of incalculable value to shipping, for, though right on the seaboard, Barclay Sound is one of the most difficult pieces of navigation to be found on the B.C. coast, for the entrance presents a perfect archipelago. There is a strong current setting towards Ucluelet, & it not infrequently happens that a sailing vessel is carried up to this locality & loses herself completely for a time. In foggy weather especially does this happen, & in nine cases out of ten the only thing that saves her is the deep channel.—Victoria Colonist.

Yukon & Northern Navigation Matters.

Passenger traffic is reported as very evenly divided between the upper and lower Yukon River boats.

The str. Bailey, a sternwheeler, built last year for the Bennett-City White Horse run, by S. S. Bailey, has been sold.

A boat is running between Taku Arm & Atlin City, & a tramway, two miles across, connects with Captain John Irving's str. Gleaner.

The str. Olive May, is said to have been purchased by the Bennett Lake & Klondike

Navigation Co., & is to be refitted & named the Dora. She will run on the upper Yukon.

The steamers of the Alaska Commercial Co. on the Yukon are now burning coal. Several thousand tons of good coal taken from a newly-discovered mine on Nation River, have been stowed in bunkers on the Yukon.

At the recent annual meeting of the Hudson's Bay Co., in London, Lord Strathcona said:—"The steamers Caledonia & Strathcona have been put on the Stikine river again, but the Co. can hardly expect the same profitable results from them this year, as the proposed railway from Glenora to Teslin Lake has not been proceeded with, although the line may probably ultimately be carried out."

U. S. Consul Cook, in a report from Dawson to the State Department, says:—"There is a great deal of activity in shipping here. At one time there were 17 steamboats at the various landings. The boats are providing improved accommodations for passengers & I do not see why excursion parties are not organized to come & see this land of gold, now that travelling is made comfortable. I should think a trip up the Yukon would be more interesting to Americans than a trip up the Rhine."

The International Navigation Co., owners of the St. Paul & other ocean steamers of the American & Red Star lines, is said to have organized the Empire Transportation Co. to operate a fleet of ocean steamers between Seattle & St. Michael, & 18 river boats between St. Michael & Dawson & intermediate points on the Yukon River. The transatlantic steamers, Ohio, Illinois, Indiana, Pennsylvania & Conemaugh, heretofore employed in the Liverpool & Antwerp trade, are said to have been secured for this route. It is also said the Empire Line will introduce a novelty in the shape of a river boat, so far as the Yukon is concerned. It will be patterned after Stanley's Congo light draft steamers with 6 small propellers in the stern, each one in its own compartment.

At a recent meeting of the Victoria Board of Trade it was decided to write the Canadian Pacific Navigation Co., requesting an improvement in the Northern Steamship service, & on receipt of the Co.'s reply to make a thorough enquiry as to what is required & what can be done. In introducing the subject A. G. McCandless said it was impossible to have a satisfactory service while the present plan of calling at Northern B. C. salmon ports was continued. The conditions of the two traffics were eminently different, & outbound Klondikers cannot be expected to take a steamer that will delay them in a section where they have no interest for days, while the steamer loads a few cases of salmon. Nor can the B. C. company expect to command the passenger business unless it provides vessels to handle it that will compare in speed, comfort & appointments with such craft as the Humboldt & the City of Seattle. He made an interesting statement when he said that the time had not long passed when the merchants of Victoria came to the rescue of the C.P.N. Co., & by signing a round-robin declaring an intention to boycott the road, prevented the C.P.R. placing a fast passenger steamer on the Victoria-Vancouver route.

The river ice in front of Dawson moved out May 17, & was soon followed by the arrival of a number of barges which started from the foot of Lake Laberge, & travelled in the rear of the ice floes. These were followed by the str. Flora. On account of low water considerable difficulty was experienced by steamers in getting down the river in the early part of June, much damage to hulls being done by shoals in Thirty Mile Creek & Teslin River. The str. Jas. Domville was totally wrecked at Thirty Mile, the steering gear not answering quickly enough for a sharp turn in the rapids. She was built last year for the

Klondike & Stewart River Pioneers, Ltd., an English Co., & was towed to St. Michael's whence she ascended the Yukon. Up to June 20 the following boats that wintered in the Yukon, from Rampart to Dawson, had arrived at the latter point:—Sovereign, Monarch, Victoria, J. J. Healy, Rideout, Mary E. Graff, Robert Kerr, Seattle, Arnold, J. C. Barr, Seattle No. 3, Lightning Clara, Oil City, Pilgrim, Herman, U. S. Stratton, Reindeer, J. C. Power, & John J. Cudahy. From the headwaters the following arrived at Dawson: Flora, W. K. Merwin, Columbia, Pingree, Tyrell, P. B. Lowe, Gold Star, Canadian & Ora. The Ora was the first boat to arrive with connection from the outside.

An informal meeting of Alaska Steamship Association was held in the office of the Canadian Pacific Navigation Co. at Victoria, July 25, & the representatives of the different companies included in the association proffered the fatted calf to the C.P.N. Co., which had given notice of withdrawal from the combine. The notice was given by letter which was read at a meeting of the association held at Seattle July 19. According to one of the Sound steamboat men present at the meeting the reason of the threatened withdrawal is said to be the same that nearly resulted in similar action several weeks ago. Both of the Canadian companies, the C.P.N. & Union, have threatened to pull out of the organization, unless the Seattle companies stop calling at B. C. ports while their vessels are en route to or from Alaska. So determined were they upon that move, that it was several days before the prospective trouble was obviated, & it was even necessary to have several conferences between the companies of the association. But even with the present stated withdrawal of the C. P.N. Co., it is believed that moral suasion will again result in drawing the recalcitrant members back into the fold. It is expected that after further discussions participated in by the members of the association, in the two countries, the body will be kept intact, & the C.P.N. people induced to reconsider their action.—Victoria Times.

Ontario & The Great Lakes.

The Thousand Islands passenger traffic has never been heavier than it is now.

W. Power, the veteran ship builder, is reported seriously ill with cancer at Kingston.

The Rainy River Navigation Co. has been incorporated under the Dominion Companies Act, capital \$99,000; headquarters, Rat Portage.

Captain Johnston, of the str. Princess Louise, is said to be negotiating for the purchase of another boat to ply between Ottawa & Thurso, Que.

Capt. J. Robertson, of the str. Darius Cole, is credited with being the oldest commander in active service on the lakes. He will be 73 next Dec. He began sailing 37 years ago.

The wreck of the old str. Rothesay is giving annoyance in the vicinity of Blaisy Point, near Prescott. The iron skeleton of the wheels stands only a few inches below the surface.

A survey of the proposed route of the Montreal, Ottawa, & Georgian Bay Canal is being made under W. Shanley, C.E., in order to satisfy the Government as to the estimated cost of the work.

Capt. Reynolds' str. Empress, built to replace the Golden City, burned last year, was launched at Lakefield July 17. She is 93 ft. over all, 16 ft. beam, has an 85 ft. keel & a promenade deck 78 ft. long.

The Western peninsula will hereafter have first-class service across Lake Erie to Cleveland, from Port Stanley & Rondeau. Tri-

weekly trips will be begun at once, the first steamer of the Lake Erie Navigation Co., the *Ureana*, having arrived at Port Stanley.

On July 20 fire broke out in the hold of the C.P.R. str. *Athabasca*, which was tied up at the dock at Owen Sound. It was caused by an explosion of patent medicines. Efforts to smother the flames by steam proving futile, the hold had to be flooded with water & the damage to the cargo was considerable.

The U. S. Treasury has remitted the penalty of \$3,200 imposed on the Canadian str. *Comfort* for carrying coastwise passengers. She carried a Fourth of July party from Marine City, Mich., to another point in the U.S., via a Canadian port. The captain said that he did not think he was violating any law, inasmuch as he touched at a point in Canada en route.

It is stated that the small passenger steamer *Unique* is to be put in service again, after being in limbo at Sarnia, Ont., on account of debt. An arrangement has been arrived at whereby she comes into the possession of an eastern syndicate. She is being fitted up & painted & will go into the excursion trade among the Thousand Islands of the River St. Lawrence & vicinity.—*Marine Record*.

The Northern Navigation Co.'s str. *Germanic* was launched at Collingwood July 20. She is 190 ft. long over all, 32 ft. beam, depth of hold 12½ ft., registered tonnage 1,300. She has state room accommodation for 200 1st class. Vice-President Long, in referring to the Co.'s increase of capital to \$1,000,000 said that the unexpended \$600,000 would be used in building large vessels suitable for the requirements of the increasing trade; also, that in conjunction with the Dry Dock Co. the N. N. Co. had in view the establishment of a large ship-building industry that would give constant employment to a large number of men.

June touched the high water mark at the Canadian & U.S. canals at Sault Ste. Marie, the freight tonnage of over 3,000,000 tons for the month breaking all records. This tonnage was not only greater than that of any previous

month in the history of the canals, but it exceeded by 244,390 tons the total traffic of St. Mary's canal during the entire year of 1885. Nothing further is needed to demonstrate the marvellous growth of lake commerce during the past 15 years, & the growth during the present year indicates that it will be but a few years when the three locks at St. Mary's Falls will be taxed to their utmost capacity in carrying it.

In the charge against Capt. McIntyre, of the str. *Ongiara*, for Sabbath profanation, brought at Niagara recently, judgment was reserved. The defence put in a number of pleas, but it is held that the magistrate has no jurisdiction. The remedy, if any, is a civil one by action only. The Provincial Legislature can make a crime of it or amend the Lord's Day Act, which was in force at Confederation. It is claimed that the Legislature has no jurisdiction in respect to the Niagara River, as it is an international highway, & that the Dominion Parliament alone has jurisdiction. The Niagara Navigation Co. has a Dominion charter, & when a corporation is not liable its servant is not liable.

Six or eight months ago the wooden steamer of 2,500 to 2,800 tons capacity, of which there is quite a large number on the great lakes, & most of them not very old, was not looked upon as very valuable property. Now these vessels are held in some cases at prices 50% above what they could be bought for last winter. Several wooden steamers of moderate size that were on the market just before the opening of navigation, were offered at \$55,000 to \$65,000; now \$80,000 & \$85,000 are the prices asked for them. Negotiations are pending for the transfer of several vessels that would be considered almost worthless a short time ago, but the parties are slow in coming to terms on account of the general advance in values.—*Marine Review*.

There is said to be no truth in a report which recently emanated from Toronto to the effect that the G.T.R. authorities were considering the advisability of establishing a line of steamboats from either Owen Sound or Goderich in opposition to the C.P.R. steam-

boat service. The G.T. authorities have heard nothing of such a project. The G.T.R. has its affiliated steamboat connections with the great lakes from both Owen Sound, Goderich & Collingwood, to Chicago, Duluth & other lake centres, & it needs no other. The existing service is sufficient for the present requirements of the traffic. Some newer boats will, no doubt, in due course, take the place of the older ones now in the service, but that is a matter of time. The service as it is now conducted is satisfactory.

The proposed St. Clair & Erie Ship Canal involves the building of a canal across the narrow neck of land separating Lakes St. Clair & Erie. The distance is 13 miles. The construction of a canal of this length would save 79 miles of dangerous lake & river navigation. The canal would undoubtedly be of great advantage to U.S. shipping, more so than to Canadian. The shipping passing Detroit amounts to 32,000,000 tons a year. It is estimated that at least two-thirds of this amount would use the canal, & that charges on this tonnage, at 2½c. a ton, would produce a revenue of \$550,000 a year, enough to finance the enterprise. In addition to this, it is claimed there would be a saving of \$1,014,200 a year to the vessel owners by reason of the shorter & safer route via the canal. The promoters do not ask for a subsidy.

The question as to the date on which the St. Lawrence canals will be available for the passage of vessels of 14 ft. draught is one on which officials do not feel like making any definite statement, though all indications point to the completion of all the pending improvements, with the exception of those on the Cardinal section of the Galops canal, by the latter part of August. The Soulages is reported as practically ready & the other works are understood to be in such an advanced stage as to justify the hope that the enlarged & deepened channel may be thrown open by the date mentioned or by Sept. at the latest. The contractors for the Cardinal section have agreed to take all vessels of more than 9 ft. draught up the river by means of strong tugs, so that the opening of navigation from the

Large sum of money to lend on mortgage at current rates of interest. Apply to

GEO. J. MAULSON,
195 Lombard St. WINNIPEG

Welland down on the improved scale will not be kept back on their account.

Probably a month will elapse before the consolidation of towing & wrecking interests on the great lakes is fully effected, but it is not at all probable now that there will be any hitch in the plans, as enough has been done to insure the success of the new company. Even after the money required for this undertaking had been subscribed by some 50 of the leading U.S. vessel owners of the great lakes, including the managers of all the principal ore companies & several representatives of the line-boat interests in Buffalo, & it was found that the stock could be sold four or five times over, it was still agreed that unless the property of the various harbor tug lines could be brought into the combination at such prices as to insure sound business methods, the scheme was not to be carried out. The plan of organization, which involves a certain amount of stock to be taken by the several companies entering into the organization, is so conservative as to appeal to the tug owners as well as to the vessel owners.—*Marine Review*, July 13.

Maritime Provinces Shipping.

The steamers of the Dominion Atlantic Ry. & of the Yarmouth S. S. Co. have been doing some racing lately between Yarmouth & Boston.

Superintendent Chipman has made some changes in the Plant line offices in Halifax: R. H. Humphrey becomes Agent in charge of accounting department; F. H. Chipman, City Passenger Agent; J. A. Lane, Chief Freight Clerk; F. F. Coates, Secretary & Assistant to Superintendent.

ELECTRIC RAILWAYS.

The Lines in Western Canada.

British Columbia Electric Ry.—In Victoria the Co. will shortly inaugurate reduced fares for workmen going to & returning from work on the Esquimault branch, & will also correct some anomalies in the present system of transfers.

Earnings & expenses for June:

	1898.	1899.	Increase or Decrease.
GROSS EARNINGS.			
Railway—Vancouver branch	\$6,450	\$7,601	\$1,151
Victoria "	7,189	6,540	649—
Westminster "	6,181	7,036	855+
Lighting—Vancouver "	5,119	5,393	274+
Victoria "	3,397	3,596	199+
Total gross earnings	\$28,336	\$30,166	\$1,830+
Working expenses	\$17,826	\$18,402	\$576+

Gross earnings April 1 to June 30.....	\$87,763	\$92,344	\$4,581+
Net earnings April 1 to June 30.....	\$31,780	\$35,981	\$4,201+
+Increase. —Decrease.			

Nelson Electric Tramway.—The first spike was driven Aug. 1st, by C. S. Drummond, a director of the British Electric Traction Co. It was a gold one & was afterwards presented to him by the Mayor. Construction will be proceeded with at once. A line will run from the C.P.R. station to Baker St., thence to Bogustown, if pending negotiations are successfully concluded. A branch will run up Stanley St. as far as Mines road, thence to Kootenay St., & from there to the skating rink, at the corner of Houston & Stanley Sts., which belongs to the Co. A line will also run along Observatory St., or possibly Robson St. to Josephine St., thence down to the main line on Baker St. A considerable quantity of rails, etc., has arrived. Power will be supplied by the West Kootenay Power & Light

Co., from Bonnington Falls. Halifax Hall is engineer in charge of construction. It is said that the British Electric Traction Co. (the parent company) had such faith in the future of Nelson that it has decided not to place the tramway shares on the market, but to keep them.

Re Sunday Cars.—At the recent session of the Manitoba Legislature, a bill introduced by R. P. Roblin, to amend the Municipal Act by allowing the council of any city to submit to a vote of the people the question of running electric cars on Sunday, was defeated.

Ontario Electric Railways.

Barrie.—With reference to the paragraph in our last issue, pg. 218, we are informed that the Royal Electric Co. did not make application to the Barrie town council for a franchise for an electric railway between Barrie & Allandale, as the Co. manufactures only; but its general agent at Toronto, J. A. Kammerer, wrote making enquiries from the council as to what franchise or encouragement would be given to a syndicate which would be willing to build an electric railway. The enquiry was made for outside capital, but up to July 25 no reply had been received.

Berlin to Port Dover.—There are said to be prospects of a line being built between these points.

The Hamilton Consolidations. At the time of writing (Aug. 7) there is very little to add to what was said in our last issue, pg. 221. There appears to be no doubt that the Cataract Power Co., represented by J. Patterson, has secured control of the Hamilton & Dundas line, the Manager having been notified to that effect by the owners. It is said the wide cars now on that line will be transferred to some other road & replaced by narrower cars which can be run over the double tracks in Hamilton. A rumor that Mr. Patterson's backers would take over the Hamilton, Grimsby & Beamsville line is again denied, with the statement added that the new company proposes to build a fast freight line to Toronto. Mr. Patterson had some people from New York, Chicago & Boston looking over the field during the third week in July. It was announced that the Hamilton St. Ry. & the Hamilton & Dundas Ry. would be transferred on Aug. 2, but for some reason not made public the transfer did not take place. It is said Mr. Patterson has to pay 125 for the Hamilton St. Ry. stock held by the shareholders who pooled their interests.

London St. Ry.—Earnings for July, \$1,056.13; operating expenses, \$5,531.14. Loss, \$4,475.01. In July, '98, the earnings were \$10,809.31; operating expenses, \$6,000.52. Net earnings, \$4,808.79. The strike still continues, with occasional disturbances by some of the citizens.

The Ottawa Electric Ry. Co. donated \$400 to the Associated Charities of the City out of the proceeds of the first Sunday's traffic on July 23. The row in the City Council over the by-law granting the Co. permission to run on Sundays has ended, the by-law having been finally passed.

The Port Arthur Electric Ry. has had a lot of improvements made recently in the wires & roadbed.

Toronto Railway. The gross earnings are:

	1899.	1898.	Increase.
Jan.	\$95,690.12	\$86,502.36	\$9,187.76
Feb.	91,860.30	82,402.19	9,458.11
Mar.	102,444.88	95,184.42	7,260.46
April	95,212.37	86,898.83	8,313.54
May	104,806.62	92,670.35	12,136.27
June	109,063.18	94,119.32	14,943.86
July	116,844.41	104,402.07	12,442.34
	\$716,922.41	\$639,214.39	\$77,708.02

There has been very little change in the position of affairs respecting the building of radial railways by this Co. east & west from To-

ronto since the matter was referred to at length in our April issue, pg. 121. A short time ago Manager Keating met the Peel County Council with reference to crossing the Etobicoke River, when the matter was referred to a committee of the Council to meet on the spot & settle the conditions under which the Council will allow a railway bridge to be built. It is understood that the question of the extensions will be considered at the next board meeting of the Co., but this may not be held for some little time as a number of the directors are away.

It is reported that the franchise of the Toronto Baseball Club has been sold by A. Irwin, C. A. Campbell & T. G. Soole, to the Toronto Ferry Co. The Toronto Ry. Co. is said to have been negotiating for it with the intention of removing the games from the Island to the city side, & this forced the Ferry Co. to protect itself. The price is said to be about \$10,000.

Woodstock to Ingersoll.—Dr. Ickes, the promoter of this proposed line, was in Woodstock recently & expressed himself as satisfied with the 50 years franchise offered by Woodstock.

Quebec Electric Railways.

Montreal St. Ry.—The gross earnings are:

	1898-9.	1897-8.	Increase.
Oct.	\$133,419.69	\$116,093.09	\$17,326.60
Nov.	125,129.10	119,088.08	6,041.02
Dec.	127,678.00	113,029.33	14,648.67
Jan.	125,276.04	110,155.96	15,120.08
Feb.	113,838.02	102,425.99	11,412.03
Mar.	123,754.11	114,476.98	9,277.13
April.	130,405.96	110,619.27	19,786.69
May.	145,466.38	123,308.08	22,158.30
June.	156,858.34	132,964.61	23,893.73
July.	154,048.07	143,986.63	10,061.44
	\$1,338,879.71	\$1,177,788.02	\$161,091.69

The Verdun extension has been completed to the western limits of the village. The line runs along the Lower Lachine Road, right beside the river, as far as the Lachine Rapids, & to within a quarter of a mile of the Lachine Rapids Hydraulic & Land Co.'s power house. Between the Queen's Park & the end of the route an extra fare is charged each way. The route chosen is one of the prettiest on the island of Montreal.

The Co. is arranging to build a second street car line into Westmount, having concluded an arrangement with the Seminary of Saint Sulpice, by which it secures the right of way over 30,625 ft. of land, running through the Seminary's property. The portion purchased is bounded by Sherbrooke st., Cote des Neiges road, Cote des Neiges corporation & Westmount. Thirty cents a foot is the price agreed upon, bringing the total up to \$9,187.50. The Co. intends to build the line from the present terminus of the Guy st. line up the Cote des Neiges road, a short distance beyond Cedar avenue, through the seminary grounds, on what was at one time intended for Elm avenue. It is said this line will ultimately be extended to the cemeteries, so that funeral cars may be run.

The cars are being equipped with life-saving fenders which are being made at the Co.'s works.

The Co. has placed an electric pay car in service, so that the men, in place of receiving their wages at the Co.'s office, are now paid at the various centres. This greatly facilitates matters, as the men are spread out in their various occupations over a large area. The car is constructed much on the same principle as the regulation mail car used in many sections of country in the electric railway service. It is divided into two compartments. One is merely a passage way through which the person receiving money passes, entrance being made at one end of the car & exit by the other. In the other compartment, which is entirely closed in, are the paymaster & the checker. These two officials have

the drivers at their disposal, but only one of them is the giving of envelopes. Of course there are a conductor & motorman. The windows on both sides of the car are protected by wire netting.

Carried by a law recently passed by the City Council, when a car stops at an intersecting street, it is stopped at the near corner instead of the far one, as heretofore. The speed of cars is limited to 8 miles an hour & 4 miles an hour when turning street corners & at intersecting lines.

The Co. is contemplating the erection of a club house for its men at the corner of Harbor & St. Catherine streets. The plans show a building modern in all respects, with every convenience for the welfare of the men.

The Montreal Park & Island Ry. Co. is seeking to restrain the town of St. Louis from interfering with its tracks on Park Avenue. The Co. alleges in substance that it has acquired by transfer the franchise granted to A. J. Corrivau in 1893 to construct & operate an electric railway in St. Louis & that since then this particular branch of its system has been declared to be a road to the general advantage of Canada by the Dominion Parliament, & that the defendant had no right on any pretext whatever to interfere with it & tear up the tracks as it did. Substantially the defence is that by its charter the corporation has the power conferred upon it to level, pave or macadamize any street in its limits, to level the ground for sidewalks, etc., that the work done with that end in view on Park Avenue was done in the regular way by a resolution of the Town Council, adopted on a report of the town engineer, to render Park Avenue fit for traffic & this in view of the selling of the exhibition grounds in lots. Moreover, if the tracks were removed it was because they were above the level of the street. The corporation denies that it is in contempt, & alleges that

when the writ was served all work was stopped.

The following notice to conductors & motormen has been issued:—On & after Aug. 1, motormen & conductors who have been in the Co.'s employ for 2 years or over will receive 15c an hour. There will also be \$100 distributed at Christmas in prizes to motormen & conductors holding the best records, as follows:—\$20 each for the motorman & conductor having worked 350 days or more during the year & having the best record. \$15 each for the motorman & conductor having worked 200 days or more during the year & having the best record. \$10 each for the motorman & conductor having worked 100 days or more during the year & having the best record. \$5 each for the motorman & conductor having worked 60 days or more during the year & having the best record. The records will be based upon the carrying out of the orders entered in the order book, obedience to the rules of the Co. & the care of the Co.'s property.

Rumors have been revived lately as to the absorption of the M. P. & I. Ry. by the Montreal St. Ry. Co. It is said that the M. P. & I. Co.'s property can be had for \$800,000 but that the M. St. Ry. Co. is not inclined to give that amount at present.

Quebec Electric Ry.—The Quebec, Montmorency & Charlevoix Ry. Co. has paid the City of Quebec \$2,365, being 4% on the earnings of the line in the city for the 6 months ended June 30, which amounted to \$59,141.

The Queenston-Lewiston Bridge.

The suspension bridge across the Niagara River, between Queenston, Ont., & Lewiston, N.Y., was opened July 21, under the auspices of the International Traction Co., which has built it through its subsidiary companies,

the Queenston Heights Bridge Co., of Canada, & the Lewiston Connecting Bridge Co., of New York State. The location of the bridge is on the site of a suspension bridge erected in 1850-51, & adheres pretty closely to the lines of the old bridge, which was wrecked by a hurricane on Feb. 1, 1864, & not rebuilt, because it was an unprofitable investment. As the great suspension bridges which stood further up the gorge have given place to new steel arches, this suspension bridge is the only structure of the kind spanning the Niagara. The cable span of the new bridge is 1,040 ft., & the span of the stiffening truss 800 ft. From center to center of trusses the width is 28 ft. clear, & the roadway has a clear width of 25 ft. The versed sine of the cables is 87 ft., & the height of the superstructure above high water mark is 65 ft. The height of the bridge above the tracks of the Niagara Gorge R.R. is about 15 ft. The stiffening truss extends about 4 ft. above the floor, & the only railing is light strips of iron flats reinforced by oak half-rounds. The floor is of 2 in. oak plank laid crosswise. A single track for trolley cars is laid through the center, the width of the bridge affording ample room for vehicles to pass on either side of the track. There is no walk for pedestrians, as the point of the bridge's location is such that there is not likely to be much travel on foot.

There are 4 towers, 2 on each side of the river. The towers on the New York side have a height of 26 ft., bases of 13 ft. square, & are located 28 ft. back from the edge of the bluff. The towers on the Canadian side have a height of 18 ft., with bases 12 ft. square, & are located 15 ft. back from the edge of the bluff, the ledge on the Canadian side being more firm than on the New York side. In the construction of these towers it was found possible to use a great part of the old towers in the new bases, & the old inscription stones

A Popular Route to New York

Canadian Pacific, and Toronto, Hamilton and Buffalo Railways in connection with the New York Central & Hudson River Railroad.

Leaving Toronto in the evening at 5.20 p.m. in one of the through sleeping cars of the Wagner Co., you are landed at Grand Central station, in the very heart of the City of New York, 4th Avenue and 42nd Street, at 8.15 next morning, adjacent to all hotels and business houses and avoiding the annoyance of transfer.

This is also the route of the famous
"EMPIRE STATE EXPRESS"
 Fastest Train in the world.

Call on nearest ticket agent of the C.P.R. or T.H. & B. for further information, or address

of the towers on both sides of the river were preserved, & have place in the new towers. The new stone used in the towers on the New York side came from Buffalo quarries, & that in the Canadian towers from Queenston quarries.

Four cables form the main support of the bridge. Each of these is composed of fourteen $2\frac{1}{4}$ in. galvanized cast steel wire ropes. These cables once formed a part of the old suspension bridge that stood close to the falls, & which was taken down in the early part of last year. The span of the upper suspension bridge was so great, & the anchorages so far back from the towers, that it has been found possible to cut the old cables in half, & thus use them on the shorter span of this new bridge. However, when so cut they are hardly long enough to fill out the entire span & reach back to the anchorages, & for this reason about 75 ft. at each end of the cable span is made up of eye-bars. The cables are anchored in solid rock about 150 ft. back from the towers, the shafts being filled with concrete. The suspended span is connected to the river banks by 2 approach spans, the one on the New York side being $34\frac{1}{2}$ ft. long, & the one on the Canadian side $19\frac{1}{2}$ ft. long.

On each side of the river the bridge has long approaches on which double tracks are laid for electric cars passing on & off the bridge. These approaches are about 25 ft. wide; the one on the Canadian side is about 1,000 ft. long, & the one on the New York side about 800 ft. long. Both approaches have face walls to prevent the native shale disintegrating under the weather. The approach wall on the New York side runs close beside the tracks of the Niagara Gorge R.R. Its highest part is about 19 ft., & for 660 ft. it drops at a 1% grade, & then for 200 ft. at a 2% grade. The high part is laid in cement, & the remainder is laid dry. These approach walls form the bridge landings. Gorge R.R. tracks are connected with the bridge on the New York side, & the Niagara Falls Park & River Ry. tracks with the bridge at the Canadian end. This makes it possible for passengers to travel around the beautiful gorge without leaving their seats in the electric cars. Starting, for instance, from the New York State Reservation, at Niagara Falls, N.Y., the trip consists of crossing the river over the new upper steel arch in a car of the Niagara Falls Park & River road; passing down that line along the top of the high bank on the Canadian side to Queenston, there crossing on the new suspension bridge to the New York side, where the tracks of the Niagara Gorge R.R. are taken back along the water's edge & up the bank to the point of starting, thus allowing passengers to view the river & banks from above & below, all forming a most delightful trip.

The capacity of the new Suspension bridge is such that it will accommodate the heaviest of trolley cars, together with a uniformly distributed load of 40 lbs. to the square foot over the entire structure. About 800 tons of metal have been used in its construction, & the cables weigh about 200 tons.

Canadian Enterprise in Brazil.

Comparatively few northern people know that in the southern part of Brazil lies one of the richest & most rapidly growing cities of South America, the capital of the state of Sao Paulo, & most advantageously situated as regards climate, elevation, railway connections & seaport facilities. The city of Sao Paulo is situated about 40 miles from the seacoast, directly under the tropic of Capricorn, $23\frac{1}{4}$ degrees south of the Equator. About 5 miles from the ocean hills rise abruptly to the height of 2,000 ft., & from this point a tableland extends inland for many miles. Sao Paulo is one of the highest points on this table land, its elevation

being 2,500 ft. above the sea level. The climate is, for a tropical country, cool, bracing & healthful, & is not characterized by that depressing tropical humidity which is felt in the seacoast cities of Brazil. The latest estimates place the population at not less than 250,000, the growth having been extremely rapid during the past ten years. It is to this city that the attention of a number of Canadian & New York capitalists has been directed for some time, with the result that a syndicate has been formed, consisting of F. S. Pearson, Chief Engineer of the Metropolitan Street Ry. Co. of New York; W. Mackenzie, who is largely interested in many Canadian street railway properties; B. F. Pearson, of Halifax, N.S., & others, to develop the street railway, light & power interests of Sao Paulo. Franchises have been obtained for street railway lines covering all desirable routes in the city, including a few miles of street now traversed by a mule railway which has been in existence for some years. R. C. Brown, whose management of the Halifax property was such as to win him the entire confidence of its owners, has gone to Sao Paulo with a large consignment of electric railway apparatus, & is in full charge of construction, equipment & temporarily, of the operation of the system. He is accompanied by F. S. Pearson, who will determine the main outlines of the installation, locate power stations, etc.

The syndicate has obtained a concession for a number of lines laid out in such a way as to give the whole city a good service, but it is not believed that the development of the system will stop with the completion of these lines, for there are desirable suburbs to be reached. Coal in Sao Paulo sells for \$10 a ton, & wood is equally costly. As a consequence, the price of gas & electric lighting is high, & none of the city lighting is as yet done by electricity. Five thousand commercial incandescent lamps are, however, supplied from the present station. The electric light service begins at sundown & except for a few large customers, extends only until 10 o'clock in the evening. About 20 miles west of the city of Sao Paulo is the only large water power near the city, with a profitable minimum supply of 10,000 h.p., to 20,000 h.p. This has been secured by the syndicate, which intends developing power & transmitting it to Sao Paulo for furnishing the lighting, railway & power service. The introduction of cheap power into a city where steam power at present costs from \$100 to \$150 a year will mean a great deal to its industries & to the lighting & railway enterprise. The right to build a transmission line has been obtained & this line will pass through the town of Augua Branca, where there are at present several factories.

The syndicate has obtained the government approval for a type of street car which is almost an exact duplicate of the Broadway, New York, car. At present there has been shipped to Sao Paulo 10 miles of track, with necessary ties & other railway material. 15 cars, Broadway pattern; two 225 kw. generators for direct connection with the engines & boilers. By the end of the year it is expected that 35 miles of track & 75 cars will be in Sao Paulo, & within a short time thereafter the temporary steam power station, now building, with apparatus described above, will be re-

ASSESSMENT SYSTEM.

THE BEST FRATERNAL BENEFIT SOCIETY IN THE WORLD

THE SPLENDID RECORD OF THE I. O. F.

Cost to Join the I.O.F.

For \$1,000 Mortuary Benefit.)	(For more than \$1,000 Mort. Benefit.)
Initiation fee (minimum) .. \$1 00	Cost to take \$2,000 Mort. Benefit..\$6 00
Certificate fee .. 1 00	" " \$3,000 " " 7 00
Registration fee. 1 00	" " \$4,000 " " 9 00

Total minimum cost .. \$4 50	Sick benefits, when required, cost extra.

Benefits given by the I.O.F.

- 1.—Social and Fraternal Privileges of the Court Room.
- 2.—Free Medical Attendance by Court Physician where not dispensed with by Court by-law; also trained nurses in certain cases.
- 3.—A Sick Benefit of \$3 to \$5 per week, subject to provisions of the Constitution and Laws of the Order; optional, and when taken cost's extra.
- 4.—A Total and Permanent Disability Benefit of one-half of face value of policy, with exemption from further payment of premiums or Court Dues.
- 5.—An Old Age Benefit consisting of exemption from payment of premiums and Court dues after age 70.
- 6.—An Old Age Disability Benefit of one-tenth of face value of policy payable yearly for ten years, on being declared totally and permanently disabled by infirmities of age after the seventieth birthday.
- 7.—An Old Age Pension payable during disability, which may be taken as a substitute for the Old Age Disability Benefit.
- 8.—A Burial Benefit of \$100 at death of a Pensioner.
- 9.—A Funeral Benefit of \$50 at death of a member enrolled in Sick and Funeral Benefit Department.
- 10.—The Mortuary Benefit of \$500, \$1,000, \$2,000, \$3,000 \$4,000 or \$5,000.

Or Any Officer or Member of the Order.

placed by power electrically transmitted from the waterfalls by the three-phase system. At this waterfall a brick and cement dam, 40 ft. high & 400 ft. long, will be constructed. The following particulars are given of the Co.'s method of construction. The standard 7-in. girder rail, which is used for city streets, weighs 90 lbs. a yard & is mounted on steel ties spaced every 10 ft. The ties are set in concrete, the latter being carried a distance of 4 11-16 ins. below the base of the rail. The rails are connected with the ties by clips & are bonded to them, making a cross connection. The joints are also bonded by the Anderson west end bond. The guard rail weighs 110 lbs. a yard, & the T rail for suburban service 62 lbs. a yard.

W. Kelly, for many years eastern passenger agent of the Chicago, Milwaukee & St. Paul Ry., has been appointed general passenger agent of the Niagara Gorge R.R.

Judge Lillibridge, of the U.S. Circuit Court, at Detroit, Mich., recently delivered a decision permanently enjoining the street railway companies from carrying freight over their lines within the city. Hitherto the suburban companies' cars have carried freight over the city companies' lines, although there has been no special authority for doing so.

At the beginning of Oct. electric traction will be installed on the lines of the Metropolitan Ry. Co., in London, Eng. The newspapers unanimously applaud the change from steam power. The system is entirely underground, & the smoke & gases from the engines have always been a most objectionable feature, preventing many persons from riding on the lines. This handicap will be entirely removed by the use of electricity.

The All-British Pacific Cable.

The Act passed by the Dominion Parliament at the recent session provides that the Governor in Council may enter into an agreement with the Governments of the United Kingdom & of the Australasian colonies, for the purpose of securing the construction & operation of a cable between Canada & Australasia. A Board of Commissioners, composed of 8 members, shall be created by authority of the Imperial Parliament of the United Kingdom. The cable & all property acquired for the undertaking shall vest in this board, in trust, to carry out the undertaking for the benefit of the Governments sharing in it. To carry out the undertaking, the board may issue debentures, payable at not less than 25 years nor more than 50 years from issue, & bearing interest not exceeding 3% per annum, the total amount of debentures not to exceed £1,700,000. Subject to the cost of operation, maintenance & management, & the setting apart of a sinking fund to provide for renewals, the principal & interest shall be a 1st charge on all the property & earnings of the undertaking. The cable shall be laid between Canada & Australasia via the Pacific Ocean, & may be in sections, but all points of its landing shall be on British territory. The Governor in Council may appoint, & shall be entitled to appoint, 2 of the commissioners, who shall, with the remaining 6 members appointed, 3 by the United Kingdom & 3 by the other contributing governments, constitute the board. The respective governments joining in the agreement shall be interested in the profits & losses of the undertaking in proportion to the amount of their liability as aforesaid. The Governor in Council is authorized, on behalf of Canada, to guarantee payment of five-eighths of the principal of the debentures, & of interest thereon.

In introducing the bill the Postmaster-General said that as to the extent to which the

scheme would involve Canada financially, it was impossible to give anything but estimates. The line would have to be laid in places at a depth of 3,000 fathoms, which exceeded the depth of any cable at the present time, but once it was laid this circumstance would help to preserve it. The estimate of cost made by the Imperial Pacific Cable Committee was £1,422,000. Since then the cost of material had appreciated to the extent of about £170,000, making the total estimated cost £1,592,000. To this it was proposed to add £108,000 as a margin, & to figure the total cost at £1,700,000. It was confidently anticipated by all that the cable would become a paying enterprise within a very few years. The cost of maintenance, repairs, sinking fund & interest, would be £144,886, & it was believed by experts that, after paying all these charges, there would be a surplus for the 1st year of operation of £1,114, which would increase by the 5th year to £124,565.

General Telegraph Matters.

Advices received at Vancouver, July 31, stated that the Dominion Government telegraph line from Bennett had been completed to Little Salmon. It was expected that it would reach Fort Selkirk by Aug. 25 & Dawson by Oct. 15.

The G.N.W.T. Co. has opened the following offices:—Cacouna, Que.; Ekfrid, Ont.; Forestdale, Que.; Glanworth, Ont.; Grimsby Park, Ont.; Roberval Hotel, Que.; Seeley's Bay, Ont.; St. Leon Springs, Que. The office at Stittsville, Ont., has been closed.

A telegraph line is being built by the C.P.R. along the Columbia & Western Ry., from West Robson to Midway, B.C., & will be completed simultaneously with the track. It is already in operation between West Robson & Gladstone, about 45 miles. Pending the completion through to Midway, the Vernon & Nelson Telegraph Co.'s line from Rossland to Greenwood is to be used for telegraphing as well as telephoning.

It is said that when the Government telegraph line is completed between Bennett & Dawson, Yukon, the rate for a 10 word message will be \$2.75, or 27½c. a word. It will be remembered that the Canadian, British Columbian & Dawson City Telegraph Co., in its debenture prospectus, gave an estimate of a revenue of 5 shillings, or \$1.22 a word, between Dawson City & Quesnelle, B.C., the extravagant absurdity of which we pointed out at the time.

The C.P.R. Co.'s Telegraph has closed these offices:—Wawanesa, Man.; Otter Lake, Ont.; South March, Ont. The following offices have been opened:—British Columbia: Gladstone, Kuskanook, McLean's Tunnel, West Robson, Kootenay Landing, Material Yard, Republic. North-West Territory: Bowell, Strathcona. Ontario: Jordan, South Lancaster. Quebec: Coteau, Fairfax, Heathton, Kateville, Massawippi, Mulvena, St. Edwards, Trenholmville, Cassville, Granite Quarry, Johnville, Kingsey Siding, Marlow, Norton Mills, St. Milo, Tuck's Landing.

The Dominion Department of Public Works is asking tenders for 165 tons of no. 8 S. W. G. galvanized iron telegraph wire (354 to 365 lbs. a mile), delivered in bond at the C. P. R. station at Vancouver, B.C. The quality of the wire & galvanizing must be such as will afford a test corresponding to the Felton-Guilleaume standard EBB; having a constant (resistance x weight, per mile) under 5,700; breaking strain, over 1,100 lbs., & taking not less than 20 twists in 6 ins. Weight of lengths, without joint, 90 to 112 lbs. Also for delivery with the above 5 tons no. 9 soft annealed galvanized iron tie wire.

A Skagway, Alaska, telegram of July 18 said:—"Two representatives of a company

which claims to have a concession for a cable from Vancouver, B.C., to this port are now here. They say steps will very shortly be taken to begin the laying of the cable. Much London capital is said to have been subscribed for this cable, in order that the mining market of London may be in telegraphic communication with the gold fields of the interior." In view of the fact that the Dominion Government has decided to extend its line from Quesnelle, B.C., via the Stikine River & Teslin Lake, to connect with the line being built from Bennett to Dawson, it is not likely a cable will be laid. In any case, cable experts say the route is almost impracticable for a cable.

The Spokane & Northern Telegraph Co. will, it is said, make some extensions into the Boundary Creek country. When D. C. Corbin sold the Spokane Falls & Northern Ry. system to the Great Northern Co. he retained the telegraph line which runs from Spokane to Rossland, & from Northport to Nelson. He has been granted a Dominion charter for a telegraph line into the Boundary Creek country. The new line will, it is said, be constructed from Marcus, where connection will be made with the line running to Rossland, Spokane & Nelson. It may be extended to Cascade, Grand Forks, Columbia, Greenwood & Midway. From the latter point it may go down the Kettle River to Curlew & thence to Republic. The latter place would thus be given direct communication with the leading Boundary points.

A London, Eng., despatch of July 30 says:—"Some very interesting tests of wireless telegraphy were tried last week, Maskelyne, the famous wonder worker of the Egyptian Hall, being the experimenter. On Wednesday a balloon was sent up. When almost out of sight messages were sent from the earth to the balloon & replied to. Then at a distance of 400 yards a powder magazine was, by means of wireless telegraphy, blown to pieces. Maskelyne affirmed that the effort would have been quite the same at a distance of 10 miles. It would be interesting to hear Marconi's opinion about this, but as he is with the manoeuvring fleets we must wait for that to test the theory. Still, a further test. Another balloon was sent up, but carried no people this time, only a tail of cartridges of gun cotton. After waiting till the balloon was but a speck in the sky a button was pressed. There was a flash, a very distinct boom, & the speck disappeared."

A. E. Porter & W. A. Ander, of Bennett, will apply at the next session of the British Columbia Legislature for an act to incorporate a company to construct & operate a system of wireless telegraphy for the transmission of messages from some place near Bennett, Cassiar District, by the most direct route southeasterly through the Province to some point on or near the C.P.R. in the Province, with power to build branches to some point on Vancouver Island, & to other points in the Province. Speaking of this application, the Railroad Gazette says:—"Is a charter necessary for the right to put up a pole on a quarter acre of private ground once in a hundred miles? Must authority be got from the Government to sling electricity through the air? We shall next be told that the inhabitant of New York must get a charter in New Jersey to look at summer sunsets or to smell the fertilizer factories. Perhaps, however, our Canadian friends are simply aiming to stake out a claim to sufficient aerial territory to prevent intrusion by rival ether-disturbers. The annoyances so prevalent in various parts of the country during the past few years in consequence of the disturbance of railroad signal circuits, by stray electricity from street-car lines, suggest that doing business in the sky may not be so free from the sordid elements of earthly life as the poets & electricians would have us think."

General Telephone Matters.

Rossland, B.C., has given a franchise to the Canadian Telegraph & Telephone Co.

In Moncton, N.B., 26 telephone instruments were burned out during a thunderstorm on July 10.

The business of the Bell Telephone Co. at Braxville, Ont., has increased rapidly lately, 10 operators being now employed.

In the Imperial House of Commons, Aug. 1, a bill to incorporate the Bell Telephone Co. was passed its 3rd reading with only 20 dissentients. It continues the franchise of the present company until 1911.

On July 24 poles were reported as being up for 10 miles on the new Brunswick Telephone Co.'s extension from Moncton to Buctouche, & it is expected to have the work completed during Aug.

Winnipeg City Council has authorized a committee to make the best terms possible with the Bell Telephone Co. to carry on the fire alarm system until the city is ready to take it over in about 6 months' time.

The Western Union Telegraph Co. & several other companies, have brought suit against the American Bell Telephone Co., under the Western Union-Bell contract, in which they seek an accounting in stocks & dividends amounting in the aggregate to about \$10,000,000. This suit not only directly affects the A.B.T. Co., but also all its sub-companies' stock & holdings.

S. L. Dakin, Beaver Harbor, N.B., & others are applying for incorporation under the N.B. Companies Act, as the Penfield & St. George Telephone Co., capital \$2,000, headquarters at Beaver Harbor, to establish telephone communication between St. George & Black's Harbor, Penfield, Penfield Ridge, Bonny River, LeTete Harbor, Mascarane, Back Bay & West Isles.

T. T. Bailey, Portage la Prairie, Man., is said to have received intimation from the Bell Telephone Co. that a petition from Portage la Prairie, asking for the establishment of a long distance system, has been favorably considered,

that estimates will be made of the cost & probable revenue, & if these are favorable the work will be proceeded with between Winnipeg & Portage la Prairie, with a possible extension to Brandon & other towns.

Prof. A. G. Bell is reported to have explained in a lecture how he came to invent the telephone as follows:—"My father invented a symbol by which deaf mutes could converse, & finally I invented an apparatus by which the vibrations of speech could be seen, & it turned out to be a telephone. It occurred to me to make a machine that would enable one to hear vibrations. I went to an aurist, & he advised me to take the human ear as my model. He supplied me with a dead man's ear, & with this ear I experimented, & upon applying the apparatus I found that the dead man's ear wrote down the vibrations. I arrived at the conclusion that if I could make iron vibrate on a dead man's ear I could make an instrument more delicate which would cause those vibrations to be heard & understood. I thought if I placed a delicate piece of steel over an electric magnet I could get a vibration, & thus the telephone was completed. The telephone arose from my attempts to teach the deaf to speak. It arose from my knowledge, not of electricity, but as a teacher of the deaf. Had I been an electrician I would not have attempted it."—Electrical World.

Among the Express Companies.

The B.C. Express Co. reports business as very fair.

D. C. Jackson has been appointed Superintendent of the Alaska Pacific Ex. Co., with headquarters at Skagway, Alaska.

W. M. Gordon has been appointed Route Agent of the Dominion Ex. Co., with headquarters at Winnipeg, with charge of all offices between Moose Jaw, Assa., & Fort William, Ont., inclusive, & all intermediate branch lines.

R. E. Helme has been appointed Route Agent of the Dominion Ex. Co., with head-

quarters at Nelson, B.C., vice A. Devitt resigned, with charge of following territory: all offices on main line of C.P.R. west of Moose Jaw, Assa.; to & including Revelstoke, B.C.; Edmonton branch; Macleod branch; Lethbridge branch to & including Kootenay Ldg.; all offices south of Revelstoke, B.C.

F. G. McKay has been appointed Route Agent of the Dominion Express Co., with headquarters at London, Ont., vice R. E. Helme transferred, with charge of following territory: all offices on C.P.R. between Galt, Ont., & Detroit, Mich., inclusive; Ingersoll branch; Lake Erie & Detroit River Ry., & the following stage routes: between Galt & Hespeler; between Galt & Waterloo; between Ayr & Brantford; between St. Thomas & Aylmer.

On July 27 Acting Chief of Ontario Police Mains arrested, at Niagara Falls, A. Nixon, who gave St. Catharines as his residence, & J. Chrysler, who gave his residence as Allandale, but claims he has been teaching school at Elmsdale the past year. He is well known at Niagara Falls, & it is alleged that he has a criminal record. The two were charged with conspiring to defraud the Canadian Ex. Co. It is stated that they signed an order at Niagara Falls & forwarded it to the St. Catharines agency, to forward any money package from St. Catharines to Port Robinson. To this, the charge is, they signed the fictitious name of C. N. Hutton. The sequel to this was a check for \$200, supposed to be forged on the Bank of Commerce, Collingwood, made in favor of C. N. Hutton & signed, in supposed forgery, with the name of G. Logan, there being, it is said, over \$300 in that bank in favor of G. Logan, which has been, it is said, advertised as unclaimed. When the bank received the check, purporting to be signed by Logan, with a request from "Hutton" to forward the money to St. Catharines, the bank authorities handed the matter over to their St. Catharines agency, the arrest of Chrysler & Nixon following. The men were brought before the Police Magistrate at Niagara Falls, & were committed for trial.

The Railway of the Future.

By Adolphe Davis, C. E.

About 60 years ago England gave birth to the steam surface railway & inaugurated the present system, & now it is again about to inaugurate the railway of the future. England waits the proper time before accepting new inventions, & does not spend money uselessly. Her people will generally make sure of a new undertaking, & will wait to see if anything better will turn up that can replace what is already in operation with lasting advantage. They have waited 60 years for new developments in railway systems, but there has been comparatively no change in the last 50 years, although it is to be admitted that the speed has been increased on passenger trains during the past 40 years by about 20 miles an hour. The changes made have consisted chiefly in making the cars more comfortable for the traveling public. In America the weight & size of the railway rolling stock have been increased greatly for the sake of facility & economy in operating; but not so rapidly in England. The latter have correctly believed there is a limit, have stopped increasing the weight of their rolling stock, & have turned their attention to devising means to meet the present conditions, which demand greater facilities & quicker means of transit, combined with more absolute safety.

American railway managers have as yet seen no limit, & they are increasing the size of the carrying capacity of their rolling stock; engines are also increased in power & corresponding weight: all this with one idea in view—to reduce the cost of operation of their line. The means adopted appear well calculated to give the companies the desired result. The main result of the practice is the great saving of man labor; in fact, the managers will tell the directors of their companies that in place of two trains being required to move a given quantity of freight, one train with one staff will do the work, so that 50% is saved on engine drivers, firemen, conductors & brakemen, & 50% on locomotives. This is for freight trains only, as on passenger trains the service remains the same. When such a report is made at a directors' meeting, there are smiles & happiness all around. Generally there is mention made of the great saving made by steamship companies in replacing the small steamers with those of four times the carrying capacity. Here, no doubt, a great saving is actually accomplished. A large expensive steamship will replace, say, four of the smaller ones, but it cannot be compared with the change that follows an increase in the carrying capacity of railway rolling stock.

In changing from small steamers to the large ones, one steamer takes the place of four—hence one crew, one set of officers, one set of engines & boilers; in fact, one complete ship at sea, one steamer berth at harbor—all in place of four. It is true that the crew will number a few more men than on a small

steamer. The consumption of coal is greater, but not nearly as much coal will be used as on four smaller ones. The risk of accidents at sea is lessened by 75%, therefore the saving must be very great. Also, the steamship company does not have to lose the small steamers, as steamers of almost any size can be put into service at various classes of carrying on the sea. This considerably reduces the expense necessitated by the change—and the extra expense ends there.

With the railway it is different. In place of one ship, thousands of new cars are required, & in place of one engine, hundreds of new locomotives are needed. This is not all. The very moment this new heavy rolling stock is ready to be put into operation, new & heavier rails, new & larger ties, & new & stronger bridges are required for the whole line. There must be new turn-tables for locomotives, the roadbed requires additional ballast, & in many cases new engine houses are needed. In the repairing shops additional machines to take in the larger parts of the larger locomotives will be necessary; in fact, the companies may look to the expense of a new railway, less only the right of way & roadbed. In addition, there is an almost total loss of the rolling stock, rails, bridges, etc., previously in use, as most of it can only be scrapped at best. When the change on a few of the trunk lines takes place, all other lines must follow or they cannot compete. Old rolling stock will be discarded, at very great loss. When all the cost of this change has been correctly estimated, after the interest has been paid on many millions of outlay, the net receipts may not be so large as were expected.

Again, the maintenance of the new heavy rolling stock, & the wear & tear of the rails, bridges, roadbed, & the rolling stock itself, must be much greater. The same number of bearings have greater friction, hence a large increase in cost of lubrication & wearing material. The roadbed & bridges will suffer in proportion, & extra friction will have to be applied to the wheels to stop these heavy trains & to moderate their speed on down grades. On the up grades the strain will be greatly increased. Additional losses are likely to result from accidents, for, although the system of steam surface railways has been in existence about 60 years, there have been comparatively no improvements outside of the enlarging of the cars & locomotives & making them stronger & more comfortable for travellers. Except for these attempts to imitate the extravagant luxury of hotels, the system is practically the same. The speed of passenger trains has been increased about 20 miles an hour in 40 years. The cost of transit for persons & freight remains about the same.

While various devices have been applied, the only one which has been of any consequence in minimizing the number of accidents to the employees is the automatic coupler, which is still far from perfection. The number of accidents on railways of all kinds & under all circumstances have been con-

tinually on the increase, the cause being that the competition of railways has become greater as new railways have been built. Railway managers have had in view only cheapness of operation of their lines. Cheap material & construction has been used, anything that would call for a little additional expense for the minimizing of accidents not being entertained. In large cities railway traffic is so congested that accidents are almost of daily occurrence. The question is, What is to be done to insure safety of travel on railways, together with quicker transit?

The elevated electrical railway will no doubt be the railway of the future. They are about to build an elevated railroad in a district full of railways between Liverpool & Manchester. This would seem to prove that the builders are reasonably assured that the new mode of transit will gradually take the place of the surface railways, both for passenger & express freight.

The considerations which make in its favor are several: First—There is the surety that an elevated railway can be made so as to insure positive safety from all accidents, though the tramway be running at 100 miles an hour or more, because from its position there can be no contact with moving or other objects, which are numerous on the ground surface. There can be no accidents from floods or washouts, landslides or misplaced switches, nor from broken wheels or rails, from collision or as the result of any one putting obstructions on the track. In the case of trains following each other, the connections would be cut from the power of the following train by the operations of the first train, should the latter be stopped because of any unforeseen emergency; so that the following train would have no propelling power in case of the necessity to stop the first train, & the electric signal would automatically strike the bell on the train that followed. As to falling off the track, that would be prevented by a gab-grip that would follow the T of the top cord of the truss, so that it would be impossible for the wheels to mount the rail or get the body of the car lower than the top cord of the girder, only four inches distant. The side of the car is also protected by the sides of the girders, which have a flat, smooth plate running on both sides, which would come in contact with rollers fitted on the sides of each car. No snow to ever block the line or cause any expense or accidents; no grades of any consequence, so that the uniform speed would be constant; no short curves to create danger or extra friction; the track would always be uniform & the car would always run very smoothly; no dust, sand, cinders or grit to cut up bearings & machinery; thus all axles could be made to run smoothly on ball bearings with comparatively little lubricant, & the cars would be free from smoke & dirt of any kind. One can fancy the comfort to travel in cars that are perfectly safe, running smoothly, with good & clean ventilation, & the enjoyment of viewing all the surrounding country as a great panorama.

Canadian Marine Engineers' Association.

HONORARY PRESIDENT, O. P. St. John, Toronto; PRES., H. Parker, Toronto; 1st VICE-PRES., A. J. Woodward, Toronto; 2nd VICE-PRES., D. F. Campbell, Toronto.

COUNCIL, T. W. Good, W. Harwood, R. Birch, Toronto; P. J. Carr, Port Dalhousie; J. E. Kane, Kingston.

TREASURER, H. Brownley, Toronto; SECRETARY, S. A. Mills, Toronto; GUARD, H. Bowler, Toronto; AUDITORS, D. L. Foley, Toronto; E. J. O'Dell, Owen Sound.

The electric single rail projected by F. B. Behr, for the elevated railway to be built from Liverpool to Manchester, is not the style of railway that can be practically successful. With the single rail system the one wheel would not be sufficient to attain a very high rate of speed, as the one-rail system would cause the wheels to slip, & the extra friction which would be caused by oscillation that must take place from the uneven loading of cars, wind, etc., would be a great detriment.

The new system is perfectly free from any interference from these causes, the railway itself can be built much cheaper, lighter & safer & the cars remain the same type as the surface cars are at present. Of course the cost of building an elevated railway would be greater on the first outlay than a surface railway, on account of the height it must be made at some places, as in crossing rivers, towns, etc. This will require pillars or piers to be made very heavy & strong for perfect safety. But, on the other hand, the mileage can be reduced on the average at least 25 to 30%. There would be comparatively no right-of-way to pay for, as only the pillars will take up any valuable space in the country, & very little anywhere. No embankments, no ditches, water culverts, stone or brick arches for roadways, no tunnels to be cut through mountains, no fences, no men to guard level crossings or on the track, no accidents to trains on crossings, no ballast required, & no expense caused by the killing of people & animals.

Then comes the difference in cost of operation of the two systems. On the electric elevated there would be comparatively no dead weight of locomotives, the motor car being much lighter than the steam locomotive, less than half the dead weight of the cars to be hauled over the line. The staff of engine-drivers & firemen, with all the assisting staff at engine-houses, would be reduced. There would be no hauling of coal & water over the line. Water stations, water pipes, water pumping engines, coal stations, all would be abandoned for three power stations per 100 miles, where boilers, engines & machinery are stationary. No damage from fire caused from sparks of locomotives, & no more burning up of trains and passengers when trains are run off the track & down embankments, or in collisions. Moreover, by moving the passenger trains from the surface, greater facilities would be given for the movement of freight trains, thus preventing many accidents & delays to the freight in transit.

As to the possibility of revenue sufficient to warrant the outlay, it is enough to consider the prospects of such a line built from New York to Chicago. The time now necessary to make that run is about 35 hours, while the time would be only 7 hours on the elevated, the distance being reduced to 700 miles, & the train running at 100 miles an hour. And this besides the fact that a person would arrive by the elevated railway perfectly rested & ready for business, in place of requiring 6 or 8 hours to rest, as is the case after one has travelled to Chicago by the present system. Passengers could afford to go a distance of 300 or 400 miles to start for Chicago from New York. Passengers from Quebec, Montreal or Boston could reach New York in one night & take the elevated. They would still make the journey in about half the time now required. In the vicinity of Chicago the same would apply. An elevated line built now between these two points would be only a beginning of the new system, it would not only return a high rate of interest on the outlay, but would confer a general benefit on the traveling human race.

The writer of the foregoing article is a consulting engineer in Montreal, who, since Mr. Blair became Minister of Railways, has on several occasions been employed on matters connected with the government railways.

The article contains a good many statements that are likely to be dissented from by other engineers & by railway men generally, & we invite a free discussion of it in these columns. For the present we abstain from reference to Mr. Davis' "railway of the future," further than to say that very few are likely to agree with him as to its "positive safety from all accidents." But we must take decided objection to some of his statements as to the railways of to-day.

Mr. Davis says "the number of accidents on railways of all kinds & under all circumstances, have been continually on the increase, that railway managers have had in view only cheapness of operation of their lines, & that cheap material & construction have been used, anything that would call for a little additional expense for the minimizing of accidents not being entertained."

These statements are entirely unwarranted & at variance with facts. It is true that in the United States the liability to train accidents has somewhat increased with increasing train mileage, but this does not warrant the inference that the number of personal injuries has increased relatively to revenue train mileage. In Canada the government statistics refer only to those accidents from which personal injury results. They show that from 1875 to 1897 the number of passengers killed per million carried averaged for the whole period 1.25. From 1890 to 1897, the highest in any one year was 1.03 in 1892, & in 1897 it was only .43. This shows a decrease of accidents, not an increase.

Train accidents may be divided into two classes, those for which the railway corporations may properly be held responsible, as due to defects in tracks, in equipment, or in regulations, & those beyond their control, as when proximately caused by obstructions, by malice, by negligence, or by disobedience of orders. Speaking generally, the diminution of train accidents must be brought about by improvement in the permanent way, by increased efficiency in appliances, in regulations, in discipline & in inspection. And there is no doubt, whatever, that in all these respects marked advances have been made on Canadian railways in the past few years & are still continually going on. That "cheap material & construction have been used," & that "anything that would call for a little additional expense for the minimizing of accidents has not been entertained," is absolutely incorrect. There has been a steady improvement in both material & construction. The various standard roadbeds of to-day are infinitely better than they were 10 years ago, the rails are much heavier & less liable to breakage, & the structures are vastly improved by the substitution of steel & masonry where formerly a good deal of wood was used. As a marked instance of the expense gone to to minimize accidents, we may mention the great precautions adopted by the C.P.R. for its main line through the mountains & canyons of British Columbia, & its consequent immunity from accidents there. The high standard of construction adopted by the C.P.R. may also be referred to. In the same way there are the improvements which have been made & are still going on in the G.T.R. lines, all with a view to improve the carrying capacity of the road & to ensure additional safety. And what is true of the two principal systems, applies to most of the other lines. In connection with the permanent way improvements may be mentioned the increased use of derailing devices, safety switches & guard rails on bridges & trestles.

The passenger car equipment has been rendered much safer by the increased solidity of its construction, by the introduction of vestibules, by the use of air brakes & automatic couplers, & by the substitution of steam heat for stoves; then there has been the introduction of the block system on some

lines, the improvements in signaling & the gradual improvement and tendency towards uniformity in train rules, with the accompanying raising of the standard of discipline.

The Dominion Railway Policy.

In a recent interview in Toronto, J. Sutherland, M.P., chief Government whip in the House of Commons, being asked as to the financial policy of the Government, said it was based on the ground that new conditions produced new necessities. In the past a policy of retrenchment was considered necessary to meet the conditions then existing. At present the great thing was to develop & build up Canada. This was the chief feature of the Government's policy. They proposed to accomplish this by building more railways, developing Canada's mineral resources, & en-

The Irish Channel Tunnel.

The project of a tunnel across the Irish Channel has been lately brought forward in England, & has caused a good deal of talk on both sides of the Atlantic. It is an aged scheme. Sir Edwin Watkins some years ago had a project for a tunnel across the Irish Channel, another across the British Channel, & either a tunnel or a car ferry across the Straits of Gibraltar, & thus a through line of rail communication from Cork to some point in Asia, possibly Herat. We forget the exact terminus. The promoters of this present scheme estimate that the cost of the Irish tunnel will be \$50,000,000, & that the interest during construction will be \$10,000,000 more, or a total of \$60,000,000. They wish to make sure of being able to pay 3% on this outlay, & to that end ask the Government to guarantee any deficiency up to but not exceeding 3%.

devoted to Eastern Canada & Newfoundland, which contains a full & accurate description of routes, cities, points of interest, summer resorts, information for sportsmen, etc., is written by C. G. D. Roberts, late of King's College, Windsor, N.S., & is revised & corrected to date. Mr. Roberts' fascinating writing lifts the work far above the level of the ordinary guide book & makes it of absorbing interest. For some unexplained reason the space devoted to Western Canada is reduced from some 250 pages, as in former years, to about 50. Hitherto this portion of the work was written by Ernest Ingersoll, a recognized authority. Possibly the western tourist travel is not sufficiently large at present to justify, from a commercial standpoint, so large a space being devoted to it, but the west is advancing more rapidly than any other portion of the Dominion, & it seems a pity that at such a time the available in-

A GROUP OF GRAND TRUNK RAILWAY OFFICIALS.

deavoring to stimulate the growth of the country generally. The fruits of this policy, he said, were already forthcoming. The building of the Crow's Nest Pass Ry was an evidence of the excellence of this policy. It had been denounced at its inception, but it had opened up a section of country which would pour millions of dollars into the country at large. For instance, the North Star mine was now recognized as a great property, & its owners were building a spur line to the mine. This would have been impossible unless the Crow's Nest Pass route had been constructed. What was true of the East Kootenay country was true of many other sections of Canada. It was now realized that New Ontario had millions & millions of dollars' worth of wealth to reward a policy of railroad development. This was the ground on which the Government justified its financial expenditures, & it was regarded as a policy of Canada for Canadians.

Mr. Balfour, in replying to a deputation, said that he could not speak for the Government, but pointed out that the project is for a tunnel, not from England to Ireland, but from Scotland to Ireland, & that in all probability passengers, mails & freight would continue to follow the more direct southerly routes which they now follow, & that the promoters might well doubt their ability to compete with water borne traffic. He suggested that it might be as well also to ascertain pretty carefully the nature of the ground to be traversed before embarking on a scheme so colossal.—Railroad Gazette.

Appleton's Canadian Guide Book.

This well-known work has been issued for the current year complete in one volume of 327 pages, with illustrations, maps of each province & of the principal cities, fishing districts, etc. As in previous years the portion

information in regard to it should be cut down. It is to be hoped the publishers may see their way clear to give more space to the west in future editions. The book is one that no one travelling in Canada, especially from the east, may know the country, should fail to take with him, to the stranger travelling it is simply indispensable, & even those who stay at home may learn much of interest from it. The publishers for Canada are G. N. Morang & Co., Toronto, & The Montreal News Co., Montreal.

The Hamilton Mountain Park Co., a recently organized concern, will take over the inclined railway formerly operated by the East Hamilton Improvement Co.

R. Chapple, Chief Clerk, General Superintendent's office, Eastern Division, C.P.R., Montreal, has announced that the company will have its headquarters in Montreal.

RAILWAY FINANCE, MEETINGS, &c.

American Railway Earnings.—The Chronicle's compilation of railway gross earnings in July shows that month to have been one of the best in the recent revival. The increase as compared with July last year is \$7,037,025, or 17%. Out of 116 roads reported, 102 showed gains. This is the heaviest gain in any month since Nov., 1897, which month was depressed with a month of depressed business in the year of the Presidential election. In the July gains, the New York Central stands at the head with an increase of more than \$1,000,000. Next comes the Chicago, Milwaukee & St. Paul with \$849,000; then the Great Northern, the Mexican Central, the Northern Pacific, the Baltimore & Ohio, the Canadian Pacific & Illinois Central show gains of over \$1,000,000 each; while the Louisville & Nashville ought to be classified with these roads, as its gain is \$299,913. The Grand Trunk gained almost \$250,000, & the Wabash close to \$200,000. Then the Norfolk & Western, the Missouri Pacific, the Mobile & Ohio, the Missouri, Kansas & Texas, the Hocking Valley, the Cleveland, Cincinnati, Chicago, & St. Louis, & the Southern show gains of over \$100,000 each.—*Railroad Gazette*.

The Atlantic & Lake Superior Ry. Co.'s annual meeting will be held at 35 St. James St., Montreal, Sep. 6.

Boston & Maine.—The report for the year ended June 30, shows the gross transportation income to be \$19,890,608, an increase of \$147,662 over previous year. The operating expenses were \$13,705,977, an increase of \$25,187. The net income was \$6,184,630, an increase of \$122,475. After the payment of interest, rentals, dividends, etc., the balance is \$15,991 in excess of previous year.

Buffalo & Lake Huron.—The directors in their report for the 6 months ended June 30, announce the payment of a dividend of 5s. 3d. a share, leaving a balance of £518 to be carried forward. A year ago a similar dividend was paid, & £360 was carried forward. This line, which runs from International Bridge to Goderich, Ont., 162 miles, is leased in perpetuity to the G.T.R. for £70,000 a year.

Chignecto Marine Ry.—At a recent meeting of this Co. in London, Eng., the Dominion Government was severely attacked for refusing to revoke the subsidy which the Co. failed to earn according to contract. The Chairman, A.D. Provand, M.P., said the Government gave "a blank refusal in every way" to his three proposals: namely, to reinstate the Co. in the possession of its subsidy that the railway might be completed; to give the Co. £400,000 as compensation for the non-reinstatement; or to submit the amount of compensation to arbitration. Mr. Provand could see no good reason for these refusals, & the shareholders confirmed the board in its refusal to accept this attitude of the Government as final. Commenting on the matter, the London correspondent of the *Toronto Globe* says: "In spite of the energy & activity of Mr. Provand in canvassing for sympathy for the Chignecto bondholders, he does not seem to be able to convince the London press that his case is as flawless as he appears himself to believe. It will be remembered that last year *The Times* was very careful in its remarks on the subject to state that Mr. Provand's presentment of the case was a purely ex parte one. The Economist went much further, & pointed out that nothing was so likely to defeat the object of the bondholders as the violent language & threats of retaliation employed by their representative. The Financial Times expressed a somewhat similar

view. This year neither of the first two papers mentioned have commented at all upon the report & meeting so far as I have seen, but the Financial Times devotes a long leader to the subject, in which it strongly arraigns the policy which has been pursued by Mr. Provand, & urges the bondholders to lose no time in adopting a more rational method of procedure. It professes to find in the wording of the report of the sub-committee of the Privy Council a loop-hole for the continuance of the negotiations on the basis of compensation, & advises the Co. to send over at once another representative, who will be prepared to carry on negotiations in the conciliatory spirit which should have been adopted from the first, & to meet the views of the Government on every minor point, a course which Mr. Provand appears to have studiously avoided. If the investors are sensible enough to take this advice it is possibly not too late to arrive at a settlement, which—while not saddling the Canadian people with a very heavy burden, of the effects of which they had become legally quit—will make a good impression & improve Canadian credit here."

The Elgin & Havelock Ry. Co.'s annual meeting will be held at 3 Great James St., Bedford Row, London, Eng., Sept. 6.

The Fort Erie Ferry Ry. Co. has executed a mortgage, dated Aug. 1, 1899, for \$50,000.00, to R. L. Fryer & H. T. Ramsdell, trustees, as security for the payment of \$50,000.00 bonds of the Co.; the mortgage covering all the real & personal property, rights & franchises of the Co.

Grand Trunk.—The Council of Longueuil has reduced the valuation of the Co.'s wharf property from \$48,000 to \$25,000, & is likely to make further concessions if the Co. will facilitate communication with Montreal over the Victoria Jubilee Bridge.

The Northey Gas or Gasoline Engine.

In Connection with Pumping Machinery for Tank Duty.

"BUILT FOR HARD WORK."

Railway Officials will find the Northey Engine to be a marked improvement over steam or other forms of power for this duty. It is simple of construction, and easily managed, necessitating only the turn of a fly-wheel to start, while it can be going at full speed in a few seconds and be shut down on the instant. Needs no engineer to look after it, the station hands can do all that is required, while it will run for hours at a time with little or no attention. The Engine is compactly built and of the best materials; it uses either gas or gasoline for fuel, and its safety and economy with either have proved it to be the most satisfactory power in the market.

We will cheerfully send Booklet and every information upon request.

The Northey Mfg. Co., Limited, ¹⁰³²KING ST. SUBWAY, Toronto, Ont.

Kootenay Ry. & Navigation Co.—Application has been made to the London Stock Exchange Committee to appoint a special settling day for this Co.'s £250,000 5% debenture stock.

The London & Pacific Gold Fields, Ltd., of 38 Holborn Viaduct, London, Eng., which has been licensed to do business in British Columbia, is empowered to construct or subscribe to, and aid in the construction of any railway or tramway in the Dominion, or elsewhere, the existence of which may be deemed to be advantageous to this Co., & to take & hold shares in any company formed for the purpose of the construction of any such railway or tramway.

Northern Pacific.—The U.S. Circuit Court of Appeals, on July 13th, at St. Paul, handed down a decision holding that the terminus of the Co. is at Ashland, Wis., & not Duluth, & that the Co. is therefore entitled to 1,000,000 acres of land which the Government has sought to have excluded from the land grant.

The election of J. S. Kennedy, a prominent stockholder of the Great Northern, as a director of the N.P., is stated by high authorities to mean that the two Companies are now working in entire harmony. This would avert any rate wars or duplication of new lines in the Northwest, which have been threatened in recent months.—Railroad Gazette.

The Ottawa & New York Ry. Co.'s annual meeting will be held at Ottawa Sept. 19.

Quebec & Lake St. John Ry.—The committee appointed at the meeting of bondholders, Aug. 2, has issued the following circular to the holders of the £780,000 5% 1st mortgage bonds:

"Having carefully considered the most advisable course to pursue for the benefit & protection of the rights & interests of the bondholders, in view of the default in payment of the interest on the bonds by the Ry. Co., we beg to put forward the following scheme for your consideration: We suggest that every bondholder deposit his bonds with the Railway Share Trust & Agency Co., Ltd., (the trustees for the bondholders), to the order of the committee, in exchange for which scrip certificates to bearer shall be issued to him. The committee will thus have all the bonds vested in them, subject to certain conditions indorsed on the back of the scrip certificates.

"Shortly, these conditions enable the committee to act generally for the common advantage and benefit of the bondholders. And, as it is very necessary that the committee shall have at their disposal sufficient funds to meet the expenses incurred from time to time, the conditions authorize the committee to raise money on the security of the deposited bonds to an amount not exceeding 2% of the nominal value of such bonds. This scheme will avoid the necessity of convening frequent meetings to authorize the committee to act in small matters, & will thus save considerable expense & annoyance to the bondholders. The conditions on the certificate expressly provide that no further money than the above-mentioned 2% shall be borrowed on the bonds, & that no reconstruction of the Co., or variation or change in the rights, position or securities of the bondholders (except the buying in of the property forming the security of the bondholders) shall be concluded without the sanction of a resolution of a general meeting, duly convened, of the holders of scrip certificates, passed by a majority in value of such holders, present in person or by proxy, thus limiting the powers of the committee to the less important matters." The circular is signed by A. W. Ballance, E. F. Coates, S. Gardner & A. S. Jacks. It is explained that F. Ross, being in Canada, it has not yet been possible to obtain his signature to the circular.

Quebec Central gross earnings for July, \$56,563.16, against \$48,799.66 in July, '98;

working expenses \$33,662.36, against \$28,921.69; net earnings \$22,900.80, against \$19,877.97.

Gross earnings 7 mos. to July 31, \$275,623.54, against \$248,756.14 for corresponding period; working expenses \$181,212.86 against \$173,477.03; net earnings \$94,410.68 against \$75,279.11.

Salisbury & Harvey.—An order has been made in the Equity Court at St. John, N.B., for foreclosure & sale of this railway, which has been in the hands of receivers for some time. The present proceedings are to close out the bonds. Once before the railway passed under the hammer. Then it was at the instance of the English bondholders, whose claims amounted to about \$600,000. The bondholders now are United Statesers, & the amount of the bonds \$250,000. The bondholders and stockholders are, for the most part, the same, & it is likely the present owners will bid in the property.

White Pass & Yukon.—The directors of the British Columbia Development Association have declared an interim dividend of 20%, being 15% on the preference shares, & £10 a share on the founders' shares. Accompanying the dividend notice is a circular stating that under an agreement dated July 29, 1898, Close Bros. had an option to pay this Co. £26,500 in redemption of £53,000 shares in the White Pass & Yukon Ry., held by the directors as security for this amount. Owing to litigation concerning the ownership of a large amount of shares, of which these £53,000 formed part (in which litigation, however, the Co.'s interests are in no way jeopardised, as both parties admit the right of this Co.), the directors have been able to make a new & satisfactory arrangement. Close Bros. have agreed as follows:—To redeem £10,000 of shares by a payment of £5,000 in cash; to purchase at par £5,000 of the £10,000 White Pass & Yukon debenture stock held by this Co.; to transfer absolutely to this Co. £5,000 White Pass Railway shares as a bonus; Close Bros. & Co. to have the option to redeem the remaining £38,000 shares on or before Dec. 31 next, on payment of the balance of £21,500. The £10,000 has been paid by Close Bros., the loan from the bankers (£3,700,) has been paid off, & about £2,500 remains in hand after payment of the dividend.

Notice is given that the following documents have been deposited at the Land Registry Office at Victoria, B.C.:—An Indenture of Mortgage made Oct. 7, 1898, between the B. C. Yukon Ry. Co., the Pacific Contract Co., F. Pavy & C. C. Macrae, & a notarial copy thereof & 1st mortgage bond, dated Oct. 7, from the B. C. Yukon Ry. Co. to F. Pavy & C. C. Macrae, for the principal sum of such an amount as shall be equal at the rate of £6,000 a mile, to the line of railway of the B. C. Yukon Ry. Co., & a notarial copy of the said bond, such bond being secured by the said mortgage.

It is stated that the tramways around White Horse Rapids, both controlled by the Macaulay Co., have been sold to the White Pass & Yukon Ry. Co., the price paid being \$185,000. From this it is inferred that the Co. proposes extending its line down the river.

Grand Trunk Earnings, Expenses, &c.

The Secretary has furnished us with a statement, subject to audit, for the half-year ended June 30, to which is added a comparison for the corresponding period of 1898, as follows:

	1898.	1899.
Gross receipts	\$2,171,710	\$2,108,500
Working expenses	1,243,000	1,208,200
Net revenue	£ 627,800	£ 685,000
Deduct		
Net revenue charges, less credits	100,000	180,800
Balance of net revenue	£ 137,300	£ 195,200

Deduct		
Chicago and G.T. deficiency for 1 year payable by the G.T. Co. under traffic agreements	£ 8,400	£ 36,400
Detroit, Grand Haven and Milwaukee deficiency for the 1/2 year	22,300	22,400
Total deductions	30,700	58,800
Surplus for the 1/2 year	£ 106,600	£ 136,400
Add		
Balance brought from previous 1/2 year	300	4,200
Balance available for dividend	£ 106,900	£ 140,600

The above balance admits of the payment of the full dividend for the 1/2 year on the 4% guaranteed stock, and a dividend at the rate 1% on the 1st preference stock, leaving about £2,000 to be carried forward.

The following statement of earnings supplied from the Montreal office, includes the G.T. of Canada, the Chicago & G.T., & the Detroit, Grand Haven & Milwaukee Rys.:

	1899	1898	Decrease	Increase
July....	\$2,105,493	\$1,860,884	\$ 244,510

The following figures are issued from the London, Eng., office:

	1899.	1898.
Passengers, number	749,832	723,747
amount	1,065,18	1,021,88
Immigrants, number	1,108	1,173
amount	881	646
Mails, express, &c.	17,070	16,849
Freight, tons	827,030	691,000
amount	200,952	177,007
Miscellaneous receipts	11,000	11,381
Total receipts	350,147	338,181
Increase	41,666	

TRAFFIC RECEIPTS OF THE SYSTEM.

Traffic receipts, Jan. 1 to June 30.

	1899.	1898.	Increase	Decrease
Grand Trunk	£ 350,147	£ 338,181	£ 11,966	
Chicago & G.T.	58,706	57,000	1,706	
D., G. H. & M.	19,795	19,200	595	
Total	£ 428,538	£ 414,381	£ 14,157	

C.P.R. Earnings & Expenses.

Gross earnings, working expenses, net profit and increases or decreases over 1898, from Jan. 1, 1899.

	Earnings.	Expenses.	Net Profits.	Increase or decrease.
Jan.	\$1,864,570.36	\$1,247,036.50	\$ 617,533.86	\$101,906.27 +
Feb.	1,753,382.82	1,153,681.34	599,701.48	176,034.12 +
Mar.	2,109,667.58	1,286,772.01	822,895.57	75,662.06 +
Apr.	2,166,312.40	1,276,008.91	920,303.49	203,212.80 +
May	2,402,151.29	1,369,392.68	1,032,758.61	106,006.30 +
June	2,362,278.67	1,339,218.47	1,023,060.20	205,664.83 +
July	2,385,625.47	1,412,663.84	972,961.63	242,272.84 +
	\$15,073,088.59	\$9,078,773.75	\$5,995,214.84	\$1,110,849.22 +
	+ Increase.			

Approximate earnings for July, \$2,367,000, as against \$2,024,000 in July, 1898; increase, \$343,000.

SUBSIDIARY LINES.

DULUTH, SOUTH SHORE & ATLANTIC.—Net earnings 5 months to May 31, \$282,093, against \$224,362 for corresponding period.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—Net earnings for 11 months to May 31, \$2,581,728, against \$2,554,941 for corresponding period.

Canadian Pacific Railway Land Sales.

June	41,000	100,244.00
July	47,402	140,540.00
		\$ 88,000.00

Senator Fempie, who died at Fredericton, N.S., Aug. 25, aged 81, was for 30 years President of the Fredericton Ry. Co.

RAILWAY APPOINTMENTS, Etc.

Canadian Pacific. Herbert Carter has been appointed General Passenger Agent at Hong Kong, as mentioned in some daily papers. He will go there to take a position in the Passenger Department, relieving one of the staff who has been taken ill. D. E. Brown is the Co.'s General Agent at Hong Kong.

G. Middleton, Locomotive Foreman at Kamloops, B.C., has been promoted to Vancouver as General Foreman of the shops there, & of the engines of the Co.'s steamships. S. Fraser, of North Bend, succeeds him at Kamloops.

A. Gordon, Roadmaster between Leaside & Havelock, Ont., having decided to retire, has resigned, & has been succeeded by A. McAuley, heretofore Roadmaster between Havelock & Smith's Falls, who will have his office at North Toronto, instead of at Parkdale, where Mr. Gordon was located. Mr. McAuley is succeeded at Havelock by J.

Malloy, heretofore Roadmaster of the Orangeville, Elora, Teeswater & Wingham branches, whose place at Orangeville is taken by B. Tansley, heretofore Section Foreman at Havelock.

G. J. Bury, heretofore Superintendent at North Bay, Ont., has been appointed Superintendent at Fort William, in charge of the line from there to Winnipeg, succeeding J. A. Cameron, who is now on leave owing to ill health, & who will, it is said, be transferred to the superintendency of the Crow's Nest Pass line.

T. J. Kennedy, heretofore Superintendent at Chapleau, succeeds Mr. Bury at North Bay as Superintendent of the North Bay, Cartier & Sault Ste. Marie sections, including the Temiskaming branch.

C. Murphy is appointed Acting Superintendent in charge of the Chapleau & White River sections, with headquarters at Chapleau.

Central Vermont.—D. Mackenzie having resigned, the jurisdiction of F. W. Baldwin,

Superintendent, has been extended over the Southern Division. Office at St. Albans, Vt.

C. E. Soule has been appointed Assistant Superintendent of the Southern Division, with office at New London, Conn.

Intercolonial.—V. Pelletier, formerly of the General Superintendent's office at Moncton, & latterly of Montreal, has been appointed in charge of the new city ticket office in Quebec city.

St. Catharines & Niagara Central.—W. N. Warburton, General Freight & Passenger Agent, has also been appointed Acting Superintendent.

Mainly About People.

Miss Audrey Blair, daughter of the Minister of Railways, leaves shortly for Switzerland where she will spend a year at school.

F. W. Powell, Chief Clerk of the Statistical Department of the G.T.R. at Montreal, has left the service & gone to the Western States.

MICA BOILER COVERING

For Locomotive, Marine and Stationary Boilers

Tested by Mechanical Experts of the C.P.Ry. Co., G.T.Ry. Co., M.C.Ry. Co., Boiler Inspection Insurance Co., and proved to be the

= = Best of All Non-Conductors = =

All Steam users should see the Mica Boiler and Pipe Covering—Flexible, Durable and Highest non-Conductor of Heat in the Market.

SINGLE EXPANSION AND COMPOUND LOCOMOTIVES.

Broad and Narrow Gauge Locomotives; Mine and Furnace Locomotives; Compressed Air Locomotives; Steam Cars and Tramway Locomotives; Plantation Locomotives; Oil Burning Locomotives.

Adapted to every variety of service, and built accurately to gauges and templates after standard designs or to railroad companies' drawings. Like parts of different engines of same class perfectly interchangeable.

*Electric Locomotives and Electric Car Trucks with
Approved Motors.*

Burnham, Williams & Co., Philadelphia, Pa., U.S.A.

E. S. Hunt, C.P.R. train despatcher at Moose Jaw, Assa., was married at London, Ont., Aug. 11th, to Miss Gertrude McCutcheon.

N. Graburn, Assistant Superintendent of the Montreal St. Ry., has been appointed Superintendent of the corporation tramways in Glasgow, Scotland.

Col. B. W. Gossage, who died at his residence in St. Thomas, Ont., Aug. 25, aged 67, was at one time engaged as surveyor on the Canada Southern Ry.

R. G. Reid, Proprietor of the Newfoundland Ry., left Montreal Aug. 25, accompanied by his family, for Newfoundland, where he will remain for several weeks.

On Aug. 23, N. K. Connolly, one of the contractors for the I.C.R. deep water terminus at St. John, N.B., was reported as lying very ill at the Royal Hotel, St. John.

Jos. Carter, C.P.R. Ticket Agent at Winnipeg, was married at Kansas City, Aug. 19, to the daughter of Col. Whitney, proprietor of the Wellington Hotel there.

H. Dalton, formerly of London, Ont., has been appointed Superintendent of the Akron Traction & Electric Co., which operates lines between Cleveland & Akron, & from Akron to Kent.

On Aug. 28 Miss Mabel Pease, daughter of the District Passenger Agent of the G.T.R. at Montreal, was reported as being seriously ill with typhoid fever in Winnipeg, where she was visiting.

A number of Halifax citizens who attended the recent carnival at Sydney, N.S., presented District Passenger Agent Lambkin of the I.C.R. with a gold ticket as a souvenir of courtesies received.

W. H. Kelson, General Storekeeper of the C.P.R., while going home one evening recently, was attacked by footpads, beaten & robbed of a gold watch, his assailants getting off without discovery.

C. A. Bruyere, of the Canada Atlantic Ry., Ottawa, is a member of the committee on tests, which will report at the annual convention of the Master Car & Locomotive Painters' Association at Philadelphia, Pa., Sep. 12 to 15.

C. Whitehead, who will be remembered in connection with the construction of section 15 of the C.P.R. between Rat Portage & Cross Lake, was seriously injured recently in a runaway accident near Morden, Man. He is recovering satisfactorily.

Geo. Roberts, a well known builder, who died in Montreal Aug. 28, aged 74, came to Canada in 1854, being employed on G.T.R. construction under Peto, Brassey & Co. for 2 years, after which he built the stations between Levis & Richmond.

C. Drinkwater, Secretary & Assistant to the President of the C.P.R., left Montreal the middle of Aug. on the official car Earncliffe, accompanied by Mrs. Drinkwater, Miss Graham, of Hull, & Dr. K. D. Graham, of Ottawa, for a trip to the Pacific Coast.

Conductor Donohue, of the C.P.R., St. Andrew's branch, is one of the oldest, if not the oldest, conductor on the C.P.R. He has been running on the branch since it was opened 43 years ago by the New Brunswick & Canada Ry. Co., & is still hale & hearty.

D. Robertson, chief clerk in the G.T.R. Master Mechanics' office, Montreal, has resigned, & has been appointed assistant to Manager Wanklyn, of the Montreal St. Ry. T. Maynard has been appointed to succeed Mr. Robertson in the G.T.R. works.

C. R. Hosmer, Manager C.P.R. Co.'s Telegraph, who has been in Europe for some weeks, is expected to return on the ss. Oceanic, which sails on her initial voyage

Sep. 6. Miss Hosmer, who has been in Paris for some months, will probably accompany him.

Assistant General Manager McNicoll, of the C.P.R., left Montreal about the middle of Aug., in the official car Rosemere, for a trip over the Co.'s main lines & branches as far as the Pacific Coast. The chief operating officials are accompanying him over their respective divisions.

C. R. Hosmer, Manager C.P.R. Co.'s Telegraph, has purchased a handsome property at the head of Drummond street, Montreal, formerly owned by D. D. Mann. He intends erecting on it a fine residence for his own occupation. The lot has a frontage of 100 ft., & is of large area.

J. Wilson, Superintendent of the Pacific Division of the C.P.R. Co.'s Telegraph, has returned from a three months' stay in Southern California for the benefit of his health, which is greatly improved. J. Fletcher, of the Co.'s Vancouver staff, has acted as Superintendent during Mr. Wilson's absence.

President Shaughnessy, of the C.P.R., returned to Montreal Aug. 7, after making an inspection of the C.P.R. short line to St. John, N.B., & tributary branches. About the middle of Aug. he left with his family for Quebec & Lake St. John, & on his return spent some days at his summer residence at Riviere du Loup.

J. E. Walsh, Assistant General Passenger Agent of the Canada Atlantic Ry., & his wife & little daughter, were thrown violently from a cab in Ottawa Aug. 28. Mrs. Walsh, who has recently been very ill, received a very severe shaking, & Miss Walsh had her knee injured. Mr. Walsh sustained a few slight injuries.

Alex. McNaughton, for many years Traveling Auditor of the I.C.R., who retired from that position about a year ago owing to ill health, since which he has been employed at the audit office at Moncton, died recently at Moncton, aged 74. At one time he was employed in the European & North American Ry., & afterwards on the New Brunswick Ry.

W. B. Close, of London, Eng., President of the White Pass & Yukon Ry. Co.; C. Lambert, of London, Eng., of the Pacific Contract Co., the contractors for the railway; S. H. Graves, of Chicago, President of the B.C. Yukon Ry. Co., & the Pacific & Arctic Ry. & Navigation Co.; & R. Cassidy, solicitor in B.C. for these companies, are now in the north looking over the W.P. & Y. Ry.

C. M. Hays, General Manager; G. B. Reeve, General Traffic Manager; F. H. McGuigan, General Superintendent, & F. W. Morse, Superintendent of Motive Power, made an extensive tour of inspection over the G.T.R. system in August. The general officers, who travelled by special train, were accompanied during their trip, which lasted over a fortnight, & embraced some 4,600 miles of track, by a number of divisional officers. Mr. Hays expresses himself thoroughly satisfied with the results of the inspection, which covered the main line & all its branches except those south of the St. Lawrence river, & the condition of the property.

In speaking at Oxford, Eng., recently to delegates assembled there in connection with the extension of University teaching, Lord Strathcona said: "I went to Canada in the first year of Her Majesty's reign, so that I have personal knowledge of many of the matters of which I shall speak; & it is interesting, by way of comparison, to state that my first voyage took between 40 & 50 days, & that the clipper-ship in which I sailed, of 500 tons or thereabouts, was a considerable vessel in those days—the largest boat of the kind known at that time being about 1,000 tons. A few weeks ago I crossed the Atlantic, spent a

week in Canada, & was back again in London in three weeks from the day I started."

Peter Larson, of Mann, Foley Brothers & Larson, is, says a B.C. paper, an excellent example of what a poor man can make out of himself. Starting years ago with nothing but determination & perseverance as a capital, he has gradually worked himself up from obscurity & poverty to affluence & prominence, though to this day he is one of the most democratic of men to meet. With shrewdness & care of details he made one small contract after another pay; then he took larger ones, & is now able to handle any size, the present one, of a sum approximating \$4,000,000 for building the Robson-Midway branch of the C. P.R., being a sample. In addition, he is interested in the Nelson & Bedlington Ry. contract, & the Trinidad-Wash. contract. He built the Nelson & Fort Sheppard Ry., & a large section of the Great Northern west from Spokane. He has also done well with his mining investments.

The Atlin & Yukon Routes.

The following figures, furnished by the Vancouver Board of Trade, will be found useful for reference:

WHITE PASS & YUKON RAILWAY (SKAGWAY PASS).

Vancouver to Skagway.....	891 Miles.
Skagway to Summit.....	17

A Half-Cent Ton-Mile Rate.

The Pennsylvania Railway is in many ways to be regarded as the standard railway of America—as the personification of the possible in American railroading. The figures contained in the Co.'s annual reports are, however rightly or wrongly, largely accepted (& especially in Europe) as in a certain sense typical of American railways as a whole. There is no other company, no commercial institution in the U. S. the course of whose affairs is similarly watched for indications of the course of business of the whole country. For this reason we feel almost as if a new epoch in the development of the transportation problem in America was marked by the fact that the average freight rate on the Pennsylvania lines has fallen below half a cent. The average ton mile rate, which was 5.64 mills in 1896 & 5.36 mills in 1897, was 4.99 mills in

The following leading railroads of Canada are using Page fencing in quantities from 1 to 300 miles: Canadian Pacific; Grand Trunk; Intercolonial; Lake Erie & Detroit River; United Counties; Canada Atlantic; St. Lawrence & Adirondack; Michigan Central; Manitoba & Northwestern; East Richelieu Valley; Toronto, Hamilton & Buffalo; Thousand Islands; Crow's Nest Pass, and Pembroke Southern.

This fence is made to wear. The horizontal wires of special steel & coiled.

For further particulars address

PAGE WIRE FENCE CO., LTD., WALKERVILLE, ONT.

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the odd-numbered sections along the Main Line and Branches, and in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North-West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6 an acre.

Lands in Assiniboia, east of the 3rd meridian, average \$3 to \$4 an acre.

Lands west of the 3rd meridian, including the Calgary District, generally \$3 per acre.

Lands in Northern Alberta and the Lake Dauphin District, \$3 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest is divided into ten instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or grazing lands.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions:

160 acres at \$3.00 per acre, 1st instalment \$71.90, and nine equal instalments of \$60.
160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.
160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.
160 acres at \$4.50 per acre, 1st instalment \$107.85, and nine equal instalments of \$90.
160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.
160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.
160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the usual cash instalment.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

Write for maps and full particulars.

BRANCH OFFICE—197 Lombard Street, Winnipeg S. A. Erskine, Resident Agent.

1898. The average cost of ton movement was similarly reduced to 3.55 mills a mile. However fully we may recognize the inadequacy of the ton-mile standard of comparison, it is unavoidable that these figures should be generally accepted as peculiarly significant. The magnitude of the reduction in freight rates during recent years on the Pennsylvania lines is perhaps most strikingly conveyed by the mere statement that with an increase in ton mileage of about 20% (or nearly three thousand million ton miles), the gross revenues were over \$4,000,000 less than in 1892.

We all hope & believe that the present year will show a general increase in the rate received as compared with 1898. The rapidity of the decline of the last few years, & especially the extraordinary lowness of the average ton revenue last year, was not the result of any legitimate & deliberate reduction of schedule rates, but of demoralization, from the effects of which all roads, the just & the unjust alike, suffered deplorably during the year. It is not necessary to say that rates to-day are much better maintained. There is every hope that the averages for 1899 will make a materially more favorable showing than those of 1898. The recovery will, however, be no more than temporary, for the ultimate tendency of all rates is downward, & what is now a low-water mark under exceptionally bad conditions will sometime come to be a normal figure.—Railway Age.

The I.C.R. & G.T.R. Agreement.

The St. John, N. B., Sun, of Aug. 26, contained the following article: "Two representatives of the Allan Steamship Co. have been to this city to meet the Minister of Railways, Mr. Blair, & to discuss with him some serious aspects of the transportation question. As far as can be learned the situation is this: The Minister of Trade & Commerce called for tenders for the Atlantic mail steamship service, intending to make a contract for two years, pending the establishment of the more ambitious service, which for the present is in abeyance. The Allan Co's tender is said to have met the requirements better than that of the only other offer, which was made by the Elder-Dempster Co. Consequently the Allan Co. was asked to sign a contract. The Co. thought it prudent before going that far to ascertain what arrangements could be made with the C.P.R. for winter export freight. It did not take Mr. Shaughnessy long to explain to the steamship men that he was not in a position to make freight contracts. He is reported to have told them that the I.C.R. had virtually transferred its whole business to the G.T.R. & had shut out the rival railway from any share of the west bound traffic. The Government railway also proposed to close out the passenger arrangement now in operation, & was generally engaged in diverting traffic from the St. John route. In these circumstances the C.P.R. could not do business at this port without loss, as the cars would all have to go west empty. This being the situation the Co. could not see its way clear to make contracts for the delivery of ocean freight at its St. John terminus. Having received this statement the Allans waited upon Mr. Blair & acquainted him with the situation. It is not known what shape affairs have taken since, but it will be seen that the situation is a grave one, not only for the railway & steamship companies but also for this city. The steamship companies want to have the matter settled at once so that if they cannot come here they may make other arrangements. St. John is not so much concerned in the dispute between Mr. Blair & Mr. Shaughnessy as it is in having some sort of settlement which will allow business to be done here. One difficulty is that Mr. Blair is bound so fast to the G.T.R. by his traffic arrangement as to make it diffi-

cult to come to any arrangement with the other road. The Senate has done the Minister a service by making the agreement revocable, but it cannot be cancelled without the consent of the G.T.R. in time for next winter's business. It will be seen that the trouble affects not only the mail lines but all the other winter freight services from this port."

On Aug. 29 the Montreal Herald published the following as a despatch from St. John, N.B.: Hon. A. G. Blair, Minister of Railways, was to-day shown the Sun article relative to the Messrs. Allan's visit, which he had not previously seen. He very much doubted whether the Sun was authorized to make the statements contained in the editorial with respect to Mr. Shaughnessy or the C.P.R. The Minister said it is true the tender of the Allan Co. had been accepted, & they had an interview with him regarding some objection taken by the C.P.R. to the proposed action of the I.C.R. The only objection which Messrs. Allan mentioned to the Minister as having been made by Mr. Shaughnessy was that if the Government persisted in the contention that all traffic originating in the territory traversed by the I.C.R. & intended for points in the West must be delivered at Montreal, it would necessitate the C.P.R. holding back empty cars it had carried east with freight intended for points on the Intercolonial. The I.C.R., Mr. Blair said, does not object to receiving freight from the C.P.R. at St. John for points on the I.C.R. He recognizes it is the right of the railway in whose territory traffic originates to deliver to a connecting road at the end of its long haul, & therefore all C.P.R. freight for points between St. John & Moncton & east of Moncton would properly be receivable by the I.C.R. at St. John. The C.P.R. has complained that cars brought down laden & handed over to the I.C.R. at St. John would have to be hauled back empty, & the Minister is well aware that the C.P.R. would therefore be doing business to less advantage than if it hauled the cars back laden or received the empties free of cost from the I.C.R. at any junction point near Montreal.

So anxious have the I.C.R. authorities been to meet the C.P.R. in a reasonable spirit that they have advised Mr. Shaughnessy of their willingness to deliver empties to the C.P.R. at Montreal or any junction point near that city, & this, it is believed, will obviate the alleged difficulty. "It is not correct," Mr. Blair said, "nor do I think it fair to ascribe to Mr. Shaughnessy the statement that the I.C.R. has virtually transferred its whole business to the G.T.R., meaning, it is supposed, its whole freight business, & shut out rival roads from sharing in the Western traffic. The I.C.R. has not done this. As Minister, I have simply made the best arrangement possible in the interests of the Government railway through the G.T.R., as being the only road that would exchange traffic at Montreal, & this ensures to the I.C.R. the use of its whole line from the terminus at Montreal in preference to the small portion of its line from St. John, to which it would be limited if an exchange agreement were made with the C.P.R. at St. John. But this agreement is confined entirely to unconsign freight, & would not, & does not, preclude shippers from requiring delivery to the C.P.R. at St. Rosalie, Montreal, or Jacques Cartier junctions in respect of goods destined for the West. Neither is it correct to say that the Minister has decided to terminate the passenger agreement between St. John & Halifax. Mr. Shaughnessy would not, I am sure, authorize any such statement, because no such conclusion has been come to. The I.C.R. is only bound to give to the G.T.R. as respects freight, & then only as far as the interests of the I.C.R. have made it desirable or necessary that such an arrangement should be concluded." The statement in the Sun that the Senate had done the Minister a service by making the agreement

revokable, Mr. Blair declared, was not of a character to impress anybody who understands the railway situation. "So far as the senators have interfered with the contract between the G.T.R. & the Intercolonial, they have interfered to its injury," said Mr. Blair, "& I have not the slightest intention of exercising the power the Senate so kindly placed in my hands. I have not the slightest intention this year or next or in any future year, so far as I know now, of cancelling the G.T.R. traffic agreement. The agreement is of that nature that there has been no period, there will be no period, or can be no period, in which the G.T.R. would not cancel the agreement in its own interests if the I.C.R. was willing, without having any statutory provision to do so. As regards St. John," Mr. Blair said, "I have only one feeling. I would do anything in my power consistent with my duty as head of the I.C.R., & with the claims of other localities, to promote the well-being of St. John & the interest of the port, but I am bound to frankly state, however, that I am quite sure the people in no part of the country touched by the I.C.R. expect me to sacrifice what I believe to be the general interest of the I.C.R. at the instance of any other railway system or the individual interests of any other locality."

Mr. Shaughnessy was interviewed on the subject of the Sun's article, & Mr. Blair's reply, but absolutely declined to discuss the matter. He, however, said that the C.P.R. still hoped to have the co-operation rather than the active opposition of the Government road in the former's efforts to maintain a Canadian winter port.

The Montreal Witness, which supports the Government, quotes "a gentleman who has watched railway affairs closely for a good many years," as saying that Mr. Blair's attitude regarding this question left no other alternative for the C.P.R. to assume than that of diverting its seaboard business to Boston. Should this be done the I.C.R. will be practically without steamship connection at either St. John or Halifax, because that railway is not in a position to make freight contracts with any steamship company that would warrant a permanent line of vessels running to & from any of the maritime ports. Without access to business west of Montreal the Government line cannot be a feeder for any steamship line, hence the action of the C.P.R. will certainly close up St. John & Halifax as winter ports & leave the Government railway out in the cold as regards steamship traffic.

Freight Traffic Matters.

Large quantities of cheese are being shipped on the Canada Atlantic at stations between Ottawa & Montreal.

Grain traffic on the Canada Atlantic is very heavy, 5,087,000 bus. having been received at Depot Harbor from the opening of navigation to Aug. 1.

The Alberta Ry. & Coal Co. has established an agency at Nelson, B.C., & will ship coal there from Lethbridge over the Crow's Nest Pass Ry.

The White Pass & Yukon Ry. is hauling about 170 tons of freight daily from Skagway to Bennett. It goes down the river immediately upon arrival in scows & steamers.

Trade has improved along the Bay of Quinte Ry. to such an extent that an additional freight train has been put on. A great deal of lumber is being brought from the back country for exportation to the U.S.

The Manitoba Department of Agriculture estimates the grain yield of the province this year as follows:—Wheat, 33,504,766 bus.; oats, 23,003,126 bus.; barley, 5,532,972 bus.; flax, 296,208 bus.; rye, 65,626 bus.; peas 26,637 bus.

According to the report of the Vancouver Board of Trade the shipments of lumber from that city in 1898 were 40,685,810 ft. b.m., against 50,044,021 in 1897. The shipments by rail to points outside B.C. were 18,754,730 ft. b.m. in 1898, and 23,720,074 in 1897.

General Superintendent Osborne, of the Western Division of the C.P.R., says the Co. is fully prepared to handle the great grain crop of Manitoba & the Territories. The Co. has 25,000 cars, including 1,500 added for this year's crop. The Perish-shops which turned out 6 to 10 new cars a day all the past year, have their capacity now increased to 15 cars a day.

The railways between Buffalo & New York have advanced the freight rate on grain coming to Buffalo by lake. Wheat to New York is 3.5c. a bush.; corn & rye 3c.; barley 2¾c.; & oats, 2c. The advance in wheat is 7½ mills; in corn 7½ mills, & in rye 2½ mills. On the announcement of these advances the canal boats raised their rates to the basis of 2½c. on wheat.

The White Pass & Yukon Ry. has cancelled its through traffic arrangement with the coast, lake & river steamboat companies, & hereafter the railway will be run as a purely local line, each company accepting through shipments having to pay the Ry. Co. a local rate on the same. This will cause a very material raise in through rates. The Canadian Development Co., for example, which has been quoting three rates of \$160, \$155, &

\$130, now announces that the lowest will be \$180.

The White Pass & Yukon Ry. management announces that the regulations of the U.S. government, which prevented perishable goods from Canada being bonded through Alaska, on the way to the Yukon, have been rescinded, & that word has been sent to the collector at Skagway from the Treasury Department, ordering him to pass Canadian perishable goods, the same as other Canadian goods, which means that they will go through without interruption.

On Aug. 14 the roads running east from St. Louis reduced the rate on flour for export to 15c. per 100 lbs. from St. Louis to New York. The western lines terminating in Chicago met the competition by making a rate of 15c. from Missouri River points. The previous rate from the Missouri River was 19½c. On Aug. 1 the lines running east from Chicago advanced the export flour rate to 17c. It cannot be maintained while a rate of 15c. is in effect from Missouri River points to New York via Chicago.

Nelson, B.C., papers report traffic as very good. On Kootenay Lake the C.P.R. steamers are fully employed in making the transfers between the Crow's Nest line at Kootenay Landing & the Columbia & Kootenay branch at Nelson, as well as in the moving of supplies to the railway construction camps at the head of Kootenay Lake. On the railway there is a greater volume of traffic com-

ing in & going out of Nelson than during any former period in its history.

The C.P.R. Freight Department has issued a circular stating that for the purpose of giving its patrons the best despatch for their shipments for the Kootenay & Pacific coast, it has been arranged that, effective Aug. 28, a train, to be known as the "Pacific Coast Bullet," will leave Fort William, making the run to Laggan in 93 hours 55 minutes, & to Kootenay Landing in 101 hours & 10 minutes. The train leaves Fort William at 2 o'clock (Central Time), & arrives at Laggan 22.15 (Mountain Time), Kootenay Landing, 5.30 (Mountain Time). A service is also being arranged for the Pacific Division, particulars of which will be given later.

Arrangements have been made by which an expert fruit shipper & packer from California will spend some time in British Columbia during the fruit-shipping season. It is intended to hold a series of meetings of growers in the fruit districts, & give object lessons in approved methods of grading & packing different varieties of fruit. A car-load of plums, packed, loaded & iced, under the direction of an expert, will be shipped to the Northwest market, & it is hoped that the fruit shipping industry will be placed upon a sound basis. The C.P.R. has promised free transportation to the expert & to furnish a first-class refrigerator car service. The Cleeve Cannery & Cold Storage Co. will cool & ice the fruit at New Westminster for shipment.

The Barrett Track Jack....

Recommended as a Standard by the
Roadmasters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low set loads.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting Capacity 10 to 15 tons.

AMHERST, NOVA SCOTIA.**

The Freight Traffic Manager of the C. P. R., speaking of the effect of the recent decision of the Interstate Commerce Commission that all export rates on freight should bear as heavily on the export business as the existing rates on domestic business should bear on the local business in the U. S., said that the only effect which the decision would have on the Canadian lines would be to keep up the export freight rates. The decision of the Commission simply means that no line in the U. S. will be allowed to make an export rate on freight which is lower than its corresponding domestic freight rate. This will, of course, prevent cutting of rates to secure export business, & in that regard, of course, Canadian lines will be affected in as much as the export rates in the U. S. will be kept up, enabling Canadian lines to do the same.

Grain Export via Boston.

A. F. Brown, the largest export grain forwarder in Boston, has been visiting Manitoba, accompanied by Foreign Freight Agent Corbett, of the C. P. R., to interview the grain shippers on the subject of exporting all rail via Boston over the C. P. & Boston & Maine railways. The high lake freights which will prevail this fall will give the C. P. R. an opportunity to handle a large quantity of this season's crop over its all rail line to the Atlantic seaboard, & special efforts will be made by that Co. to this end. The close relations between the C. P. R. & the B. & M. R., together with the excellent elevator facilities & large ocean tonnage at Boston will probably make that the export route, although the New York Central will undoubtedly make a strong effort to get a share at Ogdensburg or Montreal for export via New York.

In an interview in Montreal, on his return from Winnipeg, Mr. Brown said that Boston increased its business last year in the handling of Canadian grain by over 6,000,000 bush., & it was expected that this year there would be a further increase of 25% over last. The steamship charges at Boston, he says, are exceptionally low, steamship lines being authority for the statement that the harbor charges there are about \$1,500 less each trip than at New York. He expects that the Boston & Maine R. R., the U. S. connection of the C. P. R., will carry a large quantity of the Canadian grain to Boston during the coming winter. This result will be contributed to, he believes, by the fact that the C. P. R. being shut out from the St. John & Halifax trade by the recent traffic agreement between the I. C. R. & the G. T. R., will naturally divert as much trade as possible to Boston, via Newport. The C. P. R. would do this as a plain business matter, & in their own financial interests. Of his impressions of Manitoba Mr. Brown said: "I had previously made regular trips through the northwestern States; but never before did I see the wheat-growing portion of the Canadian West. It was simply a revelation to me. After remaining two days in Winnipeg, we went westward 150 miles, & then drove 30 miles north of the main line. There is no wheat-growing country like it on the American continent. I have been in the grain business from 12 to 15 years, but Manitoba surpasses anything I had ever seen in the south. In fact, no one can realize the vast extent & splendid quality of the golden grain I have just seen in the province of Manitoba. The wheat is remarkably clear from weeds & smut; & as I have just said, I never before saw anything like it. We visited a farm eight miles north of Brandon, owned by a Mr. Devine, & the surroundings were really remarkable. His house is built of stone & finished in white wood, & on every hand were indications of comfort & even luxury. This fact is a distinctive feature of your new western country. In the older sections of Kansas & Minnesota we see pretty

good farm houses, but nothing like the establishments that are to be met with on every side in Manitoba. Devine has 300 acres under wheat, & he expects to raise 9,000 bush., & at the price he sold for last year, viz., 67c., will have a good deal of money to put in the bank. I have heard bank managers out there say that the farmers of Manitoba have good deposits, & from what I have seen I am not at all astonished. There is no question in my mind that the crop of Manitoba & the Territories will be 50,000,000 bush., & all say that it will grade no. 1 hard. I was very much impressed with Winnipeg, & it must, with its magnificent back country, become a very large city. In fact, the whole country was a revelation to me. Then there is the C. P. R., which is a wonderfully enterprising corporation; & after seeing the country through which it runs, I am not surprised that the stock should go up. The cars composing the Imperial Limited are simply palaces on wheels."

Export & Domestic Freight Rates.

The question of relative rates upon export & domestic traffic in grain & grain products & of the publication of tariffs relating to such traffic was decided by the U. S. Interstate Commerce Commission, Aug. 7. Following is the official statement:

The Act to regulate commerce applies to the transportation of export & import traffic, & the jurisdiction of the Commission over such traffic is not denied, but is distinctly affirmed & rather enlarged by the decision of the U. S. Supreme Court in *Texas & Pacific R. Co. v. Interstate Commerce Commission*, 162 U. S. 197, 40 L. ed. 940, 5 Inters. Com. Rep. 405.

The Act to regulate commerce does not, as matter of law, prohibit a carrier by railroad from making a through rate from a point within the U. S. to a foreign destination of which its division shall be less than the amount charged by it for the corresponding transportation of domestic merchandise to the port of export. Nor is it, as matter of law, in violation of the Act for such carrier to make a lower rate to the port of export upon traffic which is exported than upon that which is locally consumed, for the export rate is in essence the division of a through rate. *Texas & Pacific R. Co. v. Interstate Commerce Commission*, 162 U. S. 197, 40 L. ed. 940, 5 Inters. Com. Rep. 405, cited & applied. *Kemble v. Boston & Albany R. Co.* 8 I. C. C. Rep. 110, cited & approved.

It is a question of fact whether rates upon export or import traffic, as well as those upon domestic traffic, are in contravention of the provisions of the Act to regulate commerce.

The Act to regulate commerce was intended to & does apply, not only in cases of direct injury to particular individuals or industries, but also in cases involving indirect injury to the community as a whole, & in the absence of some justifying reason, it would not be right for U. S. railroads to permanently transact business for foreigners at a less rate than that for which they render a corresponding service to U. S. citizens.

Market conditions, sometimes in case of wheat, but seldom in case of corn, may justify an export rate through the port of New York somewhat lower than the domestic rate, & Philadelphia, Baltimore, Norfolk & Newport News usually take rates which are certain differentials below the New York rate on both domestic & export traffic. During the period of closed lake navigation the export & domestic grain rates to New York & the other ports mentioned should ordinarily be the same. Rates to other ports, including Boston & ports on the Atlantic north of Boston, & Galveston, New Orleans & other Gulf ports may perhaps be properly made lower on export than on domestic traffic to enable them to compete for the ex-

port business. Such an adjustment of rates would be to the advantage of the carrier, & just alike to the U. S. consumer & the U. S. producer. But as the problem is primarily one for the carriers rather than this Commission, & some rate changes have been made by them during the progress of this proceeding, & the testimony indicates that the present disparities between domestic & export rates will not become permanent, no order is made in relation to this branch of the case.

In the application of export grain rates the carriers should in no case make the rate from any point to the seaboard less than that from any intermediate point on the same line.

Carriers engaged in the transportation of export flour from Minneapolis at a rate which is 1½c. less than the domestic rate to the port of export refuse to make any corresponding concession to intermediate millers. Held, That this is unjust & unlawful discrimination against such intermediate traffic, & that whatever line participates in such lower export rate on flour from Minneapolis must make a corresponding rate upon similar traffic from intermediate points.

There may be instances where a carrier should be permitted to meet railroad competition without reference to its intermediate territory, but when the very existence of an important industry depends upon the carrier being required to treat intermediate territory as it does the more distant territory, the rule of no greater charge for the shorter distance clearly applies.

Carriers largely engaged in transporting export flour have for many years made the same rate on wheat & flour, & such long continued practice is evidence against any difference in rate on those commodities; but the presumption is not irrebuttable, for if it were the carriers could never change their tariffs or classifications.

The profit to U. S. millers in manufacturing flour for export is from 1 to 3c. per 100 lbs., but the freight rates on wheat & flour for export show a difference in favor of the English miller of from 4 to 11c. per 100 lbs., & other things being equal, such discrimination is clearly prohibitive upon the U. S. manufacturer. The published railroad rates on both wheat & flour for export have been the same up to a recent period, & the carriers have exacted such rates, except where lower rates on wheat were induced by competition. Water competition on the Great Lakes limits rail rates to the various ports on both wheat & flour during the navigation season, & to a degree before the opening & after the close of navigation, & the published & actual water rates on wheat have been from 2 to 4c. lower than those on flour. To a limited extent the cost of service may be greater in the transportation of export flour than in that of export wheat. The export rate on flour includes delivery on board ship, while the rate on wheat ordinarily does not, & at New York an additional charge of about 1½c. a bus. for loading wheat is made. Exportation of flour has steadily increased, but for the last 6 years the increase has not been marked, & a decrease is shown by comparing exports in 1894 & 1898.

Held, That public policy & good railway policy alike seem to require the same rate on export wheat & export flour, but that the duties of the Commission are confined to administering the Act to Regulate Commerce, & in view of all the conditions shown in the investigation, a somewhat higher rate on export flour than on export wheat is not in violation of that statute. That the published difference in rates is too wide, & that the rate on flour for export should not exceed that upon export wheat by more than 2c. per 100 lbs. That the relation of rates on domestic shipments of flour & wheat is not involved in this decision, as the export & domestic freights are handled under different conditions.

Rates on export traffic must be published & filed in accordance with the provisions of sec. 6 of the Act to Regulate Commerce.

Severed through export rates made by joining the ocean rate, whatever it may be, to the inland rail rate, whatever it may be, are not analogous to joint rates made by joint arrangement between railway carriers, sub- ject to the statutory sense that the total rate must be published & filed & it is enough if the railway carrier publishes & maintains its own rate to the seaboard. But if there is in fact such a joint arrangement that the rate is a joint rate under the 6th sec. of the Act to Regulate Commerce, then the entire through rate should be published, & not the inland division, which in that case might vary while the entire rate remains the same.

The G.T.R. was represented by its General Manager & General Traffic Manager, & the C.P.R. by its Freight Traffic Manager.

Passenger Rate Troubles.

August was a month of scares in passenger rate matters. Early in Aug. it was announced that on account of the refusal of the Michigan Central & Lake Shore lines to cease selling tickets from the West to Portland, Me., & return via Boston at reduced rates, & the consequent refusal of the G.T.R. to stop selling cut rate excursion tickets to Boston, the Erie had decided to break the recently adopted passenger schedule & withdraw from the Chicago & Boston business. This was followed by the Erie announcing a rate of \$18.45 for the round trip between Chicago & New York. There was previously no round trip between the two cities, the standard one-way rate being \$20. The rate made by the Erie was, therefore, less than a single fare. Corresponding rates were made from intermediate points to New York. General Passenger Agent Usher, of the C.P.R., when interviewed in regard to the cut, said the report that a serious rate war, into which the C.P.R. & G.T.R. Co.s were likely to be drawn, was largely the result of the brilliant imagination of Chicago newspaper men. The report became current because the Pennsylvania lines announced a special rate between Chicago & Philadelphia of \$16.45, & the Erie Ry., in order to retain its New York & Chicago business, met this cut rate by a reduction in the rate between Chicago & New York from \$20 to \$18.45. It transpired that the special rate made by the Pennsylvania lines between Chicago & Philadelphia was only for an excursion of the Grand Army of the Republic from Chicago to Philadelphia, & remained in force only from

Sept. 1 to 4. The Erie road, in order that this special rate might not interfere with its Chicago & New York business, made a corresponding cut in its rates from \$20 to \$18.45 on Chicago & New York business. It was quite understood, however, that both these rates were for the limited period mentioned only, & would not in any way disturb the general tariff of rates on the U.S. lines generally. The Canadian lines were, of course, not in any way affected. The entire report, in fact, was the result of a misunderstanding of facts.

General Traffic Manager Reeve, of the G.T.R., said in an interview: "We are sorry to see the reduction of rate between Chicago & New York & Philadelphia, & I believe it will go far towards abolishing the reduction of rates generally to conventions, more particularly to the Grand Army of the Republic & the Christian Endeavor Society. Not that we think these associations are in any way responsible for the general demoralization that takes place in connection with the reduced fare, but because certain railway companies make that the excuse for all kinds of what used to be called, fifteen or twenty years ago, sharp practices, but which are now considered by the standard lines to mean the quintessence of stupidity. But we believe that the action of the so-called standard lines at the present time is not so much to meet competition in connection with the Grand Army fares to Philadelphia as to be a cloak for them to take action as against the differentials that have been prevalent by the so-called differential lines for many years past, & which were awarded to those lines by arbitration & with the consent &, therefore, by the agreement, of the standard lines. In other words, they are trying to take away from the weaker lines in an underhand way what they virtually agreed to allow them to retain. Our position—I am speaking of the G.T.R.—is one of strict conservatism, as we consider ourselves the strongest of the differential lines, & therefore we will not meet any reduction until the differential lines take the initiative. We will then join them & stay by them, reserving our differential as long as there is anything left to enable us to do so. That will continue to be our policy until the differential is taken away from us by the same power or through the same source as it was given us."

The differential lines are the G.T.R., Baltimore & Ohio, Wabash, Erie, New York, Chicago & St. Louis & Chicago & G.T. The Pan-handle is not admitted to be a differential line. The standard lines are the Lake shore, Michigan Central, the Pennsylvania, in other words, the Vanderbilt systems & the Pennsylvania.

Passenger Traffic Manager Kerr, of the C.P.R., who returned to Montreal Aug. 29, after spending some days in Chicago, said he did not think it likely that a general rate war would be precipitated as a result of the trouble with regard to fares to the G.A.R. convention at Philadelphia. The Erie made cuts in rates based on their claims as a differential road, & these cuts were met by other lines, whose action for a while threatened serious complications. He thought it would be very poor business for any road to start a cutting of rates during such a time of great business activity, when there was traffic enough for all, & the only question was one of sufficient accommodation to handle what was offered.

The Wabash, Michigan Central & other lines cut down to \$15.15 for the return trip to New York but limited the going trip from Sept. 1 to 4 & the return to Sept. 30 & it is expected there will be no further trouble. All the roads have united in appointing a joint agent in New York to handle all tickets & execute them for return trip. It looks altogether likely that cheap tickets will not constitute any sort of harvest fee for the scalpers, in spite of their cheapness. The tickets which the Wabash is issuing, for instance, are almost as rigid as could be made without having a photograph of the purchaser on them. They describe whether the purchaser is medium, slight or stout in size; tall, medium or short in height; male or female, & with light, dark or grey hair, besides bearing an autograph signature. On the Michigan Central the tickets will not be good east of Buffalo on the limited, but they will be good on all trains on the Wabash.

On Aug. 24, the Chicago, Milwaukee & St. Paul Ry. gave the following notice of withdrawal from the Western Passenger Association: "Rival lines, not members of the W. P. Association, namely, the Chicago Great Western, Wisconsin Central & Minneapolis & St. Louis roads, have been demoralizing rates, securing traffic to which, we think, we are entitled. We expected to be protected from such competition by the W. P. Association, but finding that we are not, we have decided to withdraw from the Association in order to be free to meet the competition of rival lines in the manner that may seem best to us. If the Great Western, Wisconsin Central and the Minneapolis & St. Louis roads will join the W. P. Association & abide by its rules, we will renew our membership immediately. While withdrawing from the Association & refusing to be bound by its articles of agreement, we have not severed our connection with the clergy, mileage or immigrant bureaus of the Association, & do not propose to do so."

Government Railway Literature.

The Press & Advertising Agent of the Intercolonial Ry. has issued a "Souvenir for Tourists, Sportsmen & Invalids," which contains some interesting reading matter, though hardly sufficiently in detail to be of much value in furnishing information. The pamphlet, printed at the Government Printing Bureau in Ottawa, has a number of good half-tone illustrations, but its general appearance is marred by the use of several old alleged wood cuts, some of which have the appearance of having been engraved with a jack-knife. Another pamphlet, "Rod & Gun in New Brunswick, along the Line of the Intercolonial Ry. & its Connections," is very well prepared as far as the writing is concerned, but is poorly got up with an unattractive type cover, with poor paper, & with a cheap-looking & indistinct map of the Province. Neither of the publications mentioned are at all up to the standard used by the Grand Trunk & Canadian Pacific for their advertising matter, & consequently will not attract the desired attention. As with other advertising matter, that used by railways must be first class & up-to-date, or the money spent in it will be largely wasted.

In none of the publications got out at Moncton does the Prince Edward Island Ry. receive fair play. In the Souvenir above mentioned it is not named on the cover or mention-page, though several inside pages are devoted to it. The summer climate, surf-bathing, & other attractions of the north shore of P.E.I., are not surpassed by those of any point on the I.C.R., & are equalled by very few, & the Island should be given more prominence.

Whatever mistakes A. H. Harris may have made during his short term as General Traffic Manager, he scored in the adoption of the title, "Canadian Government Railway System," & in showing the division of it into the I.C.R. & the P.E.I. R. on all literature. We think a mistake has been made in dropping the comprehensive title.

Military Rates from the Pacific.

Military rates are causing trouble to the lines west of Chicago, & the agreement on this business is likely to go up in the air. The bulk of the westbound movement has gone to the Chicago & Alton, & its competitors are suspicious. The Wisconsin Central has been ousted from the division arrangement on Chicago-Missouri River business because it was suddenly discovered that this system had no Missouri River line. When the agreement was first entered into the Wisconsin Central was guaranteed a percentage of the total westbound soldier business regardless of the fact that it had no Missouri River line. East bound Central Pacific officers are complaining of the methods employed by the Missouri River-Chicago roads in capturing the business from the coast. The Central Pacific people say that eastbound soldier rates must be adhered to as laid down or it will adopt drastic measures to bring the Eastern roads to time.

A San Francisco despatch says the California Passenger Association, which represents all roads having offices in San Francisco, has decided to route home discharged volunteers over the most direct line, charging the fare of \$37.50 to Missouri River points. This same fare has been announced from Tacoma. The C.P.R. is after the traffic, & has announced the same rate. The northern roads, over which the reduced fare applies, are the Northern Pacific, Great Northern & Canadian Pacific. The agreement to maintain this rate & to fight for business is as yet entirely satisfactory to the northern roads, at least, but there are rumblings of a coming fight. For

the returned volunteer travel, the "Soo," with its C.P.R. connections, is making a hard fight, & if the roads fall out on the division will probably be as active as any of the other lines. Ordinarily the northern roads would be at a disadvantage with the Southern Pacific controlling the California business, but these lines rely strongly on their water routes to San Francisco. They can take the volunteers to Puget Sound at a slight expense, & transport them across the continent at a rate which easily brings them into competition with the Southern Pacific.

C.P.R. Montreal-Ottawa Service.

The C.P.R. has put two handsome trains on its Montreal-Ottawa run. Each train, consisting of locomotive, baggage car, smoking car, 2nd & 1st class cars & parlor car, is entirely new. The exterior wood of the cars is mahogany, matching the standard equipment. In the interior of the parlor car the panels & columns are of satin wood, richly carved & otherwise ornamented. The ceilings are modelled in the empire style of railway architecture, & are superbly decorated in green & gold. Handsome windows of glazed glass add very materially to the pretty effect. The observation windows are hung with damask silk, & smoke-guards prevent the entry of cinders & dust. The chairs are upholstered in terra cotta plush, & look restful & homelike. In either end of the car the private staterooms are situated, these being finished in a delicate shade of fawn. The appointments of the 1st-class car are in keeping with those of the parlor car, the same color scheme being used throughout. The smoking car is furnished with revolving chairs. All the cars are lighted by electricity, the incandescent globes being placed along the sides instead of near the ceiling. The engine is one of the most powerful of its kind ever constructed by the C.P.R. It is not the intention now to cut down the running time of 2½ hours for the 111 miles, it being felt that that is fast enough for all practical purposes for the present, though ultimately it may be reduced to two hours.

Passenger Traffic Matters.

It is said Hamiltonians will erect a large hotel in Muskoka.

Commercial travellers in the U.S. are proposing that the railway companies shall issue uniform interchangeable mileage tickets, so that a ticket bought from one company shall be good on the lines of all.

Traffic on the Intercolonial has been very heavy all season, & the new vestibuled train between Halifax & Montreal is being largely patronized & traffic between Halifax & Sydney has been greatly increased by the improvement in the service.

All the railways running into Ottawa are enjoying a season of steady traffic unsurpassed in previous years. There has been a constant movement of tourists to the summer resorts ever since the opening of the season, as well as the usual influx of visitors & business men that make Ottawa a Mecca during the season.

The question of changing the form of interchangeable mileage tickets in the Western States has been referred by the Western Passenger Association back to the original committee to which the question was first referred. It is desired to increase the mileage of the ticket to 5,000 miles & to provide for a redemption of unused parts of books.

This has so far proved one of the best excursion seasons the railway & steamboat companies have had for years. A feature of the summer travel has been the great numbers of

Canadians from the rural districts as well as tourists from the U.S. who have visited the larger Canadian cities; all contributing materially to swell the volume of the retail trade.

The number of people who spent their vacation in Muskoka this year has been far in excess of any previous summer, probably double, about 12,000 visitors being about this year's figures. This means much to many branches of trade, & those interested will be pleased to learn that the prospects even now are bright that next year will show a very large advance on this.

The G.T.R. has decided to open up for tourists a new & charming country, the Kawartha Lake district, which is likely to rival Muskoka. It embraces the country surrounding north of Peterborough & includes Lakes Balsam, Cameron, Sturgeon, Pigeon, Buckhorn, Chemong & Stoney, which is accessible from Cobocook, Lindsay or Peterboro. The advertising department of the G.T.R. encouraged by the success that has attended its efforts in Muskoka is about to make known the beauties of this region.

The harvest excursions to the Northwest during the fourth week in August were unprecedented in size. Some 500 or 600 went from points on the C.P.R. east of North Bay, but the great bulk were from Ontario & went over the G.T.R. to North Bay, thence by C.P.R. Over 6,000 people, of whom about 1,000 were women & children, were landed at Winnipeg in two days. The transporting of this number for from 1,500 to 2,000 miles, in addition to carrying on the regular heavy freight & passenger traffic, was splendidly managed.

At a recent meeting of the Maritime Board of Trade at St. John, N.B., it was resolved that the Board views with favor the earnest efforts of the many towns of the provinces to encourage the coming of tourists, & would impress on delegates the importance of the construction of summer hotels, & the more general advertisement of the natural beauties & advantages of Nova Scotia, New Brunswick & P.E. Island, from a tourist's standpoint, & that special attention should be directed to the encouragement of this class of travel from Quebec & Ontario.

It is said the Immigrant Bureau of the Western Passenger Association has been making efforts to induce the C.P.R. to join the pool. A conference was held at Chicago on the subject, but as the Bureau refused to allow the C.P.R. as large a percentage of the profits as its passenger traffic manager thought it was entitled to, he decided to keep out. He suggested that a higher offer be made to him, & if the amount be satisfactory he will consider the matter. As the Great Northern & Northern Pacific were not represented at the conference, the original proposals could not be modified.

Travel on the Ottawa & Gatineau railway this year is very much in advance of previous seasons, substantial returns being realized from the advertisement of the country by the road, by a gratifying influx of tourists. All the hotels & summer boarding houses are well patronized, the bracing atmosphere of the Gatineau hills proving an almost irresistible attraction for those who have ever visited the place. The advertisement which the northern part of Quebec received at the recent sportsman's show in New York is also expected to bring good results & a heavy influx of sportsmen during the open season, which will soon be here.

H. J. Beemer, who now controls nearly all the waters in the Lake St. John district of Quebec, in which ouananiche may be found, is taking active measures to maintain the supply of the fish in his preserves. In his hatchery

Railroad has 75,000 young ouananiche for planting in the rivers tributary to Lake St. John. Both the C.P.R. & the Lake St. John Ry. will have fish & game exhibits in the Sportsmen's Show in St. Louis, Mo. The Province of Quebec will not make a separate show, but will probably lend the C.P.R. trophies of its woods and waters which were exhibited in New York last March, & which are to be sent to Paris next year.

After Jan. 1 next a new form of clergy half-rate permits will be used by the roads running east from Chicago, on all of the lines in the United Passenger Association. In place of the present annual clergy permit each person entitled to the credential will be furnished with a book containing 100 coupons. Whenever a ticket is requested the applicant will be required to fill out one of these coupons in the presence of the selling agent. These coupons will be turned in to the auditors of the respective roads as authority for the sale of the half-rate ticket. In this way an excellent check will be kept on clergymen's signatures, & the work of auditors will be greatly simplified. A nominal charge will be made for the books.

Much is being done to make known Canada's varied attractions. On both sides of the Atlantic the C.P.R. has advertised Canada extensively as a summer pleasure ground. In the U.S. the G.T.R. has drawn attention to the Muskoka Lake district. The steamship lines running between Boston & the Maritime Provinces are developing a large tourist business, & the tourist associations of St. John & Halifax have done much to help them by distributing beautifully illustrated pamphlets setting forth the attractions of those cities & the neighboring districts. The Dominion Atlantic Ry. has made the beauties of the Annapolis Valley of Nova Scotia well known to New Englanders, & the Quebec & Lake St. John Ry. has brought many sportsmen to Quebec Province. All this is to the good. The tourist not only takes away with him a knowledge, & it is to be hoped, a favorable impression, of the country he visits; he leaves his dollars behind him.—Canadian Gazette.

Grand Trunk Betterments, Etc.

The Co. is seeking to acquire some lots at St. Lambert, probably for the purpose of building a dyke to protect the Victoria Jubilee bridge.

The galvanized iron sheeting which is to hide trains from horses, is being put in position on the Victoria Jubilee bridge, & it is expected the structure will be opened for foot & vehicle traffic during Sept.

It is reported, but not confirmed, that the Co. will improve the Port Dover division, moving the track about half a mile further east at Norwich, in order to be near the town, & altering the approaches at Woodstock.

Work is proceeding on the new stations at Arthabaska, St. Hyacinthe, St. Anne's & Vaudreuil, Que., & Galt, Ont., & will shortly be started at Pickering & Cardinal, Ont. The St. Hyacinthe & Galt buildings will be handsome structures, costing from \$15,000 to \$18,000 each.

The last relic of the first epoch of railway engineering in Canada is passing away in the form of the tubular bridge at St. Anne's. This old bridge, which spans the Ottawa near its junction with the St. Lawrence, is being removed, & a truss bridge erected in its place. This old bridge is not only the last of the tubular bridges in Canada, but the last on this continent, & its removal is a historic event.

The new round house at Sarnia has been turned over to the Co. The Co. has some piping, etc., to do, but the building will soon be ready for use. It is situated about half a mile west of the station, & is built of white brick with stone foundation & gravel roof. The length is about 760 ft., depth 76 ft. & height 20 ft. There are 30 stalls, each accommodating one locomotive. The foundation of the stalls is composed of 4 ft. of brick, & 2 ft. of cement. In addition to the round house proper there has been constructed an office & machine shop building, 56 by 32 ft., & a 70-ft. turntable. The buildings are the exact counterpart of those being erected at Port Huron.

On returning to Montreal for a recent inspection of the lines west of there, General Manager Hays said a steady improvement

has been going on during the past year, a great many of the stations having been thoroughly overhauled, redecorated, & steam-heating appliances added. The out-buildings, train sheds, baggage rooms & freight sheds have also been renovated & improved. With regard to the road bed, he said that steps are constantly being taken to ensure safety for the traveling public. New switches & semaphores have been placed in position during the past few months, & the greatest care is exercised in the matter of signaling. The work of double-tracking the main line at Murray Hill is being actively pushed forward, & will be completed in a few months. When it has been finished the whole of the line between Toronto & Montreal, with the exception of a strip extending from Newtonville to Scarboro', will be double-tracked.

The Montreal City Council has appointed a committee to confer with General Manager Hays as to the abolition of level crossings in Montreal between St. Henri & Bonaventure station. The plan proposed is to construct a viaduct between the points named. The elevation from St. Henri to Atwater avenue is estimated at about 2,860 ft. in length. The tracks from Atwater avenue would then be on a level for 200 ft., descending on a grade of 18 1-2 ft. per mile to a point half-way between Seigneurs & St. Martin streets. From the latter street the tracks would be on a level to Bonaventure station. This would somewhat alter the present station, the elevated portions of which would be reached by staircases & elevators. Into the station proper there would run from Mountain street at least eight tracks, with platforms covered in & provisions made for the handling of baggage. The scheme also includes the building of a series of arches of 20 ft. span each, & iron bridges at all the streets, & iron trestle-work at the station. It is estimated that the iron trestle-work necessary for the whole work would cost, with wooden floorings, about \$927,000, & with buckled plates & permanent filling for tracks, \$1,034,000. The proposed work on the viaduct would be most substantial. The entrance to the station would be something like the entrance to the C.P.R.

All C.P.R. Agents in

**MANITOBA,
ASSINIBOIA,
ALBERTA and
BRITISH COLUMBIA**

sell through tickets to the Old Country, cheaper than if passengers bought railway tickets to New York or Montreal, and then re-booked.

They also sell prepaid tickets to passengers coming from the old country, cheaper than the rate obtainable in Europe, and on favorable terms.

EXECUTIVE OFFICES
NOS. 346 and 348 BROADWAY, N.Y. CITY, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

**IMPROVED AND
WILD LANDS...**

Do not fail to see my list, which includes lands in the choicest districts, near railway stations, churches and schools.

Any man with small capital can purchase a farm of 160 acres or more on very easy terms of payment, with buildings and cultivation, ready for immediate occupation.

Large sum of money to lend on mortgage at current rates of interest. Apply to

GEO. J. MAULSON,

195 Lombard St. WINNIPEG

between Guy & Aqueduct streets, that is to say, a retaining wall on each side of the right of way, sustaining the filling on which the tracks would be laid. The streets would pass under the tracks by a series of arches, which would not be all similar in design. It is expected that all masonry would have to be placed on a cement foundation on account of the unstable nature of much of the ground. An iron pipe railing would run on each side of the right of way, on the masonry coping, adding to the appearance of the work.

Canadian Pacific Betterments, Etc.

Ottawa Short Line.—The Co. is purchasing right of way for a line of 6 miles, which it is proposed to build to facilitate the handling of freight between the Co.'s Sussex St. Station, Ottawa, & the Union Station there. The new line will leave the Prescott line some distance east of the white bridge over the Rideau River, running away from the river till it reaches the Co.'s Montreal & Ottawa short line near the junction of that road with the Ottawa & New York Ry. The remainder of the distance will be covered as at present & will shorten the freight route about 8 miles as against the present haul by way of the Chaudiere Jct. No bridges will be required. It is not certain that the line will be built this year.

Montreal to Toronto Double Track. The grading is completed between Montreal & St. Anne's. The second track is being laid with 100 lbs. rails & will very soon be completed. The 72 lbs. rails on the old track are being replaced by 100 lbs. rails. It is expected the work of double tracking will be pushed on from St. Anne's westward next season.

Considerable work is being done just east of Sharbot Lake, on some 6 miles of the line, by reducing curvature & by reducing gradients from a maximum of 1% to .8%.

Fort William.—The yard sidings are being extended for about 4 miles. The new round-house is well under way, the work being done by the Co. Altogether about 300 men are employed on the local improvements. (May, pg. 139.)

Rat Portage.—The station is expected to be completed by the end of Oct., except the inside finishings, & the round-house should be completed a month later. (Aug., pg. 233.)

Winnipeg Station & Hotel.—The plans are still under consideration, & will probably be changed considerably before being finally adopted. The building will probably be 6 stories high, & will certainly be a magnificent one. It is probable work will be commenced this fall. (Aug., pg. 233.)

Winnipeg to Brandon.—Crossing sidings 2,000 ft. long are being put in at a number of stations between Winnipeg & Brandon not already served in this respect, to facilitate the shipment of grain.

Branch from McGregor.—In our last issue we gave, on pg. 236, under the head of "Great Northwest Central Ry.," particulars of a line which is being built from McGregor, on the main line of the C.P.R., 22 miles west of Portage la Prairie, to a point near Forrest or Varcoe on the G.N.W.C. We are informed that this line is being built by the C.P.R. Co., the contract having been let to A. D. McRae. It will be 56 miles in length, & it is intended to grade as much as possible this year.

Snowflake Branch.—In the middle of Aug., H. D. Lumsden, C.E., stated that work was progressing very satisfactorily, that 16 miles had been graded, & that the branch should be completed by the end of Aug. (Aug., pg. 234.)

Deloraine to Waskada.—H. D. Lumsden, C.E., reported in the middle of Aug. that contractor Egan had 100 men & 60 teams at

work, & that 20 miles of the line should be completed by Sept. 15. It runs through a splendid wheat district. (Aug., pg. 234.)

Pipestone Branch.—Track has been laid this season from Reston, 18 miles west to Antler, which is 49 miles from Menteith Jct. In the middle of Aug., H. D. Lumsden, C.E., reported grading completed 7 miles west of Antler, & that contractor Strevel hoped to complete the 50 miles from Antler by Nov. 10. This will carry the line a few miles west of Carlyle in the Moose Mountain District. (Aug., pg. 234.)

North Star Mine Branch.—Reports about this branch are conflicting. In the middle of Aug. a Cranbrook, B.C., correspondent stated that contractors Reid & McRae, & Grant & Shady were pushing work, while at about the same time a correspondent wrote from Fort Steele that work had been stopped by instructions from Montreal. (Aug., pg. 234.)

Crow's Nest Pass Ry.—The Nelson Miner asserts positively that it has information to the effect that the construction of the portion of this line between Nelson & Balfour will be gone on with this season. (July, pg. 208.)

Nelson.—The Nelson Miner asserts that that town will shortly become the divisional point for the C.P.R. lines in southern British Columbia, & that on the completion of the Crow's Nest Pass line from Kootenay Landing to Nelson, a round-house, repair shops, & probably a foundry will be erected by the Co. at Nelson.

Kaslo Wharf.—A floating wharf has been built in the Co.'s yard at Nelson, to be used at Kaslo, B.C. It is built in the form of a large scow with a square stern. At the rear is a 50 ft. frame building, to serve as a warehouse. The roof of the building projects 25 ft., terminating in a large mast, to which is affixed a chain, which, passing over a smaller mast at the bow, is attached to a movable platform fixed in front of the bow, & which can, by means of the chain, be lowered as the water of the lake falls.

Arrowhead & Kootenay Lake Branch. This line runs from the north end of Kootenay Lake, via the Duncan & Lardo valleys, to Arrowhead, on Arrow Lake, connecting there with the Arrow Lake branch & is intended to tap the rich mining districts of Duncan & Trout lakes, & Fish Creek. The distance from Kootenay Lake to Arrowhead is 78 miles, with a branch of 20 miles from the summit at Trout Lake, passing by Ferguson at the north fork of Lardo River to Gainer Creek, on the south fork of the same river. The grading from Kootenay Lake to Duncan Lake is fairly heavy, & is mostly rock & debris. From Duncan Lake to the summit at Trout Lake the work is light, & from the summit to Arrowhead rather heavy. The gradients & curvature throughout are easy, with the exception of that portion from the summit to Arrow Lake, where a 2.8 grade is necessary. The distance between Kootenay & Duncan lakes will be ready for tracklaying by the middle of Sep. There are 500 men at work. A. E. Doucet is engineer in charge. (July, pg. 208.)

Columbia & Western Ry.—On Aug. 11 the first train on the extension from West Robson to Midway, reached Cascade. Grading is completed to Midway, 99 miles from West Robson, & it is thought the rails will be laid to Midway by the end of Sept. The long tunnel through Bull Dog mountain, which is half done, or over 1,500 feet, is now progressing rapidly, & will be completed by winter. Pending its completion, the mountain is crossed by switchbacks. It has been decided not to put in false work for the span over Kettle River, at the head of the falls, but to put in the 120 ft. span itself. It is the intention to use a lighter steel from Cascade on, than the 73 lbs. rail laid in the mountains. All

the stringers for the bridges come from the Coast, & it is difficult to get rolling stock to handle them.

It is stated that the Co.'s engineers are running a line south of that previously run between Midway & Rock Creek.

Snow Sheds in the Selkirks.—Some trouble having been experienced last spring from small snow slides between Bear Creek & Illecillewaet, in the Selkirk mountains, it is said the snow sheds will be extended so as to prevent temporary interruption of traffic.

Vancouver Terminals.—As soon as the new station is completed the present ticket office, platform and all, will be moved to Heatley avenue crossing, so as to give a station to the east end of the city. Filling is proceeding for the yards along the water front. There will be a wide net-work of tracks & a system of gates will probably have to be provided for an exit to the water-front. At Gore avenue there will be a city crossing. Richards street will be extended & a bridge will be put across with a continued wharf, & of course there will be the same entrance to the larger part of the wharf as there is at present. (May, pg. 140.)

Vancouver to Steveston. When Assistant General Manager McNicholl was in Vancouver recently, he attended a special meeting of the Board of Trade to consider the subject of securing communication between that city & Steveston, on the Fraser River. He stated that the executive had the matter under consideration. He was inclined to favor a steam railway rather than an electric one, thinking it could be more easily handled, & he promised to lay the whole question before the executive on his return east. (Aug., pg. 234.)

Duluth, South Shore & Atlantic.—It is said that surveys have been completed, & that grading is to be started at once on the extension from Newtonville, Mich., to Greenland, 60 miles.

Surveys, Construction, Betterment, &c.

Algoma Central.—J. Conmee, M.L.A., Port Arthur, has been awarded the contract for building this line between Sand Beach, Michipicoton Bay & the iron mines of the Lake Superior Power Co. & has already started work. (Aug., pg. 235.)

Atlantic & Lake Superior. At the last session of the Dominion Parliament a subsidy was voted for the construction of 32 miles of railway from Paspebiac, Que., the terminus of the A. & L. S. Ry., to Gaspé. Mayor Prefontaine, of Montreal, recently had an interview with the Minister of Railways & afterwards stated that it was certain that the railway would be built from Paspebiac to Gaspé Basin, by the people interested in the coal oil fields, with the assistance of the Dominion subsidy.

At a recent meeting of the Canada Petroleum Oil Co., in Manchester, Eng., the Managing Director stated that the board was so convinced that the oil fields had a successful future that the Dominion Government was approached to secure assistance to place the property in direct communication with the Dominion railway system. He added that the railway would pass through the oil properties & give an outlet for the Co.'s products to all parts of Canada & the U.S. & that the Government had decided to erect wharves & harbor facilities at Paspebiac. The Gaspé Board of Trade recently discussed the route for the railway between Port Daniel & Gaspé. It is said to be the intention of the Co. to carry the line a distance of from 25 to 30 miles in the interior & the Board want it to run not more than 10 miles from the shore. (Aug., pg. 235.)

The Canada Atlantic will not rebuild the car shops at the foot of Elgin St., Ottawa, which were recently burned, as the shops

will be seen at Ottawa East & Stewarton that the different facilities. An addition of 9 miles is being made to the round house.

Canadian Northern.—J. Armstrong, C.E., & party at 1011 Dauphin, Man., for Winnipeg, Aug. 15, to locate the extension of this line to the Saskatchewan, which will be crossed en route to Hudson's Bay. The course of the party will be north to Dawson Bay & thence to Overflowing River & to Cedar Lake Mission. (Aug., pg. 235.)

The Caranquet Ry., N.B., has improved its track considerably recently.

Canadian Roadmasters' Association.

The 3rd annual convention will be held at Toronto Sep. 20 & 21. The meetings will be held in court room no. 2 of the I.O.F. Temple Building, starting at 9 a.m. daily, & the members will make their headquarters at the Grand Union Hotel, corner of Front & Simcoe streets, opposite the Union Station, where special rates will be given to them.

The special topics selected for discussion at the convention are the following, the names given being those of the committees appointed to prepare reports on each subject:—

1. TRACK TOOLS.—J. Drinkwater, A. McAuley, W. Shanks.
 2. EXPANSION OF DIFFERENT WEIGHTS OF RAILS.—J. Shanks, J. Graham, J. Leslie.
 3. PLACING OF TIES & TRIMMING BALLAST.—E. Murphy, T. Hickey, J. Malloy.
 4. RAIL JOINTS.—J. Drinkwater, W. Shanks.
- This matter was reported on at the last convention & partly discussed, to be again taken up at the forthcoming meeting.

A number of other subjects will, doubtless, be discussed, & exhibits will be made by railway supply manufacturers. There is every reason to believe that the meeting will be an interesting & useful one, & we hope to see a good attendance, not only of those who are already members of the Association, but of all roadmasters who can be present & who will join, as we are satisfied they will find the membership of advantage to them. Roadmasters are invited to contribute papers on

any subjects they choose, whether on the programme or not.

The reports of the above mentioned committees were published in our last issue, with the exception of one, which is given below,—

TRACK TOOLS.

The Committee, J. Drinkwater, A. McAuley & W. Shanks, report as follows:—In our opinion it is economy for any railway company to furnish its trackmen with the best & most suitable tools. They should be so designed as to enable the men using them to accomplish the greatest amount of labor without expending a superfluous amount of energy in so doing, by reason of clumsy or improperly designed tools; & they should be so constructed that the parts which require great strength & are subjected to great strain or wear, should be of a quality of steel best adapted to withstand the same, thereby reducing to a minimum the weight of certain tools where strength & not weight are desired, also decreasing the load trackmen have to carry about on their work as well as decreasing expense to the railway companies, as most tools are purchased & sold by the pound. The committee believe that these tools can be best & most cheaply obtained if concerns which make a study of these points in track tools, & which are supplied with the proper facilities to incorporate them in the same.

The Quebec Bridge Co.'s annual meeting will be held at Quebec Sep. 5.

The C.P.R. Co. has decided to devote a considerable sum per year to the improvement of live stock in Manitoba & the N.W.T.

The Hereford Ry. Co.'s annual meeting will be held at Cookshire, Que., Sep. 5. This Co.'s line is operated by the Maine Central Ry. Co.

The Canada Atlantic Ry. Co.'s annual meeting will be held in Ottawa Sep. 26, also a special general meeting on matters connected with the share & bond issues of the Canada Atlantic & the Ottawa, Arnprior, & Parry Sound Ry. Cos.

The Great Eastern Ry. was sold by the sheriff at Sorel, Que., Aug. 29, in execution of a judgment taken by R. Prefontaine against the G. E. Ry. & C. N. Armstrong purchaser. A deposit of \$1,000 had to be made by each bidder by order of the court. Mr. Prefontaine & Mr. Beauchemin were the only bidders, the former bidding \$500 & the latter \$501, & after a wait of about half an hour the road was finally adjudged to Mr. Prefontaine for \$505. (Aug., pg. 238)

The Winnipeg Western Land Corporation, application for the incorporation of which under the Dominion Companies Act, with a capital of \$1,000,000, has been made, asks for very extensive powers, including among other things the construction & maintenance of works for the improvement of river navigation, the building of tramways & works for the manufacture or utilization of electricity, telegraph & telephone. The incorporators are: W. Hendrie, Hamilton; A. M. Nanton, W. D. Matthews, J. I. Davidson, W. Carruthers, W. R. Brock & J. Hoskin, Toronto.

J. G. Aikman, for 15 years' Superintendent of the Cumberland Ry. & Coal Co., died at Parrsboro, N.S., Sep. 2, after 4 weeks' illness. He was a native of England & was 65 years of age.

Grain Elevator Notes.

John S. Metcalf & Co., Chicago, have closed a contract for the construction of a million bushel grain elevator, with an extensive conveyer system, to be built at Newport News, Va., for the Chesapeake & Ohio Ry. The power house will be equipped with 4 Geary water tube boilers, 1,000 h.p., & a pair of 22x42 Vilter Corliss engines. Belt galleries will be operated by electricity. There will be 2 Ames high speed engines, one 21x18 direct connected to a 250 kw generator, & the other an 8x10 engine, direct connected to a 20 kw generator, for the electric lighting. The Corliss engines & the 21x18 high speed engine, will both be run condensing. The Wheeler Condensing Co.'s condensers will be used. There will also be a 1,200 h.p. Excelsior heater & purifier, a 9x5½x12 Deane duplex

TO THE DEAF.

A rich lady, cured of her Deafness and Noises in the Head by Dr. Nicholson's Artificial Ear Drums, has sent £1,000 to his Institute, so that deaf people unable to procure the Ear Drums may have them free. Apply to Department O. B., The Institute, "Longcott," Gunnersbury, London, W., England.

boiler feed pump, & a 14x7½x12 Deane duplex underwriter's fire pump. The smoke stack will be of steel, self-sustaining, 170 ft. high, lined with brick. The entire elevator structure, together with belt galleries (with the exception of one 100 ft. section of the latter, built of steel), will be constructed of the finest quality of southern pine timber & lumber, covered with corrugated, galvanized iron. The rubber belting for the elevators & conveyers, together with the machinery throughout the house, will be of a higher grade than has ever been put into an elevator in America. J. S. Metcalf & Co. are building a smaller elevator for the Flint & Pere Marquette R.R. at Ludington, Mich. This elevator will be equipped with a marine leg, & will be run entirely by electricity.

SHIPPING MATTERS.

Dominion Notices to Mariners.

The Department of Marine has issued the following notices :

No. 52, July 28, British Columbia. 1. Beacon on Gabriola reefs. 2. Beacon on Danger reef. 3. Buoy off Celia reef. 4. Uncharted rock in Portier pass. U.S.A., Washington. Dangerous reef at the north end of Rosario strait.

No. 53, Aug. 1, U.S.A., Maine. 1. Intervals of West Quoddy Head fog alarm. 2. Nova Scotia, Liscomb, whistling buoy.

No. 54, Aug. 1, British Columbia. Beacon on north reef, Stuart Channel.

No. 55, Aug. 7, Ontario. Temporary stoppage of Battle Island light.

No. 56, Aug. 8, New Brunswick. 1. Richibucto Channel at entrance. 2. Liscomb Island lighthouse—orthography.

No. 57, Aug. 9, British Columbia. 1. Beacon on Shute reef, Satellite channel. 2. Beacon on Atkins' reef, Trincomali channel. 3. Oyster harbor—hydrographic notes. 4. Uncharted shoals off Halibut Island.

No. 58, Aug. 9, Ontario. Wreck of the Shenandoah.

No. 59, Aug. 14. 1. Prince Edward Island. Change in positions of Summerside buoys. 2. Nova Scotia. Sambro light station. Change in fog signal. 3. Quebec. Beacons on Island of Anticosti.

No. 60, Aug. 15, Quebec. St. Croix bar range lights.

No. 61, Aug. 17, Nova Scotia. Neal Harbor lighthouse.

Richelieu & Ontario Navigation Co.

The rumor that the Co. will build a sister boat to the Toronto is again going the rounds.

Work will probably be commenced before the end of the season on the hotel at Murray Bay which the Co. has decided to erect. It will contain some 200 rooms, & large dining & drawing rooms. The latter will be 65 by 40, while an immense verandah, 360 ft. by 24 wide, will surround the hotel.

The day service between Montreal & Quebec & the daily service to the Saguenay were discontinued at the end of Aug. The daily service to Toronto will be changed to tri-weekly about the middle of Sep. The two boats on the Hamilton route will be kept on as long as business warrants.

A Niagara Falls, N.Y., despatch of Aug. 12 said : "A rate war has been inaugurated between here & the Thousand Islands by the G.T.R. & New York Central Ry. & the R. & O. Navigation Co. A cut of \$4 has been made by the railways owing to the cut made by the steamboat company from Toronto. Round trip tickets are being sold from here & Buffalo to Alexandria Bay for \$5 via the rail lines."

It was recently stated that on account of the size of the locks in the new Soulanges Canal it is possible the steamers Spartan &

Bohemian will be lengthened 40 ft. next winter, that the dining room of the Spartan will be changed from the basement to the main deck, & that another tier of staterooms will be added to the Bohemian. The General Manager says the works indicated have not been decided on, though the reports may have emanated from employees.

In the middle of August an official stated that the receipts of the Co. were largely in excess of the receipts up to the same period last year. The total receipts to the date mentioned were about \$500,000. Owing to the lateness of the opening of navigation this season's business began about \$20,000 behind last year. This amount has not only been made up, but the amount quoted is to the credit of the earnings in addition. The total receipts for last season were nearly \$700,000, & the possibilities are that this season they will be close to the million mark.

Vancouver's Shipping Interests.

The Vancouver Board of Trade's recent annual report contains the following : The City of Vancouver is built on the southern side of Burrard Inlet, 15 miles north of the mouth of the Fraser River. The principal part of the city stands on a peninsula, bounded on the north by the waters of Burrard Inlet, on the south by a small indentation of the sea shore called False Creek, & on the west by English Bay. Burrard Inlet is always safely navigable for the deepest draught vessels & constitutes a magnificent harbor with good anchorage. The passage at the narrows or mouth of the inlet is about half a mile wide opposite the city front, however, the inlet is more than 2 miles wide, with a depth varying from 6 to 20 fathoms, & it extends about 20 miles farther inland. On the west & south sides of the harbor, English Bay & False Creek also afford accommodation for shipping. Since last year's report of this Board, a light-house has been put in operation on Prospect Point at the entrance to Vancouver harbor, known as the Lion's Gate. The continued increase in shipping during the past year has overtaken all the wharfe accommodation. The C.P.R. Co.'s principal wharf, on Burrard Inlet, has a frontage of 1,500 ft., with deep sea water sufficient for the largest ocean steamers. East of this there are a number of smaller wharfs affording accommodation also for sea-going & a large number of coasting vessels. Independent of this & in addition, the sawmill companies operating on the inlet have berths for at least 12 large ships to load at one time for foreign ports. The C.P.R. Co. has already commenced an extension to its wharfs, which, when completed, will give a further frontage of at least 1,000 ft. During the past year this Co. has built a transfer slip, & coal for the Mainland is now brought over in cars from Vancouver Island. A marine railway is under construction & almost completed, capacity 2,000 tons gross weight ; length of cradle 212 ft., which, when in operation, will afford accommodation for one large vessel or two smaller boats ; it has 3 tracks, 640 ft. long, to cost \$45,000. Exclusive of lumber & salmon fleets & in addition thereto, the following steamers sail from Vancouver :

The C.P.R. Co.'s Empress Line of Royal Mail Steamers for China & Japan. This service has been supplemented during the last year by the s.s. Tartar & s.s. Athenian.

The Canadian-Australian Line for Sydney, calling at Honolulu, the Fiji Islands & Brisbane, Queensland.

The Canadian Pacific Navigation Co.'s steamship to & from Victoria daily.

The Union Steamship Co. of B.C. despatches vessels to Shoal Bay & way ports, 3 days a week ; to Alert Bay & way ports, once a week ; to Juneau, Dyea & Skagway, Alaska, at scheduled time of sailing.

The Moodyville & North Vancouver ferry leaves Vancouver almost hourly.

The Esquimalt & Nanaimo Ry. Co.'s steamer to & from Nanaimo daily.

Vancouver is a regular port of call for all steamers engaged in the Klondike & Atlin Trade. The Pacific Coast Steamship Co.'s boats from San Francisco every 5 days, calling at Victoria.

Provisions & supplies of all kinds are plentiful & at moderate prices at the Port of Vancouver—imported goods for ships' use being re-shipped ex bonded warehouse.

A Sunday Ferry Case.

On June 22, W. H. J. Evans, J.P. for Lincoln, Ont., issued a summons against Capt. McIntyre, charging him with "unlawfully carrying on the business or work of his ordinary calling on the Lord's day, by being the captain of the steamer Ongiara, engaged on the said Lord's day in Sunday excursions, & having for their only or principal object the carriage of Sunday passengers, for amusement or pleasure only, & to go & return on the same day by the same boat." The Ongiara, owned by the Niagara Navigation Co., plies between Queenston, Ont., & Lewiston, N.Y., as a ferry boat, & evidence was taken at Niagara-on-the-Lake on July 12, the County Attorney appearing for the prosecution, & J. J. Foy, Q.C., for the defence. Several witnesses were examined & the magistrate reserved judgment. It was contended for the defence, among other things, that the Provincial Legislature, which introduced in 1882 the legislation as to Sunday excursions, has no jurisdiction to pass any such law, inasmuch as it purports to create a criminal offence not previously existing, & that the Dominion Parliament alone has such jurisdiction. At the time of Confederation a Lord's Day Act was in force, & it was contended that the Ontario Legislature cannot vary that law, so far, at all events, as to make anything criminal that was not previously so. The case of Regina v. The Dominion Electric Tram Co., decided by the full Bench in Nova Scotia, was cited as authority for this proposition. It was further contended that the local Legislature has no jurisdiction in respect of boats navigating the Niagara River, which is an international highway. The Dominion Parliament alone has jurisdiction in respect of navigation & shipping & navigable rivers, & more especially those forming the boundary of any of the provinces. It was also contended that the running of the Ongiara between Niagara & Lewiston was not for the carrying of passengers for amusement or pleasure only, but to carry travellers, & that the carrying of travellers is not a violation of the Lord's Day Act.

The Magistrate, on Aug. 11, delivered judgment for the defendant, without stating the particular grounds upon which he agreed with the contention of the defence. It is, however, understood that he conferred with the Attorney-General's Department in Toronto before giving his decision.

Maritime Provinces Shipping.

The s.s. Orinoco, running between Halifax & St. John's, Nfld., is doing the trip in from 44 to 47 hours.

W. L. Lovitt & others, of Yarmouth, N.S., are applying for incorporation under the Dominion Companies Act, as the Reform Shipping Co., Ltd., capital \$21,000.

Wm. Butler has made a contract with Smith Bros., of Quoddy, Halifax Co., N.S., for a coastal steamer to be built at once. She will be 68 ft. long, & will be delivered in Nov.

It is stated that another big steamer is to be added to the fleet plying between Boston &

ports in the Maritime Provinces. It is said the new flyer will not touch at Yarmouth but the Co. has St. John or Halifax in its eye.

The contract for carrying mails between St. John, N.B., St. Stephen & Grand Manan has been awarded to H. Cann & Sons, of Yarmouth, N.S., who will put on a steamer to take the place of the Flushing, giving a similar service.

At a recent meeting of the Maritime Board of Trade a motion was introduced asking the Dominion Government to make such increase in the subsidy as would secure daily steamboat service between St. John, N.B., & Digby, N.S. After a brief discussion it was withdrawn.

The Maritime Board of Trade has endorsed a petition to the Minister of Marine requesting that top wharfage charges at the Government pier at Digby be abolished. It is contended that the charges prevent the shipment of goods through St. John & Canadian ports & divert them via Boston.

The str. Duart Castle & Taymouth Castle, of Pickford & Black's West Indies line, will leave Halifax shortly, to be overhauled in England. They will receive considerable repairs, & will be placed on a footing which will easily enable them to comply with the conditions of the new contract, which goes in force July 1, 1900.

Deal tonnage from the provinces is in demand, & with light offerings the market is regarded as firm upon the basis of 48s 9d to 50s from St. John to E. C. Ireland or W. C. England. Lumber tonnage for the River Plate continues in request, & with no increase in the offerings, the market has retained a strong & buoyant tone. Large & medium vessels from St. John to Buenos Ayres can obtain \$9.50 to \$10, while from the outports \$10.50 has been secured in two instances.—St. John, N.B., Telegraph.

The Dominion Department of Trade & Commerce has received copies of a memorial to Lloyds & British & foreign underwriters, protesting against an increase of 1% in rates of insurance on ships & cargoes to & from the harbor of Sydney, N.S. The memorial presents irrefragable proof of the safety of the harbor as compared with New York & other Atlantic ports. It is pointed out that besides steamers calling for bunker coal, Sydney harbor is annually used by about 4,000,000 tons of shipping. The shipments of coal have increased from 147,051 tons in 1879 to 1,500,000 tons this year. The memorial is signed by about 50 master mariners of the North Atlantic trade.

At the recent session of the Dominion Parliament, \$8,000 was voted for direct steam communication between Halifax & Porto Rico. The contract has been awarded to J. T. Hamilton, Mayor of Halifax, for an 8 months' service for the amount of the subsidy voted. Mr. Hamilton will place on the route the str. Tyr, of 676 tons net, & a seagoing speed of 10 knots. The service will commence in Oct.

There will be monthly sailings, which will give a subvention of \$1,000 a trip. Porto Rico is now under the U.S. flag, but the order to enforce the U.S. coasting laws, which was given shortly after the close of the war with Spain, has been rescinded. Still, the probabilities are that when Congress meets one of its first acts will be to apply the U.S. tariff to Porto Rico, in which case the chances of keeping up Canadian trade with that island will disappear.

British Columbia Shipping.

It is not unlikely that an improved & fast steamship service will be arranged for between Vancouver & Puget Sound shortly.

The C.P.N. Co. has written the Victoria Board of Trade, answering the complaints about its northern service, which it says are unfounded. A committee of the Board has been appointed to confer with the Co. on the subject.

J. A. Thomson, Inspector of Steamboats, when recently in Nelson on his regular trip of inspection, telegraphed to Kaslo instructing the owners of all steamboats there to send them to Nelson to be inspected. Considerable indignation was expressed by the local owners at being put to the unnecessary expense & trouble of having to go to Nelson, so a meeting of the Board of Trade was held & a strong telegram sent to Ottawa complaining about the matter. As a result the Department of Marine ordered Mr. Thomson to go to Kaslo.

When present plans have been carried out, four new lighthouses will have been established on the B.C. coast this year in direct line of travel to and from Alaskan points. These lights will all have been placed in the most dangerous locations. One is situated at Turn Point, near Bella Bella, at the junction of Seaforth Channel & Lama Passage. Another has been built on Porter Island, where Fitzhugh Sound & Lama Passage join. A 3rd is on Ballinas Island, between Nanaimo & Comox; & a 4th will probably be on Lawyer Island, at the northern outlet of the Skeena river.

The C.P.N. Co.'s proposal to Victoria City Council for an improved service between Victoria & Vancouver is to put on a fast steamer with all modern appliances, first-class in every respect, costing not less than \$400,000, & capable, under ordinary circumstances, of making the trip either way in 4 hours or under. The Co. is prepared to give the following guarantees:—That Victoria shall remain the home port of the Co., & that it will continue as heretofore to purchase its supplies, make repairs & disburse its regular outgoings in the city, which on an average amount to about \$40,000 a month; that the maximum scale of rates for passengers & freight shall not exceed those now charged; that the Co. will do its best to maintain for Victoria the trade of the Northern & West Coast. In return the Co. asks \$25,000 a year for 10 years, which will be about enough to pay marine insurance.

With the passing of the British bark Nanaimo out to sea, on Aug. 9, but two vessels remain in B.C. waters to load lumber. The Nanaimo received cargo at Chemainus, & is bound for Nagasaki. Her place at the mill has been taken by the E. K. Woods, which arrived from Port Townsend, to load for Tientsin. There is but one other ship at Chemainus, the str. Tyr, she & the Woods being the only lumber tonnage in B.C. The fleet is certainly the smallest on record, & is directly attributable to the scarcity of tonnage & the high carrying rates being paid. Not a mast is to be seen at any of the big Mainland mills. The next lumber-carrier to arrive will, however, load at Moodyville. She is a big steamship, which is under a time-charter to the Pacific Export Lumber Co. of Portland, & which a few weeks ago left Port Blakely for China. As in the lumber business, so it is in the coal trade, the bark Charmer, now about loaded at Departure Bay, being the only sailing vessel in port. There are, of course, the regular fleet of coasting steamers in the coal trade, a number of which are now at the collieries.—Victoria Colonist.

Captains Troup, Gore & Forslund have not reported very favorably as to the navigability of the Columbia River above Revelstoke. They say the canyon is not practicable at all for a boat going up stream at the higher stages of water. If the people desire continuous & uninterrupted communication between Revelstoke & La Porte by the river from say May 1 to Oct. 1 it would be necessary to build a wagon road, or have other means of communication by land, from Revelstoke to a point above Nine Mile Riffle. A boat built especially adapted to the business might run probably during the months of May, Aug. & Sep., through from Revelstoke to La Porte; during June & July she would be compelled to stop at the Nine Mile Riffle, or at least above a bad place about a mile from the canyon. By having an extremely light draft boat it is possible that trips could be made in Oct. & during some seasons in Nov., & possibly during the last week in April. This would be the limit of the season of navigation on that portion of the river. The river is so rapid that light boats would be the rule going up stream, but good cargoes could be brought down stream.

General Shipping Notes.

The Canadian-Australian steamers will not in future call at the Fiji islands, as they have for several years in consideration of a mail subsidy for the purpose.

Chief Engineer Murphy, of the C.P.R. Co.'s R.M.S. Empress of Japan, has resigned to become a partner in a firm of building engineers & surveyors in Hong Kong. He has been succeeded by the ex-Chief Engineer of the Co.'s s.s. Athenian.

The Canadian-Australian line of steamers between Sydney & Vancouver has been sold by the liquidator as a going concern for £145,-

ooo to the New Zealand Shipping Co. The mortgages will be paid, the unsecured creditors will receive a dividend, & the shareholders will get nothing. J. Huddart, the pioneer of the line, & a heavy shareholder, loses all he put into the venture, but it is stated that with characteristic energy he is promoting another company to put on a larger & better class of steamers to compete for the rapidly developing trade between the two continents.

Ontario & The Great Lakes.

Wm. Powers, well known as a ship builder, died in Kingston, Ont., Aug. 29.

The U.S. Lake Carriers' Association has advanced the wages of all men employed on the boats, from second mate down, 10%.

It is said there is now 20 ft. of water from the lake to the new elevator at Goderich, although some portion of the harbor cut is not quite 50 ft. wide.

Capt. Frank Kendall, of the str. Clipper, was drowned Aug. 24 in the Rainy River Rapids, being caught in a rope that had been thrown to land & dragged off the boat.

The str. Algonquin grounded in the Port Colborne lock recently, owing to the low stage of water, caused by prevailing north-easterly winds. After seven hours struggling the water rose sufficiently to float her off the bottom.

Good progress is said to be being made with the survey for the proposed Georgian Bay & Ottawa Canal, now being conducted between Lake Nipissing & French River. The engineers in charge are H. McLeod, H. Carre & H. G. Stanton.

The Toronto Harbor Master has been notified by the Deputy Minister of Public Works, that the \$50,000 voted by Parliament for the improvement of Toronto harbor is entirely for the diversion of the Don. The other \$75,000 voted is for improvements at the eastern gap.

Capt. John Ledger, of Buffalo, recently died at his summer residence at Oak Ridge, Ont., aged 72. He sailed the lakes for many years & was prominent in marine circles. He was very popular with vesselmen in the early days. About twenty years ago he retired from sailing.

Capt. Noonan, of the str. James Swift, which plys on the Rideau route between Kingston & Ottawa, is reported to have let a contract for another boat 110 ft. long & 28 ft. wide, with triple expansion engines & a speed of 14 miles an hour. They will enable a daily service to be given.

It is rumored in Buffalo that the Northern Steamship Co. will build two more vessels, duplicates of the Northland and Northwest, which ply between there & Duluth. The Northland & Northwest cost about \$850,000 each. It is said the new vessels will cost even more than the present boats.

The new str. India, owned by the Calvin Company, of Kingston, laden with a cargo of iron, went ashore 8 miles above Port Colborne, Aug. 20, during dense smoke, which had been hanging over the lake for days. Three harbor tugs were sent to her assistance but the captain did not need them.

The people of Fort Erie, Ont., have been dissatisfied for some time with the running hours of the ferry to Buffalo, & applied to the Minister of Inland Revenue, with the result that a 20 minute service is to be given between 6 a.m. & 10 p.m., from May 1 to Dec. 1, & from 6 a.m. to 8 p.m. during the winter.

The passenger traffic on the Northern Navigation Co.'s steamers is exceptionally heavy this season. All the steamers have their capacity taxed to accommodate the large number of U.S. tourists who are visiting Mackinac, & taking the picturesque trip

among the thousand islands on the Parry Sound route.

The str. Alice Stafford will have company on the Owen Sound-Gladstone, Mich., route, during the balance of the season, in the str. Hennepin, owned by the "Soo line." The latter vessel has a carrying capacity of fully 50% larger than the Stafford & this means an enormous increase in the quantity of freight handled at Owen Sound.

Under the regulations governing masters & pilots, no pilot has a right to take a vessel down Niagara river unless his papers mention it or specify both Lakes Erie & Ontario. It is a mistake to undertake this work unless a pilot is well acquainted with the river, as there are a great many narrow passages, & a pilot needs to be acquainted with the current as well.—Marine Record.

The Canadian steamer Ontario, bound for Nepigon with a cargo of coal, went ashore Aug. 11 near Rosport, & is a total loss. She went on the beach in a dense fog. Her crew were rescued & her consorts escaped to the beach. The Ontario was formerly a passenger steamer, & is owned by Capt. John Cornwell & others, of Sombra, Ont. She had in tow the schooners Wawanosh & Eureka.

U.S. Engineer Fitch, of Oswego, has received authority from the Chief Engineer at Washington to remove the spars of the wreck of the large schooner St. Peter, which lies in the bottom of Lake Ontario, a few miles west of the port of Sodus Point, & about 1½ miles off the shore. The wreck is in the path of the vessels plying between Sodus, Charlotte & Oswego, & the spars are a danger to navigation.

Archibald McBride, died at Kingston, Ont. Aug. 8, after three weeks illness. He came from County Antrim, Ireland, 60 years ago, with his parents, settled in Kingston, & had lived there ever since. For some years he was continuously employed by the R. & O. N. Co. as engineer, serving on all its boats. His last boat was the Corsican, on which he was working till within three weeks of his death. He was unmarried & was a brother of R. McBride, engineer on the str. Bohemian.

Attention should now be turned to the reconstruction of the St. Clair Flats canal. It is thought it should be enlarged to double its present width & a new one built of the same dimensions, so as to accommodate up & down-bound traffic. Whatever improvements are made, stone & concrete should be used, at least, the U.S. government should do clean, sightly & permanent work in these large undertakings, & not string together a line of old, decaying, rickety wooden structures.—Marine Record.

Shortly after midnight, Aug. 5, the steam barge W. B. Morley, bound up, collided with the car ferry Lansdowne, bound down, the Morley being sunk opposite the D. & M. elevator, with a large hole in her bow about 5 ft. from the stem. The damage to her amounted to some \$10,000, & her cargo of coal was damaged about \$1 a ton. The port quarter of the Lansdowne was stove in & the forward compartments rapidly filled. The cars were knocked off the track & the ferry sidled into her slip with a decided list. The wrecking apparatus was called out & the cars removed as quickly as possible. She was damaged to the extent of about \$15,000.

A collision occurred in the Detroit River on Aug. 9 at 3 a.m. between the U.S. barge Leader, bound up with a cargo of coal, in tow of the str. Point Abino, & the Canadian barge Dunmore, bound down with grain, in tow of the str. Bannockburn. As the boats were passing each other in the river just above the head of Belle Isle the Dunmore took a sheer, & struck the Leader on the port bow, causing her to sink in 5 minutes. She lies in 25 ft. of water, just

above the red stake on the U.S. side of the channel. The crew were all saved. The Dunmore had a couple of planks stove in above the water line, but a temporary patch was put on, & she left for Kingston in tow of the Bannockburn at 7 o'clock.

A Brockville despatch says:—"The Northern Transit Co. of Cleveland, Ohio, now plying on lakes Erie & Ontario, & St. Lawrence river, & running between Detroit & Ogdensburg, will in all probability run their boats to Montreal next year. The Co. is handling more passengers than it can accommodate, so that in order to give perfect satisfaction an order will be given for 2 swift side-wheeler steamers, so constructed that they will run the rapids, & will make 20 miles an hour. The reason the management of the Co. have decided to have the new boats built is so that they can compete with other lines running to Montreal. The Empire State & Badger State are too small to accommodate the trade.

The Lakeside Navigation Co. has been unable to handle all the business which came its way part of this season, so popular has the Toronto-St. Catharines route become. Next season it will be prepared for a big increase. It is its intention to build a steel vessel after the model of the Lakeside, at a cost of between \$35,000 & \$40,000. She will be 165 ft. long & thoroughly modern in all appointments. The contract has not been let, but estimates are being prepared, & she will likely be built either in Toronto or Hamilton. It is intended to have a vessel capable of going 17 miles an hour, & ready for business by May 24 next. The str. Lincoln will be taken off the route, as she is too small, & the Lakeside will be lengthened 25 ft., making her the same size as the new boat.

The water in the St. Lawrence is considerably lower than is usually the case at this time of year. At Lachine it is 3 ins. lower than it was last season, & at Kingston a foot lower. The extreme range of difference in the level of the river is 7 ft. These changes are not the immediate effects of the excessive rains but appear to be occasioned by the different quantities of rain falling, in some years more than in others, & which finds its way down months afterwards. An experienced captain says the water rises until about June 15, & then steadily falls until Oct. The present fall is accountable to the strong prevailing northeast winds blowing up the Great Lakes. This lowers the volume flowing over Niagara & the corresponding decrease in Lake Ontario & the St. Lawrence follows. Navigation is not affected by the changes, as none of the channels are so shallow that the loss in water would render them unsafe for navigation.

According to the July report of Col. Lydecker, in charge of Government international improvements at Detroit, the gross tonnage passing through the St. Mary's & Canadian canals at Sault Ste. Marie has, for the first time in the history of those waterways, exceeded the 4,000,000 ton mark. July showed an increase of more than 700,000 tons in the freight tonnage through the canals. The U.S. canals passed freight tonnage to the volume of 3,689,805 tons, & the Canadian canal 484,924 tons. The total tonnage since the opening of navigation up to July amounted to 10,433,000 tons, an increase of 865,000 tons over the corresponding months of last year. In regard to the capacity of the Soo canals, the report says the record was broken on July 15 by the passage down of the tow barge Manila with 8,205 tons of iron ore. This is the first passage through the canals of a cargo exceeding 8,000 tons. The draft of the vessel with this cargo was 18 ft. 1 in.

It is more than probable that the movement of freight of all kinds to & from Lake Superior during the present season will be close to 23,-

net tons. The aggregate for 1898 was 21,714,064 net tons. Reports from both canals at the Sault to Aug. 1 this year show a total movement of 10,433,875 tons, against 9,488,500 on the same date last year, & only 7,871,000 on Aug. 1, 1897. The principal gain this year is in wheat moving eastward from the head of Lake Superior. The wheat movement to Aug. 1 aggregates 21,070,558 bus. as compared with 10,101,450 on the same date in 1898. The shortage in bituminous coal moved through the canals is not as large as was expected. The figures are 1,227,038 net tons to Aug. 1 this year, compared with 1,030,508 on Aug. 1, 1898, or a shortage of 403,530. Of anthracite coal there was moved through the canals to Aug. 1 of this year 392,523 tons. On Aug. 1, 1898, the movement of anthracite aggregated only 103,535 tons. —Marine Review.

"I was at Amherstburg, Ont., a few days ago," says a Cleveland vessel owner, "& I am quite sure from what was said there that the Canadian light-house officials will soon refuse to maintain the line of black stakes on the west side of the channel leading up the river from Bar point light, unless vessel masters are more careful in navigating the channel. The stakes have been carried away repeatedly, & there is quite an expense attached to providing new ones. In one night recently five of them were carried off by passing vessels. There is no reason why vessels should work so far over to the westward of this channel, & it would seem that the captains should have some consideration for important marks of this kind maintained for their guidance. There are few deep-draught Canadian vessels making use of this channel, & it would not be at all surprising, if the trouble continues, to hear of an order from the Canadian government for the removal of the stakes altogether." —Marine Review.

The Marine Review thinks representatives of the Canada-Atlantic Transportation Co. seem to have made a serious mistake in not buying the Menominee steamers which they have under charter, & which go to the National Steel Co. with the close of this season. It says:—"The ships are suited in every way to the Chicago-Parry Sound service of the C. A. Company, & it would seem almost impossible to replace them for next season. In the negotiations, several weeks ago, with M. A. Hanna & Co., a price had been agreed upon for the 5 steamers, & it was undoubtedly 20% lower than they could now be bought for, but the C.A. people allowed the deal to fall through on a question of insurance for the balance of the season. They said they understood they were not to pay insurance for the balance of the season, while the owners of the vessels insisted, of course, that if the vessels were to be sold the insurance was to be paid by the purchasers from the date of sale, as

much so as provision bills or any other items of operating expense would be paid by the new owners."

The organization of the Great Lakes Towing Co., which has taken in all the leading U.S. tug lines on the lakes with the exception of a few, was perfected at Cleveland, Ohio, Aug. 22. The officials of the trust are still figuring with the owners of the lines that are not in the syndicate, & their interests will probably be centered before the close of the season. All the property that was purchased by the organization will be operated by the new company from now on. The principal officers of the company are Cleveland men, & members of the board of directors & executive committee are among the leading vessel owners on the lakes. The principal officers elected are as follows: President & Treasurer, T. F. Newman, General Manager of the Cleveland & Buffalo Transit Co.; First Vice-President, Capt. J. Davidson, of Bay City, President of the Davidson shipyards; Second Vice-President, A. B. Wolvin, of Duluth; Third Vice-President, E. Smith, of Buffalo; Secretary, H. M. Wardwell, formerly with the Inman Towing Co., of Duluth; General Manager, W. A. Collier, Manager of the Vessel Owners' Towing Co., of Cleveland; Chairman of Executive Board, Gen. G. A. Garretson. The capital stock is \$5,000,000, half common & half preferred.

Province of Quebec Shipping.

It is said tenders will be invited at once for the enlargement of the Quebec graving dock, for which Parliament recently voted \$117,000.

The revenue of the port of Montreal from the opening of navigation to the end of July was \$94,164, as against \$100,456 for the corresponding period of 1898. The report of the acting harbor master shows a decrease of 37 sea-going vessels arriving in Montreal since the opening of navigation as compared with 1898, the number in the latter year being 424 & this year 387. There is also a decrease in tonnage of 13,679 this year. Up to Aug. 1, 1898, the sea-going vessels entering the port totalled up to a tonnage of 762,276; this year they only reached 748,597 tons.

Hon. R. R. Dobell, of Quebec, presided at a meeting of the Canadian marine insurance section of the London, Eng., Chamber of Commerce on Aug. 24, to consider whether the time had not arrived for a reduction in the shipping rates of insurance to Canada. Mr. Dobell quoted figures proving the security of the St. Lawrence route. In 1898, he said, 249 ships containing large cargoes traversed the route, with but one loss; this year to date 196 steamers with no loss. The growth of Anglo-Canadian trade demanded the removal of the British North America clause from the

insurance policies. He mentioned the Canadian deck load legislation as an illustration of Canada's care for marine interests. A resolution was passed urging the underwriters to alter the conditions now favoring the U.S. as against Canadian trade.

An unusual & dangerous feat of towing was performed Aug. 17. Davis & Sons, contractors for the Montreal Waterworks, had a dredge & 3 scows working just abreast of the big chute in the Lachine rapids, known as Verdun, or the lost channel. As the dredging job was completed, they wished, if possible, to take the dredge & scows out of the rapids & use them elsewhere. The Calvin Wrecking Co. surveyed the channel & placed buoys on the shoals. Their wrecker, Capt. O'Brien, with 2 powerful steamers, was sent down & placed as near to the dredge & scows as possible without descending the rapids. From there about half a mile of steel wire cables were dropped down to the dredge & scows, & with the powerful steam winches, on one of the steamers, they were drawn one by one, until they reached the stern of the first steamer, when both steamers put on full steam & towed them up the seething current through the Lachine bridge & thence into the canal.

Canada's Spirited Canal Policy.

The St. Louis, Mo., Globe Democrat, says: "Whatever may be the faults of Canada, it has given the world a remarkable illustration of enterprise in building important canals. In a short time loaded vessels of 2,500 tons capacity will be able to pass through Canadian canals, with a depth of 14 ft. from Lake Superior to the Atlantic. The Dominion has spent upon its ship canals \$55,000,000, or \$10 per capita. A like expenditure in the U.S. would amount to \$700,000,000, or enough to build four Nicaragua canals, according to the latest estimate. The Mississippi could be deepened to 20 ft. from Minnesota to the mouth for a fraction of the amount. Canada's canals are frozen up half the year, & yet

The Canadian Pacific Railway Company.

Dividends for the half-year ended 30th June 1899, have been declared as follows:

On the Preference Stock two per cent.
On the Common Stock two per cent.

Warrants for the Common Stock dividend will be mailed on or about 2nd October to Shareholders of record at the closing of the books in New York and London respectively.

The Preference Stock dividend will be paid on Monday, October 2nd, to Shareholders of record at the closing of the books at the Company's London Office, 1 Queen Victoria Street, London, E.C.

The Common Stock transfer books will close in London at 3 p.m. on Friday, 25th August, and in Montreal and New York on Friday, 26th September. The Preference Stock books will close at 3 p.m. on Friday, 1st September.

All books will be re-opened on Tuesday, October 3rd.

By Order of the Board.

CHARLES DRINKWATER,
Secretary.

the people have willingly spent a vast sum to perfect a system reaching from the head of the great lakes to the sea. The money has been properly handled, the engineering is efficient, & the people are satisfied with the investment. There are no canal scandals & no anti-canal party. The whole business has been carried forward practically, honestly & steadily.

"In view of such results secured by a people not very rich or numerous, & restricted to a cold climate, it is certain that the waterways of the U.S. are destined to receive far more attention than now. The smallest Canadian hamlet on Lake Superior will soon have the advantage of a depth of 14 ft. all the way to the ocean. Imagine the Mississippi below St. Paul improved to that extent. A splendid empire would be opened up to steamships able to carry 2,500 or 3,000 tons, at the most favorable rates in the world. Canada deserves credit for pointing the way & spending its millions with far-sighted judgment & liberality."

A Richelieu River Steamer.

On this page is an illustration with deck plans of the passenger steel steamer *Majestic* recently built in Toronto by the Polson Iron Works for the Richelieu River Navigation Co., of St. John's, Que. Her dimensions are:

Length, extreme.....	112 ft.
Beam.....	22 1/2 "
Depth of hold.....	6 "
Draft aft.....	6 "

She is fitted with fore & aft compound jet condensing engines, having cylinders 14 & 28 ins. diameter respectively, with 18 in. stroke. She has 2 Fitzgibbon boilers 66 in. diameter & 13 ft. long, tested to 170 lbs. pressure per square inch of steam, & with this machinery is guaranteed by her builders to make a speed of 14 1/4 miles an hour.

The boat is a handsome model, well finish-

ed throughout, & is fitted with 9 staterooms on the promenade deck in addition to the usual day equipment of a boat of her class. She has main promenade & shade decks. The ladies' cabin, upon the promenade deck, is handsomely upholstered in maroon plush, & the general cabin is upon the main deck aft. She is lighted by electricity & has a modern

to about half the required height of 14 ft., & the foundation is being prepared for another 700 ft. of cribbing. The piers of the swing-bridge over the canal are complete on one side, & the abutment on the other side is well under way. The embankments from Cardinal down to Iroquois are all built up to the full height & width, & are being finished off.

The lock at Cardinal is complete, & the contractors are now working on the weir, which is intended to develop a water-power at that point. At Farran's Point there is a cut throughout that a vessel drawing 14 ft. can pass. The lock is also finished. Three powerful dredges are widening out the prism, & a steam shovel is taking off the slopes. In addition to this, a force is employed putting the superstructure on the cribs for the approach to the lower entrance.

Tenders have been invited for the improvements at the upper entrance of the Cornwall canal.

The work consists largely of excavation & cribwork in front of Dickenson's Landing.

High Lake Freight Rates.

The lake freight market is a vessel owners' market for the balance of the season. There is no difference of opinion on this score. Predictions as to how high rates will go are worthless, but it would seem that there is every reason to expect an advancing market up to the closing days of navigation in view of the action of the ore interests during the past 10 days. Last week not more than 3 or 4 charters were made for immediate loading of grain out of Duluth, & yet the rate was advanced to 3 1/2 c. for "spot" vessels, & one ore concern paid \$1.50 for a steamer to make 6 trips with ore from the head of Lake Superior. It is said that this particular ore house, shipping probably 3,000,000 tons in a season, had not secured up to Aug. 1 more than 20,-

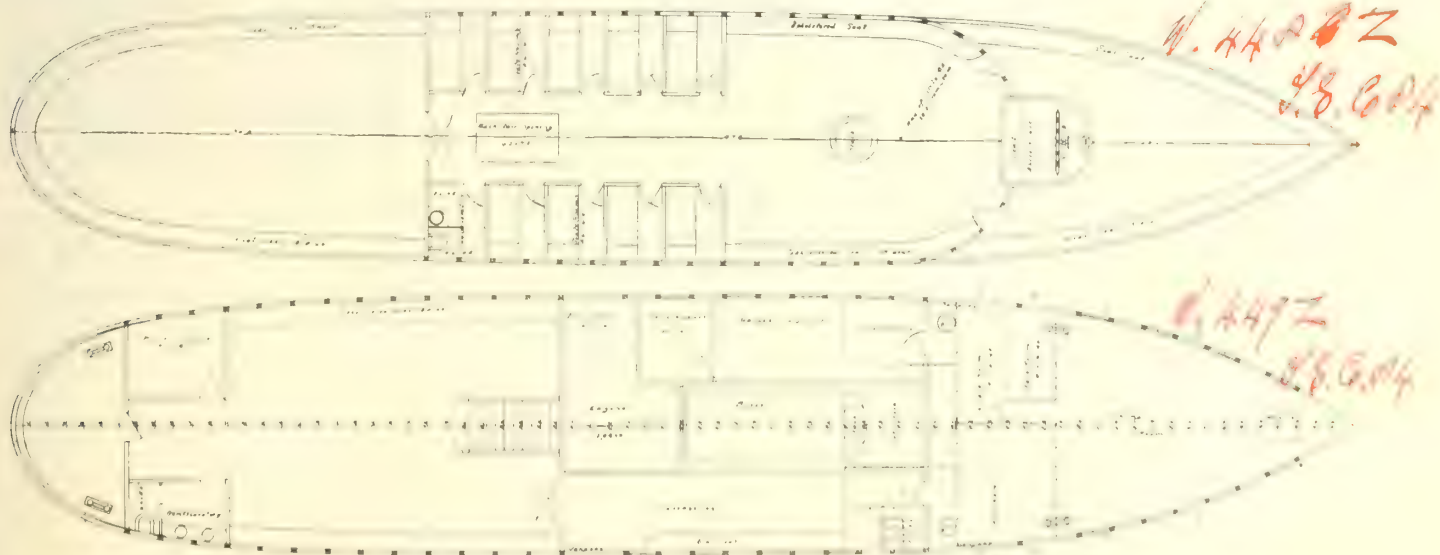

THE RICHELIEU RIVER NAVIGATION CO.'S STEAMBOAT MAJESTIC.

equipment throughout. Her passenger capacity is 400, & her route from St. John's to Lake Champlain through the Richelieu river & Chambly canal. She was designed by W. E. Redway, naval architect, Toronto, & built under his superintendence.

St. Lawrence Canal Works.

The Deputy Minister of Railways & Canals on returning to Ottawa, Aug. 21, from inspecting the work between Prescott & Cornwall, said he found the north channel, one of the most important undertakings of the route, finished except for the removal of a couple of dams, upon which work has been begun, so that the water will be let in at once. On the Cardinal section the contractors have not a great quantity of excavation to do, & are putting in the cribwork which forms the sides of the prism of the canal. About 700 ft. of this cribwork has been built up

PROMENADE AND MAIN DECKS OF THE RICHELIEU RIVER NAVIGATION CO.'S STEAMBOAT MAJESTIC.

of the vessel capacity. The great bulk of its output, of course, been covered by long contracts running over the greater part of the season, but the general demand for vessels not tied up by contracts resulted in a different situation as to the ore that was uncovered. Chicago grain shippers have noticed that if it were not for the unprecedented demand for vessels in the ore & coal trades the shipments of grain during the past month would not have warranted payment of more than 1c. a bush, out of Chicago, but, as noted above, the ore interests have been actually bidding against themselves, in order to keep their product steadily moving in advance of the grain crop that promises a big business for the fall. As a result of this condition, ore rates are up to \$1.25 from the head of Lake Superior, \$1.10 from Marquette & 90c. from Escanaba, figures which it was thought would never return again in the lake trade, & yet there is no more surplus of vessels than there was in the first days of the season when the leading ore rate was down to a 60c. basis.

Vessel men are indulging in some speculation regarding business for next season. With pig iron sold well into next year at prices that would warrant the payment of high lake freights, rather than chances being taken on a repetition of this season's experience in transportation matters, the ship owners are of the opinion that there will be a call very early for the use of their property, & some of them think that advances made to the ore interests even now might result in contracts being closed at \$1 a ton on ore. Their ideas of the market for next year are based on nothing less than the dollar figure, but there is, of course, nothing tangible as yet on this score. It is reasonable to expect, however, that contracts for 1900 will be closed up much earlier than in past years.

The few coal shippers who covered Lake Superior sales at 30c. lake freight contracts certainly have reason to congratulate themselves. There was probably 600,000 tons in all covered at the opening of navigation at this rate. Practically the entire output to Lake Superior could have been covered at the same figure if the shippers had started in early enough, but when they were willing to pay the 30c. contract rate it was too late. Now they are called upon to follow the repeated advances in ore and grain, & the Lake Michigan coal rate has reached 80c. with vessels going light to Lake Superior rather than accept anything less than 60c. to Duluth, Superior and other ports at the head of that lake. These marked advances are certainly a great hardship in the coal trade, especially with shippers who sold coal delivered, but as with other commodities, it would seem that the season is so far advanced & coal shipments so much short of requirements, that advancing rates must be expected up to the last days of navigation.—Marine Review, Aug. 17.

There is no let-up in the advance of freight rates on the great lakes. The efforts of grain shippers at Duluth to charter vessels for Sep. & Oct. at prices that are considerably better than \$1.50 on ore from the head of Lake Superior, would indicate that there is some fear among these shippers of inability to move the grain at any price. The ore companies that will be hardest pressed for the balance of the season are fortifying themselves by buying or chartering outright such vessels as they can secure. More negotiations of this kind are under way & will be announced within a few days. Lumber rates are following the advance in grain & ore, & as the owners of lumber carriers rarely make season contracts, they will all store up more money as a result of this season's business than they have earned in the past 3 or 4 years put together. From the head of Lake Superior to either Chicago or Lake Erie ports are almost anything that is asked. Charters are said to have been made at \$3.25 a thousand for the most desirable boats.—Marine Review, Aug. 24.

Yukon & Northern Navigation Flatters.

During June & July 36 vessels arrived at Dawson with an aggregate capacity of 7,285 tons.

The Empire Steamship line has built warehouses at Dawson containing 52,750 cubic feet of space.

The str. Canadian, which left Dawson July 22, made a record trip of 3 days, 21 hours & 55 minutes to White Horse, winning a purse of \$500 offered by N. McAulay to the first boat that should make the run in less than 4 days.

The Bennett Lake & Klondike Navigation Co.'s steamers Ora & Flora are reported as making their trips between White Horse & Dawson with great regularity. The Flora recently made a round trip between Dawson & White Horse in a little over seven days, including a delay on Lake Laberge loading fish.

It is reported from Seattle that another northern combine has just been effected by Manager Flockton, of the Bennett Lake & Klondike Navigation Co.; Capt. J. Carroll, of the Flyer line, operating the steamers Pingree & Low; Col. Williams, operating the Clifford Sifton; & possibly Capt. John Irving, operating the Gleaner. The compact, it is stated, will compete for the through freight & passenger business against the Canadian Development Co., & will work in conjunction with the Humboldt & the City of Seattle. The report further states that the proposed movement has the hearty approval & support of the White Pass & Yukon Ry. Co.

The steamship companies operating on the Lake Bennett & Upper Yukon route, composed of the Canadian Development Co., Bennett Lake & Klondike Navigation Co., &

the John Irving Navigation Co., have issued a notice to shippers to the effect that shipments for Dawson City & Yukon points can only be accepted subject to these conditions: That the carriers do not guarantee to effect delivery before the close of the present season of navigation, & are released by the shippers & consignees from all claims in respect of non-delivery. That freight charges to Bennett, B.C., be prepaid. The carriers will make every effort to deliver all shipments this season, but cannot undertake the responsibility of a guaranteed delivery.

Large numbers of scows are being used on the Upper Yukon. Shippers say they can save 2 to 4c. a pound on freight by scows as against steamers, & that the time consumed is very little, if any, more. The str. Kilbourne of the Upper Yukon route is towing scows to Miles canyon, where they shoot the rapids to White Horse, & are there taken in tow by the str. A. J. Goddard, of the same line, which tows them down to Thirty Mile river or any other point desired. This Co. has a monopoly of the towing below the canyon. Considerable freight, in from 4 to 15 ton lots, goes down by the scows, & now that the water is falling all along the route, many shippers predict that it is the safest way, as large steamers below White Horse will be in danger from now on of grounding. According to recent reports Lake Lindeman has fallen a foot & a half, but Bennett continues to rise slowly.

The steamers Tyrrell & Anglian, the former owned by the British America Corporation & the latter by the Canadian Development Co., were wrecked in July—one below White Horse & the other at Five Fingers. The Tyrrell, the larger of the two, struck a rock at Thirty-Mile. The Anglian struck a snag 9 miles below Big Salmon. She left White Horse July 23, with about 30 tons of freight, all of which, except about 2 tons, was saved. The Anglian is the smallest of the Canadian Development Co.'s fleet of four steamers, & was very fast, having recently undergone extensive repairs, including a new boiler. She was only on her

LELAND HOTEL, Winnipeg Man., W.
D. Douglas, Proprietor. Rooms en suite with baths and all modern conveniences. Rates \$2 to \$4 a day. Special rates for families and large parties, according to accommodation and length of time. Though moderate in price the Leland is first-class in every respect. It is especially adapted to please the commercial trade. It is in the centre of the wholesale and retail district. It is in direct communication with all parts of the city by car lines. It is supplied with the purest spring water from flowing well on the premises.

PLANS AND SPECIFICATIONS.

second trip. The Tyrrell is a composite vessel of wood & iron, & was built last year by the Polson Iron Works, Toronto, & put together at Vancouver for the C.P.R. Co. to ply on the Stikine. She was a very good vessel, & like the Anglian, equipped with all modern conveniences. When the Stikine business fell off she was taken to the Yukon, & has only completed one or two trips on the river. She was probably worth on the lakes \$80,000, although of course she did not cost that to build. At the latest advices both steamers had been raised & left on Aug. 6 for Dawson, neither being very badly damaged.

On July 31, the Alaska Commercial Co.'s str. Louise was wrecked on the Yukon, a short distance above St. Michael, resulting in the total loss of a government cargo, amounting to about \$100,000. She was chartered by the U.S. Government to haul 3 barges, containing cargoes of government supplies for Rampart & Circle City, up the Yukon. She left St. Michael on the day before the disaster, with one barge lashed to each side, & fastened by means of guy-ropes in front. When 24 hours out one of the guy-ropes broke & the barge swinging around loosened the others. The shock in striking the side of the boat turned one of the barges upside down, & the entire contents were lost. The other two barges, after drifting about among the rocks, were finally beached. A fraction of the cargo had gone into the river, & what still remained on board was so thoroughly damaged as to be of little or no value. In the meantime the big steamer, while trying to save the barges from destruction, went on a rock. A huge hole was punched through her bottom, & she settled rapidly in 10 ft. of water. When the str. Alliance left St. Michael on Aug. 6 the Louise had been raised, & a crew was engaged in pumping her out. Beyond the water damage to her appointments, & the hole in her bottom, she was all right. No effort had been made to pick up a salvage on the cargo, as it was not considered worth the trouble.

Lowering the Lake Levels.

F. J. Firth, of Philadelphia, President of the U. S. Lake Carriers Association, recently wrote the Marine Record as follows: During the many years in which the important questions of lake levels has received much intelligent consideration there has been a practically universal assent to the conclusion that the governing factors are rainfall & evaporation. It is also well understood that these factors cause wide variations in levels between seasons & between different periods in the same season. Of late years new factors have called for investigation & careful consideration. The construction of the American & Canadian locks at the "Soo" with no remedial works in the river to offset their draft upon Lake Superior; the "Soo" power canals upon the Canadian & U.S. sides of the river; the power canals at Niagara Falls; & the Chicago drainage canal; all, separately

& unitedly, present questions of grave, national & international importance in connection with the economical navigation of the Great Lakes, their connecting waterways & harbors. An able U.S. engineer estimated that the Chicago drainage canal alone would cause a reduction of 7 ins. in the Lake Erie levels. In almost all of the communications upon the subject it is assumed that small lowerings of levels caused by such works as the Chicago drainage canal, for example, are unimportant because the changes in level due to natural causes are so much greater. This may be a serious mistake. The important lake levels to the modern navigator are the lowest levels resulting from natural causes. Vessels are so loaded as to utilize every inch of available

whatever in comparison with the uncertainty & variability & the great importance of the rainfall & evaporation." The latest of the proposed projects affecting lake levels appears to be an open cut canal from Lake St. Clair to Lake Erie. It is time for those interested in maintaining, and, if possible, increasing the lake levels, to advocate & obtain the appointment of an international commission of able U.S. & Canadian engineers to carefully investigate & consider this entire question, recommending to their respective governments a permanent policy that may protect the interests of lake navigators without needlessly restricting important private enterprises desiring to utilize for power or other useful purposes the waters of the Great Lakes. It is a

question affecting all the producers & consumers of grain, ore, lumber, coal & other staples depending upon the Great Lakes for their cheap movement to the home & foreign markets.

Commenting on the foregoing, Col. W. P. Anderson, Chief Engineer of the Dominion Department of Marine, writes: "I am sorry I have not time at present to go fully into this important subject, but I endorse most emphatically Mr. Firth's view, that comparatively small reductions in lake levels are of vital importance, especially to modern U.S. lake freighters, & I also agree with Mr. Firth in urging a permanent policy which may protect the interests of lake navigators without needlessly restricting private enterprises."

Q., H. & F. W. Navigation Co.

The directors of this recently incorporated company are A. T. Wood, M.P., R. A. Lucas, W. Southam, C. E. Doolittle, C. S. Wilcox, W. D. Long & A. B. McKay, all of Hamilton. The prospectus is as follows: This Co. is being formed for the purpose of constructing, acquiring & navigating steam & other vessels for the conveyance of passengers, goods & merchandise between the ports of Canada & any port of any other country, & of carrying on the business of common carriers of passengers & goods, & of forwarders, wharfingers & warehousemen, & of dealing in goods, wares & merchandise. The new canals between Prescott

& Montreal are expected to be opened this autumn. These waterways will allow steamers to go down to 14 ft. instead of to 9 which is the present capacity of the canals. It is believed there is a good opening for a line of large steel vessels to run in connection with the railways operating between Quebec, Montreal, Fort William & Duluth & other intermediate ports, carrying grain & ore down & general merchandise up. The down cargoes of grain & ore are unlimited & the return loads only require the boats to work up the business, because every year increases the quantity of goods passing westward from Montreal. This tonnage is increasing from 10 to 20% a year, & with the opening of the new canals, when large vessels can go through from Fort William to the

THE QUEENSTON-LEWISTON BRIDGE OVER THE NIAGARA RIVER.

The photograph, taken from the U.S. side, shows the first electric car crossing on July 21. A full description & plans of the bridge appeared in our Aug. issue, pg. 248.

depth of water. Lowering of levels from natural causes will often hold a fleet of deeply laden vessels at the head of a strait or the entrance of a harbor, until the conditions change & there is a sufficient depth of water to enable the vessel to proceed with safety. If artificial constructions, such as drainage & power canals, are to still further & permanently reduce the lowest natural levels it becomes a very serious matter, & one that may involve hundreds of thousands of dollars added each season to the cost of carrying the ore, grain or other staple products of our country.

It is a mistake to assert, as was done in a recent communication on lake levels in your paper, that comparatively small reductions in lake levels are "of no practical importance

without lightering at Kingston a tremendous impulse should be given to the freight carrying business.

At present it is only intended to build 2 large vessels to carry grain, iron, ore & coal between Fort William or Duluth, Montreal & intermediate ports. It is estimated these will each cost from \$120,000 to \$130,000. It is therefore intended now to issue only \$175,000 of stock, & the balance required for the Co.'s purposes will be raised by issuing debentures. The following is an estimate of the operating expenses of such a vessel as the Co. will build, namely, one of 2,200 tons burden (75,000 bus. of wheat), & 14 ft. draught, per day.

Insurance, freight	\$ 4 00
Port dues, loss	1 00
Stowage (provisions)	5 00
Taxes, dues & Customs	1 00
Crew	25 00
Food	2 00
Light	25 00
Loss, wreck	25 00
Other	5 00
	\$91 00

The following is an estimate of the earnings of such a vessel in a season of 236 days, with no return cargo:

6 trips of 11 days each with ore, with 1,000 gross tons of \$1.00, Duluth to Hamilton, \$1.00	\$17,100 00
Less canal tolls, \$52 x 9	\$ 468 00
Less expenses for 99 days at \$90 a day	8,910 00
	9,728 00
	\$7,722 00
8 trips grain, Lake Superior to Montreal, 16 days each, 75,000 bus. at 4c. \$3,000	\$24,000 00
Deduct handling charges	\$ 2,120 00
Loss on cargo	1,800 00
Tolls on vessels	640 00
Expenses 130 days at \$90 each	11,700 00
	16,260 00
Profit	7,740 00
Add profit on grain trips	7,722 00
Total profit for season	\$15,462 00

Estimate of earnings of grain & ore down, & return cargoes of coal, from Lake Erie ports to Fort William:

6 trips of ore, 15 days a trip, with return cargoes of coal, 1,000 tons of ore a trip, at \$1.00 Duluth to Hamilton, \$1,000 x 9	\$17,100 00
2,400 tons of coal a trip at 25c (\$600)	5,400 00
	\$22,500 00
Less canal tolls	\$ 468 00
Expenses 132 days at \$90	12,150 00
	12,618 00
Profit on ore & coal trips	\$ 9,882 00
6 trips grain from Lake Superior to Montreal 75,000 bus. a trip at 4c. (\$3,000)	18,000 00
6 trips coal Lake Erie ports to Fort William 2,400 tons a trip at 25c	3,600 00
	\$21,600 00
Less handling charges	\$1,590 00
Tolls on grain	1,350 00
Tolls on vessel	480 00
	3,420 00
	\$18,180 00
Less expenses 108 days at \$90	9,720 00
	\$9,460 00
Profit on grain & coal trips	\$ 8,460 00
Add profit on coal & ore trips	9,882 00
Total profit for season	\$18,242 00

Designedly the above estimates of profits have been made on a much lower rate of freight than that prevailing now, in order that the estimates will stand the most critical examinations by those who are familiar with the transportation business. At present there are not more than 4 vessels, Canadian & United States combined, capable of taking 75,000 bushels through to Montreal, & it is not to be expected that such a low average as 4c a bus. will prevail on this route for some years to come. This season the average has been 6c a bus. through to Montreal. At this date they are offering \$1.50 a ton on ore from Two Harbors on Lake Superior to Deseronto, & the rate on coal from Lake Erie ports to Fort William is 60c. Therefore at present rates

the total profit for the season on each of these vessels, instead of being as in the 1st of the above estimates, \$15,462, would be \$36,000, & on the 2nd estimate instead of being \$18,342 would be \$47,000, but on either basis of freight the Co. should earn good dividends. If the Hamilton Steel & Iron Co. succeeds in obtaining ore from the north shore of Lake Superior, it will be absolutely necessary for it to have Canadian vessels of a sufficient tonnage, as no U.S. vessel can trade between Canadian ports. So far as competition is concerned, it would take 6 vessels of the above tonnage to deliver from Fort William at Hamilton, during July & Aug., 100,000 tons of ore, and it would not pay the Co. to keep its vessels employed upon ore in spring & fall when the rates on grain are high. Recollecting that this Co. may reasonably expect to carry the ore for the Hamilton furnaces, that there are between 30,000,000 & 40,000,000 bus. of Canadian grain to be transported during the season, without considering the vast quantity of U.S. grain, the question of competition is a matter of no particular concern to the Co.

ELECTRIC RAILWAYS.

Quebec Electric Railways.

Montreal Park & Island Ry.—At a recent meeting of Montreal City Council it was decided that the cars of the Park & Island Co. must not enter the streets of the city, & a resolution was passed ordering the City Attorney & the City Surveyor to take action to prevent it. These officials have decided to ascertain just what cars bearing the name of the Park & Island Co. belong to that Co., & just what cars bearing this name are owned by the Street Ry. Co. It is known the Street Ry. Co. has rented the Park & Island Co. a

A Popular Route to New York

Canadian Pacific, and Toronto, Hamilton and Buffalo Railways in connection with the New York Central & Hudson River Railroad.

Leaving Toronto in the evening at 5.20 p.m. in one of the through sleeping cars of the Wagner Co., you are landed at Grand Central station, in the very heart of the City of New York, 4th Avenue and 42nd Street, at 8.15 next morning, adjacent to all hotels and business houses and avoiding the annoyance of transfer.

This is also the route of the famous "EMPIRE STATE EXPRESS" Fastest Train in the world.

The Montreal Terminal Ry. Co.'s annual meeting will be held at Montreal Sep. 20. This Co. was formerly known as the Montreal Island Belt Line Ry. Co.

The Quebec Ry. Light & Power Co.'s annual meeting will be held in Quebec Sep. 12.

The Lines in Western Canada.

British Columbia Electric Ry.—Application has been made to the London Stock Exchange Committee to appoint a special settling day in & grant a quotation to this Co.'s 20,000 ordinary shares of £10 each; 12,000 non-cumulative 5% preference shares of £10 each, & £250,000 4½% 1st mortgage debentures.

General Manager Buntzen has written the New Westminster Board of Trade, explaining delay in building the extension of the New Westminster city service to Sapperton, & stating that the Co.'s engineers have been instructed to survey the proposed line, construction on which is to be commenced early next spring.

Nelson Electric Tramway.—The following officers have been elected: President, F. W. Peters; Vice-President, T. J. Duncan; other Directors, C. S. Drummond, E. Garcke, W. A. Macdonald, J. Laing; Secretary, T. C. Duncan. It has been decided to push on construction as fast as possible, & it is said the two miles of track required by the city by-law will be exceeded. (Aug., pg. 247.)

Winnipeg Electric Ry.—The Portage Avenue line has been extended. The Co. has notified the city council that if insisted on a line will be built on Sherbrooke St., but it would prefer to make some other arrangement.

Ontario Electric Railways.

Brantford Electric Ry.—The City Council has called the attention of the Co. to a number of clauses in its franchise & agreement with the city, which it is alleged has not been observed, notably in regard to the repair of tracks & the running of a 15 minutes' service on all lines, with the exception of the Park extension, from 6.30 a.m. Commenting on the matter the Courier says:—"Citizens who complain about the car service, perhaps, should not forget the fact that it is entirely owing to outside enterprise that Brantford, for so many years now, has had an electric car service. We think we are right in saying that there is not a dollar of Brantford money in the enterprise. Ratepayers should also not forget that it is thanks to the enterprise of the Co. that Mohawk Park was inaugurated, & the park is undoubtedly one of the best advertisements Brantford ever had, bringing thousands of people to the city. We are of the opinion that if an up-to-date service was inaugurated in Brantford it could be made a dividend getter. We believe that a 10 minute service on the Brant Ave. & East Ward loop could be made

to pay better than a 15 minute service. We believe, in fact, that it would be to the advantage of the street railway to have a well ballasted track, the latest & most up-to-date cars, a service running on scheduled time, & live up to the letter of its agreement all through with the city, or even go it one better."

Manager Barron has written the Council claiming that the tracks & wires are in good shape.

On Brantford's civic holiday, Aug. 14, the Co. carried over 9,000 passengers to Mohawk Park.

Chatham.—It is expected another project for the establishment of an electric street railway will be submitted to the City Council in the near future.

Fort Erie to Chippawa.—Messrs. Frenyear & Hatmeyer, of the Westinghouse Electric Co. at Buffalo, & E. Baxter, of Fort Erie, called on the Chairman of the Niagara Falls Park Commissioners, in Toronto, recently & talked over a plan for building an electric railway along the Canadian bank of the Niagara River from Fort Erie to Chippawa. They are anxious to secure the privilege from the Ontario Government of running along the chain reserve, & are endeavoring to make terms & conditions in order that a company may be formed for the carrying out of the project. The matter will be brought up at the next meeting of the Park Commissioners, when a proposition will be submitted. The railway, if completed, would form the last link in the chain of electric roads along both sides of the river. Mr. Baxter is the owner of a line of ferries which operate between Buffalo & Fort Erie, & these would probably be used to convey the trolleys to Buffalo, where connection with the lines of the International Traction Co. would be secured.

The Hamilton Consolidations.—A meeting of shareholders of the Cataract Power Co. was held at Hamilton, Aug. 9, Hon. J. M. Gibson presiding, to ratify by-laws for the absorption of the Hamilton St. Ry., the Radial Ry. & the Hamilton & Dundas Ry. The action of the directors in buying stock in these companies was approved of, & the necessary assent was given to the carrying out of the big deal. All the financial arrangements have been made, & as soon as details are settled, these systems will pass into the hands of the Cataract Power Co. Then the systems will be operated by power from Decew Falls. Another transmitting wire will be put up between Hamilton & Decew Falls. It is not known what change of management will be made. It was decided to increase the capital stock of the Co. from \$250,000 to \$4,000,000. The other companies will be merged into the Cataract Co. The question of the building of the lines to Galt & Guelph did not come up, but this scheme will be taken up as soon as the big deal is completed.—Spec-tator.

London St. Ry.—The strike still continues. The following London despatch of Aug. 20 shows what the Co. has to contend with:—"One of the St. Ry. Co.'s cars ran off the track at the Pottersburg loop, 2 miles from the city, about 9.30 last evening & was badly wrecked by a crowd numbering between 150 & 200. A coupling pin had been placed on the track. The car was no. 96, in charge of Motorman Rogers & Conductor Clough, both of whom ran away when the crowd gathered. The car windows were all broken, the seats smashed into kindling wood, & fire started in two or three places in the car. The mob dispersed on the arrival of two carloads of special police, & the wrecked car was taken to the barns without trouble. The point at which the trouble occurred is outside the city limits. No arrests have been made."

The conduct of a large portion of London's citizens in connection with this strike has been disgraceful, & of course the city is suffering in

consequence. It is said some business men are working quietly towards securing united effort to break the boycott of the street cars which is damaging business materially.

Metropolitan Electric Ry.—The extension from Richmond Hill to Newmarket was opened Aug. 14. The time from North Toronto to Newmarket is 1½ hours, 4 round trips being made. As soon as the power plant at Bond's Lake is completed, which is expected to be early in Sep., the service will be increased & baggage cars will be put on. The Postmaster-General recently went over the line & it is said the Co. is likely to receive a mail contract.

Ottawa Electric Ry.—The line to Britannia will start about 500 ft. from Holland Avenue, Hintonburg, & will run parallel to the Richmond Road & at a distance of 300 yards from it. The line will be 4½ miles long, & the terminus will be at the beach about an eighth of a mile past Britannia. A station will be erected at the village & another at the lake shore. E. E. Perreault, C.E., is laying out the line. The construction work will be very solid, the rails being 70 lb. These will be ordered forthwith. Construction will be started as speedily as possible, & the line will be in operation this autumn. The line will be double track giving direct connection with all parts of the city. The beach to which the line runs is an ideal one for bathing. No steps have been taken to arrange for the laying out of a park which will be undertaken later.—Citizen.

Owen Sound.—J. H. McLauchlan says work will soon be started on the projected electric street railway, & that he anticipates no difficulty in disposing of all the stock necessary to build & equip the road. This year's experience with the park prompts the expectation that there will be sufficient traffic to meet running expenses, & that in two or three years the road would be a paying concern. No finer route could be desired than one skirting the water's edge along the bay shore.

Queenston-Lewiston Bridge.—The illustration on page 275 shows the first car crossing on July 21. The photograph was taken from the U.S. side of the river. (Aug., pg. 249.)

The Queenston Heights Bridge Co.'s annual meeting will be held at Niagara Falls, Ont., Sep. 12.

Toronto Railway.—The gross earnings are:

	1898.	1897.	Increase.
Jan.	\$95,690.12	\$86,502.36	\$9,187.76
Feb.	91,860.30	82,100.19	9,758.11
Mar.	103,243.88	92,418.42	10,825.46
April.	95,211.37	86,868.83	8,342.54
May.	104,806.62	92,670.35	12,136.27
June.	109,603.18	94,006.37	15,596.81
July.	116,824.94	104,402.95	12,421.99
	\$716,692.41	\$639,214.39	\$77,478.02

On Aug. 7, the Civic Holiday, the Co. carried 139,000 passengers, exclusive of transfers, an increase of 18,000 passengers over the Civic Holiday of 1898. For the quarter ended June 30 the Co. paid the city \$1,934.39 percentage & \$1,854.90 mileage.

Maritime Provinces & Newfoundland.

Halifax, N.S., to Annapolis or Digby. At a recent meeting of the Maritime Board of Trade W. V. Brown moved.—Whereas the need of a second & competing transportation railway line between Halifax & St. John, through Western Nova Scotia, is generally recognized, & whereas certain London & Berlin capitalists have intimated their willingness to construct an electric railway from Halifax to Annapolis or Digby provided certain concessions be offered; therefore resolved, that in the opinion of this board every encouragement should be given towards the furtherance of this enterprise by our Government, boards of trade, municipal & town council & the press. After discussion the motion was withdrawn for this year.

ASSESSMENT SYSTEM.

THE BEST FRATERNAL BENEFIT SOCIETY IN THE WORLD.

THE SPLENDID RECORD OF THE I. O. F.

Cost to Join the I.O.F.

(For \$1,000 Mortuary Benefit.)

Initiation fee (minimum)	\$1.00
Constitution fee	1.00
Registration fee	1.00
Monthly Examination fee	1.50

Total minimum cost.....\$4.50

(For more than \$1,000 Mort. Benefit.)

Cost to take \$2,000 Mort. Benefit.	\$6.00
" " \$3,000 "	7.00
" " \$4,000 "	9.00
" " \$5,000 "	10.00

Sick benefits, when required, cost extra.

Benefits given by the I.O.F.

- 1.—Social and Fraternal Privileges of the Court Room.
- 2.—Free Medical Attendance by Court Physician where not dispensed with by Court by-law; also trained nurses in certain cases.
- 3.—A Sick Benefit of \$3 to \$5 per week, subject to provisions of the Constitution and Laws of the Order; optional, and when taken costs extra.
- 4.—A Total and Permanent Disability Benefit of one-half of face value of policy, with exemption from further payment of premiums or Court Dues.
- 5.—An Old Age Benefit consisting of exemption from payment of premiums and Court dues after age 70.
- 6.—An Old Age Disability Benefit of one-tenth of face value of policy payable yearly for ten years, on being declared totally and permanently disabled by infirmities of age after the seventieth birthday.
- 7.—An Old Age Pension payable during disability, which may be taken as a substitute for the Old Age Disability Benefit.
- 8.—A Burial benefit of \$100 at death of a Pensioner.
- 9.—A Funeral Benefit of \$50 at death of a member enrolled in Sick and Funeral Benefit Department.
- 10.—The Mortuary Benefit of \$500, \$1,000, \$2,000, \$3,000 \$4,000 or \$5,000.

The Members, the Benefits, and Their Assurance

At 31st December Each Year.

Or Any Officer or Member of the Order.

Moneton, N.B., St. Ry.—It is said the Co. has plans prepared for considerable extensions of its system & the establishment of a park at the outskirts of the town.

St. John's, Nfld.—The contract for this line provides for its running from the cross-roads, Riverhead, through Water St., to a distance convenient for running up to Duckworth St., thence along past the railway station up Military Road around Prescott St. to Queen's Road, thence down Playhouse Hill, along Gower Street to Patrick St. It is probable that a track will also run along Le Marchant Road connecting with the main line, & thus practically bringing the whole city within a block or so of the cars.—Nfld. News.

The New York, New Haven & Hartford Ry. has put in service on the line from Braintree, Mass., to Cohasset a combination passenger & baggage car fitted with electric motors, with which it can propel itself & 4 or 5 other cars. The car has four motors of 160 h.p. each, & it is claimed it can draw 7 others at the rate of 50 miles an hour.

General Telegraph Matters.

The cable rates between South Africa & England will be reduced to 4 shillings a word in Sep.

The following offices have been opened on the government line to Yukon: Bennett, Caribou Crossing, Tagish, Whitehorse, Lower Laberge, Hootalinqua.

It is said funds have been raised at Juneau, Alaska, for the construction of a telegraph line to Skagway, to connect with the line to Dawson, & that it is hoped to have the line in operation by October.

A London cablegram says, that on Aug. 16, Marconi, in his experiments with wireless telegraphy at Dover, made a complete success, the messages passing through several miles of cliffs, upon which Dover Castle stands and 12 miles across the sea.

A certificate of reduction of the capital stock of the Pacific Postal Telegraph Cable Co. of New York City from \$1,000,000 to \$100,000 has been filed. The amount of the company's capital actually paid in is \$1,000,000 & the liabilities are less than \$5,000. Among the directors are J. W. Mackay, the Bonanza millionaire, & C. R. Hosmer, of Montreal.

Telegraph & telephone matters in the Kootenay district of British Columbia continue to make progress. The Vernon & Nelson Telephone Co. now has telegraphic as well as telephonic communication between its Greenwood office & Rossland. It is stated though, that when the C.P.R. telegraph is extended to Boundary Creek, the V. & N. Co. will confine its operations to the telephone, leaving the telegraph to the C.P.R. Another report is that a branch of the Corbin telegraph system now connecting Nelson & Rossland with Spokane, Wash., is to be constructed from Marcus, via Cascade City, Grand Forks & Greenwood to Midway, & be afterwards extended thence back across the International Boundary line to Republic, Wash. The Columbia Telegraph & Telephone Company, which lately opened a telephone office at Midway, is completed to Camp McKinney, which camp has the advantage of telephone connection with all the Boundary towns & with Rossland & Spokane.

It is said in connection with the announcement that Marconi, the inventor of wireless telegraphy, will shortly visit the United States, that he will in all probability be asked to confer with officials of the Light-House Board with reference to the use of the invention in marine work generally. Experiments with wireless telegraphy have been carried on for

some time past at the U.S. light-house depot at Tompkinsville, Staten Island, by William F. Clarke, a New York electrician, under the direction of Col. D. P. Heap, engineer officer in charge of the third light-house district. These experiments have been made with a view to determining the availability of wireless telegraphy for purposes of communication between light-houses, light-ships, merchant vessels and light-house stations. The interest of the Light-House Board in the present efforts will be readily appreciated when it is understood that the board has sought for years for some method of establishing communication between the shore and moving ships. Some years ago a telephone system was tried but it proved impracticable.—Marine Review.

At a recent meeting of the Maritime Board of Trade, Mr. Hassard, of Charlottetown, introduced the question of improved telegraph communication between Prince Edward Island & the mainland. He said the Anglo-American Telegraph Co. was subsidized to the extent of \$2,000 a year. It is an old monopoly in existence since 1855. For some reason or other the Government seemed to have the opinion that P.E. Islanders would be satisfied with anything. One complaint was that there was no communication with the mainland after 8 p.m. It was also complained that rates from the Island were double that from other points of Canada. A telegram to Boston cost \$1, for instance. He moved a resolution to the effect that the Dominion Government be memorialized to either take over the service or insist on a readjustment of rates. The Government had a right to demand better service from the Co. The closing of the offices at 8 p.m. was a grievance to the newspapers of the Island and their readers. They wanted the offices open till midnight. There are 9 miles of cable. It was exceedingly inconvenient not to be able to send a message after 8 p.m., & visitors to the province wonder at the Island people putting up with such inconvenience. The papers could not get late press despatches & the public were prevented from getting the latest news in a reasonable time. The matter was referred to a committee for the purpose of communicating with the Dominion authorities.

Wireless Telegraphy at Sea.

The Marconi system did marvels in the recent Imperial naval manoeuvres. Admiral Domville's fleet was hastening to a rendezvous, to pick up the convoy of food ships which Canada was supposed to have sent to the mother country, & was all on fire with eagerness to learn whether the opposing fleet, which simulated the predatory ships of France, had been beforehand. A flying squadron steamed ahead of the laboring battleships 17 knots an hour to the big ships' 11. It found the convoy, & then by means of 2 ships disposed between the squadrons the battle fleet was told the news. Eighty-six miles separated the two squadrons, & communication could have been established in storm, in darkness or in fog, as easily as in fine weather. The news anticipated by 4 hours the actual juncture of the two squadrons, which were approaching each other at a combined speed of 21 knots an hour.

The tactics of the fleets throw a strong light upon modern naval warfare. Sir Compton Domville had a strong but rather slow battle squadron of 10 battleships, which, when working together, could go at best 11 knots an hour. He also had a score of cruisers, some fast, some of medium speed, & 28 torpedo boat destroyers. A couple of slow ships, representing a food convoy from Canada, were approaching the British Isles. In theory the convoy had been sent from Halifax, our easternmost port & safely-guarded harbor, had presumably been escorted for part of the way

by the warships on our coast, & had then steered across the Atlantic, trusting to the immensity of the ocean to elude discovery by hostile warships of strength or numbers superior to the one big cruiser which escorted it. Approaching the narrow seas, where all ocean routes converge & where discovery would be easy, it was to be met at a previously arranged rendezvous by the big British fleet of Sir Compton Domville & escorted home. That is, no doubt, very much the way in which our wheat, our cattle, our bacon, our exports generally would be sent to Britain if the Empire were at war with an enterprising naval foe. Meanwhile a lighter but swifter fleet, under Admiral Rawson, 8 battleships, which could easily make 14 knots an hour in company & 19 cruisers, backed by 24 torpedo boats, disposed along what represented the French coast, was eagerly looking for this convoy, even as the high seas would in time of war swarm with squadrons & single cruisers bent on crippling Great Britain's huge foreign trade. The "French" fleet had the speed & the start; the British fleet had the strength to win any battle in which it might engage, & knew exactly where the convoy was. Moreover, it had the Marconi system to aid its search.

Admiral Domville steered for the rendezvous, arranging a series of other rendezvous so as to make it next to impossible to miss the convoy fleet. One of his 1st class cruisers, the Galatea, was already with it as escort. His other 1st class cruisers were sent on ahead at high speed to pick up the convoy at the earliest possible moment; the 2nd class cruisers were sent out in a cloud to search for the opposing fleet, so that, if it were getting near the convoy, it could be fended off. The Juno, on which was Signor Marconi, with the installation of his wireless telegraphy system, kept some 30 miles ahead of the battleships. In due time the big cruisers found the convoy, all safe. One, the Europa, immediately turned back, & soon was some 25 miles from the convoy & 30 from the Juno. Then the two ships got into communication. From the Europa to the Juno, from the Juno to the fleet went the news; & Sir Compton Domville, 86 miles from the convoy, was in definite touch with it & had won the game. Meanwhile, the opposing fleet was desperately searching an immense area of blue water & had for hours at a critical moment been paralyzed by a fog so dense that ships might have passed within a mile of it without detection.

To understand the full value of the feat performed when the fleet & the convoy, invisible to each other, practically conversed, we may assume France & Great Britain to be at war, & need to arise for a close watch upon, say, Brest. From Brest to the Lizard is 110 miles, & from the Lizard messages can be sent to British naval stations. A cruiser could remain outside the harbor mouth, 2 or 3 more could be disposed at equal distance intervals between there & the Lizard. Whatever the advanced cruiser might see would be known in Plymouth in an hour. With flag signalling a chain of 8 or 9 cruisers would be needed & they could communicate only in clear weather. With the Marconi system the news would go in fog or sunshine, storm or calm. If a French ship were to leave Brest, within an hour or two a British ship could be leaving Plymouth, 130 miles away, to look after her. Such a system of intelligence would greatly lessen the dim uncertainty as to the enemy's movements which someone has called "the fog of war."

Defects in the system there are as a matter of course. Two showed themselves during the manoeuvres. It is slow work transmitting the messages, & signals from other transmitters may disturb the process. For instance, the Juno was once taking a message from the flagship when suddenly a despatch began to come in which was being sent from Alum Bay in the Isle of Wight, 50 miles away, to Poole,

on the English coast, some 25 miles away from the Isle of Wight. The sector through which the ray is sent can be limited to a certain degree, but at a range of 30 miles would spread out to a width of seven miles. An agency would be sure to set his transmitters so as to interfere with signals to the utmost, while his receivers would be adjusted to take in signals from any fleet he was watching. Thus all messages would have to be in cipher, & in cipher constantly changed, as no cipher is undecipherable. It is obvious, however, that the discovery is in its infancy, & with further improvements marvels may be accomplished in the direction of keeping touch between ships that to the eye are solitary upon the face of the waters. *Globe.*

General Telephone Matters.

A. F. Sise, President of the Bell Telephone Co., & Mrs. Sise, returned to Montreal Aug. 14, from a short holiday spent at St. John, Nfld.

Some information about the telephone lines in the Kootenay district will be found under the head of General Telegraph Matters on page 179.

The Eastern Telephone Co. has built a line between the Dominion Iron & Steel Co.'s office, at Sydney, N.S., & the International pier, for the private use of the Dominion Co.

On Aug. 1 the Bell Telephone Co. made a sweeping reduction in rates on all its long distance lines for night messages. Between the hours of 6 p.m. & 8 a.m. the rates have been reduced to one-half the day rate, except where the tariff is 25c. or under, no rate being reduced below 25c. The following are a few examples:—

	Day rate.	Night rate.
Toronto... Montreal	\$2.00	\$1.00
"... London	.60	.30
"... Kingston	1.00	.50
"... Brockville	1.25	.65
"... Morrisburg	1.50	.75

The only cases where the night rate is not one-half the day rate, is where the day rate

is less than 50c., as seen by the following cases:—

The 45c. day rate would be 25c. at night,	
" 40c. " " 25c. "	
" 25c. " " 25c. "	

and anything under 25c. remains unchanged.

Among the Express Companies.

The Canadian Ex. Co. has closed the Montreal & St. Laurent route.

The Canadian Ex. Co. has opened offices at Anson, Ont.; Carmel, Que.; Depot Harbor, Ont.; Dunbarton, Ont.; Norwich Jct., Ont.; St. Nicolas, Que. Summer offices have been opened at Niagara-on-the-Lake & Queenston, Ont.

On Aug. 15 there was received at Joliette, Que., by Dominion Express, \$7,000 in bills for the local branch of the Banque Nationale. As the safe in the local express office had been out of order for several days, the Co. sent an inspector at once to open it & arrange for the safe storage of the money. After working until nearly midnight the inspector was forced to give up the task, & the \$7,000 was handed over to the C.P.R. agent, who put it in the chimney in the cellar. In the morning he found the chimney vacant & the money gone, & it has not been recovered.

The shipment of two wives by express from Issaquah, Wash., to their husbands at Dawson City, by the Nugget Express Co., is something of a novelty in the express business. Mrs. L. T. Mullarkey & Mrs. L. T. Jones are the ladies who constitute the novel consignment. An express messenger accompanies them to look after their baggage, etc., & he will take a receipt from the respective husbands on delivery of the goods. Precisely what would happen if either of the husbands was dead or could not be found, & where the liability of the Co. would end, is not stated.—*Express Gazette.*

A recent despatch from Seattle, Wash., said:—"Some of the wealthiest capitalists of Pittsburg, Toronto, Ont., & Denver are in-

terested in the passenger & express line to be established from the Yukon River, in Alaska, to the Klondike mining region. J. T. Cornforth, of Denver, is the Western guiding spirit. J. H. Ruse, a Toronto capitalist, is President. The company will be known as the Yukon Overland Express & Transportation Co. Mr. Cornforth stated that work on the line would be commenced inside of two weeks. He is hiring large gangs of men for the construction work. A thousand will be needed." There is no J. H. Ruse in the Toronto directory, & we are not aware of any such "capitalist" in this vicinity. Perhaps the balance of the despatch is equally reliable.

Advertising Express Business.

The Commercial Appeal of Memphis recently contained a large advertisement of the Southern Express Co., which suggests the thought that express companies are losing an opportunity in not keeping their advantages before the public. Particularly is this true in the case of express money orders, which have undoubted advantages over post office orders. Nor do the majority of people know of all the things one may get an express company to do; take, for instance, this summary from the advertisement mentioned:—

"The Southern Express Co. receives & forwards freight, valuables, money, etc., to all points accessible by express. Collects bills, with or without goods. Carries free any orders sent for goods to be returned by express, when enclosed in a government stamped envelope, & goods are called for & brought on return train. Deeds may be sent through this Co. to be recorded & returned to the sender. Baggage checks taken & baggage obtained & shipped to owner. Goods in pawn redeemed. Money orders sold on all accessible points in the U.S. & Canada—also payable in Cuba. A receipt is always given, & you can get your money back if the order is lost. There is no cheaper way to send money than by Southern Express Co.'s money orders."

ADVERTISING ON THE CANADIAN PACIFIC RAILWAY.

The exclusive privilege of advertising in the Stations, Ticket Agencies and Hotels of the CANADIAN PACIFIC RAILWAY, and on that Company's buildings, premises, telegraph poles and fences, is controlled by THE ACTON BURROWS COMPANY.

The franchise embraces the whole of the C. P. R. System, including all branches and leased lines, comprising 7,178 miles of railway, 690 stations, and a number of ticket agencies and hotels.

Advertising on the C. P. R. is like every department of that Company's service, modern, up-to-date and reliable.

The Engineer & the Road to the Yukon Gold Fields.

By Harrington Emerson.

[The following article, which was written in March last, deals with matters from a United States standpoint, which makes all the more forcible the remarks about the difference between the policies of the Canadian & U. S. governments in regard to aids to navigation & in attention to frontier matters. The admission that the White Pass & Yukon Ry. will divert the trade of the Yukon from U. S. to Canadian channels is significant. We are inclined to think Mr. Emerson is misinformed as to what he terms the annoyances & extortions of the Canadian customs officials at Log Cabin. If such abuses existed formal complaint would undoubtedly have been made. Since the article was written the W. P. & Y. Ry. has been completed to Lake Bennett, 41 miles from Skagway, & is now in operation, giving connection at Bennett with the river steamer service to Dawson. —EDITOR.]

He who leaves what is generally termed the Pacific Coast for the Klondike & the Alaskan gold fields, enters another world when he boards the north-bound steamer. It is not that the vessel differs from steamers of the same tonnage on the Atlantic Coast, for the engineer's handiwork must be more perfect for voyages to the outlying places of the earth where there are no repair shops. It is the passengers who make a different world, or perhaps it is fairer to say that among them the conventions of civilized life lose their force, & the sordidness & other elemental & unlovely instincts which civilization hides but does not eradicate, crop up unblushingly. A good part of the men northward bound are miners, animated not by patriotism nor hope of homestead, not by dream of glory, nor love of science, not by pride of conquest nor religious enthusiasm, not even by the pleasure of adventure, but impelled northwards solely by lust of gold. Dogging the footsteps of these pioneers is the motley horde of human parasites & beasts of prey, both male & female, & these & their ways emphasize the difference between the lust for gold & the pursuit of immaterial riches. No one tries to rob Dewey of his laurels nor Nansen of the honor due his adventures & discoveries, but if a man has secured an ounce of gold a thousand rise up in his path & try to take it away from him.

Owing to the absence of parasites, industrial, criminal & governmental, it was cheaper & safer to go to the Yukon ten years ago

than it was when the great work was on, & were it not for the works of the engineer, the passage down or up the Yukon would to-day be lined with as many robber roosts, levying blackmail, euphemiously called toll, on all the travel & traffic, as was the Rhine in the Middle Ages. But the engineer, with his ocean steamers, wharves, railroads, aerial cableways, river boats, etc., came & converted what was once an expedition of extreme physical danger & hardship, & what next became a journey of extreme pecuniary danger & expense, into a rapid, safe, convenient & also

C. F. SISE,
President the Bell Telephone Company.

cheap trip to the Arctic Circle. It is this cheapness that above all else will develop the resources of that far off region, making profitable great numbers of mines to-day unworkable. In California gravels containing as little as 5¢ of gold to the cubic yard are washed at a profit, but in the Klondike region all gravel that yields less than \$15 a cubic yard is mined at a loss. It is too much to expect that far northern gravels can ever be worked as cheaply as in California, but it is not too much to expect that with cheaper labor, cheaper supplies, & above all, better appliances, five dollar gravels will in time have value.

The most remarkable part of the long road to the new gold fields is the short link which crosses the backbone of the continent. Elsewhere, the continental divide lies in Colorado, Wyoming, Idaho, but in southeastern Alaska, it is a rampart rising direct from the sea. At its base lie the blue waters of an arm of the Pacific. Fourteen miles inland is the summit, & immediately beyond are the head waters of the Yukon. A few coast passes are the only feasible highroads to the interior, & this gives them very great political as well as commercial importance. Further north between the

Yukon & the ocean are those stupendous snow giants, Mount Saint Elias & Mount Logan, towering about 18,000 ft. in height.

The profiles here given, showing the two lowest passes from ocean to river, were drawn from his own surveys by Frank Reid, the engineer, who, at Skagway, in 1898, in the cause of decency, order & law, shot & killed "Soapy Smith," the leader of all the crooks & thugs with which the place was infested, & was in turn killed by him. Of all the many dead claimed by the dangers & diseases or the murderous trails, Reid alone rests under an imposing monument, erected in the forlorn little cemetery to show the gratitude of the citizens & as a permanent warning to evil-doers. The man was honored who had saved the town from a reign of terror, but the engineer began a greater work in his surveys, which were the beginning of a development, that in 18 months replaced the Indian hunter's foot-path with aerial cableways & a steam railway.

The profiles are worth studying. Lynn Canal is an inlet or fjord of the Pacific Ocean, & the lakes over the summits are the head lakes of the Yukon River. Although these summits are but 14 miles from the ocean, the distance down the Yukon to Bering Sea is 2,000 miles. Nowhere else in the world are the navigable head waters of a great river so near the same ocean into which it finally empties. It is as if the headwaters of the Ohio River were but 14 miles from New York Bay.

From Panama to the Fuca Straits there are but few harbors, but from Puget Sound northwards a whole coast system of mountains & valleys sank, in a former geologic age, several thousand feet, & thus formed the present sounds, canals, channels, inlets, bays, harbors, a land-locked water-way of marvelous beauty & danger stretching a thousand miles north of the sound cities, Tacoma, Seattle, Victoria & Vancouver. So smooth & placid is this water-way that Indians, in their dugouts, undertake trips of 1,000 & more miles along the coast, yet so dangerous is it that scarcely a week passes without some steamer striking or stranding on the dark

shores or sunken rocks. At the northern end
of this inside passage & 90 miles from the sea
is the head of Lynn Canal, which is 7 miles
wide & from 135 to 413 fathoms deep, but the
Wrangel Narrows, 100 miles further south,
are only $\frac{1}{4}$ of a mile wide & 18 miles long, &
so shallow that rarely a steamer passes
through them without scraping on the bottom.
At another point in the long inside passage
conflicting tide currents swirl & rush 30 miles
an hour, & this place can only be passed at
slack water, either high or low.

At the head of Lynn Canal is Taiya Inlet,
14 miles long & but 1 mile wide, & into the
head of Taiya Inlet empty the Taiya & Skag-
way Rivers, each making a long mud delta
covered at high water, bare at low tide; &
here the tidal range is very great, 16 or more
feet. The Taiya & Skagway Rivers both
flow rapidly down from the summits of the
coast range of mountains. They are but tor-
rents, only 14 miles long from source to del-
tas, & within a few feet of their head-waters
are the head-waters of the Yukon; thus nat-
ural passes are formed from the coast to the
interior. By no other route is the distance so
short as up the Taiya River. There has al-
ways been an Indian village at Dyea, which
is doubly favored by being at the extreme head
of ocean navigation & nearest to the series
of lakes, Crater, Long & Deep, which empty
directly into Lake Lindeman. This lake in
turn empties into Lake Bennett, which is
but 40 miles from Dyea. From an engineer-
ing point of view the Skagway route is the
better, as the White Pass at the head of Skag-
way River is 600 ft. lower than the Chilkoot
Pass, but neither Indians nor miners used it.
Its series of lakes, Summit, Middle & Shallow,
are separated from Lake Bennett by a high
divide, & flow by long & shallow streams into
other lakes not so immediately available for
reaching the Yukon. Although the distance
to Lake Bennett is the same by survey over
each pass, the most enthusiastic backers
of the White Pass route have always consid-
ered it at least 10 miles longer, owing to its
extreme & lasting difficulty for foot & horse
travel. In former years at two seasons of the
year only was travel possible over the Chil-
koot Pass, in late winter when the snow was
hard & the lakes frozen, & in late summer
when the lakes were open for rafts & canoes.
It is strange that this easy & natural highway
for the Indian up the coast in a canoe, over
the pass with a pack on his back & down the
river on a raft, should have presented almost
insuperable obstacles to civilized travel.
The Indian in his dugout cared not for nar-
rows, shallows & currents, tides & flats. He
did not try to force them, but accommodated
himself to conditions as he found them, & was
governed by the seasons in his trips over the
pass, as was also the early gold seeker, who,
drifting north in 1877, made his way with In-
dian help over the Chilkoot Pass to the Yukon
River.

Between the final triumph of modern en-
gineering, the railroad, & the natural high-
way of the savage, there were many stages
of improvement which were more toilsome,
dangerous & expensive than the conditions
they are supposed to better. There was no
longer easy & sympathetic acquiescence in
nature's whims when the great gold rush
to the Yukon began in Aug. 1897. Just as
the engineer has substituted his work for
all other instruments or vehicles of trans-
portation over the White Pass, so also it is
the engineer who with his ocean steamers has

supplanted the Indian canoe, the sailboat, the
little coast steamers, but with the difference
that whereas the land engineer makes his own
road on which he safely runs his engines, the
naval engineer can only build a good steamer,
which too often is wrecked owing to the
culpable negligence of the U.S. government,
quick enough to install revenue collectors, but
exceedingly slow to chart, buoy and light
dangerous channels.

Nearly 5,000 people a month make the pas-
sage from Seattle & other Puget Sound cities
to south-eastern Alaska, & many thousand tons
of freight are also carried, yet aside from
a few buoys in Wrangel Narrows there is ab-
solutely nothing provided by the government
to aid the mariner in navigating those waters.
The Canadian government, both on land and
sea, is more prompt to act & to provide pro-
tection. It has a light-house on the Sister
Rocks in the Gulf of Georgia, another at
Cape Mudge at the entrance to Discovery
Passage & yet another at Egg Island. The
disastrous wrecks almost without exception
have occurred in U.S. waters. As canoes
gave way to ocean-going vessels in these un-
buoyed & unlighted channels, the government
pilot charts were improved with pasters sug-
gesting that the chart was not more than 5
miles out of the way. Steamer after steamer
was lost, the Mexico sank in Aug., 1897, on
her return trip from carrying the first load of
gold seekers, the Corona stranded in Nov. of
the same year, the Clara Nevada ran on a
rock & burned or blew up with a loss of all
on board in the following Feb., & since then
a dozen other steamers have either grounded
or been totally wrecked. These dangers &
losses continue to date. On Feb. 15, 1899,
the Humboldt, a fine California steamer, went
on the rocks between Juneau & Wrangel, &
was in gravest danger; early in Mar. the
Dirigo stranded but was finally dragged off
with severe damage; later in Mar. the Tees,
a Canadian steamer, was reported fast on the
rocky Alaskan coast & on Mar. 29 the City
of Topeka of the Pacific Coast Steamship Co.
went fast on a ledge in Wrangel Narrows.

As the engineer was not able to take the
survey & improvement of the sea highway
out of the hands of the government he turned
his attention to terminals for the carriers both
by land & water which his skill had evolved,
& here also the transition from the perfectly
safe landing of the Indian canoe on the flat
beach above high water to the equally safe
landing of the ocean steamer at a deep sea
wharf, beyond the fall of the lowest tide, has
been through intermediate steps expensive &
dangerous. The first load of gold seekers in
Aug., 1897, found no wharves at Dyea or
Skagway, & the hastily gathered mining out-
fits were either lightered ashore at great ex-
pense, or at low tide dumped off the steamers
to be submerged by the returning waters un-
less rapidly moved by waggons whose owners
charged extortionate rates. Prices for pack-
ing over the pass had been 12 to 15c. a pound
in the old days of Indian-back, but they rap-
idly rose to 47c. by the Dyea or Chilkoot trail &
to sixty cents by the Skagway trail. Block-
ades occurred, paths turned into bottomless
pits, & pandemonium was everywhere. It is
a curious illustration of the fallibility of in-
telligent human judgment that nearly all the
capitalists organized transportation com-
panies to reach the Klondike by way of the
mouth of the Yukon, leaving the nearer &
obvious road in the hands of men without
capital but with plenty of energy & ready
quickness.

A comparison of the two routes to Dawson,
down & up the river, should have been suf-
ficient to convince one as to their relative
values. Dawson is 1,600 miles from the Puget
Sound cities. Of this distance 1,000 miles
are by inland sea, 40 are by mountain pass,
the balance down lakes & rivers. This route
is open 8 months in the year. By the other

route it is over 4,000 miles to Dawson, 2,700 miles of North Pacific Ocean to St. Michaels, & about 1,500 miles of treacherous river touching the Arctic circle, with bars at mouth & elsewhere. Boats are limited to a 3 ft. draft, & the river mouth is open but 3 months in the year. The extent of the transportation delusion is evidenced by the increase of steamboats on the lower Yukon from scarce a dozen in 1897 to 110 by the summer of 1898. These boats represented capital. The gold seekers went the other way & the only real rivalry that there has ever been for a permanent Yukon route is between Dyea & Skagway, between the Chilkoot & White passes. When the rush began, one of these was an Indian path, the other nothing, but what it lacked in merit Skagway made up in boisterous advertising. The Indian village at Dyea developed into a town, the U.S. speculation on the Skagway flats was platted & the city of Skagway started. It first succeeded in building a wharf to deep water & this was the beginning of its supremacy, because it became easier & safer to land there. Beyond the landing this trail was utterly unfit for travel, but the first arrivals were too busy pushing on to warn those who might follow, & both town boomers & steamer lines assured ticket buyers that whatever might have been true last week, now the trail was indeed open.

Above its delta, the Skagway River, a mountain torrent, occupies nearly the whole width of the valley. The mountains rise steeply on each side & every spot that is not washed bare of earth is overgrown with heavy timber. If in rare places the river has a shore, it is covered with boulders & loose rock, either terminal or lateral moraines of the former Skagway glacier, or the result of landslides. For 10 miles from the sea, the fall of the Skagway River is not rapid but above the last fork, the stream rushing down from the summit of the White Pass is a rocky torrent, in a deep canyon bed. The rise in the last four miles below the divide is about 2,000 ft. Over 12,000

Six to seven horses or mules made a string under the care of one man, the driver riding on an extra animal, sometimes in front, often behind. Rates for packing fell to 20¢ & then to 12¢ a pound & fortunes were made, & squandered, in the business. Six horses carried 1,500 lbs. of net freight & earned gross \$180 to \$300. Expenses for a round trip were \$40 in wages, \$12 hotel bills, \$25 for horse feed, \$20 wear & tear & \$15 toll, making a total of \$112. Some packers who had 40 to 50 horses on the trail put in their own boarding camps, thus reducing expenses, & the most energetic & successful & reliable earned for several months over \$1,000 a day net on an investment of \$2,000 to \$3,000. One energetic man interviewed the arriving Klondikers at Seattle, contracted to deliver their freight at Bennett, required a part payment in cash, used the cash to buy his horses & pack-saddles & went north on the same steamer with his customers & fulfilled his contract.

But the enormous amount of freight going to Dawson by way of the passes, nearly 20,000 tons, prompted G. M. Brackett, an experienced & energetic railway contractor, to begin a wagon road from Skagway to the summit. He started early in the fall of 1897 and pushed the work with great energy, hoping to be ready for the great spring rush, but in this he was disappointed. The remoteness of the region, with mails 10 days apart, labor,

Mr. Brackett had built his wagon road without authority & there was indeed no time to wait for it, as the U.S. Government is always several years behind requirements in frontier matters. Very great friction developed between the wagon road company & the packers. The latter drove their pack horses up the frozen bed of the river & thus avoided the new road, but Brackett completed a short piece of road around which it was impossible to go and there he erected his first toll gate. While the struggle was going on in Alaska Brackett was not idle in Washington & secured the passage of a resolution by Congress giving the Secretary of the Interior jurisdiction over Alaskan roads with authority to grant toll privileges. From the Secretary of the Interior Brackett obtained authority to levy a toll of 2¢ a pound on all freight, \$10 on each wagon, \$1 on each foot passenger, horse, sheep, dog or other animal. These rates were excessive. This wagon road, owing to its heavy grades, was none of the best. In building it Mr. Brackett had in many places simply improved the previously existing trail made by the packers themselves. The road was only built for 11 miles, yet without proper investigation, without any comprehension of the actual conditions or of the equities, the privilege was granted to levy prohibitive tolls on all the enormous traffic using this pass. There was not even any possibility of appeal, as no court

had any jurisdiction over tolls placed by act of Congress at the discretion of the Secretary of the Interior. The wagon road, however, experienced difficulties. The Chilkoot Pass route had not been idle, & from the first as a man pack route it had been preferred to the White Pass because shorter, with better approaches & with more direct waterways to the head of Yukon navigation. The first improvement on this pass was made when a horse whim was anchored at the summit of Chilkoot, & by this means loads of over a ton could be hauled up on sleds, thus putting this route far ahead of the Skagway trail for heavy

freight as well as for single loads. After the first season the horse gave way to a gasoline engine, his last act being to wind his own successor to the top. The gold seekers could drag their own loads on sleds to the foot of the summit, there turn them over to the whim, be hauled up, coast down the other side & go on their way rejoicing over the frozen lakes & smooth trail to Bennett.

In Aug., 1897, work was started on the Chilkoot R.R. & Transportation Co., on the Alaska R.R. & Transportation Co., & on the Dyea Klondike Transportation Co., all three of them aerial cable trams. These three were ultimately consolidated into the Chilkoot Pass route, & but one line finished in April, 1898. A large force of men was kept busy all winter, but very little beyond shoveling snow was accomplished from Dec. 10, 1897, to Mar. 15, 1898. The tram begins 9 miles from Dyea at Canyon City, to which place a wagon road is almost without grade. There are 2 loops, 1 from Canyon City to Sheep Camp, 4 miles, & the other from Sheep Camp over the summit, & $\frac{1}{2}$ mile down the other side. This loop is $4\frac{1}{4}$ miles long. The trolley automatically switches from one loop to the other, & the load is limited to 400 lbs., generally carried in boxes 40 x 20 x 24 ins. With its level wagon road & these trams in operation, the Dyea trail should & could have beaten its rival Skagway as to rates, but it

people landed at Skagway in the first year after the rush, or between Aug., 1897 & July, 1898. Most of these unfortunates crossed the pass dozens of times carrying their goods in relays, a man load at a time, a slow way of transporting a ton or two of supplies a distance of 30 miles over almost impassable trails. Most of the packing was done on man back & extraordinary loads were carried. One of the Indians on Chilkoot carried in one load 247 lbs. over the summit, & on the whole, nothing is so generally efficient as a man. Dogs were fitted with pack saddles & given loads of 10 to 30 lbs., & this was worth while, at 60¢ a pound. Goats were used, rafts, canoes, rough boats, any & everything that could be impressed into service. Horses were shipped to Skagway by the hundred, & there, on the worst trail in the world, they died also by hundreds, but during this first summer a horse was not able to carry as much as a man. It was the packers, the owners of the horse trains who made the first trail, for the gold seekers had no time to join in any "good road movement," but the packers organized, instituted compulsory service & by the spring of 1898 had succeeded in opening a very fair bridle path, making this trail from this time on essentially a horse trail, & thus scoring a second triumph over Dyea. The horses between Skagway & Bennett each carried 250 lbs. besides feed for the round trip of 4 days.

climatic & financial difficulties all combined to prevent rapid work. Nevertheless Mr. Brackett succeeded in building an excellent road for about 10 miles, marring it however, and from an engineering point of view ruining it, by the fearful grade over Porcupine Hill, a grade so steep that 2 horses with a single sled loaded with only 400 lbs. could scarcely climb it coming towards Skagway. Going down this same hill sled runners are generally wrapped with heavy chains, in addition to the very effective automatic brakes used on all Skagway sleds. This brake consists of 2 sharp steel prongs bolted underneath the back end of the shafts & pointing downwards. When the horse pulls these are lifted off the ground or snow, but when on a down grade, the sled runs forward on to the shafts & presses the prongs deep into the ice or snow. Another effective form of brake is a dragging hook, bolted loosely through the back end of the runners. Ordinarily it is turned up & rests on top of the runner, but on down grades it is turned down so that the sharp end of the hook sticks into the runners' track. On this hook the driver will stand, and thus hold almost any load. In Jan., 1899, a 4 horse double bob sled, not being equipped with these brakes, rushed the teams down the steep grade of Porcupine Hill & forced the leaders over the precipice, several hundred feet to the river below.

could not handle the freight offered, & there were long delays, charges of favoritism, & through freight was secured at the Skagway rates of 8c. & up to keep the trains busy, so no reduction was made. It was, nevertheless, this Dyce competition which forced a reduction of tolls on the Brackett road from Skagway. The rate being lowered to 1c. a pound from Skagway to Summit, & 3/4c. a pound to those who made their way up the river bed. Some packers also threatened to build a new trail of their own, & one energetic man with over 100 tons of freight to carry, was bribed from so doing by a free pass for his stuff.

All these transportation, financial & competitive struggles were around & about the passes, the stretch from salt water to lakes. From the head of Lake Bennett down to Dawson, "over the ice" as it is called, the travel in winter is only by dog team, although this year one mule & one horse made the trip out. The Yukon sleds are 16 ins. wide, 6 ft. long, 8 ins. high, & strongly braced. Some are made with a gee pole on the right side, & the driver straddles the rope or chain by which the dogs pull. The preferred sled this year is the basket pattern with plow handles behind to which the driver clings. Four to eight dogs make a team. On a good smooth trail the native dogs, "insiders," as they are called, one-quarter, half, or even three-quarters wolf, will drag 100 lbs. to the dog. These animals are thickly furred, & seem to enjoy extreme cold. They are fed on boiled rice, corn-meal & bacon, & will not eat dog-biscuit. Outside dogs cannot stand the extreme cold, are not as a rule as good pullers, & are miserably unhappy. At Skagway good insiders are worth from \$50 to \$100; outside dogs can be bought for \$10 to \$20. Up the White Pass & through fresh snow dogs cannot pull 15 lbs. The extreme difficulties of the White Pass make a dog team trip from

Dawson to Skagway much easier than from Skagway to Dawson, as the dogs are not worn out before they are fairly started.

The rapidity of travel with a good dog team is remarkable. T. Crahan left Dawson Jan. 28, 1899, at 9:45, & reached Skagway Feb. 12, at 4:45 p.m. He had 2 in his party, & a 4 dog team to haul the equipments. While on the trail he fed his dogs once in the 24 hours, at night, each dog receiving 2 1/2 lbs. of food, which consisted of 1 1/2 lbs. of thoroughly boiled bacon, 3/4 lb. of well-cooked rice, & 1/4 lb. of cooked corn-meal. The distance is full 600 miles, but although the dogs averaged more than 40 miles a day they were in good condition. On Jan. 29 I turned over to M. A. Mahoney, at Tagish 2,000 lbs. of U.S. & Canadian mails. He had 4 sleds with 5 fine dogs to each sled, & on each sled he loaded 500 lbs. of mail or 100 lbs. to each dog. He reached Dawson on Feb. 26. Returning he left Dawson Mar. 21 at 9 a.m. with one passenger, the contract being to land him in Skagway in 14 days for \$700, or to forfeit \$100 for every day over that time. He pulled into Skagway on the afternoon of Mar. 31 at 5 o'clock, having made the trip in 10 days & 8 hours, or at the rate of 55 miles a day. The team consisted of 6 huskies (Arctic dogs), & he carried no supplies with him, buying everything for himself & dogs at the bunk houses along the river. If a dog team has to carry its own food & that of the driver, & 30 to 40 lbs. of blankets, robes & other equipments, its radius of travel is very limited. Mahoney's teams could barely have reached Dawson carrying their own supplies & no extra freight whatever. It is because there is no food for horses along the trail that these animals or mules are not used. A good horse can drag about 2,000 lbs. over a fair trail on a food allowance of 40 lbs. a day. He can travel through fresh snow that would stall any

dog team, but the latter can travel over crusty snow that would break under horses. Wherever the food supply permits, freighting is done with horses & mule teams, as between Skagway & Tagish 100 miles towards Dawson, but for light & rapid running from place to place dogs are preferred. Each dog is as much trouble to care for, & more trouble to feed than a horse.

During the summer of 1898 pack trains were in full action over the White Pass, & the trains over the Chilkoot, & the healthy rivalry between them prevented too great extortion. About this stage of development civilized modes of transportation may be said to have overtaken in convenience & cheapness the primitive savage methods. It was just about as cheap to send goods over in July, 1898, as in July, 1897, before the rush had begun, but a new competitor now appeared in the field that was for all time to settle the supremacy of Skagway. This new comer was an international railroad, whose survey ran 20 miles through U.S. territory from tide water at Skagway to the summit of the pass & the international boundary, & thence 325 miles to Fort Selkirk, on the Yukon River, below White Horse Rapids & other dangers, & but 174 miles above Dawson. This railroad is now in operation to the summit of White Pass, & much of the grading is done for 20 miles more to Lake Bennett. If it should stop here the aerial tram could still prove a dangerous rival, because the capital charges are so much less, operating expenses less, & its capacity could be easily increased to 100 tons a day. The difficulty has been, not in transporting, but in handling the freight at the two termini, where accumulations caused almost inextricable confusion & long delays.

Freight rates from Dyce to Bennett by way of the tram are, in Mar., 1899, 3 1/2c. a pound, & the same by the railway. From the summit

The Northey Gas or Gasoline Engine.

In Connection with Pumping Machinery for Tank Duty.

"BUILT FOR HARD WORK."

Railway Officials will find the Northey Engine to be a marked improvement over steam or other forms of power for this duty. It is simple of construction, and easily managed, necessitating only the turn of a fly-wheel to start, while it can be going at full speed in a few seconds and be shut down on the instant. Needs no engineer to look after it, the station hands can do all that is required, while it will run for hours at a time with little or no attention. The Engine is compactly built and of the best materials; it uses either gas or gasoline for fuel, and its safety and economy with either have proved it to be the most satisfactory power in the market.

We will cheerfully send Booklet and every information upon request.

The Northey Mfg. Co., Limited, ¹⁰³²KING ST. SUBWAY, Toronto, Ont.

the railway company has opened one of the best snow roads in the world. It was made by sending team after team through the snow drifts, packing down the snow until the hard bed rose above the level of the snow field & was thus swept clear by the wind. It is staked with saplings on both sides & can be followed in the darkest night or severest storm. Log Cabin, the Canadian custom house & mounted police station, is 12 miles from the summit & boundary, & is also at the end of the White Pass series of lakes, Summit, Middle & Shallow. The former trail from Log Cabin to Bennett was difficult both winter & summer, as it passed over a high & rocky divide, winding steeply up & down along the slopes. The new railway trail was opened by cutting down trees, grubbing out stumps, blasting away boulders, packing down snow drifts, and is a beautiful & model road. Freight carried to the summit by the railway is there transferred to double bob four-horse sleds with wide runners, & each such sled can be loaded with half a ton. Three or four of the freighting firms have formed a through freight line in connection with the railway, & through bills of lading are issued. A big freighters' camp is established near Log Cabin half way between the summit & Bennett, & each morning except Sunday (for the mounted police will not allow freighting on Sunday), teams start in both directions, thus giving the horses 10 miles of load down grade, & 10 miles empty.

The railway hauls to the summit of the pass for 1c. a pound, or one-half of the toll authorized by U.S. Secretary Bliss for the privilege of dragging one's own freight over the toll road. The freighters carry for 2 cents a pound from the summit to Bennett. The expenses of the round trip are about \$20; receipts under best conditions, which are the exception, may amount to \$200. If there were a sufficient quantity of freight there would be a bonanza in the business for a freighter with 10 or more four-horse teams. As it is, the freighters alternate between excessive earnings & inability to pay their teamsters or other bills, none of them being organizations with large capital. The snow trail is not in good condition until Feb., & begins to soften the latter part of April. The lakes are deep & well warmed during the long summer days, but in early winter the first sharp frost covers them with a thin crust of ice. On this a blanket of snow falls, which delays further freezing & presses the thin ice below the water, so that beneath the snow there is oftentimes slush 2 or 3 ft. deep. Horses & men break through the upper snow, & the resulting wetting is dangerous with the thermometer 20° or more below zero & the wind blowing.

The railway is a great example of engineering & constructive skill. It would have been a great feat to grade 40 miles & build twenty over a similar rocky pass under the most favorable conditions, but this work was done in seven months, in a region without laborers, 1,000 miles from supplies, 3,000 to 4,000 miles from rolling mills & car shops, & against fearful climatic conditions. Day after day fresh snow drifted over the road-bed & day after day it had to be shovelled off, sometimes to a depth of 6 to 8 ft. Supplies, bridge timbers, fire-wood even, for the enormous camps had to be carried over almost impassable snow trails. There were days when men could not work on account of the storms or the intense cold, but they had to be fed & warmed.

The road begins on deep water, a mile from Skagway. A shelf is blasted along the face of the cliff, & this beginning is typical of the 20 miles to the summit. High above the valley, on a maximum grade almost the whole distance, the road sweeps around two different forks of the Skagway River, adding 6 miles to its length, but making it possible to reach the summit of 2,885 ft. without switch back. It has, however, been questioned by able engineers whether this was the best loca-

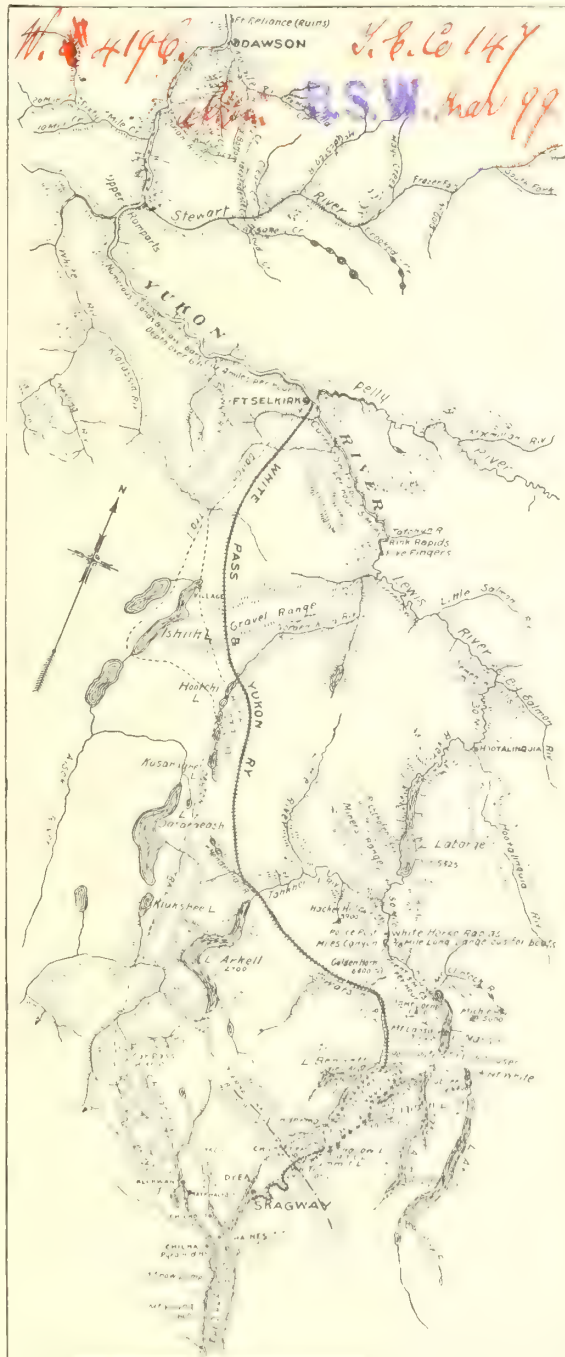

the coming city of Alaska, & thus ended the race between the older Indian Dyea & the younger U.S. city. It will do more. It will change the freight route to Dawson from an up-river to a down-river movement. Even this year barges to carry 20 tons can be bought at Bennett for \$300, or competent men will contract to deliver freight with their own barges for 4c. a pound to Dawson. Contracts are now being made from Seattle & Tacoma, from Victoria & Vancouver to Dawson via the White Pass for \$160 a ton, or 8c. a pound. This through rate may fall to 6c. when the railway reaches Bennett. Even 8c. is lower than the rates hitherto charged by the long mouth-of-the-Yukon route. Passenger travel will all take the shorter road & freight will inevitably follow passengers.

Another & more serious result of the completion of this railway to the summit is the inevitable diversion of a trade thus far almost exclusively in U.S. hands to Canadian points & houses. Last year the high duties imposed by the Canadians were fully off-set by the extortionate charges made for bonding & conveying Canadian goods through the U.S. strip. This year the railway furnishes the bond for a nominal charge, & ships Canadian goods in bonded cars, delivering either at summit of pass, in British territory, or at Log Cabin or Bennett. It is not possible for U.S. merchants to stand 30% duty & also the Canadian custom house delays, annoyances & extortions at Log Cabin. Last year United Statesers made these annoyances an off-set for a 30% duty, but hereafter the Canadians are protected by both duty & annoyances, & even if U.S. meats & hardware are taken to the Yukon they will enter Canada elsewhere & go through in bond. Happily, however, this possible loss of Klondike trade will be more than offset by the very sensational discoveries of gold made near the shores of Bering Sea, at Golovin Bay & Cape Nome. The climate at these points is comparatively mild, they are most easily accessible by boat for five months in the year & the region is described by those who know it as an Arctic paradise.

The Klondike madness is past. In two short years the savage trail with a dozen Indian packers has been replaced with transportation facilities with a capacity exceeding the requirements of the Yukon basin for years to come. This excess will stimulate further developments. The country offers the widest field, for it is inexhaustibly rich. Nowhere else as on this gold trail has the genius of engineers wrought such beneficent and rapid change in so short a time. The evolution from hunter's path to railroad, through the intermediate steps of pilgrim path, mule trail, wagon road, was 2,000 years in making in the St. Gotthard Pass, the great high road between the most civilized portion of the ancient world & of the mediæval world, the road that led from the gloomy north to the rich south, rich in treasures, in food, in spiritual tradition & comfort.

Two short years as against 2,000 have evolved the same succession of improvements on the highway over the White Pass back to a north, hideous in climate, without history, without sentiment, without food, but abounding in gold. Engineering Magazine.

The wife of Dr. J. A. Hutchinson, Chief Medical Officer of the G.T.R., died in Montreal Sept. 5, suddenly.

ROUTE OF THE WHITE PASS AND YUKON RAILWAY.

tion. The strata dip from east to west, & the other side of the valley would give a stable instead of unstable ledge. The west side is also the sunny and protected side, freer from ice & snow, but on this side a switch back could not have been avoided. The road is narrow gauge, but the road bed & construction are adapted for standard gauge. It is one of the most solid & substantial road beds in America.

This railway has already made Skagway

Total.	£ 917,919	£ 791,854	£ 126,065	

On Sept. 19, the London Financial Times commenting on increases in G.T.R. earnings for July to Sept., said: "This is certainly a noteworthy record, for last year was considered an exceedingly successful one, it will be remembered. The market, however, is not satisfied with remarkable traffic returns on the G.T.R. It expects them to be sensational. Yesterday it was expecting an increase of £20,000, and getting only £14,300, prices dropped, the second preference losing two points."

A London cable says the G.T.R. report to June 30 is quite a colorless document, concerned alone with the satisfactory figures for the half-year and the text of the agreement with the Dominion Government concerning the Intercolonial Ry. The half-year's operations show a net improvement of £29,752.

Passenger receipts improved £50,988, the average fare received increasing from 2s 11¼d to 3s 5¼d. The freight carried increased 440,807 tons, but the increase of low rate through traffic caused the average receipt per ton per mile on the entire freight traffic to decrease from .66 of a cent to .58. The annual meeting will be held Oct. 12.

RAILWAY FINANCE, MEETINGS, &c.

The Alberta Ry. & Coal Co.'s annual meeting will be held in London, Eng., Oct. 25.

American Railway Earnings.—The compilation of gross earnings of the railroads for the first half of this calendar year, as made by the Financial Chronicle, has been revised & extended. The earnings of 166,599 miles of road amounted to 600 million dollars. It is estimated that the increase for all the railways of the U.S. would amount to 40 million dollars, or perhaps to two or three million dollars more. This follows an improvement in the first half-year of 1898 of 70 million dollars. In this gain in gross earnings the Pennsylvania (lines east end & west of Pittsburgh) leads with an increase of 3½ millions. The Lehigh Valley comes next with 2½ millions, & the Milwaukee & St. Paul next with 2¼ millions. The Reading, the North-Western, the Southern, the Canadian Pacific, & the Central of New Jersey each gained over a million. In fact, the Reading, with its coal & iron companies, would have shown over two millions had its figures been reported for six months, those given being for only five months. All of which is pleasant reading.—*Railroad Gazette.*

Atlantic & Lake Superior.—The Baie des Chaleurs railway litigation has entered upon a new phase, a petition for a writ of injunction having been filed in Montreal on behalf of the curators to the H. Macfarlane estate. The petitioners allege that they believe the Baie des Chaleurs Ry. is to form part of the system of the A. & L.S. Ry., & they are informed that steps are being taken for the removal of portions of the rolling stock, etc., of the B. d. C. Ry. Under these circumstances, & considering the action now pending before the courts between the Macfarlane estate, the B. d. C. Ry. Co. & C. N. Armstrong, for over \$180,000, they ask the issue of a writ of injunction to prevent the removal of rolling stock, etc., as above mentioned, the right of retention of Macfarlane as builder of the B. d. C. Ry. being affected thereby.

The Bedlington & Nelson Ry. Co.'s annual meeting will be held at Kaslo, B.C., Oct. 18.

All Steam users should see the Mica Boiler and Pipe Covering—Flexible, Durable and Highest non-Conductor of Heat in the Market.

Full particulars, reports of trials, testimonials, prices, etc., from

Mica Boiler Covering Co., Limited, 9 Jordan St., Toronto, Ont.

Montreal, Toronto & London Eng.

The B.C. Yukon Ry. Co.'s annual meeting will be held at Victoria, B.C., Oct. 11.

Brockville, Westport & Sault Ste. Marie.—A report comes from Brockville, Ont., that R. G. Hervey, of Halifax, N.S., a former resident of Brockville, who spent some days there recently, is about to enter an action against the Philadelphia Investment Co. to recover possession of the Brockville, Westport & Sault Ste. Marie Ry., of which he was the chief promoter. It is contended that when this Co. took the road it was understood that it was to be put through to Sault Ste. Marie, to be equipped with first-class rolling stock, & to have a good train service. These conditions Mr. Hervey contends have not been fulfilled, & he thinks the Co. is not entitled to hold the road under the circumstances. He also states that if the court should decide the matter in his favor no difficulty would be experienced in procuring the necessary capital to put the road through to the points it was originally intended it should reach. Its present terminus is Westport, 45 miles from Brockville.

Buffalo & Lake Huron Ry. Co.—The English Association of American Bond & Share Holders, notifies that it is prepared to receive for payment coupon 39 of the 1st mortgage bonds, & coupon 52 of the 2nd mortgage bonds of this Co. for the half-yearly interest due Sept. 1, 1899.

Calgary & Edmonton.—Net earnings for July \$6,605.26 as against net loss of \$1,190.06 for July, 1898.

Canada Central 5% 1st mortgage bonds, comprising 16 bonds of £500 each & 54 bonds of £100 each, will be paid at the rate of £105 per £100 bonds on Oct. 2, at Speyer Bros., 7 Lothbury, London, E.C.

Canadian Railway Securities.—In a recent issue the London Outlook, after warning readers against U.S. railway stocks, said: "As regards Canadians, the case is different. We believe that new capital will be wanted for the C.P.R., but both that line & the G.T.R. are doing splendidly. Why G.T.R. guaranteed is not taken up more as a speculative investment, destined to reach 'par,' it is difficult to see, & Trunk seconds are a good speculative purchase. These & Canadas should certainly go higher in the long run & they have not Mr. Bryan, with his quack remedies for all the ills, to worry them."

Canadian Yukon Ry.—An Ottawa despatch of Sep. 13 to a Conservative paper said: "It was generally expected that at the last session of Parliament the Government would suggest an appropriation to compensate Mackenzie, Mann & Co. for their expenditure in connection with the Yukon railway contract. A doubt exists in some quarters as to whether the contractors have in this matter a legal claim against the Government. The contract was subject to the approval of Parliament, & as Mackenzie, Mann & Co., entered into it on this understanding, & as Parliament did not ratify the contract, some authorities contend that the whole thing falls to the ground. There is a disposition, however, in Ministerial circles to recompense Mackenzie, Mann & Co. for their expenditure, but it has not been determined what method to pursue. A Government accountant was recently despatched up the Stikine as far as Telegraph Creek, with a view to securing evidence of the actual expenditure incurred by the contractors, & it is expected that it will shortly be determined by the Minister of Railways whether Mackenzie, Mann & Co. shall be offered a certain sum without prejudice to get rid of their claim, or whether they shall be granted a fiat to have the amount of the compensation determined by the Exchequer Court."

Chicago Great Western.—A. B. Stickney, who was the first General Superintendent of the C.P.R., & is now President of the Chicago

Great Western, is making a success of the latter. In the past year it earned enough balance over the 4% payment on the debenture stock (which represents half of the first mortgage bonds of the old Chicago, St. Paul & Kansas City) to pay 4% dividends on the preferred stock A, which represents the other half of the old bonds. The gain in gross earnings in the year was \$481,696, or 9%, & in net earnings, after taxes, was \$284,552, or about 20%. The totals for 929 miles of road were \$5,867,740 for gross & \$1,720,223 for net. The per mile for the first time exceeded \$6,000, being \$6,313, while net per mile was \$4,243. Mr. Stickney says the rebuilding of the line, which has been going on under a systematic plan since 1894, will be completed by the end of the present year, when, he says, "the physical condition of the roadway & the equipment will compare favorably with the excellent condition of competitive lines, while in point of easy grades & curvatures, it will have no superior west of Chicago." He points out that the improvements carried out permitted the operating ratio to be reduced from 77½% of gross receipts in 1895 to 67.21% in 1899, & he thinks the figure will be reduced to 60% or less.

Chignecto Marine Ry.—Mr. Provand, M.P. for Glasgow, recently met the Amherst, N.S., Board of Trade, in regard to the Board acquiring running powers over the Co.'s railway & the use of its wharf, which are lying idle. Mr. Provand promised to recommend to his board the granting of the request. As showing the importance of Amherst as a shipping point, President Curry, of Rhodes Curry & Co., stated that his firm alone brought in over 60 cargoes last year, nearly all of which could have been imported via Fort Lawrence had the proposed arrangement been in force.

Crow's Nest Pass Ry. Suits.—Thirty-four laborers who were engaged in Montreal, in Oct. 1897, to work on this line are suing the C.P.R. Co. for damages. Sixteen of them, whose claims range from \$150 to \$250 each, have been authorized by a judge to proceed in forma pauperis. The other 18 have entered suits in the Circuit Court, the amounts they claim being smaller.

Dominion Atlantic Earnings for 8 months to Aug. 31 were \$440,370, against \$375,892 for corresponding period.

Edmonton, Yukon & Pacific.—It is said that the charter for this line, granted at the last Dominion session to G. McAvity & others of St. John, N.B., has been acquired by Mackenzie, Mann & Co., in the interest of the Canadian Northern, so as to give that line an outlet to the Pacific Coast. A Dominion subsidy for 50 miles of the line, from South Edmonton via North Edmonton towards the Yellow Head Pass, was voted last session.

Esquimalt & Nanaimo. In the case of the E. & N. Ry. Co. vs. the New Vancouver Coal Co., the suit involving the valuable mining rights in Nanaimo Harbor, B.C., a new & very important phase of the question has been commenced by the commencement of a new suit, the Attorney-General of B.C. & the New Vancouver Coal & Mining Co. vs. the E. & N. Ry. Co. This action has been instituted for the purpose of ascertaining whether the coal in a certain portion of Nanaimo harbor is vested in the Province, subject to the right of the N.V.C. Co., & is in consequence of the action pending between the E. & N. Ry. Co. & the coal company relative to the claim of the railway company to the coal opposite Newcastle Townsite, Nanaimo harbor. By the Settlement Act, the Province agreed to transfer to the Dominion, for the purpose of constructing the E. & N. Ry., the land usually known as the railway belt, together with the coal, etc., thereunder. The Dominion Government added to this part by including the "foreshore rights in respect of such lands as aforesaid,

which are to be granted to the said company (the E. & N. Ry. Co.) as aforesaid, and which border on the sea, together with the privilege of mining under the foreshore & sea opposite any such land, & of mining & keeping for their own use all coal & minerals, under the foreshore or sea opposite any such lands in so far as such coal & foreshore rights are vested in Her Majesty as represented by the Dominion Government." The Federal Government granted to the railway company the said land & mining privileges & the foreshore rights, & in the beginning of 1898, the railway company commenced proceedings against the coal company to establish that the railway company was entitled to the coal opposite Newcastle Townsite reserve, which the railway company claims is included in the letters patent, & if so the railway company wants compensation for the coal abstracted. The coal company distinctly challenges the right of the railway company to Newcastle Townsite reserve, & pleads that the grant by the Federal Government of the coal under the foreshore & under the sea opposite such lands is ultra vires of the Federal Government, as neither by virtue of any grant of the Province nor by the B. N. A. Act was any title conveyed to the Federal Government.

G.T.R. Accident Award.—A. F. Beatty, a mail clerk, who had his spine injured in the disaster at Murray Hill, about a year ago, entered suit against the Co., which has been settled by agreement, he receiving \$3,650.

Great Northern of Canada.—A special general meeting will be held at Quebec, Oct. 24, to authorize the issue of bonds upon the whole mileage of the Co.'s road, constructed & under contract to be constructed, & upon the bridge over the Ottawa River, such bonds to replace pro tanto the bonds already issued or authorized.

Hereford Ry.—At the annual meeting, Sep. 5, Hon. F. Jones, Portsmouth, N.H., was elected President, with the following other directors: C. Page, Portsmouth, N.H.; G. Van Dyke, & Hon. I. W. Drew, Lancaster, N.H.; P. H. Whittemore, Brookline, Mass. As the road is leased for 999 years to the Maine Central there was no business before the meeting except of a routine nature. The line runs from Beecher Falls, Vt., to Lime Ridge, Que.

Intercolonial Ry. Extension to Montreal.—A proclamation of the Governor-General-in-Council has been issued, declaring in effect from Sept. 26, the Act passed in the last Dominion session, to confirm the agreement between Her Majesty & the G.T.R. Co., for the purpose of securing an extension of the I.C.R. to Montreal.

Inverness & Richmond.—Suit has been entered by L. G. McKam, a Nova Scotia contractor, against P. Ryan, of Toronto, over the sale of the charter for this line to Mackenzie, Mann & Co. Mr. McKam claims he was a partner in securing the option & in making the sale last June, & that as owner of one-eighth share in the concern, he obtained from the owners of the other seven-eighths a deed of their interest for the purpose of a sale that he negotiated with Mr. Ryan, who afterwards sold the whole thing.

The Kaslo & Slocan Ry. Co.'s annual meeting will be held at Kaslo, B.C., Oct. 11.

Kingston & Pembroke.—It is stated that the receipts for Aug. increased 26½% over Aug., 1898.

Miles Canyon & Lewes River Tramway Co.—M. St. John is suing this Co. for \$1,000, amount of promissory note unpaid.

Ottawa & Gatineau Ry. & Pontiac Pacific Jct. Ry.—There has been deposited in the Office of the Secretary of State a mortgage deed from these companies to A. J. Ferguson & J. Elliot, of Montreal, as trustees, to secure a bond issue made by the companies.

The Pembroke Southern, which was built 80 years from Pembroke, Ont., to Golden Lake, on the Canada Atlantic Ry., 21 miles, has been leased to the latter Co. for 5 years, the C.A.R. paying a percentage of the earnings as rent. The C.A.R. thus gets connected with Pembroke, where it will compete with the C.P.R.

Pullman Palace Car Co.—A Boston director is quoted as saying that this Co. will not make any extra distribution to stockholders until another liberal surplus has accumulated.

Qu'Appelle, Long Lake & Saskatchewan.—Net loss in operating for July, \$3,677.77, as against \$4,676.59 for July, 1898.

Quebec & Lake St. John earnings for 4 months to July 31, were \$15,646 more than for corresponding period.

Quebec Central. The directors recently gave notice that a majority of the 5% prior lien bonds had been exchanged for the new 4% debenture stock. Unexchanged bonds are not now received on the terms set forth in the circulars issued in May & June, the cash bonus of £3% mentioned therein having been reduced.

Following is the traffic statement for Aug.: Gross earnings for Aug., \$57,385.85, against \$50,309.60 in Aug., '98; working expenses: \$33,291.28, against \$28,262.82; net earnings: \$24,094.57, against \$22,046.78.

Gross earnings Jan. 1 to Aug. 31, \$333,009.39, against \$299,065.74 for corresponding period; working expenses: \$214,504.14, against \$201,739.85; net earnings: \$118,505.25, against \$97,325.89.

Rutland & Noyan. At the annual meeting at Noyan Jct., Que., Sept. 6, the following

were elected: President, F. H. Button; Clerk & Treasurer, H. G. Smith; Engineer, J. W. Burke; other directors, P. W. Clement & C. L. Pierce.

St. Lawrence & Adirondack. At the annual meeting at Montreal Sep. 6, the following directors were elected:—W. S. Webb, H. L. Sprague, C. M. Depew, J. J. Astor, E. VanEtten, J. H. Purdy, New York City; M. E. McClary, Malone, N.Y.; G. H. Burnett, Utica, N.Y.

White Pass & Yukon.—The following documents have been deposited in the office of the Registrar-General of Titles at Victoria, B.C.:—A deed of covenant & a deed of agreement dated October 7, 1898, & of June 20, 1899, both made between the British-Yukon Mining, Trading & Transportation Co., The British Columbia-Yukon Ry. Co., The Pacific & Arctic Ry. & Navigation Co., The Pacific Contract Co., The White Pass & Yukon Ry., F. Pavy & C. C. Macrae, & The Railway Share Trust & Agency Co.

Traffic receipts week ended Sep. 7, \$63,800.

RAILWAY APPOINTMENTS, Etc.

Canadian Pacific.—C. R. Hosmer, who has been Manager of the Co.'s telegraphs since their inception, has been elected a director of the Co.

A. C. Henry, Purchasing Agent, has been promoted to the position of General Purchasing Agent. E. N. Bender, who has been his chief clerk for some years, has been appointed Assistant General Purchasing Agent.

H. L. Penny, heretofore Auditor of Disbursements, has been appointed General

Auditor, necessitating the following appointments: J. Leslie, Auditor of Disbursements; A. A. Goodchild, Assistant Auditor of Disbursements; C. J. Black, Auditor of Agencies.

In reference to the change in the superintendency of the C.P.R. between Fort William & Winnipeg, we are officially informed that J. A. Cameron specially requested to be relieved of that division on account of ill health. He recently returned from California & has been appointed Superintendent of the Crow's Nest Branch, including the line from Dunmore Jct. to Kootenay Landing, vice M. H. MacLeod, assigned other important duties. Mr. Cameron's office will be at Cranbrook, B.C.

General Superintendent Marpole, of the Pacific Division, gives notice that the portion of his circular of July 1, relating to the appointment of L. R. Johnson, is amended to read as follows: "L. R. Johnson has been appointed Superintendent Engineer of the Co.'s shops at Vancouver, reporting to and taking instructions thereof from the General Superintendent. He will also, as hitherto, have general supervision of the engine departments of the Co.'s Steamships, in connection with which he will report to & take instructions from the Superintendent of that Department, A. Piers."

R. J. E. Scott, of Montreal, has been appointed Chief Inspector of Time Service.

G. M. Sherlock, of the train despatching staff at Winnipeg, has been appointed Chief Train Despatcher at Rat Portage, Ont.

W. Manson, Local Auditor at Vancouver, has been transferred to other duties in the Co.'s Montreal offices.

W. H. Brodie, Chief Clerk in the Assistant

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the odd-numbered sections along the Main Line and Branches, and in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North-West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6 an acre.

Lands in Assiniboia, east of the 3rd meridian, average \$4 to \$4.50 an acre.

Lands west of the 3rd meridian, including the Calgary District, generally \$3 per acre.

Lands in Northern Alberta and the Lake Dauphin District, \$3 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest is divided into ten instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or grazing lands.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions:

160 acres at \$3.00 per acre, 1st instalment \$71.90, and nine equal instalments of \$60.
160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.
160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.
160 acres at \$4.50 per acre, 1st instalment \$107.85, and nine equal instalments of \$90.
160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.
160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.
160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the usual cash instalment.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

Write for maps and full particulars.

L. A. HAMILTON, Land Commissioner,
F. T. CRIFFIN, - Asst. Land Commissioner,
WINNIPEG.

ENAMELED IRON SIGNS

For Steam & Electric Railways, Steamship, Express, Telegraph, Telephone and Advertising purposes.

These signs last practically for ever, they never fade or tarnish, they are ever bright and attractive, they are absolutely impervious to heat or cold, they are the only signs that will withstand the effects of weather in all climates.

For Prices, Illustrated Catalogues, etc., address

THE ACTON BURROWS COMPANY,

Agents for the Imperial Enamel Co. of Birmingham,
29 Melinda Street, Toronto, Canada.

BRANCH OFFICE—197 Lombard Street, Winnipeg, S. A. Erskine, Resident Agent.

General Passenger Agent's office at Toronto, has been promoted to be Chief Clerk in the General Passenger Agent's office at Winnipeg. J. J. Brignall, heretofore in charge of advertising at the Toronto office, succeeds him as Chief Clerk there.

G. W. Lawson, Report Clerk in the City Ticket Department at Toronto, has gone to Montreal as Assistant Travelling Auditor.

J. S. Lawrence, Train Master & Agent of the Nakusp & Slocan branch, has been appointed Trainmaster on the West Robson-Midway branch. He is succeeded at Nakusp by A. F. McCully, formerly Despatcher at Nelson.

Central Vermont.—W. B. Hatch having resigned, J. B. Laurie has been appointed purchasing Agent & General Storekeeper.

Duluth, South Shore & Atlantic.—The following officers have been elected: President, General S. Thomas, New York; First Vice-President, T. G. Shaughnessy, Montreal; Second Vice-President & General Manager, W. F. Fitch, Marquette, Mich.

Grand Trunk.—W. F. Cookeson, who has been Ticket Clerk in the Dearborn St. station, Chicago, for the past 10 years, has been appointed Chief Clerk to First Assistant General Passenger Agent Bell, at Chicago.

Great Northern (U.S.A.)—C. P. Adams, Superintendent of Telegraph, with headquarters at St. Paul, Minn., has resigned.

Intercolonial.—Several changes have recently been made among the trackmasters. J. McGovern, formerly G.T.R. Roadmaster at Brockville, Ont., has been appointed Trackmaster of the Campbellton & St. Flavie section. J. Henfield succeeds P. J. Comeau, retired, between St. Flavie & Riviere du Loup. J. Yeo, jr., succeeds his father, J. Yeo, sr., on the Riviere du Loup & Levis section, the latter retiring on account of age.

J. H. Brossard, has been appointed Chief Train Despatcher at Riviere du Loup, succeeding C. Belleau, assigned to other duties.

Michigan Central.—W. Macmillan, heretofore Assistant General Freight Agent at Buffalo, N.Y., has been appointed Assistant General Freight Agent, with headquarters at Chicago, Ill., succeeding B. E. Hand. F. Zimmerman has been appointed Assistant General Freight Agent, with headquarters at Buffalo, N.Y., succeeding Mr. Macmillan.

United Counties.—Vice-President L. F. Morison has issued a circular announcing the appointment of A. Ouellette as General Traffic Manager, with headquarters at St. Hyacinthe, Que., vice H. Upton, resigned. He will also have control over all the other departments of the road. P. Evans, heretofore of the G.T.R. Audit Department, has been appointed Accountant & Auditor, vice H. Upton.

White Pass & Yukon.—S. Irwin has been appointed General Traffic Manager, with headquarters at Skagway, Alaska, succeeding L. H. Gray, resigned. W. B. King, formerly Travelling Auditor of the Great Northern (U.S.A.) has been appointed Assistant Auditor of the W.P. & Y., succeeding S. Irwin.

Mainly About People.

General Manager Teall, of the Tilsonburg, Lake Erie & Pacific Ry., is suffering from fever.

T. R. Secord, late Deputy Superintendent of the Welland Canal, died at Port Colborne, Ont., recently, aged 69.

Mrs. T. G. Shaughnessy & family returned to Montreal early in Sep., after spending the summer at St. Patrick, Que.

C. R. Hosmer, Manager C.P.R. Co.'s telegraphs, returned to Montreal Sep. 14, after a two-months' visit to Europe.

W. R. MacInnes, General Freight Agent, C.P.R., Winnipeg, has been elected a member of the Winnipeg Board of Trade.

Mr. Hibbard, until recently of the Ottawa & New York Ry., has purchased the Hancock Iron Mine near Ironsides, Ont.

The residence of W. B. McKenzie, Chief Engineer of the I.C.R. at Moncton, N.B., was considerably damaged by fire, Sep. 7.

Cornelius Vanderbilt, head of the Vanderbilt family, & of the Vanderbilt system of railways, died in New York Sep. 12, of paralysis.

Collingwood Schreiber, Deputy Minister of Railways, has gone to British Columbia to inspect the Crow's Nest Pass and other railways.

At the recent convention of the National Railroad Blacksmiths' Association, in Milwaukee, D. B. Swinton, Montreal, was elected Second Vice-President.

Miss Amy Price, only daughter of the Chief Train Despatcher of the I.C.R. at Campbellton, N.B., was married there Sept. 20, to Dr. A. H. Hall, of Quebec.

G. H. Ham, of the Literary Bureau of the C.P.R. Passenger Traffic Manager's office, is making an extended tour between Lake Superior & the Pacific Coast.

E. A. Donkin, recently appointed Superintendent of the Dakota Division of the Great Northern (U.S.A.), is a Nova Scotian, & was once a despatcher at New Glasgow.

On leaving Stratford, Ont., recently for Hamilton, J. H. Hanna, Division Freight Agent of the G.T.R., was presented with an address, etc., by a member of citizens.

Miss Margaret Whyte, eldest daughter of the Manager of the C.P.R. Western Lines, was married at Winnipeg Sep. 16, to F. Fisher, barrister, son of Jas. Fisher, M.L.A.

Mrs. T. Tait, wife of the Manager of the C.P.R. Eastern Lines, has returned to Montreal after spending the summer with her parents, G. R. R. & Mrs. Cockburn, at Birch Point, Muskoka.

Mrs. Leonard, mother of the General Superintendent of the C.P.R.'s Ontario & Quebec Division, died Sep. 28 at Toronto Jct., where she lived with her daughter, Mrs. Fair. She was 80 years old.

G. F. Evans, formerly Manager of the Westinghouse Mfg. Co., at Hamilton, Ont., who went to Russia last year in the Westinghouse interests, has entirely severed his connection with them.

G. McL. Brown, Executive Agent of the C.P.R. in British Columbia, had a serious illness at Rossland early in Sep., from the effects of blood poisoning caused by the extraction of a tooth.

On leaving Windsor, Ont., recently, to take the General Agency of the C.P.R.'s freight department in Chicago, W. A. Kittermaster was presented with a handsome cut-glass punch bowl & glasses.

On leaving Medicine Hat, Assa., recently for Calgary, Alta., his new headquarters, Superintendent Niblock, of the C.P.R., was entertained at a public dinner & presented with an address & diamond ring.

A. E. Kirkpatrick, Resident Engineer of the C.P.R. at Smith's Falls, Ont., recently resigned to accept a position as engineer on the Egyptian Government Railways, under Major Girouard, with headquarters in Cairo.

S. J. Chase, Commercial Agent of the Michigan Central, having resigned, has been succeeded by J. F. Morris, now Travelling Freight Agent. W. J. Leahy, Travelling Freight Agent for Canada, succeeds Mr. Morris.

On being transferred from the roadmaster-ship of the C.P.R. between Cartier & North Bay to a similar position on the Sault branch, W. Kelly was presented with a silver tea ser-

vice & address by the foremen & men of his old district.

I. Deyell, formerly foreman of the T. H. & B. locomotive department at Hamilton, Ont., is suing Master Mechanic Christopher for damages for slander, claiming that Christopher stated that he had been in the habit of being intoxicated while on duty.

T. D. Sheridan, who was connected with the G.T.R. for 30 years, the greater part of which time was spent in Buffalo, N.Y., where he was Northern Passenger Agent until 3 years ago, when he resigned on account of ill health, died at Buffalo recently.

J. P. Dowling, formerly secretary to D. McNicoll, of the C.P.R. at Montreal, has been appointed Manager for the shipping house of Dodwell & Co., Ltd., at their Tacoma, Wash., office. Mr. Dowling was with them for eight years in Hong Kong, China.

Jas. Baker, of Cape Cove, Que., one of the Government representatives on the directorate of the Atlantic & Lake Superior Ry., & a prominent Gaspesian, was stricken with apoplexy on the str. Admiral, Sept. 30, & was landed at Port Daniel, where he died a few hours later.

The employes of the Southern Division of the G.T.R. & the Buffalo Division of the Washash have presented a cabinet of sterling silver, containing 149 pieces & costing \$500, to G. C. Jones, formerly their superintendent, & now Superintendent of the Middle Division of the G.T.R. at Toronto.

In a private letter received at Ottawa towards the end of Sep., D. D. Mann stated that he would return to Canada from China immediately. After having looked over the ground he has come to the conclusion that there is nothing to be secured there in the way of paying railway contracts.

Mrs. W. R. MacInnes, wife of the General Freight Agent of the C.P.R. at Winnipeg, & her daughter, arrived in Montreal early in Sept. from Cap a L'Aigle, & are the guests of Mrs. MacInnes' mother, Mrs. Cross, Cote des Neiges Road. They will probably spend the winter in Montreal, going to Winnipeg in the spring.

J. N. Hill, eldest son of J. J. Hill, has been elected third vice-president of the Great Northern Ry. Co., (U.S.A.) L. W. Hill, the second son, has been elected vice-president of the Eastern R.R. of Minnesota, the position recently held by J. N. Hill. Both sons are college graduates of only six years' standing, & have spent several months in each department of the road, from construction & grading to the general manager's place.

It is rumored that President Lucius Tuttle, of the Boston & Maine R., will become president also of the Maine Central R.R., on the retirement of President Wilson, of the latter road. Mr. Tuttle will thus be at the head of the two large systems & G. F. Evans will remain as vice-president of the Maine Central. Mr. Tuttle was from 1887 to 1889, Passenger Traffic Manager of the C.P.R., leaving to become Commissioner of the Trunk Line Association, passenger department, afterwards becoming General Manager & Vice-President of the New York, New Haven & Hartford & then President of the Boston & Maine.

The Right Hon. W. J. Pirrie, who designed & constructed the new Atlantic liner, the Oceanic, was born in Quebec in 1847. After completing his education at the Royal Belfast Academical Institution, he devoted himself to engineering & shipbuilding. He is now chairman & principal of Harland & Wolff, Ltd., which has designed & built some of the largest & fastest steamers afloat, including the Majestic, Teutonic, Canada, Cymric & Pennsylvania. The firm's tonnage output for 1896 was the highest on record, namely 18,316 tons.

Mr. Pirrie, besides being a J.P. for the city of Belfast & for the counties of Antrim & Down, holds various other titles to distinction. He is a member of the Privy Council in Ireland, & has been Lord Mayor of Belfast. This year he is on the roll for High Sheriff for County Down. Although a busy man, he always finds time to receive & converse with visiting Canadians, & he corresponds regularly with many old friends in Quebec, Montreal & Ottawa.

The C. N. R.'s Superintendent.

The Dauphin, Man., Press has this to say of D. B. Hanna, whose portrait was published in our Aug. issue. "Though the early frosts have whitened the Superintendent's hair somewhat he is still a young man, and even what is better than youth, he possesses a good constitution. In early life he received a sound commercial training in one of the business centres in England. This has stood him in stead in his after life in Canada. Several years ago he caught the immigration fever & crossed the Atlantic with the intention of becoming a farmer. This purpose he carried out, & for a time devoted his energies to making the prolific soil of Manitoba blossom with wheat. But what was said of Grant may be applied to Supt. Hanna, that 'you can't make a tanner out of a man who is destined to be a general.' His natural bent was businessward, & it was not long before he entered the offices of the M. & N.W.R. at Portage la Prairie. Though it is not on record that he made any phenomenal rise, he occupied the post of Treasurer of the Co. at the time he severed his connection from it. In 1896, at the time the first section of the Dauphin road was completed, the promoters, Mackenzie, Mann & Co., were casting about for a man to take the management of the road. For various reasons the choice fell on D. B. Hanna. At that time the Dauphin road was an unknown quantity. It commenced nowhere & practically ended at the same destination. Three years ago William Mackenzie was not such a well-known man as he is to-day. There were misgivings as to the road's success. Predictions were freely made that it would be thrown back on the hands of the government. But the fertile brain of Mackenzie was at work. The Dauphin road was a link in a chain it would be hard for even an optimist to predict the length or breadth of.

"But to return to Mr. Hanna. From the day he assumed control the road was in cap-

able hands. It was not only able to pay the interest on its bonds, but had a good balance on the right side of the ledger after all liabilities were met. The importance of the Dauphin road as a factor in the province's development may be gleaned from the fact that the road carried nearly a million bushels of wheat last season. Outside of Mr. Hanna's thoroughness as a business & railway man, much of his success is due to his genial disposition. Busy man that he is it is rarely that he hasn't time to receive a caller or listen to the grievance of a shipper. Of course, with the ever increasing volume of business & the vast projects the Co. has in view the personal relations of the patrons of the road with the Superintendent must cease to a great extent. When complaints have got to run the gauntlet of red tape it will then be learned what the true loss is.

"And now for a peep into the future. The writer is no prophet & does not lay claim to be blessed with the vision of a seer. A few things, however, appear within the range of possibility. Firstly, the Canadian Northern Ry. will be one of the great transcontinental lines. Secondly, it will have termini on three continents, America, Europe & Asia. In the development of this picture there will be no more interesting figure to watch than that of D. B. Hanna."

Grand Trunk Subsidiary Companies.

The annual meetings of the following companies have been held recently, & officers elected as mentioned below:

INTERNATIONAL BRIDGE at Buffalo, Sep. 30, President, C. M. Hays; Vice-President, J. Bell; Sec.-Treas., C. Percy; other directors, H. W. Sprague, G. F. Brownell, F. H. McGuigan, E. W. Meddaugh.

ST. CLAIR TUNNEL at Detroit, Mich., Oct. 2, President, C. M. Hays; Vice-President, J. Bell; Superintendent of Tunnel, F. H. McGuigan; other directors, E. W. Meddaugh, W. J. Spicer, A. Vidal, C. Mackenzie; Sec.-Treas., C. Percy.

MICHIGAN AIR LINE at Detroit, Oct. 2, President, C. M. Hays; other directors, W. J. Spicer, J. H. Muir, E. W. Meddaugh, J. Bell; Sec.-Treas., C. Percy.

CHICAGO, DETROIT & CANADA GRAND TRUNK Jct. Ry. at Detroit, Oct. 2, President, C. M. Hays; Vice-President, J. Bell; Sec.-Treas., C. Percy; other directors, W. J. Spicer, E. W. Meddaugh.

DETROIT, GRAND HAVEN & MILWAUKEE Ry. at Detroit, Oct. 2, President & General Manager, C. M. Hays; other directors, J. Pridgeon, Jr., C. Buncher, E. W. Meddaugh, G. B. Reeve, J. Hobson, W. J. Spicer, C. Percy, F. H. McGuigan; Sec.-Treas., J. H. Muir.

TOLEDO, SAGINAW & MUSKOGON Ry. at Detroit, Oct. 2, President & General Manager, C. M. Hays; other directors, C. J. Church, E. W. Meddaugh, G. B. Reeve, F. H. McGuigan, W. Cotter; Sec.-Treas., J. H. Muir.

CINCINNATI, SAGINAW & MACKINAW R.R. at Detroit, Oct. 2, President, A. W. Wright; Vice-President & General Manager, C. M. Hays; other directors, W. R. Burt, G. M. Stark, L. O. Fisher, E. W. Meddaugh, F. H. McGuigan; Sec.-Treas., J. H. Muir.

CHICAGO & GRAND TRUNK Ry. at Chicago, Oct. 3, President, C. M. Hays; other directors, F. A. Howe, E. W. Meddaugh, W. J. Spicer, G. B. Reeve, D. F. Skinner, A. Dixon; Sec., C. Percy; Treas., J. H. Muir.

GRAND TRUNK JCT. Ry. at Chicago, Oct. 3, President, C. M. Hays; other directors, F. A. Howe, E. W. Meddaugh, G. B. Reeve, W. J. Spicer; Sec., C. Percy; Treas., J. H. Muir.

Railway Committee of Privy Council.

Bedlington & Nelson Ry. & C.P.R.—On Sep. 1 two orders were issued by the Committee, the 1st giving the Bedlington & Nelson Ry. Co. power to connect its railway at two points on the Crow's Nest Pass branch of the C.P.R., & the 2nd granting to the Bedlington Co. running powers over the C.P.R. between these two points, a distance of 8½ miles. The application was made to the Committee several months ago by J. A. Gemmill, Counsel for the B. & N. Co., at Ottawa. The charter granted the Co. by the B. C. Legislature authorized it to construct a railway from the foot of Kootenay Lake, southwards to Bedlington, on the international boundary, whence the line continues to Bonner's Ferry, Idaho. Its construction is nearly completed. When the C.P.R. obtained a subsidy from Parliament in 1897 towards the construction of the Crow's Nest Pass branch, provision was made in the Act that the Committee might grant running powers over such road to any other company applying for the same upon such terms as the Committee might fix. The C.P.R. Solicitor opposed the application upon several grounds, but after three differ-

"Up-to-Date"

If you are you will use

Fairbanks' Standard Railway Track Scales with TYPE REGISTERING BEAM.

They are arranged to impress upon a ticket the figures indicating the weight of the load, thus giving a true and ineradicable record. This record entirely prevents the errors which so frequently arise through mistakes in reading weights.

THE FAIRBANKS CO., 749 Craig St., MONTREAL.

ent hearings, during which Counsel for the B. & N.R. contended that the portion of the route in question was of such a mountainous character that another track could not be constructed except at enormous expense, the Committee granted the application.

The terms of the second order are that it is made for the purpose of relieving the B. & N. Co. of the expense of building about 8½ miles of track parallel to the C.P.R. The B. & N. Co. obtains the right jointly with the C.P.R. of using & enjoying the road, road-bed, track, side tracks, switches, bridges & cattle guards of the section of 8½ miles & the station at Sirdar & all the fixtures pertaining thereto & to run its trains & locomotives over the section, subject to rules & conditions which are set out. The use of the section is for 10 years & thereafter until the C.P.R. shall require the use of it, & in case of dispute as to whether the C.P.R. does require it, the same shall be settled by the Committee. The expense of maintaining the 8½-mile section is to be borne jointly, & in addition the B. & N. Co. is to pay the C.P.R. a monthly rental of \$336.50, or \$4,038 a year, which represents the interest on half the cost of constructing the 8½ miles, after deducting the Dominion subsidy of \$6,400 a mile. Differences are to be settled by arbitration. The order contains several other provisions, but as these relate more particularly to the operation of the 8½ miles by both companies it is not necessary to give them here.

Northern Pacific & C.P.R.—At a meeting of the committee on Oct. 7 two applications of the N.P.R. to cross C.P.R. lines in Manitoba were taken up. The first was for permission to make a connection, for the purpose of exchanging freight, with the C.P.R. South-western Branch at Methven. The obligations which rested upon both companies to make this connection were set forth by J. S. Ewart, Q.C., who represented the N.P.R. G. M. Clarke and C. Drinkwater were present for the C.P.R. Mr. Ewart pointed out that in the order already granted in this case by the committee it was provided that interlocking & derailling switches be used, while there was no necessity for such, as all that was wanted was a siding, so that both companies could use it for dropping off and picking up freight cars. The committee granted an order for a connection by means of an ordinary switch. At the suggestion of the Minister of the Interior the following was incorporated in the order: "And each company shall, with reasonable diligence & expenditure, remove from the said switch and forward by its line the freight cars & freight placed for that purpose upon the said switch by the other company."

An interim order was also granted the N. P.R. to cross the C.P.R. on Pacific avenue, Portage la Prairie, until Nov. 15 before the installation of the interlocking appliances referred to in a previous order.

Canadian Ticket Agents' Association.

A large number of members, many of whom were accompanied by their wives, the party numbering over 160, left Ontario, Oct. 7, in six sleeping cars placed at their disposal by the C.P.R. management, the special train also containing a dining car and a baggage car. The cars were hauled to North Bay by the G.T.R. as a special, & were taken from there by the C.P.R., Winnipeg being reached on the morning of Oct. 9. The party was received at the Winnipeg station by local railway officials, the Mayor & others, a hearty welcome being given. In the afternoon the visitors assembled at the City Hall, where they were formally welcomed by the Mayor. The afternoon was spent in seeing the sights of the city, & in the evening a reception was held at the Clarendon Hotel, where the annual dinner also took place. The business meeting was

held Oct. 10, when the following officers were elected: President, E. W. Churchill, Collingwood; 1st Vice-President, W. Jackson, Clinton; 2nd Vice-President, M. McNamara, Walkerton; 3rd Vice-President, W. H. McKay, St. John, N.B.; Secretary-Treasurer, E. de la Hooke, London; Hon. Counsel, J. H. Flock, Q.C.; Auditor, H. Palmer, St. Thomas; Executive Committee, C. E. Morgan, Hamilton; W. H. Harper, Chatham; T. Long, Port Hope; J. W. Tierney, Arnprior; C. C. Young, London.

It was decided to hold the next annual meeting at Hamilton, Ont., on Oct. 10, 1900. Vancouver, Victoria, & London, Ont., were proposed, but were withdrawn in favor of Hamilton. Vancouver and Victoria seemed to be favored for 1901.

On Oct. 11 the party left Winnipeg by special Northern Pacific train for St. Paul, stopping over at Grand Forks. Milwaukee & Chicago were also visited on the return journey.

Time Service on the C.P.R.

Manager Tait has issued a circular stating that it is proposed to reorganize the time service of the Co. on the lines east of Fort William. R. J. E. Scott is appointed Chief Inspector of Time Service, with office at Montreal. He will have general supervision of the Co.'s clocks & of the standard watches to be carried by employees, & his instructions in connection therewith must be observed.

Train masters, road foremen of locomotives, roadmasters, bridge & building masters, conductors, engineers, train baggagemen, brakemen, firemen, yard masters, & yard foremen must each carry a standard watch when on duty.

The minimum standard of excellence adopted by the Co. is a grade known among American movements as 17 jewelled, Breguet hair spring, patent regulator, adjusted to temperature, isochronism, & at least three positions, & corresponding to Waltham "Appleton, Tracy & Co. nickel," Elgin "B. W. Raymond nickel," Hampden "New Railway," Illinois "Bunn," Hamilton "936," & all grades equal or above, the variation of which must not exceed 30 seconds a week.

Employees required to carry standard watches must submit them for half-yearly inspection within the months of January & July of each year, to the various watch inspectors appointed at local points, a list of whom is given.

Grand Trunk Betterments, Etc.

It is expected that the Victoria Jubilee Bridge, already open for railway traffic, will be completed during Oct., & open for vehicular & pedestrian traffic. Good progress is being made with the approaches & the iron screens & guards.

The Co. has acquired some land at St. Lambert, opposite Montreal, for the purpose of constructing a dyke to protect the piers of the Victoria Jubilee Bridge.

The hanging bridge over the tracks at the Point St. Charles yard, Montreal, which has been used for many years, is to be removed to make room for the additional tracks that the increased traffic requires.

Work has been commenced on improvements to Bonaventure station, Montreal. The wooden sidewalk at the eastern front is to be replaced by asphalt. In front of the station a fountain will be erected, & at either end of the rectangle a grass plot will be laid down & flowers planted, while the entrance & exit for vehicular traffic will be regulated by the placing of stone posts at each end. The canopy that at present runs the length of the building & extends over the sidewalk will be extended out another 15 ft., so as to afford protection against the weather to passengers entering or leaving cabs or buses. Some important

structural changes are also to be made to the station building, which will, it is said, include the removal of the second-class waiting-room & closets. The changes, when carried out, will enable the I.C.R. officials, who are at present inadequately housed in a room belonging to the Customs Department at the station, to take up quarters of a more commodious character. Arrangements will be made for their occupying two large rooms, one of which will be utilized as an office & the other for the stores of the parlor, sleeping & dining cars.

The yards at York, near Toronto, are being remodelled for the purpose of forming a west-bound yard south of the main track. There will be 7 or 8 long tracks, capable of containing 80 cars each, while a new shunting track will be constructed to permit shunting without fouling the west-bound main line.

The daily papers have recently stated that the Co. will discontinue the use of the I.C.R. station at Levis & build one of its own, as the I.C.R. station is much overcrowded & that the G.T.R. will operate its own ferries between Levis & Quebec. This is very misleading. The G.T.R. passenger trains have heretofore made joint use of Levis station with the I.C.R., but owing to its crowded condition the G.T.R. has discontinued running its passenger trains into it & now stop them at its own station at Point Levis, from which station its own ferries have hitherto run & continue to run to the city of Quebec. The only change in the situation is that the G.T.R. interchanges its business with the I.C.R. at Point Levis, & ferries from there to Quebec, instead of from the lower station.

On the Middle Division about 120 miles are being relaid with heavy steel rails this year. More than 500,000 ties have been replaced & some 80 miles have been rebalasted.

A contract has been let for substituting a heavier superstructure for the old bridge over the Magog River, Que. The old piers & abutments will be utilized.

The surveys for the improvement of grades & the laying of double track between Hamilton & Niagara Falls is about completed, & it is said contracts for the work will be let at an early date, though nothing definite has yet been decided on.

Sarnia rate-payers have passed a by-law granting \$2,550 for building a switch from the G.T.R. yards to the Dominion Wire Manufacturing Co.'s works.

Canadian Pacific Betterments, Etc.

Hotel at Ste. Agathe.—An unconfirmed press report says that the Co. is about to erect an hotel at Ste. Agathe, on the Labelle branch, 63 miles from Montreal. The Co. has purchased 350 acres, 15 of which has a frontage on Lake Sable. The hotel, which will be on the shore of the Lake, surrounded by charming mountain scenery, will contain 200 rooms. It will supply a want of first-class hotel accommodation which has long been felt by the numerous visitors to that picturesque resort.

Montreal to Toronto.—Owing to increased traffic & the heavier tonnage of trains, it has become necessary to make improvements in the permanent way. With a view to improving the alignment & grades on the Harrow section between mileage 148, near Bathurst, & mileage 210, near Tweed, surveys were made during 1898 at 17 different points aggregating in length about 31 miles, which includes alternative changes at different points. During July & Aug. of this year a portion of the foregoing, between mileage 154 & 180 (Maberly & Ardendale), was taken up & several desirable deviations re-surveyed with cross-sections, & estimates of cost made. Two of these changes are proposed to be carried out this year, viz. at mileage 154 & mileage 159-161. The work consists chiefly

of cuts & fillings & embankments to be widened with entirely new road bed in places, & it is remembered that the line was first built with a view to economy in construction, & a reduction of quantities in cuttings & embankment, it is obvious that in making these changes a large surplus of excavation must be met with, & this material will be utilized towards grading the road-bed for prospective double track. The deviation at mileage 154 involves an expenditure of \$6,000, & will take out a double reverse curve, of which the total curvature is $16^{\circ} 06'$, substituting a tangent, without any appreciable change in the existing gradient (17 ft. per mile) & reducing the length of line by 15 ft. The second change is between mileage 159 & 161, involving an expenditure of \$30,000. This has been under construction since Aug., & the following gives an idea of the improvement to be accomplished. This alteration necessitates crossing the present track at 5 different points. The length of track is reduced 50 ft. The number of curves taken out is 6. The total degree of curvature removed is 114° , & there is substituted a tangent of $1\frac{1}{4}$ miles, with 2 light curves of 11,460 ft. radius, with a total angle of $3^{\circ} 50'$, & 1 curve 5,730 ft. radius, with a total angle of $7^{\circ} 45'$, while the gradient is uniform for the whole distance (43 ft. per mile) the same as existing with the original alignment. The Co. has at work 150 men & 12 teams, & it is expected that this work will be completed by Nov. 30. Owing to the interference with traffic on the present track it was thought desirable to do the whole work under the Co.'s road-master, instead of letting it by contract.

Fort William.—In order to accommodate the vastly increased traffic, between 3 & 4 miles of additional track have been laid in the yard this year, raising the capacity of the yard tracks to 16 miles. (Sep., pg. 267.)

The round house to replace the one burned last spring will be entirely stone. It will have 18 stalls. For the present the old round house will be used as an auxiliary. (May, pg. 139.)

Fort William to Winnipeg.—The work of extending the sidings to 4,000 ft., thus doubling their length & making them available for part of the second track which will soon have to be built, is about completed. (Aug., pg. 233.)

Rat Portage.—The basement of the station building has been completed, & work is being pushed on the superstructure. The old station is to be moved down the track near to the Central School building & will be devoted to the use of the local operating officers.

Work is also proceeding on the 20-stall round house. (Sep., pg. 267.)

Bonnett Lake Branch.—In Aug. Manager Whyte, of the Western lines, stated that it had been found that the first line run by the surveyors was unsuitable for the railway. It was, therefore, necessary to revise it, a work that can be better done in winter than at the present season; consequently the line would be revised next winter, & everything got in readiness for the construction of the road next spring. Mr. Whyte added that if the production of the Bonnett Lake Co.'s yards came up to the standard of the samples the success of the enterprise was assured, & the brick, if up to the specimen quality, would probably be used in the construction of the C.P.R. hotel at Winnipeg. In the middle of Sep. it was announced in Winnipeg that A. C. Smith had been given a contract for grading the branch. (June, pg. 172.)

Winnipeg Terminals.—It is not likely that much, if any, work will be done on the station & hotel buildings this year, but there is little doubt work will be started early next spring. It is said the building will be 320 by 208 ft., & 6 stories high, with towers, & that it will contain not less than 350 bedrooms. A report that the Co. was buying land near the post office for an hotel site has been contradicted. A combined station & hotel will be erected on & near the site of the present station. (Sep., pg. 267.)

An addition of 10 stalls is being made to the east end round house. Some other improvements to the shops, etc., have received consideration, but will not be proceeded with at present.

The Snowflake Branch. which starts from the first siding on the Pembina Mountain Branch, 118 miles southwest of Winnipeg, is about completed to its terminus at Snowflake, & will be open for traffic this fall. (Sep., pg. 267.)

Deloraine to Waskada.—The grading of this branch has been completed. Track will be laid at once, & it is to be ready for traffic this fall. (Sep., pg. 267.)

North Star Mine Branch.—In reference to the conflicting reports about this British Columbia branch, mentioned in our last issue, we are officially informed that construction is being proceeded with. (Sep., pg. 267.)

Revelstoke Shops.—It is said the capacity of these shops is to be considerably increased. All the work for the main line between Laggan & Kamloops, & for the Kootenay branches, is now handled at Revelstoke.

Vancouver Terminals.—The handsome new station has been completed & is now in use. The various officials have moved into the office portions of the building.

New Westminster.—The exterior of the station is about finished, & work is going on in the interior. (June, pg. 172.)

Columbia & Kootenay Branch.—It is said an appropriation of \$30,000, in addition to the \$50,000 made early in the year, has been provided for the further improvement of this branch, & that Tierney & Co. will receive another contract to go on with the work. Next spring the filling in of the wooden trestles will probably be gone on with. (July, pg. 208.)

Arrowhead & Kootenay Lake Branch.—On Sept. 24 grading was reported as nearly finished between Lardo & Trout Lake, & track-laying was expected to be started very soon. It was also stated that trains would be running to Duncan City by Nov., & that construction would be continued all winter. It is said that in addition to the country traversed being rich in minerals, the agricultural lands are of considerable value. (Sep., pg. 267.)

Columbia & Western Ry.—On Sep. 26 President Shaughnessy said:—"The grading of the road into Midway has been completed, & there remains only some 25 miles of iron to be laid before we shall have our trains running into Midway. The work on the big tunnel 30 miles west of Robson, where we have pierced for 3,000 ft. the side of the mountain, is not quite completed, but the state of the work there will not prevent the running of trains from Robson to Midway this autumn. In addition to the main line, we have constructed some 30 miles of sidings along the line into mining camps, where the development has been sufficient to warrant us in going to that expense. This road is by all means the most expensive the C.P.R. has ever constructed. The country throughout the entire distance is exceedingly difficult, & the engineering difficulties very great. The entire line has cost the Co. in the neighborhood of \$40,000 a mile, or a total expenditure of nearly \$4,000,000 for 100 miles of line." (Sep., pg. 267.)

H. B. Smith, C.E., of Victoria, recently inspected the line from West Robson to Grand Forks for the B.C. Government. He says he found the line in excellent condition. Regular train service has been established between West Robson & Grand Forks.

It is stated that the C.P.R. engineers are running a line south of that previously run between Midway & Rock Creek. Leaving Rock Creek about a mile above its junction

THE BARRETT TRACK JACK.

Recommended as a standard by the
Road Masters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low set loads.

No. 2 Automatic Lowering.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting capacity
10 to 15 tons.

No. 1 Trip.

with Kettle River, a south-easterly course is taken to Meyers Creek, & passing south to the big mountain that rises at the junction of Meyers Creek & Kettle River, the former stream is followed down to Jackson's ranch, thence to Midway, about 4 miles. The original survey line will be pretty closely adhered to.

It is also said that surveys are to be begun soon for a spur from a point on Brown's Creek, the north fork of Kettle River, to run to Pathfinder mountain, on the east side of the river. The Pathfinder mine is a shipping basis for ore & a number of promising mining properties in the vicinity are to be developed.

Spur from Rossland.—A report has appeared in some papers to the effect that a spur is being built from Rossland, B.C., to connect the C.P.R. with the Great Northern Ry. (U.S.A.). This is evidently incorrect, as we are advised from the C.P.R. head offices in Montreal that nothing is known of the matter there.

Duluth, South Shore & Atlantic.—Contractor M. J. Peppard, of Minneapolis, is reported to have commenced grading on the extension from Newtonville, Mich., to Greenland, about 65 miles. (Sep., pg. 267.)

Railway Construction in Manitoba.

The railway mileage in Manitoba will be increased considerably this year, the work under contract for completion before winter sets in exceeding 300 miles. Some of the lines under construction will in the no distant future form sections of important systems, & their progress is being watched with much interest by the people. For instance, there is the Canadian Northern with two objective points, the one Fort Churchill, on Hudson's Bay, & the other Prince Albert, through the fertile Saskatchewan valley, & ultimately, no doubt, the Pacific coast. Then there is the Manitoba & Southeastern, which will form part of the new line to Lake Superior, & furnish additional transport facilities for the annually increasing wheat traffic, besides opening up & materially assisting in developing the mineral & agricultural districts of north-western Ontario. The Northern Pacific, too, is reaching out into the wheatfields of central Manitoba by the extension of its Portage la Prairie branch with an objective terminal yet undetermined. The C.P.R. McGregor-Varcoc branch will connect with the Great Northwest Central, & ultimately extend well into the Territories. The C.P.R. Reston branch, now being extended to the Moose Mountain region, is an important colonization road, & its construction has already attracted hundreds of settlers to the country which it traverses & also stimulated the old settlers to largely increase their agricultural enterprises. The Snowflake & Waskada branches, in southern Manitoba, will fill a long felt want in the respective districts by giving convenient transport facilities to the large number of farmers settled there. The construction of the Gilbert Plains branch of the Canadian Northern will in a like manner benefit the settlers living west of Dauphin. Should the influx of immigration continue to be as great as it has been this year much railroad building will have to be done every year to keep pace with the settlement & development of the country, & railway contractors believe there are equally as good times in store for them as there appear to be for all other classes of people. The lines now under construction in the province, which are expected to be completed & ready for operation this fall, are as follows:

Manitoba and Southeastern.....	50
N.P.R., Portage extension.....	25
Lake Manitoba branch.....	8
Saskatchewan and Western extension.....	3
Great Northwest Central extension.....	20
Canadian Northern extension.....	75
Gilbert Plains branch.....	25

The above, added to the present mileage, will make 2,200 miles of railway in Manitoba, a remarkable showing when it is remembered that 19 years ago there was not a rail west of the Red River.

Surveys, Construction, Betterment, &c.

Algoma Central.—J. Conmee, M.L.A., who has the contract for the Michipicoton branch of this line, says every effort is being made to construct the 12 miles between Michipicoton Harbor & the Lake Superior Power Co.'s iron mine before navigation closes. (Sep., pg. 267.)

The U.S. Commercial Agent at Sault Ste Marie reports as follows:—"The Algoma Central Ry., which is one of the roads granted a subsidy of \$3,200 per mile by the Canadian Government, is to run from Sault Ste Marie, Ont., northerly to Dalton on the C.P.R., about 160 miles, with a branch from Dalton southwesterly, about 40 miles, to Michipicoton, a harbor on Lake Superior. The Lake Superior Power Co. owns the franchise, & I am informed that the branch running from Lake Superior to Dalton, on the main line of the C.P.R., is under construction, & that it will be completed as far as the Helen hematite iron mines, about 12 miles, by Nov. 1, & the balance of the branch will be completed next summer. It is understood that the Ontario government has promised an additional land bonus of 6,400 acres a mile. The country through which this road runs shows outcroppings of minerals, principally iron & copper, with some gold, & it is expected that valuable mines will be developed. The ore of the Helen mines is brown hematite iron, & is claimed to be very high grade. The Co. has done considerable development work, & claims that by the time the road is finished to the mines this fall, it will be able to ship 1,000 tons of ore a day. It is constructing large docks at Michipicoton for loading the ore into vessels. The same Co. also informs me that it has completed arrangements for building large smelting works here, for treating all kinds of ores (said to be by a new electrical process), to be completed within a year. The stock of this Co. is owned principally by citizens of the U.S."

Atlantic & Lake Superior.—A London, Eng., correspondent writes:—"In a previous letter I referred to the re-construction of the Canadian Steamship Co., whose steamer, the Paspebiac, had such an eventful voyage on her first & only trip under the management of that Co. I also referred to the Bagnall Oil Co. as being largely interested in the forming of the new company. It is now announced that the Bagnall Oil Co. have secured from the Dominion & Quebec governments guaranteed subsidies of \$10,000 on every mile of the new railway which is to connect the Canadian oil fields with the A. & L.S.Ry. The Chairman of the Bagnall Co. has been given power to reorganize the A. & L.S.Ry., & the Quebec government will guarantee 4% on the million sterling worth of debentures the new board will be empowered to issue. The guarantee will hold good until 1915. I am also told that the Dominion government is building wharves at Paspebiac to make the harbor suitable for oil vessels. The Bagnall Co. has made a large purchase of property adjacent to its present holding in the Manchester ship canal dockyard. A line of steamers will be put on between Milford Haven & Paspebiac." (Sep., pg. 267.)

Canada Atlantic.—The filling in of the big ravine at the Rideau yards, Ottawa, is about completed. The filling in of this patch of waste land increases the area of the yards by about 40 acres, as before the work was done the land was too low & swampy to be of any value. (Aug., pg. 235.)

The Co. is doing considerable building in Ottawa. A three story wooden building is being erected at the foot of Elgin street for small stores. A large 2½ story building is under way at Ottawa East, to contain the general stores, mechanical office, instruction office & men's dining room. Ten stalls are being added to the round house & the machine shop is being extended 150 ft. (July, pg. 208.)

Canadian Northern. Some 700 men, among whom are many Galicians & Doukhobors, are at work on the main line extension from Cowan, last year's terminus, which is 154 miles from Gladstone Jct., where the line connects with the M. & N.W.R. Track has been laid to Swan River, grading is being done at Birch River, & right of way is being cleared to the north of Bell River. Stations have been located at Favel, Swan & Woody rivers. If the weather is favorable it is hoped to complete the line this season about 70 miles beyond Cowan. It will not be possible to reach Red Deer Lake as was expected at the commencement of the season. (Aug., pg. 235.)

Work has been started on the 25 miles branch from Dauphin unto the Gilbert Plains. (Aug., pg. 235.)

The reeve of St. Laurent municipality states that assurances have been given that the C.N.R. will build along the east shore of Lake Manitoba & that a start will be made next year. (June, pg. 175.)

Stations are to be built this season at Ogilvie, Valley River & Fork River.

The yards at Dauphin are to be improved at once by the erection of a 6 stall stone & brick round house & shops.

Central of New Brunswick. It is rumored that work on the extension of this line from Chipman to Gibson is to be started at once, but no definite information is obtainable. (Aug., pg. 235.)

Coast Ry. of Nova Scotia. It is reported that the extension of this line to Barrington is about completed, & that a contract has been let for a further extension to Clyde. (Aug., pg. 235.)

The Combined Mining Co. is building about two miles of railway to connect its mine with its mill on the shore of the Lake of the Woods. A locomotive has been purchased & will be towed from Rat Portage on a barge.

The Dominion Atlantic will build an improved station at Digby, N.S., to be completed by next summer.

The Dominion Iron & Steel Co. will shortly have under construction a branch line beginning near the Whitney pier at Sydney, N.S., & running along the shore line.

Edmonton Bridge. The highest water ever seen in the North Saskatchewan was during the third week in Aug. The concrete piers for the railway & traffic bridge between South & North Edmonton, Alta., built by the Dominion Government, are reported not to have been damaged, but the water went 6 ft. over the bridge seats of the piers, & had the superstructure been in position it would undoubtedly have been carried away. The Minister of Public Works therefore decided to have the piers raised 8 ft., which is now being done.

In the discussion of the estimates at the recent session of the Dominion Parliament, when \$13,000 was voted for the completion of this bridge, the Minister of Finance stated that the amount of the contract was \$46,332; freight from Montreal to Edmonton \$11,000; superstructure contingencies \$2,668; total

	Miles.
C.P.R., Bonnett Lake branch.....	10
" Snowflake branch.....	17
" Waskada branch.....	20

" Pipestone branch.....	30

Sherbrooke. The estimated expenditure up to June 1st was \$7,000, & the contribution of the report of Edmonton \$5,000, which, deducted from Sherbrooke, makes the balance required is an estimate, \$13,000. The contract requires the superstructure to be completed by Dec. 1st.

Esquimaux & Nanaimo. An extension of the line is being built at Oyster Bay, B.C., & coal breakers are being erected there.

Granville & Victoria Beach, N.S. A fair measure of interest is, says the Maritime Merchant, being developed in the project of bridging the Annapolis River at Annapolis Royal, so as to connect Granville Ferry on the other side, and thus form a connecting link in a line of railway which it is proposed to run from Victoria Beach through Caledonia to Halifax. The matter of a subsidy for at least a part of the line has been already arranged in the last provincial estimates, & if the enterprise goes through it will be a decided addition to the transportation facilities of the Valley. Eastport, Me., is but 55 miles from Victoria Beach, & as it is the terminus of a number of New England railways it would give a much shorter route to Boston or Montreal than any existing line from such western points as Halifax. The persons interested in the enterprise make the most pronounced claims on behalf of the natural advantages of Victoria Beach as a harbor for ships of all sizes, and assert that this port should be the natural terminus for all western railways in Nova Scotia. The matter was discussed at a recent meeting of the Maritime Board of Trade, when a resolution was adopted favoring the scheme. (June, pg. 175.)

Great Northwest Central.—A 20 mile extension is being built from the terminus of this line at Hamiota, Man., to Parkissimo, to serve the country between the main line of the C. P.R. & the M. & N.W.R. It will run through a well settled & excellent farming district & will be of great value to farmers in the vicinity of the Assiniboine River between Birtle & Virden. The character of the work is very similar to other prairie lines, but it is somewhat heavier in the neighborhood of Arrow River, where the surface of the country is very rough & broken. The gradients & curvature will be very light. Two stations will be built, one 10 miles west of Hamiota & the other at the terminus of the extension. This extension, for some legal reason, is being built under the charter of the Saskatchewan & Western Ry. See also under head of M. & N.W.R. on pg. 295. (Aug., pg. 236.)

Great Northern of Canada.—T. F. Oakes, formerly President of the Northern Pacific

Ry., accompanied by Col. McNaught, of New York, & H. H. Melville, of Boston, two of the directors of the G.N.R., & J. B. Haggin, the American copper operator, have been inspecting the work of construction recently.

One of the contractors, J. W. McRae, recently said:—"The grading over the whole line from Shawenegan to Hawkesbury is about completed, & track is laid from Montcalm to 10 miles east of St. Elizabeth, while the masonry in the bridges & culverts is likewise all completed. The heavy bridge over the Ottawa River at Hawkesbury is well started & we expect to have the 2 abutments & 8 piers completed in November. We found good solid rock foundations for all the piers, & a large force of men are hurrying on the work. The trestle work at the approaches is well advanced, & from the start the work on the road & bridges has been pushed right along. The Joliette station, which is of pressed brick, on stone foundation, will be the best on the line, & is well under way." (Aug., pg. 235.)

Great Northern U.S.A.—It is very positively asserted that this Co. will build into Republic, Wash., probably going via Wilbur up Hawk Creek & on by the San Poil. It is hardly likely that the line will stop at Republic, & it will probably be extended to the international boundary at least. An unconfirmed rumor says the extension will reach the boundary at Carson & that the C.P.R. will build a 3 mile branch from Grand Forks, B.C., to connect at Carson. This is rather unlikely, to say the least.

Intercolonial.—Work is progressing on the deep water terminus at St. John, N.B. The dredging of the eastern part is about done & the entire dredging is considerably more than half done, but that which is yet to be completed will necessitate considerable blasting. The work has been much hampered by some of the material brought up, which consists in the most part of edgings, stuck together by mud in such a manner as to render dumping an extremely difficult task. The work has also been delayed by the building of a new track. However, it is expected that one berth will be ready for this winter's business. Three cribs have already been sunk. (Aug., pg. 236.)

The General Manager has recently made a thorough inspection of every section of the line, accompanied by the General Superintendent, the Engineer of Track Maintenance & the Bridge Inspector. As a result a number of improvements are to be gone on with.

A large amount of repairs have been done to the stations this year, especially on the main line between Halifax & Campbellton.

The siding accommodation at Sydney, N.S., is being considerably increased.

It is said tenders will be asked for at an early date for the station building at Levis, Que., involving an expenditure of some \$80,000.

A lot of snow fencing is about to be built on the Northern division. Nine rest houses for train men are being built at different points.

Interprovincial Bridge, Ottawa & Hull.—Workmen are now engaged on pier no. 2. Another gang has been placed at work on the approaches on the Ontario side, & the work is progressing at a good rate. It is expected that before the end of the year the greater part of the work will be completed. About 70 men are employed. (June, pg. 175.)

The Ottawa City Engineer, J. Galt, has taken strong exception to the bridge plans. He says the way the ground plan of the bridge has been designed is exceedingly objectionable, particularly as regards the approach on the Ottawa side. It contemplates a steam railway track in the centre, on either side of this, & separated only by a wooden balustrade, there being wedged in between trusses, two 4 ft. spaces for pedestrians. Outside of these footpaths again, & overhanging the river beyond the stone piers, are, on either hand, spaces, 1st, for electric cars, & then for vehicular traffic. Under the proposed arrangement, pedestrians, tram cars & vehicles on the down-river side of the bridge will turn into the street leading up past the Printing Bureau almost on a level with Sussex St., but all three on the up-river side of the bridge will be conveyed on an incline down to a point where they can be carried, by means of a subway beneath the railway track in the centre, coming up again so as to join the remainder of the traffic in the vicinity of the Bureau. The City Engineer claims that there

A. O. Norton, Coaticook, P. Q., Canada.

are two highly-objectionable features to this proposed plan—1st, the wedging in of the footpaths between the railway track in the centre & the trusses on either hand; & 2nd, that half the traffic on the Ottawa side of the Ottawa River must perforce go down grade to a low level in order to pass through the subway & then up again to reach the level of Sussex St. In order to remedy these defects, he suggests that the centre of the bridge, between the trusses, 24 ft., shall be given over to steam cars; that the up-river side shall be devoted to trams going both ways, there being no objection to their going down grade through the subway & up again; & that the down-river side shall contain next to the truss, a 14 ft. space for vehicles, & on the outside, overlooking the river, a 5 ft. walk for pedestrians. The bridge people admit that the original plan is not at all satisfactory, but they maintain it is the best way of disposing of all the traffic. The city contributes a bonus of \$100,000 on the understanding that free accommodation be provided for foot passengers & vehicular traffic.

After the falling of the Ottawa & New York Ry. bridge at Cornwall, the Government, fearing that it was caused by defective concrete in the piers, decided to make a thorough examination of the piers of the Interprovincial Bridge. Diamond drill borings have been made & it is said the result is satisfactory.

Inverness & Richmond.—Work is progressing favorably & it is expected to have 30 miles of this line, from the Strait of Canso to Port Hood, N.S., finished this year, & to reach Broad Cove Mines, a further 28 miles, next year. Several small sailing vessels have been employed carrying ties from points on the Gaspé coast to Port Hastings, N.S., for use on this line. The rate obtained was about 9c. a tie. (July, pg. 209.)

James Bay.—Engineer Hazlewood is making a survey for the 5 miles of this line to be built from the main line of the Canada Atlantic Ry. to the town of Parry Sound. A contract for construction is said to have been let to McCormick & McLeod. (Aug., pg. 236.)

Kingston & Pembroke.—This Co. is building a 5 mile spur to the Martell & Caldwell mines, & expects to finish the work this fall. (Aug., pg. 236.)

An attempt is being made to get this Co. to extend its line into the mineral belt of Quebec in the vicinity of Bryson. This mineral cannot be developed on account of the lack of transportation. Twelve miles of new track from the K. & P. terminus at Renfrew would take the line to Portage du Fort, where there are Gaboury's mine and marble quarry. Eight miles further would take it to Bryson, the county town of Pontiac, at the head of the Grand Calumet Falls, a beauty spot for tourists. There are said to be iron, marble, zinc, galena, silver, gold & mica prospects; the Grand Calumet Mining Co. is at work within two miles of the village. This extension would, it is claimed, tap one of the best water powers in Canada. Between Bryson & Pembroke are a dozen lakes, affording good sport. The extension would also open up a territory of unfloatable timber, maple, birch, elm & oak, which cannot be brought to market without a railway.

Kootenay Valley Ry. & Navigation Co. Rails are being laid north from Bonner's Ferry, Idaho, towards Kuskanoek, B.C., on the Co.'s subsidiary line, the Bedlington & Nelson. N. D. Miller, formerly Chief Engineer of the line, & later Chief Engineer of the Great Northern, U.S.A., has resumed his old position on the K.V.R., vice W. H. Knowlton, resigned. (July, pg. 209.)

Under the order of the Railway Committee of the Privy Council, the Bedlington & Nelson Ry. has running powers over the C.P.R.'s Crow's Nest Pass line for about 8 miles, from a point 4 miles west of Creston to about $\frac{3}{4}$ of

a mile west of Sirdar. From the latter point to Kuskanoek, the Kootenay Lake terminus of the B. & N.R., is a distance of 3 miles.

Lake Erie & Detroit River.—It is said this Co. will erect an hotel at Erieau, the summer resort on Rondeau Harbor acquired with the Erie & Huron Ry.

Manitoba & Northwestern.—The Saskatchewan & Western Ry., which runs from Minnedosa to Rapid City, Man., 15.47 miles, & is leased to the M. & N.W.R. Co., is being extended $2\frac{1}{2}$ miles, near Rapid City, to connect with the Great Northwest Central Ry. The work is light, & there are no structures of any importance upon it. See also under head of "Great Northwest Central Ry," on pg. 294.

Manitoba & Southeastern.—Grading from La Broquerie, last year's terminus, has gone ahead with fair progress, & tracklaying has been started. The eastern boundary of the Province will it is expected be reached this year, but it is hardly likely that the line can be got through to Rainy River before winter, as was expected, & it is said application has been made to the Manitoba Government for an extension of time. It is said a contract has been let for clearing the right of way through Minnesota. (Aug., pg. 236.)

Michigan Central.—The work of placing a third truss on the cantilever bridge at Niagara Falls, necessitated by the increased weight of rolling stock, is well under way. On the Canadian side the masonry is being laid, & on the U.S. side the concrete foundation is ready for the masonry. With the view of ascertaining the profile of the river bottom under the bridge soundings were taken. The bridge is situated just over the head of the whirlpool rapids, where the current is very swift, & unusual methods had to be resorted to in getting the depth. The sinkers on the sounding-lines were egg-shaped masses of cast iron, one weighing 600 lbs. & the other 150 lbs., the sounding line being a steel wire about $\frac{1}{8}$ in. in diameter. In order to keep the sinkers from twisting a long fin was attached to the rear of each. The depth at mid-stream was ascertained to be 78 ft., & the depth at 100 ft. from shore 43 ft. In the course of subsequent soundings the weights were lost. By means of these soundings the engineers were able to make accurate maps of the river at the point of crossing, the importance of which can be readily surmised when it is known that the piers supporting the cantilever bridge are located close to the water's edge on either side of the stream (May, pg. 137.)

Midland of Nova Scotia.—Track has been laid from Windsor to the Shubenacadie River, 45 miles, & the remaining 15 miles between the river & Truro will be laid as soon as the grading is completed, probably during October. It is doubtful whether the bridge over the Shubenacadie will be completed this year. It is proposed to construct a railway dock at Windsor. (Aug., pg. 236.)

Musquodoboit.—There is a division of opinion as regards the route to be taken by this projected line. Dartmouth wishes the line diverted so as to pass through the town, & at a meeting of the promoters recently representatives from there insisted strongly upon this feature being included in the Co.'s plans. The road is intended to begin at Parker's Rock in the Musquodoboit valley in the eastern section of Halifax county & to extend to Windsor Jet, or its vicinity. The charter permits a choice of two routes, & it is over this that differences have arisen. Although the charter provides that the railway shall be operated as a steam road we believe the better plan will be to use electricity, & the cost will be much lighter as power can be obtained from the several water powers that lie along the proposed route, & it will be possible

to use the railway as a nucleus to extend to many other points in Halifax county which are as yet unprovided with these necessary facilities. It is understood that the building of this road will begin in a short time aided by the Provincial & Federal Government subsidies.—Maritime Merchant. (May, pg. 134.)

Northern Pacific.—Good progress is being made with the construction of the 20 miles extension of the Portage la Prairie branch from Portage la Prairie northwesterly, & also with the construction of the spur of 9 miles from Portage la Prairie northerly towards Lake Manitoba. Both are to be completed this season. The recently issued annual report of the Co. states that it is building these lines under separate charters, without use of funds derived from its mortgages. The capital stock & indebtedness of these subsidiary companies is held in the N. P. Ry. Co.'s treasury & it is believed that the control of these companies will secure valuable additional territory to the N. P. lines & contribute to the earning power of the system. (Aug., pg. 236.)

The crossing of the two branches mentioned above over the main lines of the C.P.R. & the M. & N. W. R. at Portage la Prairie has caused some local excitement. The Railway Committee of the Privy Council made an order authorizing the crossings, but in the case of the C.P.R. crossing, the Northern Pacific was required to construct & maintain at its own cost an interlocking, derailing & signal system. The N. P. management, to save time, wanted to put in a diamond crossing temporarily. The C.P.R. objected to this & kept a locomotive patrolling the track at the proposed crossing so as to prevent a diamond being put in without leave. The matter having come before the Railway Committee again an interim order was granted to allow the crossing to be made by a diamond until Nov. 15, when the interlocking appliances are to be installed.

The rebuilding of the Winnipeg offices, destroyed by fire, has been completed & the staffs have moved in. The roof of the train shed, broken by falling bricks at the fire, has been repaired, & the north end has been boarded up. (July, pg. 209.)

North Lanark.—An Ottawa despatch, dated Sept. 5, said: "The directors of this Co. are pushing the preliminary work for building the road as speedily as possible. At a meeting lately held at Ottawa, the president, J. Stewart, of Waba; J. Bell, secretary-treasurer, of Arnprior; A. Bell, C.E., & W. J. Wylie, of Almonte entered into an agreement by which an option was given to Mr. Gade, agent for an English railway construction company, to build & equip the entire road from Mile Lake, on the K. & P. Ry., to Arnprior."

Some time since we were informed that the intention in regard to this line was to build a rough tramway to get out timber, iron ore, etc.

Nova Scotia Southern. Unconfirmed reports are to the effect that C. B. Wilkins & Co., of Yarmouth, N.S., have the contract for this line, & that they are making fair progress with the work, including the bridge crossing the La Have River, also that they are prepared to sublet contracts for work between the northern end of the road & the Indian Gardens. (July, pg. 209.)

Ontario & Rainy River. The various contractors on the first 80 miles west of Stanley, on the P.A.D. & W.R., where the line starts, are making as good progress as possible, but have been much hampered by wet weather & scarcity of men, many teams having stood idle for want of drivers. There has also been unavoidable delay in the delivery of rails. Track-laying has been begun with a small force, so as not to overrun the bridge construction and grading. A bridge construction outfit, pile-drivers, framers, etc., began work 4 days ahead of track-laying, & both bridge-builders and track-layers will continue until

the glaciers are overtaken. There are not many streams in the grading, although all the glaciers are complete for 5,000. Every stream is being made to get men, & the force of the glaciers is being daily but slowly. With conditions as they are, & with ordinarily good weather, it is hoped to get 50 miles of track and to have the line up. Supplies are being rushed in by water to the depot on Rainy Lake, to be used on the rock work it is intended to have done during the winter. (Aug., 1899.)

Commencing at Stanley, up to which point the O. & R. R. has running powers over the O. & D. & W. Ry., the line runs close to Kakabeka Falls, a vast water power, & proceeds through the east end of the Matawin iron range, which is 20 miles long, of which 10 miles is soft hematite, and the remainder, at the western end, magnetic. Skirting the Shebandowan & Kashabowie lakes, the line then passes through a copper region, the most known mine in which is the Tip Top, having a vein of 100 ft. wide; thence it runs close to Moss township, where there are several gold locations, not at present being developed. The line next passes close to Lac des Mille Lacs & Partridge Lake, 12 miles to the south of the Saw Bill mining region, running through the Atik-ogan iron ranges for 20 miles. It is stated upon excellent authority that here is the largest iron deposit in the world, there being in one place 2,000,000 tons of iron ore in sight on a plot of 160 acres. The Seine River waters are next reached, which will give ready access to the mines, & here there are many valuable water powers. Running along the Seine River Valley, the line goes north of Bad Vermillion & south of Little Turtle Lakes, where it will cheapen supplies for more than a hundred prospects & mines, the principal of the latter at present being the Golden Star & the Olive. It next runs along Rainy Lake, crossing the western arm of the same on a succession of 6 islands, two miles west of Pither's Point, necessitating the building of 5 bridges. Between Pither's Point & Fort Frances is an excellent site & prospect for a town, the Couchiching falls being estimated to supply a water power of

tully 50,000. From Fort Frances the line runs along the Rainy River, where there is a large area of fine agricultural lands, & reaches a crossing near the river's mouth. Here connection will be made with the Minnesota & Manitoba R. R., under the same ownership, which will run through Minnesota until it reaches a point on the International boundary a few miles west of Buffalo Bay, where connection will be made with the Manitoba & Southeastern, also under the same ownership & which is now about completed from Winnipeg. W. Mackenzie says through communication between Port Arthur & Winnipeg, by this route, will be established early in 1901.

The Co. has bought no. 5 dock at Port Arthur from Marks & Co., & is making considerable improvements to it.

See also under head of Port Arthur, Duluth & Western on this page.

Ottawa & Gatineau.—Work is being pushed on the extension from Gracefield, 60 miles from Ottawa, towards Maniwaki. (Aug., pg. 236.)

See also under head of Pontiac Pacific Jct. on this page.

Ottawa & New York.—It is said that the bridge over the south channel of the St. Lawrence at Cornwall, which collapsed, & is being rebuilt, will not be completed until next year. (Aug., pg. 236.)

Pembroke Southern.—It is said that the leasing of this line to the Canada Atlantic will not hinder the proposed extension from Golden Lake to Bancroft, so as to give close connection with Toronto, but will rather materially assist that scheme, as it will enable the projectors to devote their whole energies to its construction.

Pontiac Pacific Jct.—Work is proceeding on the extension from Hull to Aylmer, but it may not be completed this fall. The city of Hull is bonusing the Co. to the extent of \$30,000, the Co. agreeing to build a station at the terminus to cost at least \$4,000; to have the work shops, shunting yards, etc., in Hull; to employ 40 residents of Hull during the first two years, and 50 afterwards, & to have all the works completed by Sept. 30, 1900. (July, pg. 210.)

Work has commenced to give this Co. & the Ottawa & Gatineau connection between the Ottawa end of the Interprovincial bridge & the Ottawa Central station. A double track will be built, to accommodate which a section of the wall flanking Major's Hill park at the southern end, about 12 ft. in depth, will have to be cut away. For 90 ft. in the direction of the river the roadbed will be made solid by filling in; the line for the rest of the distance to the bridge will run on a trestle. Dufferin bridge has already an open space through which the rails may run, but it will be necessary to construct an arch beneath the Sappers bridge. This will be done of stone & iron.

Port Arthur, Duluth & Western.—The road bed between Port Arthur & Stanley, some 12 miles, which is to be used by the Ontario & Rainy River Ry., is to be ballasted & put in first class shape.

Prince Edward Island.—A considerable amount of ballasting has been done this year, switches have been improved, the wharves at Charlottetown, Summerside, Alberton, Georgetown & Souris have been repaired, a number of bridges have been improved & 10 flag stations have been built. It is said 40 miles of new rails will be laid next season.

Quebec Bridge.—At the annual meeting, Sep. 5, it was reported that 7 tenders for construction had been received & submitted to Theodore Cooper, consulting engineer, New York, who had recommended the acceptance of one of them, that negotiations were going on with the firm in question, but that as nothing definite had been decided the directors were not at liberty to state anything further. Mention was made of the Dominion Parliament's subsidy of \$1,000,000, & other subsidies expected from the Province & City of Quebec, & the hope was expressed that work might be started this year. Full cadastral information has been gathered about property crossed by the projected railway lines to connect the bridge with the city, either by Ste. Foy or by the Coves, & options have been secured on a large portion of the property. The engineer has been instructed to make a trial survey & estimate of cost of an alternative line by the Coves & Champlain St. to Allan's Wharf. (May, pg. 137.)

A rich lady, cured of her Deafness and Noises in the Head by Dr. Nicholson's Artificial Ear Drums, has sent £1,000 to his Institute, so that deaf people unable to procure the Ear Drums may have them free. Apply to Department O. B., The Institute, "Longcott," Gunnersbury, London, W., England.

St. John Valley.—W. Pugsley, Q.C., & A. G. Blair, jr., are reported to have had a satisfactory interview with the New Brunswick Government in reference to the construction of this line from Fredericton to Woodstock, N.B., south of the St. John River. The Government is said to have decided to subsidize it, & the Dominion Parliament has already done so. (Aug., pg. 237.)

Tilsonburg, Lake Erie & Pacific.—The ratepayers of Ingersoll have voted \$20,000 towards the extension of this line from Tilsonburg to Ingersoll. The charter empowers the Co. to build from Port Burwell to Woodstock, Ont. The present line runs from Port Burwell to Tilsonburg, 20 miles. The Dominion Parliament last session voted a subsidy for an extension of 28 miles from Tilsonburg to Ingersoll or Woodstock. T. Mackie, C.E., is now locating the line beyond Tilsonburg. An unconfirmed report says that when the extension is built the line will be operated by the Baltimore & Ohio Ry., which will establish a line of coal ferries between Fairport, Ohio and Port Burwell. (June, pg. 99.)

Toronto, Hamilton & Buffalo.—A Hamilton report says that although this Co. has purchased the right of way, it has abandoned for the present the building of the proposed spur to the northeast part of the city. The Co. recently applied to the city council for an extension of time for completing the spur line to the end of 1900, & to have the exemption in connection therewith commence on Jan. 1, 1900. (May, pg. 137.)

White Pass & Yukon.—About $1\frac{1}{2}$ miles of

tion of the line from Cariboo Crossing, at the northeast end of Lake Bennett, & between Lake Bennett & Lake Nares, by way of the Watson Valley to the Lewes River below the White Horse Rapids, some 40 miles. Grading has been started, rails have been shipped from Vancouver, & as the work is comparatively easy, there not being much rock or heavy cuttings, it is hoped to have this section built by the opening of navigation next spring. It will do away with the necessity of making portages & transferring from steamer to steamer at the rapids. Pending the completion of the line along the east side of Lake Bennett transfer barges are likely to be used to

Last session the Dominion Parliament voted a subsidy for this line, 6 miles, from Cross Creek Station, Canada Eastern Ry., to Stanley village.

Canadian Pacific Equipment.

From the design of R. Atkinson, Mechanical Superintendent, three heavy fast passenger locomotives of the Atlantic type have recently been built at the Co.'s shops at Montreal, for the purpose of hauling high-speed express trains over the new short line between Montreal & Ottawa. The distance is 111.4 miles, & is at present covered in 2 hours & 25 minutes. On the schedule for which these locomotives are built, it is intended to reduce the time to 2 hours, with 2 or 3 stops & 4 or 5 slow-ups for diamond crossings, etc., & the running speed will be about 80 miles an hour.

The cylinders are of the Vaucrain compound 4 cylindertype. The large driving wheels & trailing

wheels are of cast steel. The cab is built of steel about $\frac{1}{8}$ in. thick, with the front rounded off, & has a clean smooth finish without rivet heads or bolts. It is lined with wood, with an air space between the wood & plate of $1\frac{1}{2}$ inches.

The tank is of a new design & exceptionally large, having a capacity of 4,500 imperial gallons or 5,400 American wine gallons, which is sufficient to take the train through from Montreal to Ottawa without stopping for water. The back of the tank is rounded off like a whaleback steamship, so that any water

C.P.R. ATLANTIC TYPE LOCOMOTIVE.

convey cars across the lake. (Aug., pg. 237.)

The Chilkoot aerial tramway, owned by the W. P. & Y. R. Co., has been put in good repair recently; 2 towers have been replaced, the wire cable, where worn, has been repaired, & snow sheds have been constructed at several points. The engineers have been retained at the power station, & it is expected the tramway will be used during the winter should the steam railway become blocked by snow. (June, pg. 167.)

York & Carleton County, N.B.—A recent despatch from Stanley, N.B., said:—"The

CANADIAN PACIFIC RAILWAY ATLANTIC TYPE LOCOMOTIVE.

snow sheds are being built on the line between Skagway & Lake Bennett. A rotary snow plough has been purchased, & the management expresses the hope that it will be possible to operate the line throughout the winter. This Co.'s present line extends from Skagway to Lake Bennett, 41 miles. In the extension of the line towards Fort Selkirk, the water stretches are evidently to be used, at first at least, as much as possible. The route along the east side of Lake Bennett, some 27 miles, is very heavy, & is not likely to be gone on with for a time, until Dominion or Provincial aid is secured. A contract has been let to Mr. Heney, of Ottawa, Ont., for the construc-

plans & profiles of the York & Carleton County Ry. have been prepared by Mr. Ruel, C.E. The President of the Co., Dr. Moore, had an interview with the Minister of Railways recently regarding the contract for the construction of the road. It is understood the interview was highly satisfactory, & that the contract will be signed in a few days. The N.B. Government's subsidy will also be given when the contract is made with the Dominion. The President is in correspondence with parties regarding the grading & the supplying of sleepers. The outlook is very hopeful for the immediate construction & completion of the road.

which overflows will run off. The coal space is made hopper shape, & the coal capacity is about 8 tons, being sufficient for the round trip. The tank is mounted on a heavy steel frame made of 10 in. channels, & is provided with heavy metal trucks & axles with 5 x 6 in. journals.

The engine & tender truck wheels are of wrought iron, steel tread, & rail wheels of engine & tender have clip rings. The whole engine & tender, including the truck, is equipped with the Westinghouse high speed brake.

The fast trains have not yet been inaugurated, as a portion of the line is being double

tracked & laid with 100 lbs. rails. The engines are remarkably smooth riding which is especially noticeable on curves.

The Mechanical Department of the C.P.R. made a record in the time of getting out the first engine. The design was commenced by Mr. Atkinson on the morning of May 1, all materials were procured & the first engine was in steam on July 3, nine weeks from the date of commencing the design, & after going on trial trip & being cleaned & touched up, was sent for inspection to the Windsor St. Station on July 6. This time could have been beaten by some days, if the heavy freight traffic in the country had not delayed transportation of materials.

The two engravings on page 297 show the principal features of the engines. Following are the general dimensions, etc.:

Fuel.....	soft coal.
Gauge of track.....	4 ft. 8½ in.
Total weight in working order.....	159,000 lbs. estimated.
Weight of drivers.....	70,000 "
Total weight of engine & tender.....	274,000 "
Driving wheel base.....	7 ft. 3 in.
Frame wheel base of engine.....	25 ft. 11½ in.
Total wheel base of engine & tender.....	33 ft. ¾ in.
Cylinders.....	13½ in. & 23 in. x 26 in.
Boiler.....	Belpaire with extended wagon top.
Diameter at smallest ring.....	60½ in. inside.
No. of tubes.....	284
Diameter of tubes.....	2 in. outside diameter.
Length between sheets.....	15 ft. 1-16 in.
Firebox.....	9 ft. 17½ in. long x 3 ft. 6½ in. wide inside.
Working pressure.....	210 lbs.
Diameter of driving wheels on tread.....	84 in.
Diameter & length of journals.....	8½ in. x 12 in.
Diameter of engine truck wheels.....	36 in.
Diameter of journals.....	6 in. x 10 in.
Tender frame.....	steel.
Tank capacity water.....	4,500 imperial gallons.
Tank capacity coal.....	8 tons.
Brakes.....	High speed Westinghouse American.
Tender axles, steel.....	Steel, Peck & Tozer.

The cars recently turned out of the Co.'s Montreal shops for the Montreal-Ottawa fast run are without doubt the triumph of car building up to date & reflect high credit on Master Car Builder Apps. The two trains each consist of baggage car, combination 2nd class & smoker, a 1st class car & a parlor car. The interior of the parlor car is finished in mahogany & satin wood, the bevelled glass windows are large, the seats are of dark green plush & the ceiling is decorated in dark

green & gold. The interior wood work is very handsomely carved. The car contains a ladies' drawing room & a smoking room. Special attention has been paid to the lavatories. The 1st class car is finished inside with the same woods as the parlor car. The combination 2nd class car & smoker is fitted with revolving wicker chairs. The whole train is lighted by electricity, generated from the axles.

A recent press despatch from Montreal stated that the Co. had placed orders for some 30 or 40 locomotives with U.S. manufacturers, that this had been done owing to the machinists' strike & that the Co. would close its locomotive shops & place its orders in the U.S. in future. We have been unable to secure either a confirmation or denial of this from official sources. Another report states that an order for 12 compound consolidation locomotives has been placed in the U.S., delivery to be made in May next. It is said they will weigh 150,000 lbs. with 133,000 lbs. on the driving wheels, & have 21 in. & 33 in. x 26 in. cylinders; 57 in. driving wheels; Belpaire boilers with 255 tubes 2 in. in diam. & 12 ft. 11 11-16 in. long & a working steam pressure of 200 lbs.; fireboxes, 9 ft. 17½ in. long & 3 ft. 6½ in. wide, of steel, & a tank capacity for 4,000 gals. of water.

The Co. is building at its own shops 400 box & 60 furniture cars. The box cars are 35 ft. long, 8 ft. 5 in. wide inside, 7 ft. 3 in. high inside & weigh 31,000 lbs. The furniture cars are 45 ft. long, 8 ft. 6 in. wide & 9 ft. high inside. All are being equipped with Westinghouse air brakes.

A report that the Duluth, South Shore & Atlantic was about to buy some steel cars is officially denied.

The Minneapolis, St. Paul & Sault Ste. Marie has ordered 40 refrigerator cars & is asking bids on 1,000 box cars.

Improving North-West Live Stock.—Mention was made in our last issue of the intention of the C.P.R. Co. to expend a considerable sum for the purpose of improving the breeds of live stock in Manitoba & the Terri-

tories. A few animals are being sent in this fall.

Ball Bearing Jacks for Export.—A. O. Norton, manufacturer of ball bearing jacks, Coaticook, Que., advises us he has just shipped a large order to Denmark, & that several other important orders for export to India, Australia & South Africa, have recently been received.

Rutland R.R.—It was recently reported in the daily press that arrangements were about completed by which this Co. would secure an entrance into Montreal, independently of the Central Vermont & its connections, & that the new route would be established by the acquisition of the United Counties Ry., from Lacolle Jct., by St. Johns & Iversville, thence by the Montreal & Province line. We are informed that the whole story is a fake, entirely without foundation in fact.

Elevator Commission.—At the last session of the Dominion Parliament an appropriation was voted for the expenses of a commission to investigate the grain elevator question in Manitoba and the Territories. The commission has been appointed as follows: Judge Senkler, of St. Catharines, Ont.; W. F. Sirett, M.P.P., Glendale; C. Castle, Foxton, & W. Lothian, Pipestone, the three last named being Manitoba farmers. C. N. Bell, Secretary of the Winnipeg Board of Trade, has been appointed Secretary of the Commission.

The Fairbanks Co. has this year made the following sales of railway track scales through its Montreal office:—To the C.P.R. 3, for Vancouver, Winnipeg & Sharbot Lake; G. T. R. 5, for various points on its line; Canadian Northern Ry. 1, for Winnipeg; Algoma Central Ry. 2; Dominion Coal Co. 2; Dominion Iron & Steel Co. 1; Cumberland Ry. & Coal Co. 1; Granby Consolidated Mining & Smelting Co., Grand Forks, B.C. 1; Dominion Cotton Mills Co., Magog, Que. 1; Laurentide Pulp Co. 1; Nova Scotia Steel Co. 1. The total length of these scales is 742 ft., & the total capacity over 3,000,000 lbs.

THE CANADIAN ROADMASTERS' ASSOCIATION.

The third annual convention opened in the Temple Building, Toronto, Sep. 20. President W. Shanks, in taking the chair, said: In opening this our third annual convention I may say, before commencing the business, that I am very much disappointed that there are not more of our members with us. I fully expected that at this meeting we would have a goodly number, but there may be more in later on. I think it must be that a great many of our roadmasters really do not appreciate the benefit derived from a meeting of this kind. Perhaps when the good to be obtained from these gatherings becomes better known there will be a larger turnout. I will not attempt to take up any more of your time just now, but will proceed to the business in hand. The first in order would be the reading of the minutes of the last annual meeting, but as they are rather long, perhaps we had better pass that over, & take up the Secretary-Treasurer's report.

The Secretary-Treasurer, J. Drinkwater, reported a membership of 41 in good standing; an expenditure of \$6.42 had been made since Jan. 31st, with receipts amounting to \$8, leaving a balance on hand of \$63.58. The report was adopted.

The Secretary then called the roll as follows. Those before whose name an asterisk is placed were present: A. Black, C.P.R., Pogomasing; *J. R. Brennan, O. & G.R., Ottawa; W. Cooper, C.P.R., Three Rivers; J. Coughlin, C.P.R., White River; *J. Drinkwater, C.P.R., Winchester; A. Gordon, C.P.R., Parkdale; *J. Graham, C.A.R., Ottawa; *Thos. Graham, C.A.R., Parry Sound; F. W. Green, C.P.R., Fort William; J. Henessy, C.P.R., Montreal; *T. Hickey, M.C.R., St. Thomas; *F. J. Holloway, C.P.R., Parkdale; D. Jelly, C.P.R., Nepigon; *J. Jelly, C.P.R., Carleton Junction; H. L. Johnston, C.P.R., Nakusp; M. Keefe, N.Y. & O.R., Ottawa; W. Kelly, C.P.R., Sudbury; Thos. Landers, C.P.R., Farnham; J. Leslie, C.A.R., Ottawa; R. H. Lowe, C.P.R., Regina, N.W.T.; *A. McAuley, C. P. R., Toronto; *A. N. McLennan, S. & L. R., Glace Bay, N.S.; J. Malloy, C.P.R., Smith's Falls; Wm. Moe, C.P.R., Sherbrooke; M. Morin, C.P.R., St. Therese; G. Munroe, C.P.R., Kamloops; *E. Murphy, C.P.R., Woodstock; E. Myers, C.P.R., Smith's Falls; W. O'Donnell, C.P.R., Chisleau; W. Rose, C.P.R., London; Geo. Seamen, I.C.R., Moncton; J. Shanks, C.P.R., Montreal; *R. Shanks, C.P.R., Mattawa; *W. Shanks, C.P.R., Carleton Jct.; J. Telfer, C.P.R., Calgary; W. Wallace, C.P.R., Ottawa; R. Watters, M. & N.W.R., Portage la Prairie; J. Yeo, I.C.R., Riviere du Loup.

The Secretary reported correspondence with a number of railway managers, etc., about the convention, most of whom had replied they would arrange leave of absence & transportation for their roadmasters who wished to attend.

The reports of committees were then taken up.

TRACK TOOLS.

The Committee, J. Drinkwater, A. McAuley & W. Shanks, reported as follows:—In our opinion it is economy for any railway company to furnish its trackmen with the best & most suitable tools. They should be so designed as to enable the men using them to accomplish the greatest amount of labor without expending a superfluous amount of energy in so doing, by reason of clumsy or improperly designed tools; & they should be so constructed that the parts which require great strength & are subjected to great strain or wear, should be of a quality of steel best adapted to withstand the same, thereby reducing to a minimum the weight of certain tools where strength & not weight are desired, also decreasing the load trackmen have to carry

about on their work, as well as decreasing expense to the railway companies, as most tools are purchased & sold by the pound. The committee believe that these tools can be best & most cheaply obtained off concerns which make a study of these points in track tools, & which are supplied with the proper facilities to incorporate them in the same.

The adoption of the report having been moved it was discussed as follows:—

T. HICKEY.—I notice that this report states that these tools "can be best & most cheaply obtained off concerns which make a study of these points in track tools, & which are supplied with proper facilities to incorporate them in the same." I agree with the Committee that these concerns can make tools cheaper than we can in our railroad shops. The Roadmasters' Association of America had up the question of tools some seven or eight years ago. I was one of the Committee, which met during the year at Toledo. Every member of the Committee was present & brought some tools with him—each member brought a tool & some more than one—and we got quite an assortment. From those we worked there & designed what we thought

W. SHANKS,

President Canadian Roadmasters' Association, 1897-99.

was most suitably adapted for the purpose. We got the privilege from one of the companies to use their shop for making & changing the tools, & I think we got up a number of tools that were very good. Clay picks, it was not a very hard matter to decide on that tool, but on the question of a tamping bar, we went into that quite extensively & changed & planned one that we thought was good. Then there were spike mauls & other tools. The most important were the claw bars. It took us some time to design one that we thought was right—that is, one that would readily take hold of a spike in a tie & would pull it out without bending. We accomplished the making of a claw bar, & it was adopted as a standard. The M.C.R. is using that particular claw bar to-day, & our foremen are very very well satisfied with it, & it would be a hard matter, I believe, to change it for any other, so far as the foremen are concerned.

The report was adopted.

EXPANSION OF DIFFERENT WEIGHTS OF RAILS.

The committee, J. Shanks, J. Leslie & J. Graham, reported as follows: The expansion

required in 30-ft. rails at different temperatures is as follows:

30° below zero, 5-16 of an inch.	
0°	1-4 " "
30° above zero, 3-16 " "	
60°	1-8 " "
90°	1-16 " "

The above expansion applies to rails from 56 to 73 lbs. per yard.

T. HICKEY.—This is an important question & one we should not lose sight of. You have all noticed the expansion on different roads, & I have no doubt we have all heard the lamentable sound of the wheels passing over the joint where there is too much expansion. While too much expansion can be given, too little can be given as well. The expansion used by the Michigan Central is as follows:

From 7 degrees above to 30, 5-16 of an inch.	
30°	53, 1/4 " "
53°	76, 3-16 " "
76°	97, 1/8 " "
97°	120, no expansion used

We use iron shims so made that they cannot drop down below the head of the rail—that is, the whole shim cannot drop down—the shim can go down 1 1/4 in. but not entirely. These shims of course would be taken out before the train passes over the rail.

THE CHAIRMAN.—I would like to hear from all the roadmasters on this question; it is a very important one & there is a great deal of difference of opinion in connection with it. Perhaps Mr. Drinkwater has something to say about this.

J. DRINKWATER.—Mr. Hickey said this was a very important question & one that should not be lost sight of. It is something I have given a good deal of thought to & I have been reminded very often of the subject in riding over my own division, & almost every division that I have been over. I forget whether Mr. Hickey said it was a melancholy sound, or what, he heard at the joints—something like that anyway. It is a thing I have never been able to come to any definite conclusion about, as to how much expansion would be right. Mr. Hickey has truly said that we can give too much & we can give too little. The object of allowing for expansion at the rail joints, to my mind, is to provide against the rail kicking out of the road—that is the only reason why there is an opening left at a joint. I have never had charge of any track that I did not think the joints were too open, that there had not been too much allowance for expansion. I have been furnished with a set of shims, yet I find it very difficult to use them & get the expansion just as the blue print lays it down. We start out in the morning at 7 o'clock to go to work, & probably it is 20 above zero, or down to zero. We set up a leg of rail, or put it in the track—generally, changing rails, we set up a leg of rail & use our shims & put on our fish plates, or whatever joint fastening we may use, tighten the bolts fairly well & remove the shims as we go along 7, 8 or 10-rail lengths. The atmosphere goes up, & at 12 o'clock probably it is 90 in the sun, & you walk over that same leg of rail & find about the same opening in those joints as there was at 7 o'clock—the fish plates grip the rail & carry it ahead & you have the same openings. After you have laid 10, 15 or 20 miles of track, & in Nov. or Dec. you find the joints are all too open. That has been my experience. I think it is the most difficult thing trackmen have to contend with. In laying new track the same conditions exist—the ties have nothing to hold them, the resistance of the ties is less than on ballasted track & the whole thing walks bodily ahead as the track is laid. I re-laid a piece 6 years ago in June & I put 4 ft. more rail in 1/4 of a mile than I took out. The foreman said, "That will go over the fence in a week." It has not, those rails are about as good on the ends as when they were put in. I have seen lots of rails used up on the ends—one of the

causes was that the joints were too open; the more opening you have at the joint no doubt the better stroke you get. Rails flatten down worse at the ends in winter than in summer, & I know no reason except that the joints are more open in the winter than in the warm weather. The rail is certainly not any softer. I think you will all agree with me that that is about the way it is. I am not in a position to tell you any methodical way of bringing about an improvement so that it will be perfect at all. It is a class of work that is pretty hard to get just right, & it is not hard to make a table to go by, almost anybody could do that; I think I could make a table myself, giving the figures, temperature, etc., but it is a great deal more difficult to get your rails down in accordance with that table, whatever it may be.

T. HICKEY.—I would like to ask Mr. Drinkwater if he couples them together before he puts them in.

J. DRINKWATER.—I generally do.

T. HICKEY.—How long a stretch?

J. DRINKWATER.—It depends a good deal on where we are working & how the train service is, etc. I generally try to put in a quarter of a mile, very often put in half a mile without a break.

T. HICKEY.—In using the expansion shims I have just spoken of, I think if the rail is properly laid there cannot be any mistake made as to the amount of expansion. Our practice is that we lay one rail at a time, & the foreman who does the work carries with him a thermometer, he does not carry it in his pocket, either. He changes his shims according to the temperature, laying on a rail at a time; so that the cold snaps do not affect your rail where it is laid in that way as though you put up a string of half a mile or three-quarters of a mile in the morning & put it in at noon.

J. DRINKWATER.—I may say that we have been using thermometers, but in any rails I have laid we have always coupled them together in strings varying from 10 rods to a mile. I have put in a mile of branch rail where there was not much traffic. We have never laid any with one rail at a time as Mr. Hickey speaks of.

THE CHAIRMAN.—I think the proper way to lay new rails is to lay one rail at a time. That is the way I have adopted of late years.

J. DRINKWATER.—I don't see how that overcomes the difficulty. You must have an opening at one end of the rail, & you have a new rail at one end of it & either a gap or an old one at the other end. The temperature does not stop while you place that rail in position & fix it there, it keeps going up all the time or going down. If you tighten up your bolts, any joint fastening I have ever seen grasps it tight enough to carry the rail along. A joint fastening that won't do that is not very much good, to my mind. I cannot see where laying one rail at a time will get over the

difficulty, unless you leave your fish plates off or not tighten your bolts.

J. GRAHAM.—In the last three years we have re-laid about 60 miles of 72 & 73 lbs.—about 20 miles 73 & the balance 72. The way we do, we link up half a mile or a mile, just according to what time we have between trains. I use oak shims for expansion, & leave them in, don't take them out; 3-16 is the size I use. Last year in Nov. I relaid about 8 miles. This spring when it got warm we had to cut 30 inches out of 4 miles. When the bolts were in it would only allow 3-16 of an inch expansion. I am certain if we had not cut the rails in May or June that they would have kicked in that 8 miles laid in Nov. This summer I laid about 13 or 14 miles in Aug. of 73 lb. steel. I think one has to be very careful about the expansion. I find that the rails are liable to buckle, which I think is just about as bad as having them pound a little on the ends.

THE CHAIRMAN.—I would like to ask Mr. Hickey if he considers there is any difference in expansion between the different weights of rails.

T. HICKEY.—No, I don't think there is enough to make a difference. There may be a very slight difference, but it is a hard matter to get at & to get at accurately. I have made some tests in that direction with a light section of rail & also a heavier one, & I was unable to detect any difference. I might, however, have gone into it more thoroughly, but my time was limited. It would require a great deal of time & a great deal of care to get at the difference, if there is any. The difference is so slight that I don't think we should make any mention of it. I would like to say a word as to using wooden shims. I used them some 16 or 20 years ago. Where you use oak shims they turn the rail ends & bunt up the rail you set them in, leaving very little expansion. I found I had some trouble with the wooden shims & discontinued using them.

J. GRAHAM.—I think it depends a good deal on the foreman who is laying the steel, how the wooden shims act—if he makes his men be careful when they are fitting the rails together, all right. I suppose if he is careless & lets them come back with the other rails as hard as they wish the wooden shims will not amount to much.

T. HICKEY.—In regard to that, as I understand it, the wooden shims are used for a given expansion, which has to be allowed between one rail & another, & that opening is filled with hardwood. I don't understand just how that opening is allowed for expansion if there is a hard piece of wood in there.

It was decided to postpone the further discussion of the report.

PLACING OF TIES AND TRIMMING BALLAST.

E. Murphy, Roadmaster C.P.R., Woodstock, Ont., Chairman of the Committee, reported as follows.

Thirty-foot rails should have ties uniformly spaced as follows:

70 lbs. a yard or lighter,	18 ties
70 to 80 "	" " 16 "
80 to 100 "	" " 14 "

Ties in main side tracks should be 24 in. centres, & in other than main side tracks 30 in. centres. In reference to trimming ballast I cannot give a better idea than to consult the C.P.R. standard. I have had my ballast for the past 16 years trimmed according to our present standard, & have found a great benefit from it. We all agree that the quicker we can get the water from the roadbed the better it is for the road.

The adoption of the report having been moved it was discussed:—

J. DRINKWATER.—I have an idea that probably Mr. Hickey would like to have something to say regarding this report. Although he has moved the adoption of it, I don't know whether he had anything to do with getting it up or not. Mr. Murphy sent it to me, & there may be things in the report that Mr. Hickey is not just in sympathy with. I got up with the intention of trying to make it clear for him to have something to say if he wished. There are things in it that I am not altogether in sympathy with. I have never had a track where the ties were too close together, not if we could equalize the spaces or distances. I have seen one rail with 18 or 19 ties under it & the next one to it with 11. I don't like them that way, no matter what the weight of the rail is. This report gives a 70 lb. rail & lighter, 18 ties. I think if the different weights of rail for the main line had been left out & 18 ties mentioned it would have been something near it, with the class of ties we use on our road. We get them all the way from 7 in. face to 14, or somewhere near there, & it is rather a difficult matter to get them spaced & have an equal bearing & an equalized support under the rail. I find in looking round that a great many roads have fallen into the idea, & adopted it, of having ties cut to a certain dimension. This way they can be equally spaced & the bearing & support of the rail thoroughly equalized. The same number of ties then would be under each rail of a corresponding length, & the space, whether spaced from centre to centre, or spaced between bearings, would be all the same. This summer we started spacing our ties—hewn ties & sawn—varying

PLANS AND SPECIFICATIONS.

very much in size on the face, & we have been making a space between bearings of 14 ins. The tie is supposed to be at least 8 ins. I think that system is better than a given distance between centres, where ties vary in size. I think you get a more equalized bearing for your rail that way. Of course you have no idea then how many ties you are going to have under your rail—it depends altogether on the size of the face—some rails have 16, 17 & down as low as 15. When you put in 7 in. ties together & 24 in. centre it leaves your spaces pretty wide. Probably the next 3 or 4 ties may run 11, 12 or 13 ins. with a 2 ft. centre & your spaces are very narrow. Get on an engine & ride over a piece of track like that & you will find a hard spot wherever these large ties are. I am very strongly inclined to think lately that ties should be cut to a dimension, & should have a given size for the face; then there would be no difficulty & we could decide on the number of ties to put under a rail. I don't think, if ties were dimensioned say 6 by 8, that 18 ties would be any too many under a 100 lb. rail. The trimming of ballast is a thing that people differ about. I don't know that it would be policy on my part to criticize very much the standard laid down for the C.P.R., as I have charge of a division on that system; yet I have been able to find fault with & reason out a pretty strong case against this style of trimming of ballast. I contend it is detrimental to your ties in the first place, & next that if you have a good quality of gravel, with the exception of when the ground is frozen that it provides no drainage whatever. If you have a fair supply of good gravel under your track, almost every drop of rain that falls on it goes down through the gravel, it does not run over the top of it. If I saw water running over the side of the slope, as shown on this blue print, to any great extent, & no frost in the ground, I would come to the conclusion that you had not really good ballast, it was not gravel altogether, something mixed with it that the water could not get through. I have seen some other cuts of trimming of ballast on the C.P.R. & they show cinders trimmed up square with the surface of the ties, also rock ballast & coarse ballast. Of course I think it is necessary to trim dirt ballast in this way, as water will not go down through it, & if it does it will not do the road any good. I believe the ordinary tamarack or hemlock tie will last at least a year longer with the ballast up flush with the surface of the tie. I have taken hemlock ties out of farm & other crossings that had been in there 11 years & perfectly sound, only cut down with the rail. The reason was that they were protected with a covering. We don't pretend to be able to bury them all up like that, but if you leave 2½ ins. or so of the end bare you expose it & before it is rotten it begins to shake to pieces. I believe in trimming up ballast flush with the ties if you have good ballast.

T. HICKEY.—I would like to say a word with regard to the placing of ties. If we allow a given number of ties to a certain length of rail I don't see how you are going to get that number of ties if you are going to space between the ties, that is, if you get some hewn ties & some sawn ties & go to work & space them uniformly between the ties, then I cannot understand how you are going to get a certain number of ties under the rail. Our practice in placing ties is this: We allow a certain number of ties to the rail for certain sections, & we have a 15 foot pole marked for the different sections of rail. The pole is marked at intervals for the centre of each tie, & when a man wants to put in a tie or more the pole is laid on the rail with the end of it up to the end of the rail & he marks where the tie is to go in according to the mark on the pole. The old tie comes out. It is possible that you would have to shift another tie to get this one in, but he will get that tie in where it belongs. And when the other ties

are renewed they are all spaced uniformly. Where there are a number of large ties & some small ones the large ones are not all put in together, neither are the small ones put in together. If a man puts in a large tie he usually puts in a small one next to it & that divides up the space more uniformly. If they are all sawn ties it is not necessary to do that. The question of handling ties is really very important. The ties perhaps cost more than the rail does, & for that reason I don't think that too much care or attention can be given to the handling of them & the best method in which to space them, as a result of which they would give better service.

THE EDITOR OF THE RAILWAY AND SHIPPING WORLD.

This report gives the C.P.R. standard ballast section on tangent, as used on the Ontario & Quebec, Atlantic & Eastern division, & I thought it might interest the members to see the standards of some of the other roads. I have here the Michigan Central double track, the Intercolonial & the western division of the C.P.R., & place them at the disposal of the members.

J. DRINKWATER.—I did not intend to say that we always put 3 or 4 small ties together & 3 or 4 large ones. It is something I never do when we can avoid it. But I have seen where they were taking out & renewing ties that there was a tie probably with 12 or 13 ins. face that had to come out, & the largest tie within a mile of it did not have more than 9 ins. & you had to put it in. I have spaced ties from the centres ever since I have been in the railway service. I never spaced them any other way until this year. I said, I think, in my former remarks that in spacing between the ties, the surface bearing of the ties, that we got for some rails 17, 16 & down as low as 15, according to the size of the ties. I did not say we could put

any specified number of ties under a rail & have them equally spaced unless the ties were cut to a dimension. That is what I intend to convey to you as being my opinion of the matter. I have always spaced ties & put

them in just as Mr. Hickey spoke of. I did not always use a pole, but I have used a pole & we have a pole on every section. Even then you don't get your bearing equalized. It is utterly impossible to equalize your bearing by putting ties under the rail either by a given number or spacing them from the centre or even between the ties. It cannot be done unless your ties are all the same size.

The report was adopted.

ELECTION OF OFFICERS.

At the afternoon session officers were elected as follows:—President, J. Graham, C.A.R., Ottawa; Vice-President, R. Shanks, C.P.R., Mattawa, Ont.; Secretary-Treasurer, J. Drinkwater, C.P.R., Winchester, Ont.; Executive Committee, J. Yeo, I.C.R., Riviere du Loup, Que.; J. R. Brennan, O. & G.R., Ottawa; A. N. McLennan, S. & L.R., Glace Bay, N.S.; F. J. Holloway, C.P.R., Toronto.

The minutes of last year's meeting were adopted.

RAIL JOINTS.

The committee, J. Drinkwater & W. Shanks, reported last year as follows, the discussion on the report being adjourned until this year: In connection with our work there is no one thing of so much importance or that affects tracks so much as the joints. Considering from this fact the importance of the subject & the amount of money, time & study that has been expended on attempting to perfect rail joints, & yet your committee are strongly of the opinion that the best that has been produced that they have had practical experience with is still lacking, or has failed to fully meet the requirements. Our experience is from the old wrought iron chair to the plain fish plate with the tie directly under the joint. Then came the 2-tie angle bar, & later the 6 hole 40 ins. angle bar supported with 3 ties, & later still the 44 ins. angle bar supported the same as the 40 ins. with 3 ties, & at present we have a 4 hole angle bar supported on 2 ties.

Our experience has been that wherever joints have been supported with a tie directly under them, whether with the plain fish plate or the 3 tie 6 hole angle bar, the results have been better than with the 4 hole angle bar with the joint suspended between ties. The new angle bar with 4 bolts & 2 ties suspended joint is, we consider, a decided improvement over the old one in its general make up. Instead of slats in the edges for spikes the holes are through the web or flange. This gives the full benefit of the 4 spikes against spreading, but with the improvements in this joint over the old 2 tie suspended joints we have been unable to see where the defect has been remedied, or the cause removed, or the necessity provided for that we have found to exist with a suspended joint.

The 40 & 44 ins. angle bars have the appearance of a waste of material & this, of course, means expense for which no benefit is derived.

Up to the present our experience is, & we beg to report based on experience, that the suspended joint has been a failure & even with the improvements on the present suspended joint we do not feel free to recommend it as being all that it should be, but, to the contrary, believe that they must get their support from underneath & we consider that the energy spent & the efforts put forth to produce a satisfactory joint have not been productive of the result desired.

The report having been read, it was decided to postpone its further discussion.

SUBJECTS FOR NEXT YEAR.

THE CHAIRMAN.—The meeting is now open for discussion as to the subjects for our next annual meeting. It will be necessary to couple with the suggestion of each subject the names for the committee.

The following subjects were selected:—The

Creeping of Rails. Committee, J. Jelly, J. Brennan & T. Hickey.

The Best Mode of handling steam shovels, embarking & unloading ballast & all work to be done in connection with ballasting, etc., filling freights, & all such work as that; taking so fully all the best devices & what it is really necessary to have to do work of that kind with. Committee, F. Murphy, A. McAuley & T. Graham.

The Renewal of ties, taking the best method of handling the ties from the time they are received on the section until the old ties are piled up, giving the cost of changing the ties or putting them on the track, & of each kind of ballast. Committee, J. Drinkwater, J. Leslie & J. R. Brennan.

MONTREAL CHOSEN FOR 1900.

THE CHAIRMAN.—The next thing is as to where our next meeting will be held & when.

R. SHANKS.—I will move that our next meeting be held in Montreal in the second week in Nov., 1900. My object in naming Nov. as the month is that there are quite a number of the members who live at such a distance that they were unable to get in in Sep. I think if we put it in Nov. that there cannot be much excuse.

J. DRINKWATER.—I have been at Detroit attending the American Roadmasters' Association convention which was held there last week, & found there seems to be a general feeling with the different associations that they have been holding their meetings too early in the season. The American Association had their meeting this year earlier than we have, & had the first choice. They have chosen the second Tuesday in Nov. as the date of their next meeting. I have the pleasure & satisfaction of being a member of that association & would like very much to attend their next meeting, & of course it would be impossible for me to be in Montreal & Los Angeles on the same day. On that account I think it will be worth our while to fix our meeting early enough so that the two will not conflict. It will take probably four or five days to get to California, & I am pretty strongly inclined to think that after the American meeting is over it would be too late for ours. I don't think Mr. Shanks was aware that the American Association had changed its date. I know down round Montreal I have been running a snow plow pretty early in Nov., & that is considered the most important work that we have. I find the last half of the fall is always the busier. I also find that if a man does not want to attend a convention of this kind he does not go to it, & if he wants to go & tries really hard he gets there. I would be in favor of holding the meeting later than we have been doing; at the same time I don't think it would be advisable to fix the same date that the American Association will have

its meeting. I am sure we would not have Mr. Hickey with us if we took anywhere near the same date.

T. HICKEY.—The reason for putting the date of the American Roadmasters' Association meeting in Nov. was on account of going to a warm climate. It was put ahead for next year only.

J. DRINKWATER.—I meant to mention that the date of the meeting was only named after the place had been decided on. I suppose, probably, if a place of meeting had been selected down east, or anywhere near this section, that the date would not have been so late.

R. SHANKS.—In view of what Mr. Drinkwater has just acquainted us with I will move that the date be Oct. 17 & 18, 1900, instead of the second week in Nov. It is not very convenient for roadmasters to be away at the very end of the month nor at the very first. F. J. Holloway seconded the motion, & it was carried.

THE EDITOR OF THE RAILWAY & SHIPPING WORLD.—Will you allow me to say, on behalf of the Track Supply Association, that in connection with the Montreal meeting I think it will be well for the Executive, if possible, to try & arrange so that the meeting, the headquarters & the place for the exhibits may be all together, as it was in Detroit, where everything centred at the hotel. It is much more convenient to have an hotel for headquarters, where you can have the meetings as well as the exhibits; have the whole thing together. I think this will meet the views of the supply men as well as the members of the Roadmasters' Association.

J. DRINKWATER.—The suggestion is a very good one, but it has come a little late to help us out any this year. Our finances are looking up well & everything is prosperous. Our members are all good payers; if they don't come near us, they send us the money, & I don't know of any reason why we should not go to the Windsor Hotel in Montreal, unless a better one is built. There are two or three hotels there with halls in connection with them. I don't think there is an hotel in Montreal that compares with the one in Detroit where the American Association met. But I fancy we can be fairly well fixed at the Windsor. I think I can promise you that arrangements will be made so that we can meet at the Windsor.

The following were appointed a committee to arrange for a place of meeting, etc., in Montreal: J. Hennesy, J. Shanks, W. Cooper, J. Drinkwater & F. E. Came.

VOTES OF THANKS.

R. SHANKS.—I move that a vote of thanks be tendered the members of the Track Supply Association for the very kind manner in which they have entertained the roadmasters on this

occasion. This was seconded by J. Graham & carried.

THE CHAIRMAN.—I may say to the supply men who are still with us, that I have much pleasure indeed in tendering them this vote of thanks from the members of this Association for the kind way in which they have treated us, & I hope that in time to come we will have larger gatherings, & that there will be more members at our meetings to appreciate your kindness and look over the supplies.

R. L. THOMAS.—On behalf of the supply men I may say that we will do all that we can to please you in the future, & we will try to help your Association to grow.

MR. CLARK.—I would like to mention that in 1879 I attended the beginning of the American Roadmasters' Association, & it only had seven members; that ought to be encouraging.

J. JELLY.—I beg to move that a hearty vote of thanks be tendered the management of the G.T.R., through General Roadmaster Ferguson, for their kindness in extending the courtesies of the road to us, & in providing us with a special car in which to visit Niagara Falls. This was carried unanimously.

J. JELLY.—Before we close I would move a vote of thanks to our President for the able manner in which he has filled his office since being elected.

F. J. HOLLOWAY.—I have much pleasure in seconding the motion.

J. DRINKWATER.—What Mr. Clark said about there being seven members in 1879 of the American Association, reminded me of the day that our President & I & three or four others met to organize this Association. I am very sorry that we have not grown faster, although we have not got anything to complain of so far as membership is concerned—we have something like half the entire roadmasters in Canada members in good standing to-day, & although there are not many here to-day, we have got them on the roll. There were 21 present, I think, the first day of last year's meeting, & we had a fairly good meeting. I think if we do not get completely discouraged, but endeavor to go on, when the features of this meeting become known, some of those who were too busy or too indifferent to be with us to-day, will kick themselves for the next three months. I am going to let them know pretty soon. THE RAILWAY & SHIPPING WORLD will give a detailed account of the whole thing; & each member will get a copy of the proceedings. I hope when we meet next year in Montreal that every member of the Association will be with us, & that by then we shall have enrolled

THE FIRSTBROOK BOX CO., LIMITED.

CROSS ARMS, TOP PINS,

as member every roadmaster in the Dominion. I am going to make a desperate effort. Every time I write to a roadmaster, if there is anything of any importance, anything I think would interest him, I write him about it, & send him all our printed matter just the same as if he was a member. It is pretty hard work when you have to get down to coaxing, but I am going to start coaxing next year & see if that will do something. If every member will make a personal effort to induce his neighbor on each side of him to attend these meetings, I think it will be beneficial. I am sure I am in sympathy with Mr. Jelly's motion thanking the President. I presume the President does not feel like putting this motion, & if no one else wishes to say anything, I will put it. The motion was unanimously adopted.

THE CHAIRMAN.—Gentlemen, I certainly appreciate your kindness in this respect. While I accepted the position of President of this Association at the time it was organized, it was simply because I was, I may say, forced to do so; nobody else would do it, & we had either to drop the matter or I had to take the position. At our next meeting it was the same thing. I fully intended to drop out of it last year, & would much rather have had someone else at the head of the Association. While we have not made much progress, I can only say that I have done what little I could, & that has not been very much, but I hope that in the future the Association will grow. I have great faith in this Association as being something that will be a great benefit to roadmasters, & I look upon it that anything that is a benefit to roadmasters in this respect is a benefit to the railways they are on. I fully believe that if our roadmasters realized the benefit that they would derive from attending these meetings, that more of them would turn out. I hope more will be present next time. I thank you sincerely for your kindness.

F. E. CAME.—I would like to say a few words in behalf of the Track Supply Association, if you do not object. The railway supply men of Canada & the United States are very anxious for the success of your Association, believing as they do that the more knowledge you have about the different devices the better able they will be to sell their goods. It means dollars & cents to the supply people to have you look at their wares & know what they are, so that you can decide intelligently. For this reason we have organized an Association, to be practically in connection with yours, to be known as the Track Supply Association. The object is to further your interests, & to try to make the conventions a success, financially & otherwise, by helping you to arrange your hotel accommodations, to have the devices so that you can see them, & give more or less of a systematic entertainment, which will not detract from the papers & the technical proceedings, but will help you to pass some of the rest of the time, & make the meetings as a whole pleasant & productive. We have done some few simple things this time, & next year we hope to be well organized, & to do better in Montreal. I think this method will help to increase your membership as well, if we have a concerted action.

The Convention then adjourned.

EXHIBITS OF TRACK SUPPLIES, ETC.

The following exhibits were displayed in the hall in the Temple Building, in which the Association met:

THE PAGE WIRE FENCE CO. OF ONTARIO, Walkerville, Ont., represented by R. Z. Rogers, Special Railway Salesman. Exhibits: Wire fencing, including the Page Coiled Spring Wire.

A. O. NORTON, Coaticook, P.Q. Exhibits: 2 Norton sure drop track jack, 1 Norton Automatic raising & lowering jack, & 1 Norton ball-bearing bridge jack.

F. E. CAME, Montreal. Exhibits: Samples

of the Servis tie plate, the Q. & W. tie plate & the Pearson jack; also model of the Macpherson patent safety switch block.

THE NATIONAL LOCK WASHER CO., Newark, N.J., represented by R. L. Thomas. Exhibit: Nut locks.

ROBERTS, THROP & CO., Three Rivers, Michigan, represented by W. H. Frisby. Exhibit: Sample of the Donovan improved pressed steel wheel.

THE RAMAPO IRON WORKS, Hillburn, N.Y., represented by R. J. Davidson. Exhibit: Automatic safety switch & stand.

THE BUDA FOUNDRY & MFG. CO., Harvey, Ill., represented by J. McKinnon. Exhibit: Steel wheel.

DILWORTH, PORTER & CO., Pittsburgh, Penn., represented by C. Stein. Exhibit: Samples of the Glendon longitudinal flange tie plates.

THE CONTINUOUS RAIL JOINT CO. OF AMERICA, Newark, N.J., represented by W. E. Clark. Exhibit: Sample joints.

THE WEBER RAILWAY JOINT MFG. CO., New York, represented by J. C. Barr & G. E. Daggett. Exhibits: Sample tee rail joint, step joint & insulated joint.

W. GOLDIE, JR., & CO., Pittsburgh, Pa., represented by W. Goldie, senr. Exhibits: Sample tie blocks, tie plates & spikes.

THE DIAMOND STEEL CO., Wilmington, Del., represented by R. Reece. Exhibits:

THE TEMPLE BUILDING, TORONTO,
in which the Convention was held.

Spikes, rail joints, rail-joint springs, tie plates & track bolts.

TRACK SUPPLY ASSOCIATION.

The supply men in attendance at the convention held a meeting Sep. 19 & decided to form an organization to be known as the Track Supply Association.

The following officers were unanimously elected: President, F. E. Came, Montreal; First Vice-President, R. J. Davidson, Hillburn, N.Y.; Second Vice-President, W. H. Frisby, Three Rivers, Mich.; Secretary-Treasurer, Acton Burrows, 33 Melinda Street, Toronto.

SOCIAL FEATURES OF THE CONVENTION.

On the afternoon of Sep. 20, the members of the Association, many of whom were accompanied by their wives, were the guests of the Track Supply Association, & enjoyed a charming drive in four-in-hand coaches through the principal business & residential streets of Toronto. In the evening they were entertained at one of the theatres, where an excellent vaudeville performance was witnessed.

At 11 a.m. on Sep. 21, a number of the members of the Roadmasters' Association & of the Track Supply Association were conveyed to the Niagara Falls in a special car attached to the G.T.R. express no. 9, the invitation

having been extended by General Roadmaster Ferguson, by kind permission of General Superintendent McGuigan. On their arrival at Niagara Falls station a special electric motor car of the Niagara Falls Park & River Railway took them to the Dufferin restaurant, where lunch was partaken of. The electric car was then taken to the Dufferin Islands, where a short time was spent, after which a rapid trip was made north to Queenston Heights, where Brock's monument was visited, Niagara Falls being again reached about 6 p.m.

The party having dined at the G.T.R. restaurant, the special G.T.R. car was again boarded, Toronto being reached about 9 p.m. after a most enjoyable day's outing, which was a great treat to those who were privileged to be present, & many of whom had not visited Niagara Falls before. While on the way from Niagara Falls to Toronto, a hearty vote of thanks was passed to the G.T.R. management for the courtesy shown, & several of the roadmasters expressed themselves in very warm terms as to the excellence of the track.

Railway Equipment Notes.

The Bay of Quinte Ry. is having 10 flat cars built.

The Caraquet Ry., N.B., has added another locomotive to its equipment.

Two locomotives have recently been added to the rolling stock of the Canadian Northern.

The Dominion Atlantic has placed an order with Rhodes Curry & Co., Amherst, N.S., for 10 flat cars.

The Moncton & Buctouche Ry. has ordered a passenger car from Rhodes Curry & Co., Amherst, N.S.

Ross, Barry & McRae, contractors for the Great Northern of Canada, recently purchased 5 flat cars from Rhodes Curry & Co., Amherst, N.S.

The Dominion Iron & Steel Co., Sydney, N.S., recently secured 8 freight cars from Rhodes Curry & Co., Amherst, N.S. The Co. has placed an order for a locomotive in the U.S.

The Canada Atlantic has built 500 freight cars at its Ottawa shops this year, & is about to build 500 more to be completed by next spring. These cars have a capacity of between 70,000 & 80,000 lbs. each.

The Sydney & Louisburg Ry. has added a 121-ton locomotive to its equipment. Orders have been placed for 50 steel cars of a capacity of 100,000 lbs. each & for a 2nd-class combination passenger car, the latter with Rhodes Curry & Co., Amherst, N.S.

The Great Northern of Canada's new equipment, for part of which orders have already been placed, will comprise 12 four-cylinder compound locomotives; 8 1st-class & 11 2nd-class passenger cars, 4 sleeping, parlor & dining cars, 8 baggage, express & mail cars, 300 box & cattle cars, 100 flat cars, 4 cabooses, 4 refrigerator cars, 4 snow plows, 25 hand cars & 25 push cars.

The London Times, in a recent article dealing with Russia's activity & enterprise in railway matters, announces that the Russian Government has issued a Ministerial order directing that by January, 1903, all freight rolling stock on all the Russian lines, both State & private, be fitted with the Westinghouse quick-acting brake. It is estimated that 1,200 locomotives & 30,000 freight cars will be thus fitted.

For the Intercolonial orders have recently been placed with Rhodes Curry & Co., Amherst, N.S., for 20 Wicks patent refrigerator

cars & box cars, the latter to be 35 ft. long & of 60,000 lbs. capacity. Four locomotives & 100 cars are being built at the shops at the line at Moncton. An order has recently been placed outside for 5 locomotives. A considerable amount of new machinery will be placed in the Moncton shops this year. About \$50,000 is to be expended in equipping freight cars with air brakes.

Grand Trunk Equipment.

Two new dining cars which have recently been put on between Suspension Bridge & Chicago are thoroughly up to date in every particular. They are 74 ft. over all & are equipped with standard wide vestibules, steel platforms & cowheel trucks with 33-in. steel tired wheels. Air signals are attached, an antitelescoping device affixed, & all modern appliances added. The general exterior appearance is similar to the new standard day coaches which are run on the system. The windows are glazed with heavy plate glass, all double. The dining-room is large, being 31 ft. 8 in. long, & will seat 30 persons comfortably. The general style of the interior design is colonial, the wood work being of quartered oak. The chairs are of oak upholstered in leather. The windows are decorated with draperies & the openings into the dining-room are provided with ornamental portieres. The floors are carpeted with Wilton throughout the whole length of the car & the vestibuled floors are covered with rubber tiling. The kitchen & pantry are equipped with all modern conveniences, the tables, etc., being covered with polished brass. A handsome sideboard is placed at one end of the dining-room just in front of the pantry, & opposite to the sideboard a wine locker is provided. China & linen closets, wardrobes & white metal washstands are in evidence in accordance with modern practice. The cars are heated with hot water coils from the engine.

The building of 12 standard freight engines has been completed at the Co.'s Point St. Charles shops, & out of the order for 10 standard passenger engines 3 have been finished.

Ten Vauclean compound consolidation locomotives are being built for the Co., at the Baldwin Locomotive Works. They will be used on freight trains in international service in hilly or mountainous districts where the grades are unusually heavy, such as the White Mountain district in New Hampshire, & westward along the line to within a short distance of Montreal.

The Co. is building at its Point St. Charles shops, Montreal, 20 1st-class passenger coaches of the 800 series, which will be of the most modern & approved construction.

High Speed Brakes.

The Westinghouse high speed brake has recently been placed on 3 C.P.R. trains, also on 3 Canada Atlantic trains, all of which are employed in the Montreal-Ottawa fast service. This brake has been designed to meet the exceptional requirements of regular trains which are scheduled to run at much higher average rates of speed than have heretofore prevailed in passenger train service. It will stop passenger trains in emergencies in about 30% less distance than is required with the best brakes heretofore used. The brake apparatus is the standard Westinghouse quick action with a pressure regulating attachment. The addition of pressure regulating devices to the existing quick action brake fixtures for both locomotives & cars is all that is required to convert them into high speed brakes. The superior stopping capacity is obtained by increasing the standard air pressure of 70 lbs. to about 110 lbs.

The apparatus of the high speed brake is very simple. It consists of the quick action air brake apparatus, as ordinarily applied to a passenger car, to which is added an automatic reducing valve, that is adapted to be secured quite readily to the car sills or to any point in the vicinity of the brake cylinder, to which it is connected by means of suitable piping. It is therefore only necessary to add this pressure reducing valve to the quick action brake apparatus, already in use upon any passenger car provided with standard brake gear, to convert the apparatus into the high speed brake. This automatic pressure reducing valve is so constructed that it remains inert in all service applications of the brake, unless, at any time, the brake cylinder pressure becomes greater than 60 lbs. per square inch (for which the pressure reducing valve is ordinarily adjusted), in which case the reducing valve operates to promptly discharge from the brake cylinder so much air as is necessary to restrict the cylinder pressure to 60 lbs. It will thus at once be apparent that the maximum brake cylinder pressure, in all service applications of the brakes, is restricted to 60 lbs., regardless of the air pressure normally carried in the train pipe & auxiliary reservoirs. In an emergency application of the brakes, the violent admission of a large volume of air to the brake cylinder (only made possible by the quick action feature of locally venting the train pipe) raises the pressure more rapidly than it can be discharged through the capacious service port of the reducing valve, & the port thereby becomes partially closed, restricting the discharge of air from the brake cylinder in such a manner that the pressure in the brake cylinder does not become reduced to 60 lbs. until the speed

of the train has been very materially decreased.

In order to cause this high speed brake apparatus to become practically effective for producing the increased stopping efficiency, the pressure of the air carried in the train pipe & auxiliary reservoirs is increased from 70 lbs. (the customary standard) to about 110 lbs. per square inch. With this pressure in the train pipe & auxiliary reservoirs, an emergency application of the brakes almost instantly fills the brake cylinders with air at nearly 85 lbs. pressure, thereby increasing the braking force from about 90% (the customary standard) to about 125% of the weight of the car. Or, in other words, the pressure of the brake shoes upon the wheels is about 40% greater, at this instant, than is realized by the mere use of the quick action brake. The air pressure immediately begins to escape from each brake cylinder, through the automatic reducing valve, & continues to do so until the brake cylinder pressure becomes 60 lbs., which is thereafter retained until the brakes are released by the engineer.

On account of the high pressure normally carried in the auxiliary reservoirs (110 lbs.), a full service application of the brakes (charging the brake cylinders with air at 60 lbs.) may be made, & still leave the pressure in the auxiliary reservoirs at nearly 100 lbs. If, after releasing the brakes, a second application of the brakes should be called for before there has been time to recharge the reservoirs, there is abundant air yet stored in the reservoirs to make a second, & even a third, full service application, & still leave sufficient air pressure to make an emergency stop equal to that of the ordinary quick action brake. These advantages, coupled with such a restricted brake cylinder pressure for all service applications of the brake, that wheel sliding is entirely avoided, require no comment to insure recognition of their importance upon trains of unusually high speed. By simple additions to the brake apparatus on the locomotive, the train pipe pressure is easily & quickly changed to 70 lbs., when the locomotive is used in other kinds of service, & vice versa.

One on C. R. Hosmer.

This is how the Daily Transcript, Moncton, N.B., announced Mr. Hosmer's recent election to the C.P.R. directorate:

"C. P. R. DISASTER.

"MONTREAL, Oct. 10.—Mr. C. R. Hosmer has been elected a director of the Canadian Pacific Railway."

Moncton is a "dry" town, so the Transcript proof reader will have to find some other excuse.

TO CALIFORNIA.

Via The Midland Route.

Every Friday night, at 10:45 p.m., a through Tourist Car for San Francisco, carrying first and second-class passengers, leaves the Chicago, Milwaukee & St. Paul Railway Union Passenger Station, Chicago, via Omaha, Colorado Springs and Salt Lake City (with stop-over privileges at Salt Lake City), for all points in Colorado, Utah, Nevada and California.

The Tourist Car berth rate from Chicago to San Francisco is only \$6.00, and the sleeping car berths should be reserved a few days in advance of departure of train.

Through tickets and sleeping car accommodations can be secured from any agent in the east, or by applying at the Chicago, Milwaukee & St. Paul Depot or City Ticket Office in Chicago.

Send for our free illustrated California folders. Address Geo. H. Heaford, General Passenger Agent, Chicago, Ill., or A. J. Taylor, Canadian Passenger Agent, 8 King street, E., Toronto, Ont.

Direct Results from Advertising.

The new advertiser looks for direct & immediate returns from his advertising, & if he doesn't get them, is likely to think the advertising unprofitable.

The old & experienced advertiser is willing to wait for results, & it is he who generally gets them.

Only bargain advertising brings in business with a rush; & it must be remembered that bargain advertising is not profitable in itself—the profit comes later. Bargains bring people again, & it is the people who come again who make profitable customers.

Advertising lives a great deal longer than most people give it credit for.

An advertisement that is in to-day loses its value only when the last man who saw it is dead.

An experience of mine on the life of advertising may not be amiss.

In a monthly class publication I inserted an advertisement one month, from which immediate replies did not seem to justify continuance, & I stopped it.

Six months afterward I got a reply that brought me more business than the advertisement cost. About ten months afterward I heard from a man who paid me several times the cost of the advertisement.

Who knows but if I had continued the advertising it might have made me rich?

The direct & immediate results were almost nothing. The results that came after I had supposed the advertisement dead & forgotten were as profitable as they were surprising.

As a single advertisement can seldom be hoped to pay, & as the cumulative effect of repeated advertising is the strongest element in the success of advertising, it is not unreasonable to suppose that a continuation of that advertisement would have been highly profitable.—From Sacramento, Cal., Bee.

G.T.R. Brantford Shops.—The Brantford Co-operative Pork Packing Co. is negotiating with the G.T.R. Co. for a lease of the old shop buildings at Brantford.

ELECTRIC RAILWAYS.

Quebec Electric Railways.

Chaudiere Valley Ry.—The Canadian Electric Light Co. is about to develop the water power of the Chaudiere Falls, near Levis, by which a minimum of 5,000 horse power is expected to be secured. It is said the Co. will construct an electric railway, to be known as the Chaudiere Valley Ry., & to run through Levis, Bellechasse, & the neighboring counties.

Hull Electric Co.—The town authorities of Aylmer are applying for an injunction to restrain the Co. from removing its tracks on Main St., Aylmer, the Council believing that it would interfere with the town's business & progress to have the tracks altered, while the Electric Co. desires to make the change to avoid legal complications.

Montreal Park & Island Ry. At the annual meeting, Sep. 21, the report showed the following results for the year ended Aug. 31:

Earnings.	1898-9	1897-8
Car earnings.....	\$109,988 74	\$104,761 36
Miscellaneous revenue.....	1,072 00	207 99

	\$1,645,450.24	\$1,458,324.91	\$187,125.33

On Oct. 2 the Co. handed over to the City of Montreal \$70,608.57, amount of percentage on the gross earnings of the Co. within the limits of the city for the year ending Sep. 30. The Co. pays 4% on earnings up to \$1,000,000, & 6% on earnings between \$1,000,000 & \$1,500,000. The question of paying the city a percentage on the earnings of the lines outside the city is still in dispute, & no payment has been made by the Co. in this connection. Under the by-laws the Co.'s annual meeting is fixed for Nov. 1, but as that is All Saints' Day & a legal holiday in Quebec it is probable the meeting will be held Nov. 2.

The Co. is appealing against its assessment by the city, the assessors having valued the poles, wires & rails, independent altogether of the plant & machinery, at \$280,000. The Co. have about 96 miles of single track in the city, so that the valuation is on the basis of \$3,000 a mile. The Co. claims that the valuation for a similar tax in Toronto is only \$1,050 a mile, & asks that the assessment be reduced to the valuation imposed in Toronto. This would reduce their valuation by about two-thirds, & the assessment to something like \$100,000, instead of \$280,000. The Co. also objects to the imposition of the special business tax on the basis of the assessment of its real property, including that already taxed under the poles, wires & rail tax & the machinery tax. The Co. points out that in reality as the law is construed by the assessors, it is being taxed no less than three times on some of its property which the city charter designated as real property. The Co.'s protest to the assessors contends that the charter, while it authorizes the taxation of machinery as being part of the immovable property, & also the taxation of poles, etc., as forming part thereof, does not authorize the taxation of the rental value thereof as part of the business premises of the Co. The machinery, poles, etc., are not subject to water rates. The poles, wires & rails of the Co. have been

valued at a higher price than the Co. would be able to obtain for the same if desirous of disposing of them. The 2nd clause of the Co.'s contract with the city reads:

“The Corporation shall grant the said Co. all licenses, rights & privileges necessary for the proper & efficient use by electric power to operate cars in the said streets in the manner successfully in use elsewhere; including the right to open said streets,” etc., etc.

The understanding & agreement between the City & the Co., the document continues, was that the percentage of its earnings paid by the Co. was accepted by the City in lieu of all taxes, rates & assessments, with the exception of the tax upon immovable property & the water rate. This agreement or contract, it is argued, having been confirmed by the Legislature, cannot be annulled by the charter. In support of this sec., 567 of the charter is quoted, which reads:

“Nothing contained in this Act shall be construed as allowing the city to violate any of its obligations undertaken by contract or as affecting or repealing any powers specially granted by statute to corporations or companies.”

In conclusion the notice of appeal says: “The Montreal St. Ry. Co. respectfully submit to the Board of Assessors, That an excessive valuation has been placed upon its property on Delisle & Notre Dame Streets. That its machinery, poles, wires, etc., did not constitute, at the time of the contract, real estate, & consequently it is not liable for assessment thereon under the present charter of the city. That it is liable only for an assessment of the property which was immovable in 1893. That if the machinery, poles, etc., are immovable they should be assessed only at such value as the Co. could obtain for them if they were desirous of disposing of them. That it is not liable for water rates on any part of the assessment which represents machinery, poles, etc. That the Co., having a grant from the City of all licenses necessary for business, the city cannot levy any tax or license upon it, & inasmuch as all personal taxes, including business tax, are licenses within the meaning of the charter & the contract referred to, the Co. is not liable for the same.”

The Co.'s car shops at Hochelaga, on which work was started early in the spring, have been completed. They cover an acre & a half of ground at the corner of Harbor & St. Catherine Streets. The blacksmith shops & a portion of the storerooms are the only rooms occupied at present, the workmen in these having been removed recently from Côté St. The vacated building on Côté St. is to be used for storing reserve cars & for urgent repairs at all times. The new shops include those for machine, blacksmith, winding & car-building purposes. The latter building is nearest St. Catherine St., & is fitted with a full system of tracks, where a large number of cars may be kept in the course of alteration or construction at once. The premises are all to be heated by the hot blast system. The machine shop & storeroom are 35 ft. high, while the other building is only 20 ft. high, & is well lighted by hundreds of windows & a dozen large skylights. Near by the Co. is erecting a reading room & recreation building for employees, which is to be fitted with a gymnasium, bathroom & barber shop, & will be ready before the snow flies. On St. Denis St. the Co. has well under way large storage sheds, measuring 250 by 100 ft., which will accommodate nearly 100 cars.

The city attorney has given his opinion that the Co. is bound to remove the snow from its tracks, & also to pay half of the cost of removing the snow from the rest of the street from curb to curb, including that thrown from the tops of buildings.

The Co.'s winter cars now being put in service have the front vestibules entirely closed in, thus making the motor men more comfortable & keeping the cars warmer, owing to the doors on the front vestibules not being opened.

The city surveyor states he intends to take steps to compel the Co. to repair the asphalt near its tracks on the asphalted streets, as he considers that much injury is done to the asphalt by the vibration of the cars.

The Co. has placed a gang of men at work constructing the Cote des Neiges line. It is said work will be continued to the city limits on the Cote des Neiges road.

Quebec Ry. Light & Power Co.—At the annual meeting, Sep. 12, the following report was presented: The directors having been authorized at a special meeting of shareholders to complete the purchase of the stock, assets, franchise, etc., of the Montmorency Electric Power Co., take pleasure in reporting the satisfactory completion of the negotiations entered into, the Co. taking possession of the property Aug. 16, 1898. By the amalgamation of this division the original intentions of the Co. were accomplished, & it became advisable to apply to the Dominion Parliament for legislation ratifying & confirming the purchase of the Quebec District Ry. Co. & the Montmorency Electric Power Co., & advantage was taken of the application to change the name of the Co. to the Quebec Railway, Light & Power Co., & to obtain further important & valuable legislative powers, the principal being:—Sub-sec. 4 of sec. 10 of chap. 59 of the statutes of 1895 was repealed, & power to construct railways in municipalities without their consent, was obtained, provided the railway was not laid along the public highways. Power to acquire the business of gas & lighting companies. Confirmation of the agreements made with the Quebec District Ry. & Montmorency Electric Power Co. Power to expropriate for pole lines & other purposes under the provisions of the Railway Act. This bill was assented to, & became law July 10, 1899.

The by-laws passed at a special general meeting on Mar. 20 last, were approved by the Governor-in-Council, & in accordance therewith the number of directors was increased from 7 to 9, W. Shaw & G. H. Thomson being added to the board. The directors submit a statement showing the result of the year's operations, which may upon the whole be considered satisfactory, taking into account the broken period on the power division, & the fact that the winter was excessively severe, over 120 inches of snow having fallen, the summer unfavorable & the inability of the Co. to properly operate its electric cars, owing to the paving & asphaltting of the streets. The legal, notarial & other expenses incident to the amalgamation of the several companies, & which have been very large, have been charged & included in the year's operations. Judging from the results of the past year & of the previous year, the directors expect for the future very considerably increased earnings, & they are confirmed in their belief by the results of the last two months, which show an increase on the Montmorency division of 16% & 7¼% on the Citadel division over the same period of last year.

During the past year the mileage of the Citadel division has been increased from 13.77 to 17.22 miles, the principal extension being from Aqueduct st. to St. Valier Toll Gate or St. Charles Cemetery, & the Co. is only awaiting the sanction of the Railway Committee of the Privy Council before operating this extension. The Beauport & Montmorency extension has been left in abeyance for future consideration. The cars, electrical equipment, & everything necessary for the electrical conversion of the steam road, except the copper & other material for the overhead construction & bonding, have been purchased or ordered, & the directors expect that this work will be fully completed during the ensuing year. The Co.'s financial arrangements did not contemplate any provision for the cost of installing the necessary plant for the electrical power for

the railway to Ste. Anne, or for the railway to Montmorency, nor was there any provision made for the extensions of the Citadel division, which have been found essential to the profitable working & operation of the whole system. The cost of all these improvements is estimated at \$150,000, & the directors have called a special general meeting of shareholders for Oct. 9, to consider this subject, when they will recommend that the treasury stock remaining in the hands of the Co. be issued & sold by tender for the purpose of providing the additional necessary capital.

Montmorency, Citadel and Power divisions; general financial statement for year ended June 30, 1899:

*System was only taken over on Aug. 16, 1898.
Net earnings during 6 weeks between July 1, and Aug. 16 was over \$8,000 00.

The following were elected: President, A. Thomson; Vice-President, F. Ross; other directors, H. J. Beemer, Judge Chauveau, W. Shaw, W. Hanson, Hon. S. N. Parent, G. H. Thompson, E. E. Webb.

It is stated that during the 4 months from May 1 to Aug. 31, 1899, there was an increase, of \$15,817.83 in the gross receipts over the corresponding months of 1898.

Roberval.—It is said the British American Pulp & Paper Co., in which R. Prefontaine, of

Montreal, & J. Tessier, of Quebec, are interested, will construct an electric railway from a point on the Quebec & Lake St. John Ry. around the lake to Roberval, with branch lines.

Ontario Electric Railways.

Brantford Electric Railway.—The Co. has expended about \$8,000 in improvements this year. A rumor recently current to the effect that the Electric Ry. Co., the Electric Power Co. & the Gas Co. were about to amalgamate, has been denied by officials of each company.

Brantford to Port Dover, etc.—T. Elliott recently returned to Brantford from a trip through the lake townships in the interests of electric railway extension. He interviewed the town council of Port Dover, & also the councils of rural municipalities, & reports very favorable feeling towards the project.

Glenora to Wellington.—G. W. Goodwin recently wrote a Picton paper suggesting the building of an electric railway from Glenora to Picton, the sand banks, & thence skirting the shore of Lake Ontario to Wellington. He claimed it would prove an attractive route, & predicted that Kingston citizens would subscribe \$250,000, Picton \$250,000, & Deseronto \$150,000.

Hamilton, Ancaster & Brantford.—The negotiations which have been pending for some time between the promoters of the Hamilton, Ancaster & Brantford Electric Railway & Mr. Marcus, of New York, have not resulted satisfactorily, & the project has received a set-back. It is said the Cataract Power Company may possibly take hold of it later on.

The Hamilton Consolidations.—The Cataract Power Co. has now complete control of the Hamilton Street Ry. Co., the Hamilton Radial Electric Ry. Co. & the Hamilton & Dundas Electric Ry. Co. Some time ago J. Patterson, acting on behalf of the Cataract Co., obtained some \$90,000 worth of stock of the Hamilton Street Ry. Co., which, however, was not a majority; the other holders of stock pooled their interests so that Mr. Patterson had to secure all or none of the balance, consequently the balance, some \$125,000 or \$130,000, was bought. The new officials of the Co. are: President, Hon. J. M. Gibson, M.L.A.; Vice-President, J. Dickenson, M.L.A.; Sec.-Treas., J. B. Griffith.

The management of the Hamilton Radial Electric Ry. Co. has been reorganized as follows: President, J. Patterson; Vice-President, Hon. J. M. Gibson; other directors, J. Dickenson & J. A. Kammerer; Secretary, S. E. Malloch; Treasurer, J. Moodie; Manager, C. K. Green.

For the Hamilton & Dundas Electric Ry. it is said the Cataract Co. paid over \$110,000 in cash & assumed the bonds of the H. & D. Co., amounting to some \$90,000. Since its conversion into an electric Co. the H. & D. has obtained its power supply from the Cataract Co. Its new officers are: President, J. W. Dickenson; Vice-President, J. A. Kammerer;

Secretary, J. Patterson; Treasurer, J. Moodie; other director, Hon. J. M. Gibson.

Supplementary letters patent have been issued under the Ontario Companies Act, extending the powers of the Hamilton Electric light & Cataract Power Co., so that when the Co. has acquired at least two-thirds of the capital stock of any corporation, being one which the Co. is, by its charter, authorized to promote, the Co. may assist such corporation in carrying on & extending its business, &c., by furnishing by way of bonus, loan or otherwise, moneys for such purpose. The Co. is also authorized to act as the agent, or manager of any such corporation in the carrying on of its business upon such terms as to remuneration or otherwise as may be agreed upon.

It is again rumored that the Cataract Power Co. is after the Hamilton, Grimsby & Beamsville Electric Ry.

J. Patterson is said to have assured the Mayor of Berlin that grading on an electric line from Hamilton to Berlin will be started this season.

London St. Ry.—A special general meeting was called for Sept. 29, to authorise an increase of capital to \$750,000, or less.

It would appear that the strikers have no intention of withdrawing from the fight. They recently took out four more bus licenses. The Trades & Labor Council has purchased 10 teams for the use of the strikers. For the winter closed buses have been engaged. They will be heated by stoves, & when snow comes will be put on sleighs.

Proceedings have been taken by the Co. against the Police Magistrate & the Mayor to recover \$20,000 damages, for alleged illegal licensing of buses. The by-law passed under the statute fixed the license at \$10, & it is claimed that the Mayor & Magistrate, as members of the Police Commission, granted bus licenses to J. Garnett & others for a less amount. The reason Judge Elliot, the third member of the Police Commission, is not made a party to the suit is said to be that he voted against issuing licenses at less than \$10.

Metropolitan Railway Co.—At the annual meeting at Toronto, Sep. 8, the following were elected:—President, C. D. Warren; Vice-President, S. M. McElroy; other Directors, W. A. & F. B. Warren; Sec.-Treas., R. Jenkins.

Niagara Falls Park & River Ry.—The power house in Queen Victoria Park was totally destroyed by fire Sep. 4, the loss being placed at \$85,000. The railway was crippled for a couple of days until power lines were run over from the U.S. side. The power house will be rebuilt as soon as possible.

The two high wooden trestles near the Whirlpool are being gradually filled in. One of them will require 20,000 yards of earth, & the other about 15,000.

A large number of ties are being replaced. About 3,000 new ones have already been put in, & about 7,000 more will be laid, oak being used. The first track which was laid had tamarac & hemlock ties, & most of these have to be renewed. The second track in which cedar was used is in better shape.

The Co. is building at its shops, 4 open motor cars, 36 ft. long, with double trucks.

Ottawa Electric Ry.—Hency & Smith, of Ottawa, have the contract for building an electric railway for this Co. from Ottawa to Britannia, on Lake Dechene, 7 miles, & it is expected to have it completed by Nov. 1.

Owen Sound.—The Town Council recently rejected a report of a committee proposing that a delegation of the Mayor & two aldermen should visit Berlin & Guelph to obtain information about the conditions under which electric railway franchises have been granted in those places. J. McLauchlan & other promoters of the proposed line to Owen Sound recently waited on the Town Council & asked

the sanction of the Council as required by statute before a charter could be secured. They stated that the municipalities of Derby & Sarawak had already given consent. When the Co. was organized it was the intention to extend the line to Meaford, Chatsworth, Durham & Southampton, but it has since been decided to confine the undertaking, for the present at least, to Owen Sound & the immediate vicinity, it being the intention to go down the shore as far as Balmy Beach & to the cement works. The Council appointed a special committee to deal with street railway matters.

The Port Stanley Electric St. Ry. Co. has been incorporated under the Ontario Companies Act, subject to the provisions of the Street Railway Act, to construct & work street railway lines in Port Stanley & adjoining municipalities. The capital is \$40,000 & the head office is at St. Thomas. The provisional directors are E. H. Caughell, A. E. Marlatt, Mary L. Caughell & Emma L. Marlatt.

Rideau Route.—It is proposed to build an electric railway to connect the towns along the Rideau Canal & Lakes. Good water power is available at Jones Falls.

Queenston Heights Bridge Co.—At the annual meeting at Niagara Falls, Ont., Sept. 12, the following directors were elected: E. B. Osler, W. H. Beatty, T. G. Blackstock, W. Nesbitt, Toronto, Ont.; W. B. Rankine, New York City; W. C. Ely, B. Van Horn, Buffalo, N.Y.

St. Catharines, Niagara Falls & Toronto Ry.—This is the new name of the St. Catharines & Niagara Central Ry., which runs from St. Catharines to Niagara Falls, 12.35 miles. Manager F. A. Cheney recently stated that work will commence on the extension of the line from St. Catharines to Port Dalhousie during Sept., & that it will be built as an electric line, the intention being to convert the old line into an electric one at an early date.

St. Thomas Electric St. Ry.—Manager J. E. Taylor having resigned, President J. H. Still is looking after the Co.'s finances, & F. Dart is superintending the operating. On leaving Mr. Taylor was presented with a gold watch & address by the employees, who evidently have a high regard for him.

Sarnia St. Ry.—The following officers were recently elected:—President, J. S. Symington; Vice-President, S. A. McVicar; Secretary & Manager, H. W. Mills; directors, C. Mackenzie, J. Cowan, J. H. Jones, J. Flintoft & F. Smith.

It is proposed to change the horse car system to an electric one & the preliminary work is being done by J. H. Jones, C.E. The route of the new line will be along Front & Christina sts., & from Christina st. north to St. Clair st., Point Edward, through that village to the lake shore & thence along the shore to a point to be decided upon. The southern end of the line will be by the present route to the tunnel & also along Christina st. to the Imperial Oil Works & the proposed new nail & wire works factory. These lines are laid out with a view to increasing the mileage of the road by belt lines, &c., as the town grows & business demands them. The present horse system has proved of great value to the town by giving connection with Point Edward, the G.T.R. employees at which place do most of their shopping in Sarnia.

Toronto Railway.—The gross earnings are:

	1899.	1898.	Increase.	Decrease.
Jan.	\$6,000.00	\$5,000.00	\$1,000.00	
Feb.	91,866.35	84,100.00	7,766.35	
Mar.	103,234.88	92,318.42	10,916.46	
April	95,212.37	86,868.83	8,343.54	
May	101,840.00	91,000.00	10,840.00	
June	109,063.18	94,119.32	14,943.86	
July	116,824.94	104,302.92	12,522.02	
Aug.	123,282.70	110,300.54	12,982.16	
Sept.	137,621.10	138,021.74		\$400.64
	\$977,596.21	\$887,536.67	\$90,059.54	
	Increase, Jan. 1 to Sep. 30, \$89,658.90.			

For the year ended Aug. 31, 1899, the Co. paid the city \$109,108.65 as percentage, an increase of \$14,821 over the previous year.

Negotiations are in progress between the Co. & the town council of Toronto Junction, for the extension of the Co.'s lines to the corner of Keele & Dundas streets in that town. Further information on this matter will be found under the head of Toronto Suburban St. Ry.

Toronto Suburban St. Ry.—A deputation from Toronto Junction Town Council recently met the directors of this Co. in Montreal & arrived at the following understanding: The Co. is either to abandon its franchise over the portion of Dundas st. between Keele st. and Humberstone avenue, or grant running powers over it to the Toronto Ry. Co. In return for this the town is to forego its right to collect an annual mileage rate from the Suburban Co., but this Co. is to pay \$125 a year towards the maintenance of the track allowance of the portion of its road which it will continue to operate in the town. The franchise of the Suburban Co., which has about 12 years to run under the old agreement, is to be extended for a further term of 10 years. This new agreement will not go into effect unless the Toronto Ry. Co. undertakes to run its cars over the portion of Dundas st. which the Suburban Co. is to give up. It is also a part of the scheme to have the Suburban line extended along Dundas st. as far as Cooksville, & out the Weston road to Woodbridge. The proposed transfer point at Keele st. is the business centre of Toronto Junction.

In the Ontario Court of Appeal, Sept. 29, in the case of the City of Toronto vs. this Co., counsel for city appealed from judgment of Ferguson, J., in so far as it holds that plaintiff is not to be entitled to mileage payments in respect of the 950 ft. of street railway track on Queen st. or the lake shore road west of Roncesvalles avenue, Toronto, & against the judgment upon defendant's counter claim for a reference to ascertain the damages sustained by the conversion by plaintiff of the pavements & roadbeds & interest of defendant therein under the contract of sale & conditions & act of incorporation of defendant. Osler, Q.C., & J. Bicknell, for defendant, opposed appeal, & cross-appealed from the finding of the judgment that plaintiff's contention as to meaning of the word "turn out" in clause 15 of the contract is correct, & declining to exclude from payment of mileage any of the tracks where there is more than one double track on the "street railway" part of a street, or where there are "connecting railway tracks" or "Y tracks," or temporary tracks, or tracks to sheds, or broken parts of a mile, or tracks in places where plaintiffs have not put down permanent pavements in conjunction with the laying of the tracks. Judgment was reserved.

The Lines in Western Canada.

British Columbia Electric Ry. Co. The earnings & expenses for Aug. are as follows:

	GROSS EARNINGS.	1898.	1899.	Increase or Decrease
Railway—Vancouver division	\$8,000	\$9,718	\$1,479	
Victoria	7,998	8,441	443	
Westminster	994	800	194	
Lighting—Vancouver	5,993	7,032	1,129	
Victoria	4,084	4,757	673	

Gross earnings	\$33,171	\$38,000	\$4,828
Working expenses	\$20,114	\$20,700	\$586
Net earnings	\$14,047	\$17,754	\$3,707

Aggregate gross earnings April 1 to Aug. 31	\$154,411	\$108,850	\$45,561
Aggregate net earnings April 1 to Aug. 31	\$60,903	\$71,974	\$11,071
+ Increase. — Decrease.			

C. A. Vanner, director of the Southern Punjab Ry., the Doodar Tea Co., & of the Russian Petroleum & Liquid Fuel Co., has been named director of the B.C.F. Ry. Co., to fill the vacancy on the board caused by the death of R. Northall-Laurie.

The Co. has placed on its interurban route between Vancouver & New Westminster, two new cars which, instead of being numbered, are named Vancouver & New Westminster respectively. The aisles are placed in the centre, & the handsomely upholstered reversible seats on either side accommodate about 90 passengers in each car.

The Co. is considering two extensions of its system in Victoria, one to take the cars near the outer wharf, & the other to improve the Gorge road service. It is expected the outer wharf extension will be made very shortly & that the cars will be run right down to the wharf. The building of a line to the Gorge depends upon the residents along the road giving the necessary financial assistance.

There has been some misunderstanding lately between the Co. & the city of New Westminster, but an agreement has been entered into which is said to be satisfactory to both parties. The Council allows track to be run from Columbia St. into a lot about to be purchased by the Co. for terminals. The Co. promises to put up the terminal station at once; to put up a shelter shed at the city limits terminus of the city line, to build the Sapperton extension next spring; to put on a two-car service in the city immediately after the fair; to grant transfers for city passengers between interurban & city cars, & to give the same terms as to low rate tickets that are given in Vancouver, which means 3 cent fares within certain hours.

The Nelson Tramway Co. has let a contract for the erection of the trolley poles along the line of the road. Work has been started on the power station, which is erected at the end of the Hall Mines switchback, near Cottonwood Creek. The Bonnington Falls Power Co. is clearing the right of way for its pole line, & promises to have the line over the 9 miles to the power station & deliver power by Oct. 15. The car barn has been located at the corner of Kootenay St. & the Mines Road. An order has been given for 2 motor cars, with removable vestibules & double trucks. Each car will be equipped with four 40 h.p. motors, owing to the steep grades to be encountered. The overhead trolley sys-

tem will be used. The power from Bonnington Falls will be transformed to a lower working voltage by oil cooled transformers, & then will drive a synchronous motor of 450 h.p. which will be directly connected to a rotary-converter-motor-generator of the same size. The alternating current will then be converted into a direct current. The synchronous motor will be of the revolving field type, & the railway generator of the multipolar ironclad armature type. On the grades 60 lbs. rails will be laid, lighter ones being used on the level.

Rossland, B.C.—T. G. Duncan & W. A. Macdonald, of Nelson, are applying for the incorporation of the Rossland & Sophie Mountain Electric Ry., Ltd., with power to construct lines within the limits of the City of Rossland, & extending on Washington St. from the city limits around the southern slope of Red Mountain, the southern slope of Spokane & O. K. Mountains, crossing Record Creek, along the east slope of Sophie Mountain, crossing the summit of Sophie Mountain near the crossing of the Dewdney Trail, along the west slope of the mountain to the Velvet Mine, thence to Main Sheep Creek, a distance from Rossland of some 12 miles.

Winnipeg Electric Railway.—A second track is being laid on Broadway & River Ave. so as to afford a double-tracked belt line.

Maritime Provinces and Newfoundland.

Halifax Electric Tramway.—A press report to the effect that this Co. has been authorized by the City Council to obtain Parliamentary powers for extending its line, & that it is estimated the cost of the proposed extension will be about \$110,000, appears to be without foundation, as the Manager advises us he knows nothing whatever about it.

The Co. has declared a quarterly dividend at the rate of 5% per year, warrants for which will be mailed to shareholders Oct. 2.

St. Johns, Nfld.—Good progress is being made with the construction of the street railway by R. G. Reid & Sons, the work being under the management of W. McKay. Some of the equipment has already arrived.

Electric Roads in the Future.

In a recent paper on Canadian water power & its electrical product in relation to the undeveloped industries of the Dominion, T. C. Keefer, C.M.G., says: The substitution of electricity for steam as the motive power for railways on many roads is regarded as inevitable sooner or later. It has already taken place as regards suburban railways, notably in the case of the Quebec, Charlevoix & Montmorency road, & the Hull & Aylmer railway, where water is doing the work which has heretofore been done by coal. The chief obstacles to an early change on the larger roads are the hundreds of millions invested in locomotives, & the very large outlay required to equip existing steam roads with the electric system. The principal inducement would be the passenger service, owing to the increased speed possible, it being confidently stated that, with electricity, a speed considerably over 100 miles an hour could be attained. Moreover, there would be entire abolition of the poisonous smoke which drops upon the sleeping car in preference to any coach ahead of it.

While the conversion of trunk lines would be attended with a cost which is for the present prohibitory, this objection does not apply to new lines, which may be worked independently, or in connection with electric ones. When the time arrives for such railways, water power will have a field of usefulness of which we can at present form little conception. Water wheels & wires would displace the coal docks, the coal-laden vessels, the huge coal yards, & the trains required for distributing their contents over hundreds of miles of lines.

An interior line connecting Lake St. John, on the Saguenay, with Lake Temiscamingue, on the Ottawa, which could ultimately be extended, via Missanabie, Nepigon & Lac Seul to the Saskatchewan, would be a colonization road, removed from the frontier—one which could be worked possibly altogether by water power, & would open a virgin tract in

R.I.P.A.N.S.

THE WONDERFUL MEDICINE

They relieve Distress from Dyspepsia, Indigestion and Too Hearty Eating: are a perfect remedy for Dizziness, Nausea, Drowsiness, Bad Taste in the Mouth, Coated Tongue, Pain in the Side, TORPID LIVER.

They regulate the Bowels. They Cure Sick Headache. A Single One Gives Relief.

WANTED

A case of bad health that R.I.P.A.N.S. will not benefit R.I.P.A.N.S. 10 for 1 cent, or 12 packets for 48 cents, may be had of all druggists who are willing to sell a low priced medicine at a moderate profit. They banish pain and prolong life. One gives relief. Accept no substitute.

Note the word R.I.P.A.N.S. on the packet. Send 3 cents to Ripans Chemical Co., No. 10 Spruce St., New York, for 10 samples and 1,000 testimonials.

which electro-chemical & electro-metallurgical industries might arise, as well as those connected with the products of the forest & the mine.

Electricity for Main Line Railways.

At the recent convention of the American Society of Civil Engineers a prominent place was taken by the discussion upon the applicability of electricity to main line railways, & it is rather interesting to notice how the views of the various speakers indicated their present affiliations. It is very difficult for any railway man to see anything good in electric propulsion for anything but local and suburban traffic, & the possibility of railway traffic ever becoming modified because of the use of electricity is something which the orthodox railway engineer does not want to think about. Col. Haines showed that electricity was more suitable for light, frequent trains than for heavier ones running less often, but no one seemed to see in that an argument for running light, frequent trains altogether, obvious as the suggestion might appear. The fact that the fuel-saving of power houses over locomotives is not great, was brought out strongly in opposition to the use of electricity, but the absence of reciprocating parts, & the advantages of independent motor cars were features altogether too radical for the average railroad man to accept. It must not be forgotten that the traffic conditions which are assumed to control the subject, are themselves the creation of the present railroad system, & that a new system may create new traffic conditions adapted to its capabilities, & none the less effective because they happen to be different from those which now exist. No one doubts that if aerial navigation should become a practicability, an entirely new set of traffic conditions would instantly be created, & the old conditions would be altogether powerless under such circumstances. When the mechanical conditions which are necessary to adapt electric traction to main line surface are fulfilled, the traffic conditions may be found equally powerless.—*Engineering Magazine.*

Fair Warning.—Visitor—Does the trolley line lead to the cemetery? Citizen—Yes, if one isn't careful.

F. A. Huntress, Manager of the Halifax Electric Tramway Co. has been visiting Barbadoes, Port au Prince, & Georgetown, in the West Indies, where it is said there are favorable openings for electric railways, which are likely to be taken advantage of by Canadian capitalists.

At the recent Trades & Labor Congress in Montreal, it was decided to petition the Dominion Government for the passage of an Act to provide that employees of electric railways shall be compelled to serve an apprenticeship of 30 days, & to pass an examination as to competency before entering upon active duties.

General Telegraph Matters.

The Commercial Cable Co. has declared its usual quarterly dividend of 1¼% payable Oct. 1.

The C.P.R. Co.'s telegraph is extending its service along the Columbia & Western Ry., between West Robson & Midway as fast as track is laid, offices being opened at the principal stations.

J. H. Helmcken, of Victoria, B.C., is advocating the establishment of telegraph communication between Vancouver Island & the smaller islands adjacent to it, particularly a cable from Comox to Texada.

The Spokane & Northern Telegraph Co.'s lines have been extended to Midway, B.C., via Republic, Wash. It is the intention to ex-

tend through the Boundary Creek country, including Cascade City, Grand Forks, Columbia, Curlew & Greenwood.

The Dominion Government telegraph line, connecting the Cape Beale & Alberni lines, thus circling the southern end of Vancouver Island, has been completed. The wire follows the coast line, but is strung on trees, cleared of branches, & a good trail has been cut, so there is not likely to be much trouble from falling timber. The line is 60 miles long.

The C.P.R. Co.'s telegraph office in Vancouver has been removed to the General Passenger Agent's office on Granville Street where the work of the office will be carried on pending the completion of the building being erected on Hastings St. When the new station is completed a branch office will be opened in it, which, with the Carrall St. branch, will give the Co. three telegraph offices in the city.

At the annual meeting of the G.N.W. Telegraph Co. in Toronto, Sep. 27, the directors & officers were re-elected, viz.:—President, H. P. Dwight, Toronto; Vice-President, A. Brown, Hamilton; Directors, H. N. Baird, J. Hedley, A. S. Irving, W. C. Matthews, Toronto; R. Fuller, Hamilton; Hon. W. McDougall, Ottawa, & C. A. Tinker, New York; Secretary & Auditor, G. D. Perry; Treasurer, A. Cox. The Co. does not make its report public, but it is said the financial statements presented showed a marked improvement in the revenue of the Co. over the previous year, & it was stated that the outlook for the coming year was still more hopeful.

The establishment of the Marconi system of wireless telegraphy in the northern part of Newfoundland, & along the Labrador coast, seems to be seriously contemplated by the Newfoundland Government, whose Minister of Marine & Fisheries, in a recent interview, stated that the plan at present thought of, if arrangements can be made with M. Marconi for instruments, fitting up, etc., is to connect the whole Labrador coast with the nearest telegraph station on the island, probably Tilt Cove. The distance between Tilt Cove & Rama, Northern Labrador, in a line along the coast, is something over 850 miles. This means that about 18 stations at a distance of about 50 miles apart will be placed. The system will probably be worked only during the fishing season of some four months in the year.

General Superintendent McGuigan, of the G.T.R., has issued a circular in which he points out that numerous complaints have recently been made that public telegraph business at several stations is not handled in a prompt or satisfactory manner. "It is our desire," he says, "that this service be made as satisfactory to the public as possible. Therefore, agents & operators will be expected to expedite the handling of this class of business, & will, hereafter, be held strictly to account for unnecessary delays or failures. Passengers & others offering messages at our stations for transmission are to be given prompt & courteous attention, & their messages transmitted with the least possible delay consistent with the proper performance of railway duties. The delivery of such messages must also be made without unnecessary loss of time."

The Plant S. S. Co.'s str. La Grande Duchesse is to carry an excursion to the International yacht race between the Shamrock & Columbia, & will have Marconi on board to transmit a report by wireless telegraphy. A cable ship will be stationed at some convenient point & connected with the cable, the land end of which is at Coney Island. The cable ship will at times be 20 miles or more from La Grande Duchesse, but it is claimed that it will be possible to receive messages on the latter & transmit them to England in one

minute's time. The Duchesse is particularly adapted to the work from the fact that a long spar is necessary in order to convey the sound successfully. The fore truck of La Grande Duchesse is 135 ft. from the water line, upon the extreme top of which will be placed at right angles a short gaff, or arm, about 3 ft. long. From this arm will be suspended an insulated wire, the lower end of which will connect with the operating instruments in a room immediately below the arm or gaff.

The extension of the Dominion's Gulf of St. Lawrence telegraph system to the Strait of Belle Isle will shortly be effected. The line on the north shore of the Gulf extends from Murray Bay to Big Romaine, 500 miles. The stretch between Big Romaine & Chateau Bay on the Strait of Belle Isle is 315 miles, & the contract for the construction of the line between these points has been let to X. Gendreau, of Quebec. The poles are being laid along the route. Chateau Bay is the nearest point on the Labrador coast to Belle Isle, the light station at the "front door of the St. Lawrence," which station it is intended to connect with the government signal system. But the experts are as yet undecided how the connection shall be made. A cable could easily be laid from Chateau Bay to Belle Isle, but the grinding of the immense masses of ice which pass through the straits in early spring would make short work of a cable. The only alternative, therefore, seems to be the adoption of a scheme of wireless telegraphy, & the experts of the Public Works Department are eagerly following the experiments being made in Europe, with a view to adopting wireless telegraphy as a means of connecting Belle Isle with the coast signal system.

At the hearing of the North Waterloo, Ont., election protest recently, subpoenas were served upon the G.N.W. Telegraph agents at Berlin, Waterloo, Elmira, & the C.P.R. Co.'s telegraph agent at Berlin, requiring them to produce all telegrams relative to the election which had passed through their respective offices. Large batches of messages were produced. The G.N.W. T. Co.'s Berlin agent, on the advice of his superior officers, submitted to the court that the subpoena served upon him was not sufficiently definite, as it referred to certain telegrams passing through his office during a period of 5 or 6 months, & did not give names or dates. He was instructed by Judge Osler to obey his subpoena. The Elmira agent, when called, said that his instructions from the Co. were not to produce telegrams without an order from the judge, who declared emphatically that he would not give an order; that telegraph people must understand that they must obey a subpoena. President Dwight, of the G.N.W. T., & Superintendent Pingle, of the C.P.R. Co.'s telegraph, were called upon to produce all telegrams sent in & out of Toronto & the different stations in North Waterloo by the Ministers of the Province & various others interested in the election. These gentlemen, however, did not respond, & it is now stated that application will be made to set aside the subpoenas served upon them. The effect of this subpoena, it is argued, would be to place in the hands of the petitioner & solicitors all the public & private despatches of the Ministers for months together, whether relating to the case or not, & also to destroy confidence in the telegraph companies & thus injure their business. The local manager of the Bell Telephone Co. at Berlin, & the telephone agent at Elmira, were also subpoenaed & testified as to conversations in reference to the election having taken place over their wires.

The Yukon Telegraph Line.

The Dominion Government's line was completed in Aug. to Fort Selkirk, 417 miles from its starting point at Lake Bennett, and the 176

ASSESSMENT SYSTEM.

THE BEST FRATERNAL BENEFIT SOCIETY IN THE WORLD.

Or Any Officer or Member of the Order.

miles from Fort Selkirk to Dawson were completed Sep. 28.

Frank Richards, Surveyor for the telegraph construction party, was drowned in Five Finger Rapids, Aug. 2.

The present rate for a 10-words message from Bennett to Five Fingers, 319 miles, is 75c.

A. B. Clegg has been appointed Manager of the office at Dawson, & W. Brownlow has been appointed to the Selwyn River office.

It was recently reported in Victoria, B.C., that the Government intends constructing a line from Tagish to Atlin, about 115 miles. A telephone system is already in operation in the Atlin district.

The cheques accompanying tenders put in on Aug. 24 for the supply of telegraph wire for the proposed line between Quesnelle, B.C., & a connection with the line from Bennett to Dawson having been returned to the tenderers it was reported that the Government had abandoned the idea of constructing this line, for the present at least. The Government press announces that the report is unfounded, that the policy of the Government has undergone no change, & that a contract for the supply of wire has been let to the same contractors as supplied that necessary for the Bennett-Dawson line.

Arrangements have been made by the C.P.R. Co.'s telegraph by which messages received by it at Vancouver for transmission to the Yukon, will be forwarded by steamer every other day from Vancouver, & every intermediate day from Victoria & Nanaimo, making practically a daily service with the north. At Skagway the messages will be handed to the White Pass & Yukon Ry., & sent over its wires to the starting point of the Government line at Bennett. It is expected that messages can be got to Dawson within 4 days after leaving Vancouver. Coming down the same arrangement will be in effect. The steamers will bring messages from Skagway, and at the first port of call, whether Comox, Nanaimo, Victoria or Vancouver, the messages will be delivered to the telegraph office for transmission to the points to which they are addressed.

The Pacific Cable Scheme.

All the Australian colonies interested in the proposed Pacific cable from Vancouver, B.C., to Sydney have been discussing the subject of late. The Victoria Assembly has passed a motion declaring it expedient that that colony co-operate with the United Kingdom, Canada, New South Wales, Queensland & New Zealand in the construction & working of a cable across the Pacific Ocean from B.C. to Australia, touching upon British territory only. Victoria is thus committed to the Pacific cable, & if the Eastern Extension Co. wants the Cape route it must carry it out itself. In New South Wales nothing will be done in the direction of bringing the Pacific cable question before Parliament until a definite agreement has been arrived at on the subject. The latest phase of the matter is the representation on the board which is to arrange all the preliminary business & prepare the tariff. The original proposal was that a board of eight should be appointed, comprising three delegates from Great Britain, two from Australia, one from New Zealand & two from Canada. The Australian colonies, & especially New South Wales & Victoria, considered that the representation for Australia was too small, & the suggestion has been made that the three

Australian colonies & New Zealand shall each have a member on the board, thus making four for Australia. This it was recognized would necessitate an increase in the representation of Great Britain & Canada. The matter is now under the consideration of the home authorities.

Subways for Electric Wires.

City Engineer Galt, of Ottawa, having been instructed by the city council to report upon the feasibility of having all electric wiring underground, has done so as follows:

Underground wiring is quite practicable from a civil, mechanical & electrical standpoint notwithstanding all the objections, difficulties & obstacles to be encountered. The most important feature to be considered from the standard of municipal requirements is the system of underground work. The ideal method, unquestionably, would be separate open subways on each side underneath the sidewalks or along the street roadway close to the gutter or curbing, large enough in size for the accommodation of water & gas mains, electric wiring, etc., including facilities for examining, making all repairs & house connections. This seems to be the only suitable plan of subway construction, & will give separate underground space on each side of the street for pipes & wire service to the street line. Of course, this would require duplicate water & gas mains, etc., but there could be no objection outside of the extra cost, because in the central portion of the city this is most desirable & highly advantageous, subway or no subway. My conclusions are as follows:

In cities overhead wiring is objectionable from every standpoint.

Underground systems are practicable for all kinds of service, notwithstanding the serious objections urged, including interference on account of electrical induction.

A single subway in the middle of the street, although practicable, is entirely unsuitable, because connections to house properties would require constant cutting up & repairing of streets.

It is more than apparent, without further explanation or illustration, that under municipal ownership the extent & interference in the tearing up of streets will be reduced to a minimum.

In the end the results will be highly satisfactory & economical to all concerned, while at the same time the dangerous, annoying & objectionable overhead system will be abolished.

I submit a preliminary sketch showing a brick lined underground subway 4 ft. wide by 4½ ft. high, located inside the roadway close to the curbing. The total cost of the actual construction of this double subway on the ordinary macadam roadways would be \$12 per lineal foot & on permanently paved roadways \$16 per foot, to which would have to be added all the other large incidental expenses connected with the conversion of the present system into the new. If subways were placed directly underneath the concrete sidewalks the cost of construction would be increased to 25%, & would still have to cross over road-

ways at all street intersections; & in addition be a serious hindrance to pedestrian traffic during period of construction.

General Telephone Matters.

A telephone line has been established between Atlin, B.C., & Discovery, a distance of 6 miles.

The poles for the extension of the N.B. Telephone Co.'s line from Moncton to Buc-touche have all been placed.

The Town Council of Neepawa, Man., has awarded contracts for the installation of an electric light & telephone service.

The Bell Telephone Co. will shortly have all its wires on Main St., Winnipeg, under ground & next season will extend the conduit system to other central streets.

Salt Spring Island, Strait of Georgia, B.C., has a telephone service with about 35 miles of wire & 12 'phones. The postmaster keeps the central & maintains the lines, etc.

The Winnipeg City Council has extended its contract with the Bell Telephone Co. for the operation of the fire alarm system for another year, at the old figure, \$3,000.

The Hudson's Bay Co. has decided to establish telephone communication between Fort Smith & Smith Landing, on Great Slave River, N.W.T., a distance of 16 miles.

The Bell Telephone Co. gives notice that a direct heavy copper wire having been built from Toronto to Buffalo, improved communication can now be had with places in the U.S.

The New Westminster & British Columbia Telephone Co. has now over 800 subscribers on its Vancouver list & will shortly have to install a switchboard of larger capacity than the present one.

The Vernon & Nelson Telephone Co. intends to string another wire to accommodate its rapidly increasing business. It makes connection with the C.P.R. Co.'s telegraph at Cascade, B.C.

Telephone communication has been established between Mine Centre, Algoma, & all the mines of the Vermilion group, including the Golden Star, Decca, Manhattan, Olive, Lucky Coon, Aria, Alice A, & many others.

The premises of the Telephone Exchange & Public Works Warehouse, at Kingston, Jamaica, were recently destroyed by a fire caused by some mishap to the West India Electric Co.'s trolley wire. The loss is estimated at £6,000.

Rat Portage, Ont., municipal council has made a contract with the Citizens' Telephone & Electric Co. for street lighting. The Co. gives free lighting for the town hall, free telephone service for the same & for the police station & pump house, as well as a fire alarm service without cost to the town.

The Bell Telephone Co.'s plant in Ottawa is to be greatly improved, in fact almost entirely renewed, at an expenditure of about \$150,000. The present switchboard, which cost \$35,000 when installed, is to be replaced by one which will be 50% quicker. All the wiring is to be renewed, copper wire being used solely. A

Ref to Canadian Electrical News Nov. 2. 99.

conduit is being laid along Elgin St. for the co-termini, & it is probable that one will also be laid to the Parliament Buildings.

The Eastern Townships Telephone Association, is the name of a new company which is now about to start business in the eastern townships of Quebec. The points to be connected are Waterloo, Knowlton, Magog, West Shetford, Cowansville, Sweet'sburg, East Carleton, Adamsville, Roxton Pond, Roxton Falls, St. Valerien, St. Anne de Stukely, Lawrenceville, Bonsecours, St. Alphonse, Angeline, L'Ange Gardien, Valcourt, St. Marie, Mawcock, Milton, St. Cesaire, Farnham & Granby. The association purposes connecting with the Sherbrooke line at Magog, & the new St. Hyacinthe Co., at St. Hyacinthe.

A Grand Forks, B.C., despatch of Sept. 12, says: "C. O'Brien Reddin, of Spokane, President & General Manager of the Columbia Telephone & Telegraph Co., is here to carry out a contract with J. P. Graves for the construction of 50 miles of private telephone lines connecting the head offices here with the City of Paris, Majestic, Knob Hill & Old Ironsides & Aetna mines, the Granby smelter & the smelter dam on the North Fork of Kettle River. Connection will be made at Eholt with the trunk line of the Columbia Co. between Grand Forks & Greenwood. The Co. has a system extending from Rossland to Camp McKinney, & there are local exchanges at all leading intermediate points. Later on the line will be extended to Pentictic & Vernon. Its U.S. ally is the Spokane & B.C. Telephone Co., which reaches Spokane, Republic & other points in Washington. Mr. Reddin occupies the same executive position in the U.S. Company, which with the Canadian Corporation owns 350 miles of telephone lines."

For the purpose of preventing the free use of the telephone by persons who are not entitled to the privilege of communication, the Bell Telephone Co. has adopted the nickle-in-

the-slot machine, to open up a new source of revenue. The Co. complains that its telephones are very improperly used by a large number of persons, especially the instruments in drug stores, grocery establishments & hotels, who pay nothing whatever for service which in many cases must be of great value. Business people who have telephones in their establishments are usually willing to oblige any person who politely asks for the favor, and they are in a measure repaid for their courtesy by the popularity which attaches to a kindly act which costs them nothing. In fact, some subscribers go so far as to provide an extra 'phone with a switch for the use of their customers & the public generally. The Co.'s records state that in some semi-public places as many as a hundred people a day use the instruments promiscuously & thus entail a large amount of work upon the Co.'s staff, for which it receives no remuneration whatever. The five-cent-in-the-slot instrument is to be distinct from the ordinary telephone in the office or store. The person desirous of using the instrument calls up the central operator, who responds by a request to put 5c. in the slot. If this is done an interrupted battery current signals through the operator's telephone that the money has been deposited. The number required is then called & the user can then proceed with his business; but if no money is put into the slot there is no service so far as the central is concerned. It is the intention of the Co. to keep a strict watch on all private 'phones where there is a slot instrument available, to see that the former are not put to an improper use. The nickel-in-the-slot machine is being put in in Montreal, Toronto, Hamilton & London, & will probably be introduced in Ottawa & Quebec a little later on.

Among the Express Companies.

The Dominion Ex. Co.'s office in the Hotel International, Fort Steele, B.C., was recently destroyed by fire.

The Dominion Ex. Co. has opened offices at Gladstone, Cascade, & Grand Forks, B.C., on the Columbia & Western Ry.

The Yukon Overland Express & Transportation Co. has been incorporated under the Dominion Companies Act, with a capital of \$500,000, & with powers to construct & operate a waggon toll road from Cariboo crossing, on Lake Bennett, to Dawson. It is specified in the charter that the whole work shall be completed by Aug. 1, 1901. The provisional directors are, J. T. Cornforth & Jos. Roos, of Denver, Col.; I. R. Hedges, Vancouver, B.C.; Irwin Mahon, Carlisle, Pa.; W. Hutchinson, M.P., & T. McVeity, Ottawa, Ont. The Co. will operate a stage waggon line in summer & a line of sleighs in winter. Mr. Cornforth is said to be an old hand at the stage coaching business, having many years ago conducted a stage line from the Missouri River to Denver. He has gone over the ground of the projected line & believes that when the stages are running, the 400 miles between Cariboo crossing & Dawson can be done in from 3½ to 5 days for express stages. Of course the heavier laden coaches or sleighs will take considerably more time to take in loads of freight. In the place of following the sinuosities of the river a bee line will be made across country from Bennett to Selkirk, thus making a 200 mile journey out of what by the river would be a 350 mile trip. It is the intention to erect way stations every 15 miles, where passengers can rest for the night, & where meals can be obtained. The stages will start from Bennett twice a day, & the directors hope that by the new year the road will be built within 50 miles of Selkirk. It is said to be intended to charge only small tolls to vehicles using the road & not belonging to the Co., as it will be easily seen that the business of the organization will be the better the greater the number of travellers who put up at the wayside inns. The coaches will be constructed in Concord, N.H., but the sleighs & other equipment will, it is said, be purchased in Canada.

G.T.R. SEMI-ANNUAL MEETING.

At the semi-annual meeting in London, Eng., Oct. 12, there was a large attendance of proprietors, with Sir C. Rivers Wilson, President, in the chair.

After routine proceedings the President said: When we met this time last year in this hall it was my province to announce to you that the $\frac{1}{2}$ -year which we had to treat of—the $\frac{1}{2}$ -year ended June 30, 1898—had been the most prosperous June $\frac{1}{2}$ -year which we had had since 1890, & further, that we were in a position to declare the full dividend on the guaranteed stock for the first time for $4\frac{1}{2}$ years; & in making those communications to you, I ventured to predict that we should continue to have a further measure of success in the near future. I am happy to say that the expectation I then held out to you has been fairly realized, because upon the present occasion we have gone a step further, & are in a position, after declaring a full dividend on the guaranteed stock, to declare a dividend of 1% on the 1st preference stock. I will not trouble you at such length as I generally do with a detailed explanation of the figures in the accounts. It will only be necessary for me to refer to some of the more salient features of the working of the line during the past $\frac{1}{2}$ -year. The capital expenditure during the $\frac{1}{2}$ -year has been kept within very reasonable bounds; indeed, I may say that the increase would have been almost infinitesimal if it had not been for the obligation imposed upon us by the Safety Appliances Act of the U.S. to equip our rolling stock with automatic couplers & air brakes, which accounts for £33,330 out of a total capital expenditure of only £49,733 in the past $\frac{1}{2}$ -year. The remainder of the capital outlay consisted mainly of £3,256 for the further extension of the double track between St. Hubert & St. Lambert, near Montreal, & in connection with two important bridges on the main line, & £5,403 was expended on account of the new general offices at Montreal on the excellent site so liberally presented to the Co. by the City Corporation for that purpose. The contracts for the masonry & ironwork for the new offices have been placed, the latter, owing to increased prices, at rather a higher figure than was originally estimated; but it is so far satisfactory that had these contracts been delayed, a much larger cost would have been incurred, owing to the extraordinary rise which has recently taken place in the price of iron & other materials. I may mention that we have authorized the General Manager to proceed with the doubling in sections of about 10 miles of the line at points where the traffic is heaviest, & where the existence of only a single line

militates against the safe, expeditious & economical movement of our through freight & passenger trains. You will remember that the distance between Montreal & Toronto is 333 miles, of which, when the additional mileage now authorized is completed, only about 48 miles will be single track, & we hope within a reasonable period that the whole of that important section of the line will be doubled. Turning, now, to the revenue account, it will be observed that all the items of which the revenue receipts are composed show an improvement. The receipts from passengers

than in the corresponding $\frac{1}{2}$ -year. The large haulage per train will be still further increased when the reconstruction of the bridges in heavier material & of greater bearing capacity on the Portland section & on the Southern division is completed, so as to allow of heavier loads being run over them. Looking to the expenditure side of the revenue account, it will be seen that the total working expenses including taxes, were £54,361 in excess of those for the June $\frac{1}{2}$ -year of 1898. The total maintenance of way charges were more by £8,219. The expenses for repairs of roadway were reduced by £14,194, & the clearing of snow cost less by £7,664 in consequence of the open winter last year, but the charge for repairs & renewals of bridges & culverts was £10,789, & for the repairs & renewals of buildings & fixtures £7,308 in excess of those charges in the corresponding $\frac{1}{2}$ -year. I daresay those of you who were present at the $\frac{1}{2}$ -yearly meeting in March last will remember that Mr. Hays made certain remarks in regard to expenditure on the line. He said most distinctly that the proprietors must not expect economies either in maintenance of way or in maintenance of rolling stock, & we must endeavour to economise in other branches of the expenditure, & not in those which would imply the starving of the line. Although a portion of this expenditure consists—especially in connection with bridge renewals—of improvements to the property, the whole of it has been charged to revenue, & the same remark applies in some measure to the increased charge for the repairs & renewals of rolling stocks—about £20,000—inasmuch as the new engines recently provided out of revenue are of modern type & of greater haulage capacity than those they have replaced. The cost of fuel for locomotives shows an increase of £25,328, or 14%, which the General Manager explains to have arisen from the larger number of tons hauled 1 mile, which increased by 17%, & from the larger consumption of fuel caused by the increased speed at which the more powerful locomotives now being introduced are run. I am happy to say that, on the other hand, there has been no appreciable increase in the

CHARLES R. HOSMER,

Director of the Canadian Pacific Railway Co., and Manager of the Co.'s Telegraphs.

were £50,988, from freight & live stock £43,749, from mails & express business £1,815, & from rents & tolls £14,933, in excess of the earnings of the corresponding $\frac{1}{2}$ -year, making an aggregate increase in the revenue receipts of £111,485, or 5.96%, while the train mileage only increased 1.4%, & the engine mileage 3.13%. This comparatively small increase in the train & engine mileage is not an unsatisfactory feature in the operations of the $\frac{1}{2}$ -year, when the larger ton mileage carried of 17% is taken into consideration, proving, as it does, that the tonnage hauled per train was materially larger

price of coal. The result of the $\frac{1}{2}$ -year's operations, compared with those of the corresponding period of 1898, may be briefly summarized. The revenue receipts show an increase of £111,485, & the working expenses of £54,361. The net traffic receipts were, therefore, £57,124 better than in the June $\frac{1}{2}$ -year of 1898. The net revenue charges, after deducting the credits to that account, were less by £749, leaving an increased G.T. revenue surplus of £57,873. On the other hand, the advances to the Chicago & G.T., & to the Detroit, Grand Haven & Milwaukee under our existing agree-

NEXT ANNUAL MEETING at Montreal, Oct. 16, 1900.

ments with those companies were £28,119 more in the past than in the corresponding ½-year, owing to the increased working expenses of the Chicago & G.T. line. The improvement in the G.T. net revenue surplus amounted, therefore, to £29,754, which, with the balance brought forward from the previous ½-year, permits of the payment of the ½-year's dividend on the guaranteed stock & of 1% on the 1st preference stock, with a small balance carried forward. You will always bear in mind that the ½-year with which we are dealing now is the lean ½-year.

Turning aside from the accounts, I will just mention some of the experiences I brought back from Canada, which I visited this year in company with Mr. Hubbard, one of our directors, & our Secretary, Mr. Lindley. The particular objects of my attention upon the occasion of my recent visit were the Central Vermont & the Chicago & G.T.—the Central Vermont on account of the recent reorganization of the line, the particulars of which were explained to you at the special general meeting in May last, when you passed a resolution approving the agreement in connection with that line. We travelled over the whole of that line from its junction at St. John's in the north, down to New London in the south, & then we branched off eventually on to the Boston & Maine Ry. to Boston. We were accompanied during the greater portion of our examination of the line by Mr. Smith, the President of the line, & by E. Baker, who was the President of the late bondholders' committee, and, of course, by the officials of the line, & the conclusion we arrived at was favorable. We found that there was a great deal of work to be done, but that it was being done well & efficiently, & with every prospect of leading to the success which we anticipated when we made that arrangement with the Central Vermont. The rails were nearly all 65-lb. rails, & they will have to be gradually replaced with heavier rails. The rolling stock leaves a good deal to be desired, & there are various other matters which will have to be attended to. But already, under the improved management, & under the control of our own officers, during the first 4 months of the new administration, the receipts for May, June, July & Aug. were considerably in excess of the fixed charges. That is a satisfactory result, & all the more so to ourselves, inasmuch as we are the largest holders—more than 2-3 of the whole—of the ordinary stock of the C.V. Co., & the fixed charges, being once provided for—I do not mean to say immediately, because we may use the balance for the improvement of the line—there is a substantial prospect, as I held out to you last May, of our shares becoming a valuable asset. I did not upon the present occasion go to Portland, which was visited, however, by Messrs. Hubbard & Lindley. I went on to Montreal, & for the first time over the new Victoria Jubilee bridge, & I can assure you I experienced a feeling of the greatest satisfaction, I may now say of the very greatest possible relief, to feel that I was going over a bridge which has a carrying capacity, as Mr. Hays explained to you last year, of 11,000 lbs. per lineal foot instead of 2,400 lbs. which the old bridge was originally designed to carry, & which I am bound to say was the cause of no little anxiety. I cannot express to you the feeling of security & satisfaction with which my colleagues & myself went over this magnificent structure, which, as far as one can

judge, will last to the crack of doom. The double track over the bridge was opened for traffic last Dec., & since then the work has been almost entirely completed. There are one or two little matters of detail connected with the bridge which have not yet been finished, but virtually this great structure has been successfully completed. Again, I must express our satisfaction to our engineer, Mr. Hobson, for the great intelligence & ability which he has brought to bear upon that work. Passing on to the west we were very pleased to inspect two round houses which have been erected, one at Port Huron & the other at Sarnia, the western & eastern ends of the St. Clair tunnel. There had been great inconvenience in consequence of the long distance at which the former engine sheds were from the terminals of the tunnel, & the result was that great expense was incurred by moving locomotives backwards & forwards to their stables. That has now been obviated. Other matters in connection with our visit I need not go into in detail, but we carried away an impression that the line was improving in all respects. The permanent way is well kept up. You cannot travel over 20 miles of the road without seeing indications of the improvements in every branch of the line. We have acquired for ourselves, I can assure you, a reputation in Canada which I do not think we ever possessed before. But, in order to keep the line up in its present condition, & to continue improvements, a liberal expenditure is necessary, & it requires all the ability & all the efforts of our management to resist the influences which we have to encounter, namely, the influences which tend to force up the working expenses, & the continued falling off of the rates. There is also another element which is naturally incidental to a great undertaking like ours, & also to the prosperous times through which we are passing, namely, the demands—I will not say the unjustifiable demands—for better wages on the part of our employees. We have had, you will remember, I dare say, some little agitation amongst some of our men, which, I am happy to say, has been amicably settled. We have had, no doubt, to make concessions to our employees, but they have never been unreasonable, & I believe they are perfectly satisfied with what has been done. I could only wish that we had been always left face to face with our employees, who, as I said before, are reasonable people, but I am sorry to say that politicians & other persons very often try to get up a little cheap popularity in espousing a cause which does not require them to put their hands in their pockets. We have had to contend with a great deal of that sort of thing, but I am happy to say that the press has, on the whole, been extremely fair in these controversies which have been going on on the subject of wages. I call to mind, however, one instance where a rather too enthusiastic writer, who, on my having timidly advanced some of the most elementary principles of political economy, accused me of having preached the "fiendish doctrine of supply & demand." There were references also from the pulpit, not from the most distinguished of ecclesiastics, in which we were held up to execration as a bloated, corrupt & greedy corporation. Now, I think if there was ever an unfortunate company of which this cannot be said it is the G.T.R. of Canada & its long-suffering proprietors. Another important consideration which must enter into our calculations at the present time is the enormous rise in the price of materials, especially iron & steel. The last contract that we entered into for steel rails was in Nov., 1898, when we contracted for a large quantity at \$17.75 a ton delivered on our line. The prices now—the last quoted prices which I have seen—are \$32 at the works. By the foresight of our General Manager, on the occasion of the last contract made, he fortunately stipulated for a

considerable quantity in advance of our immediate requirements, &, therefore, for the moment we do not feel the pinch in this respect. But then this increase goes through the whole of the steel & iron trade, & the increases between Jan. & Aug. this year have varied from 50% to something like 150%. For instance, steel boiler plates have increased by 125% in value, & steel tank plates by 136%. The result of all this—and it affects, of course, every other company as well as ours—is hesitation & reluctance to embark upon new works. We all of us shall postpone as many important works as we possibly can in the hope that prices will come down, & the fact of our abstention, coupled with the fact that a large quantity of new capital will probably go into this industry, will tend, I hope, to bring prices down. Meanwhile, we must watch things very carefully, & we shall certainly not embark in any unnecessary expenditure. Even in the case of lumber, of which you would think there was such an unlimited supply in Canada, the price has also risen in every class by about 19½%. As to rates, I am sorry I have nothing very satisfactory to tell you—in fact, Mr. Hays reports that the open tariffs are lower than ever. The only remedy for this state of things, as far as I can see, is that which I have mentioned upon one or two occasions previously—namely, legislation by the U.S. Congress. I think that the mind of the public is being gradually crystallized to recognize the fact that something must be done for the railways in that respect, to allow them to pool their earnings, & to give them the legal power to enforce contracts among themselves. You see, as I said before, there are always these conflicting elements at work in the administration of the great railways. First of all, the natural pressure of increased expenditure, & against that the countervailing efforts of the management to introduce more economical methods of working, & also, of course, to obtain more profitable business. You will remember what Mr. Hays said last year, “that to save money you must spend money,” & that must be our note, I am afraid, for some time to come.

We shall have to ask you to pass a resolution approving of the agreement which has been entered into between our Co., subject to your approval, & the Dominion Government, for the lease to the Intercolonial Ry. of running powers over a portion of our line. The matter has been mentioned on one or two previous occasions, but it is only now that we are in a position to ask you to give your formal sanction to the arrangement, because it was only in Aug. last that the Act of the Dominion Parliament received the Royal Assent. The matter hung fire for some little time in consequence of the opposition of the Senate. The Bill passed the Lower House last year, & when it went to the Senate certain modifications in the agreement were insisted upon so that it was thrown out, but this year it was reintroduced, & modifications have been made which do not affect the general purport of the agreement, & the matter is now complete. I must explain to you generally what the nature of the agreement is. The chief points are, that in consideration of the joint use by the Intercolonial Ry. of the G.T. bridge across the Chaudiere River & the joint use of the G.T.Ry. & property between Ste. Rosalie & St. Lambert stations, together with the use of our railway & property between & including Ste. Rosalie & Bonaventure station, Montreal, the use of the Victoria bridge & of the termini in that city, the G.T. Co. is to receive a yearly rental of \$140,000, payable in equal monthly instalments, & also a share of the cost of maintaining the railway appurtenances & appliances between & including Ste. Rosalie & Bonaventure station, of the Chaudiere bridge & connections, & also the cost of maintaining the tracks of

the Victoria bridge in the proportion that the combined engine & car mileage of the I.C.R. trains, made over each of the above-mentioned joint sections, bears to the total combined engine & car mileage running over the said joint sections during each month. There are also provisions as to the I.C.R. paying a portion of salaries & wages & also imposing upon them the obligation, in the event of doubling the track or erecting new stations, that they shall pay 4% on a proportion of the capital outlay. There are also provisions for the conduct of traffic, the application of receipts, & arbitration in case of necessity. I must explain to you that the point to which the Senate took exception, & which was afterwards conceded by the Government, was this: Under the agreement an arrangement was to be entered into between the two companies for the interchange of traffic, & inasmuch as the traffic arrangement was to run concurrently & continuously with the main agreement for 99 years, it was objected that the Government would tie its hands for too long a time. That matter has been conceded, & is now arranged that the traffic agreement may be put an end to at any time on 6 months' notice. It is a matter of no great importance to us, because we feel thoroughly convinced that there can be no reasonable chance of competition in view of the great convenience to the I.C.R. afforded by our valuable terminals at Montreal. That is explained in the supplementary agreement which will have to be approved by you. May I take the agreements as read? (Voices: “Yes.”) I will take the opportunity of mentioning in respect to this arrangement, that it is one that recommends itself to the judgment of the board, & I hope it will to yours. It is part of the policy which we have pursued for the last 3 or 4 years of entering into friendly agreements with our connecting lines. The result is that at present we are in receipt of rents under 3 of these agreements—namely, that with the Wabash, that with the C.P.R., with respect to its running powers between Toronto & Hamilton, & the present agreement. The aggregate which we receive now as a yearly rental amounts to about £86,000, which will be increased in view of the progressive increase in the rent payable by the Wabash, to over £100,000 a year. That is a very comfortable amount to come yearly into our coffers, irrespective of other considerations.

Now I come to a matter of considerable interest & importance which has engaged the anxious consideration of the board for some time past—I allude to the position of the Chicago & G.T.R. You are familiar with the history of that line. You know how it was built up mainly by the energy & ability of Sir Joseph Hickson, formerly General Manager of this Co. You know it is a line which runs from Port Huron to Chicago, a distance of 335 miles. You know it is our great means of communication with the West, & that we also have a very large financial interest in the undertaking. But what perhaps you may not be aware of, if you have not studied our reports very closely, is the fact that there has gradually accumulated a very large indebtedness from the Chicago & G.T. Co. to the G.T. The Chicago & G.T. has not been in a position to raise capital for the improvement of its line, because the conditions of the 2nd mortgage preclude any amount being raised in excess of the 1st mortgage. The consequence of that has been that it has had to fall back upon the G.T., & that large sums have been advanced for many years past for general capital purposes, & for loans on rolling stock indebtedness, cars, & so forth. That amount at the present time is no less than about £650,000, & I think I may take credit to ourselves in saying that since the present board came into office, no addition has been made to that indebtedness. Indeed, I may say we have been able to decrease the amount by

some £111,000. But over and above that indebtedness, we have, under the traffic agreements which we could not evade, advanced over this period of years about £695,000; the consequence is, up to the present moment, we have had to put our hands into our pockets to the extent of between £1,300,000 & £1,400,000. Well, the condition of the Chicago & G.T. line is not at all satisfactory, particularly when you have to take into consideration that it is competing with other vigorous & wealthy lines running out of Chicago, & it has become perfectly obvious that if the Chicago & G.T. is to hold its own against this competition, it must spend a considerable sum of money in doubling the track & improving the grades. It is a matter of the most absolute necessity. Therefore, the question arose, how was this to be done? & we considered that a very opportune moment presented itself for the consideration &, I hope, the settlement of this question, in view of the fact that on Jan. 1 next a large number of 1st mortgage bonds fall due, & at that time the traffic guarantee under which these bonds receive their interest ceases, & I may just remark that we, the G.T., are not responsible for the principal. The Chicago & G.T.Co., let me remind you, is a separate corporation, & an American line. It is maturing a scheme which it is hoped will place the Co. upon a thoroughly sound & paying basis, & at the same time provide sufficient funds to carry out these indispensable improvements to which I have alluded. I am not in a position to go further into the question to-day, but a circular will shortly be issued by the Chicago & G.T. board to the mortgage bondholders, stating the proposals which they deem it their duty to make in the general interest, & to carry such a plan, which is so desirable for all parties concerned, into effectual operation, the co-operation of the Chicago & G.T. bondholders, as well as of the other creditors of that Co., of which the G.T. Co. is the chief, will be invited, & I think I may say on your behalf that any assistance consistent with the protection of your interests the G.T. Co. can render will be cheerfully afforded with a view of placing the Chicago & G.T.Co. in a permanently self-supporting position.

There are no further topics of prominent interest on which I need dilate to-day, & I have only a few words to say in conclusion. We may look back, I think, with justifiable satisfaction upon what we have done during the last 3 or 4 years. I think we may also fairly say that the prospect in the immediate future is bright. In the current ½-year, although it is a little premature to estimate exactly what the outcome will be at Dec. 31, yet so far for the 1st 2 months of the ½-year our net receipts have exceeded those of the corresponding period for last year by £43,000, & for the first 14 weeks of the ½-year, concluded 5 days ago, the gross increase of receipts has been £178,000. The general outlook is promising. The crops are good. I believe that the harvest is not likely to realize altogether the expectations that were formed a few weeks ago, but, at the same time, it is an excellent harvest, & in all other respects business is going ahead in a manner which has never been seen before, either in the U.S. or in Canada. Prosperity—to use Mr. Gladstone's expression—is advancing by leaps & bounds. The aggregate amount of exports & imports in Canada has been enormously increased. There have been large budget surpluses, almost a new feature in the history of Canadian finance. The banks say they have never had such a year before. Money is freely subscribed for new companies, and, in short, there seems to be enterprise all round. Therefore, I say, for the immediate future we have nothing to apprehend. Yet, at the same time, it is my duty to point out to you that prosperous times cannot always last, & we must be prepared for vicissitudes in the

figure. The moral of that is that we must make the best use of prosperous times by putting the line into as good condition as we possibly can. A useful note to this effect was struck by Mr. Gardlestone at our last general meeting, when he spoke some encouraging words to the board, & told them to act courageously by using their resources freely in good times for the betterment of the line. I was very glad to hear him make these observations, & I hope & believe that he echoed the sentiments of the proprietors at large. I need only say that the board will continue the same conservative & prudent line of policy which has hitherto been attended with so much success.

Resolutions for the adoption of the report and accounts, for the payment of dividends as announced, & to confirm the agreement between the Dominion Government & the Co., respecting the I.C.R., were unanimously adopted.

A. Hubbard, one of the directors, said:—It is hardly necessary for me to occupy much of your time after the very clear & exhaustive statement which you have just listened to from our Chairman, but at his request I may perhaps say to you what passed through my mind when I went over the line with him. When I visited the line about 7 years ago, a great depression was passing over not only Canada but the U.S.; one company after another was gradually going into liquidation, & one-third of the railways at that time in the U.S. had passed into liquidation. The G.T. happily escaped that, but everything looked very dark, & everything was against the executive being able to give a favorable report. But when I accompanied the President this summer everything was changed, & changed for the better. Prosperity succeeded adversity, & the leading men of Canada were telling us that never before in its history had Canada

been so prosperous as at the present time. As you heard just now, the traffics are increasing rapidly; the harvest has been good, & we are able to spend more on the line, so that we are now in a very different position to what we were in 7 years ago. The President has told you that we went from New York, & we travelled through by night to Montreal. We did not let the grass grow under our feet anywhere, & after we had spent a day or two at Montreal we went over the Central Vermont line, & I heartily agree with what the President said in regard to that line, that it will prove of great benefit to the G. T. system. But it was manifest to all who saw it that the line had been much neglected, the ties, though many had been renewed, required attention. The ballasting also was neglected, so that the maintenance of the line for some time to come will require a good deal of expenditure to bring it up to the standard of the G.T. From Boston the President went to Montreal & I went to Portland, where I found the change more marked than in any part of our system. Seven years ago only a few vessels could come along the wooden jetties, because the jetties were in bad condition, but on this occasion I found they had all been thoroughly renovated & put in good order, & vessels were lying alongside. An elevator has been erected, forming a large building 120 to 150 ft. high, capable of holding 1,000,000 bushels of corn, with all the latest improvements, & now we can discharge up to 6 vessels at the same time. I was told that last year we raised 10,000,000 bushels of corn into that elevator. That represents not only the rental for the corn and charging for loading & unloading, but the rate over our line for each bushel so disposed of. So great was the success there that some of the officers even thought it would be wise to put up another elevator, but such an outlay as that would require much consideration, & I

am sure the board will not enter hastily into that undertaking, for it would be rather too much in times of prosperity to go so far ahead that when changes came we might not have enough to fill one elevator. Portland has one of the finest harbors in the U.S., & it is a favorite port now. We are doing remarkably well, and that elevator has been a great success. From Portland I went to Gorham, & we travelled over our own line, which was in a capital condition. In many parts we travelled 60 miles an hour without any inconvenience or unpleasantness. From Montreal, we went over that magnificent structure, the Victoria Jubilee bridge, which was not quite completed, though traffic had been passing over it for some time. It is one of the finest bridges in America, & is a great credit to all concerned, to us as a Co. & to our engineer, Mr. Hobson, & it was carried out without the loss of a single life, except two cases, when men fell from the scaffolding into the St. Lawrence, which, of course, could not be provided against. That bridge now has a double track, & furnishes all we require for the traffic. In addition to that, each side of the bridge has roadways for carriages. There is a track 15 ft. wide on either side, & it will be a great convenience to the people living at Montreal. The Chairman has referred to our indebtedness to the Chief Engineer, which I thoroughly endorse. No one can look on that bridge without feeling that a master mind had constructed it. We then went further westward, travelling to Chicago. No one could travel over that portion without seeing the marked improvement that has taken place during the last 6 or 7 years. The road was in capital order. We are taking up light rails & laying down heavier ones, & in each mile 300 or 400 additional ties are laid to make it stiffer, so that with ballasting, everything is being got into as perfect condition as anyone would like

The Northey Gas or Gasoline Engine.

In Connection with Pumping Machinery for Tank Duty.

"BUILT FOR HARD WORK."

Railway Officials will find the Northey Engine to be a marked improvement over steam or other forms of power for this duty. It is simple of construction, and easily managed, necessitating only the turn of a fly-wheel to start, while it can be going at full speed in a few seconds and be shut down on the instant. Needs no engineer to look after it, the station hands can do all that is required, while it will run for hours at a time with little or no attention. The Engine is compactly built and of the best materials; it uses either gas or gasoline for fuel, and its safety and economy with either have proved it to be the most satisfactory power in the market.

We will cheerfully send Booklet and every information upon request.

The Northey Mfg. Co., Limited, ¹⁰³²KING ST. SUBWAY, Toronto, Ont.

to see. In coming from Chicago I had the pleasure to meet our General Traffic Manager, Mr. Reeve. He was one of the old officers, & he has at his fingers' ends all the mileage rates over the whole of our system, & instead of telegraphing to the different places he told me that for the last 5 weeks before I arrived in Canada he had hardly spent a day at his own house, because the pressure was so great at different places, & he chose to go himself instead of sending telegraphic messages as to the rates, & we are greatly indebted to him for the increased traffic we have had over the G. T. system. Another point struck me, & that was the changes made in connection with the maintenance of the line. On the former visit, the engineer, as on all lines in England, had not only charge of the construction work, but of the maintenance. Here a change had been made, & the General Superintendent, Mr. McGuigan, has the maintenance, in addition to the traffic work. So far, it seems to have answered very well. Mr. McGuigan is a very active man, & is doing all he can to advance the interests of the Co. In going through the various workshops I was very much struck by their being "live" shops. Anyone who knows anything of engineering shops will know what I mean. All the men seemed to be at work. There was no hanging about, nothing deadening, the men were all alive, & every person seemed doing his work, and doing it thoroughly. I could give more details, but I am sure you do not want to stay longer to-day.

The meeting concluded with a hearty vote of thanks to the board & the staff, in acknowledging which Sir Rivers Wilson said: I am extremely indebted to you all on my own behalf, & on behalf of my colleagues, for the very kind terms in which you have expressed our appreciation of our efforts. A large portion of the credit for the present condition of the undertaking is due to our General Manager for his efforts & the great ability with which he has seconded & carried out the policy of the board.

SEMI-ANNUAL REPORT.

The following summary shows a comparison of the ½-year's revenue account with that of the corresponding ½-year, ended June 30, 1898:—

June 30, 1898.		June 30, 1899.
£1,871,734	Gross receipts.....	£1,983,217 9 10
1,243,883	Deduct—	
	Working Expenses, being at the rate of 65.46 %, as compared with 66.46 % in 1898.	1,298,244 7 5
627,851	Net traffic receipts.....	684,973 2 5
12,930	Received from International Bridge Co.....	12,930 12 9
5,254	Interest on Toledo, Saginaw, & Muskegon bonds.....	5,957 17 1
3,087	Interest on bonds of Central Vermont Ry.....	3,087 10 8
64,840	Interest on securities of controlled lines & on St. Clair Tunnel bonds acquired by the issue of G. T. 4% debenture stock.....	64,781 3 6
16,710	Balance of general interest account.....	16,448 19 11
£730,672	Net revenue receipts.....	£788,179 6 4

Following are the net revenue charges for the ½-year:—

Rents (leased lines).....	£73,174 8 3
Interest on debenture stocks & bonds of the Co.....	441,578 18 8
Interest on debenture stock & bonds of lines consolidated with G. T. Co.....	70,477 15 7
Interest on Michigan air line bonds.....	7,750
	592,981 2 6

Amount advanced to Chicago & G. T. Co. under traffic agreements towards payment of interest on its bonds, ½-year to June 30, for which interest coupons are held..... 36,425 12 10

Amount advanced to Detroit, Grand Haven, & Milwaukee Co. towards payment of interest on its bonds,

under agreements, ½-year to June 30.....	22,368 2 2
	58,793 15 ..
£651,774 17 6	
Leaving a surplus of.....	136,404 8 10
	£788,179 6 4

There was a balance at the credit of net revenue account on Dec. 31, 1898, of £4,212 os. 8d., which added to the above surplus for the past ½-year makes £140,616 9s. 6d. available for dividend.

The directors recommend the payment of the ½-year's dividend on the 4% guaranteed stock, amounting to £104,395 17s. 6d., & a dividend of 1% on the 1st preference stock, amounting to £34,168 6s. od., leaving a balance of £2,052 6s. od. to be carried forward to the next ½-year's accounts.

The net revenue surplus for the ½-year ended June 30, 1898, amounted to £106,651 18s. 7d. The result of the past ½-year's operations shows, therefore, an improvement of £29,752 10s. 3d.

This table exhibits a comparison of the receipts for the ½-years ended June 30, 1899 and 1898:—

Description of receipts.	1899.	1898.	Increase.
	£	£	£
Passengers.....	493,247	442,259	50,988
Mails and express.....	92,479	90,665	1,814
Freight and live stock.....	1,329,508	1,285,819	43,749
Miscellaneous.....	67,023	52,901	14,932
	1,983,217	1,871,734	111,483

TRAFFIC STATISTICS.

	1899.	1898.	Increase.	Decrease.
Passengers carried.....	2,870,082	3,096,641	—	138,659
Average fare per passenger.....	3s. 5½d.	2s. 11¼d.	6d.	—
Tons of freight and live stock.....	4,878,259	4,437,440	440,819	—
Average rate per ton.....	5s. 5½d.	5s. 9½d.	—	440,819
Tons carried one mile.....	1,106,187,159	943,041,005	163,146,154	—
Earnings per train-mile.....	530sd.	513sd.	17sd.	—

Although there was a decrease of 138,659 in the number of passengers carried, mainly owing to additional travel induced by the abnormally low local fares in operation during the greater part of the corresponding ½-year, the total receipts from passenger traffic show an improvement of £50,988, & the average fare received increased from 2s. 11¼d. to 3s. 5½d.

The quantity of freight carried increased by 440,819 tons, & 160,544,064 more tons were carried 1 mile, of which much the larger proportion was represented by through business. This preponderance of the increase in the through-freight ton mileage, together with lower rates for that description of traffic, had an adverse influence on the average receipt per ton per mile on the entire freight traffic, which decreased from 0.66 of a cent in the corresponding ½-year of 1898 to 0.58 in the past ½-year.

The working expenses, including taxes, amounted in the ½-year to £1,298,244, or 65.46 % of the gross receipts, as compared with

£1,243,883, or 66.46 %; an increase in amount of £54,361, but a decrease in the proportion to the gross receipts of 1%.

This table exhibits a comparison of the revenue expenditure, excluding taxes, for the ½-years ended June 30, 1899 & 1898:—

Description of expenditure.	June 30, 1899.	June 30, 1898.	Increase.	Decrease.
	£	£	£	£
Maintenance of way, & structures.....	195,205	186,180	8,219	—
Maintenance of equipment.....	244,407	224,187	20,280	—
Conducting transportation.....	702,204	769,078	—	22,586
General expenses.....	53,848	50,717	3,131	—
Total.....	£1,285,784	£1,231,568	£54,216	—
Percentage of gross receipts.....	64.83	65.80	—	0.97
Expenditure per train-mile.....	34.75d.	33.70d.	0.09d.	—

The train mileage of the ½-year compares with that of the ½-year ended June 30, 1898, as follows:—

Description.	June, 1899	June, 1898	Increase.	Decrease.
Passenger.....	3,133,197	3,069,188	64,009	—
Freight.....	5,209,113	5,127,515	79,398	—
Mixed trains.....	540,166	557,129	—	16,954
Total.....	8,880,276	8,753,823	126,453	—

From the foregoing statements it will be observed that the G. T. gross receipts for the ½-year show an increase of £111,483, or 5.96%; the working expenses, including taxes, an increase of £54,361, or 4.37%, the train mileage an increase of 126,453, or 1.44%.

The number of engines & cars owned by the Co. is shown in the return of working stock. No additions to the stock have been made at the expense of capital during the ½-year. Twelve engines were constructed during the ½-year in the Co.'s shops at the cost of revenue. Eight passenger, 374 coal & flat cars, & 50 cinder cars were built in the Co.'s shops or purchased in part replacement of cars broken up. At June 30, 1899, there were 5 locomotives in excess of the official stock; & to replace the cars out of service, there was at the end of the ½-year £117,173 os. 4d. at the credit of car renewal fund. There also remained a reserve £33,259 14s. 5d. at the credit of engine renewal fund available for future renewals.

The outlay on capital account for the ½-year amounted to £49,733 13s. 10d.; the principal item of expenditure being £33,330 18s. 6d. for the further equipment of engines & freight cars with air-brakes & automatic couplers, in compliance with the Safety Appliance Act. There has been credited to this account £11,785 6s. od., consisting chiefly of the premium received on the issue of £200,000 4% debenture stock, thus reducing the total charges to capital account for the past ½-year to £37,948 7s. 10d.

RENEWAL OF BRIDGES.

£15,402 being the proportion of the expenditure chargeable to revenue for the reconstruction of the Victoria Jubilee Bridge & of the cost of renewing the bridges between Montreal & Portland & on the southern division on the basis mentioned in the report for the ½-year ended June 30, 1898, has been included in the maintenance of way charges of the past ½-year. There has been expended to June 30, 1899, on account of these renewals, £139,438 2s. 3d., of which £71,883 9s. 10d. has been, up to that date, included in the maintenance charges, leaving £67,554 12s. 5d. at the debit of bridge renewal suspense account on June 30, 1899.

The gross receipts of the Chicago & G. T. Ry. Co. for the ½-year to June 30, 1899, amounted to £394,585, against £376,387 in 1898, an in-

crease of £18,198. The working expenses were £341,812, against £294,541, an increase of £47,271, attributable partly to the cost of handling the larger tonnage carried, & partly to the increased expenditure necessary for placing the line & rolling stock in a condition of greater efficiency. The net profit amounted to £52,773, against £81,846, a decrease of £29,073. The net revenue charges for the year were £80,100, against £90,238 in 1898, so that there was a net revenue deficiency in 1899 of £36,426, as compared with a deficiency for 1898 of £8,392. The number of passengers carried during the ½-year was 578,922, against 539,084, an increase of 39,838, or 7.39%, & the passenger train receipts, including mails & express receipts, were £98,981, against £84,806, an increase of £14,175, or 16.71%. The quantity of freight moved during the ½-year was 1,268,027 tons, against 1,122,161 tons in 1898, an increase of 145,866 tons, or 13%, & the receipts from this traffic were £295,045, against £291,205 in 1898, an increase of £3,840, or 1.32%.

The gross receipts of the Detroit, Grand Haven & Milwaukee Ry. for the ½-year to June 30, 1899, were £90,163, against £86,470 in 1898, an increase of £3,693; the working expenses were £75,144, against £71,379, an increase of £3,765; leaving a balance of £15,019, against £15,091, a decrease of £72, compared with the corresponding ½-year of 1898. The net revenue charges for the ½-year were £37,387, against £37,373 in 1898, so that there was a net revenue deficiency of £22,368, as compared with £22,282 for the corresponding period of 1898. The number of passengers carried during the ½-year was 252,888, against 228,832, an increase of 24,056, or 10.51%, & the passenger receipts, including mails & express receipts, were £35,654, against £34,993, an increase of £661, or 1.89%. The quantity of freight moved was 356,616 tons, against 309,930 tons in 1898, an increase of 46,686 tons, or 15.06%, & the receipts from freight traffic were £53,273, against £47,581 in 1898, an increase of £5,692, or 11.96%.

The directors announced in their report dated March 23, 1898, that a provisional arrangement with the Dominion Government for allowing the Intercolonial Ry. running powers over about 38 miles of the G.T. line & the Victoria Bridge into Montreal, with terminal facilities in that city, at a rental of \$140,000 a year & a payment of a proportion of the working expenses, had come into operation on Mar. 1, 1898. They have now the satisfaction to report that an agreement

for a term of 99 years, giving formal effect to these arrangements, was, subject to the conditions subsequently embodied in an agreement supplementary thereto, confirmed by an Act passed in the last session of Parliament, which received the Royal assent on Aug. 11. The main & the supplemental agreements are printed as appendices to the report & will be submitted at the general meeting for the approval of the proprietors.

Following are extracts from the appendices to the report:

On June 30, 1898, the G.T. system comprised 3,506 miles of roadway, 411¼ miles of second track & 770½ miles of sidings, a total of 4,688¼ miles, of which 4,649 miles are laid with steel rails & 39½ with iron.

The charges for the maintenance of the Co.'s property during the ½-year ended June 30, were \$40,000 greater than in the corresponding period of 1898. The cost of the repairs of roadway, of docks & wharves, & of clearing snow, was exceptionally low; that of the renewal of ties, repairs, & renewals of bridges, culverts & buildings, was higher than during the first ½ of last year.

The Superintendent of Motive Power reports expenditure, mileage, etc., as follows:

½-year ended.	Expenditure.	Train mileage.	Rate of Expenses per mile.		
			Train.	Engine.	Car.
June, 1899	Dollars.		Cents	Cents	Cents
" 1898	2,231,463	8,880,276	25.13	20.52	1.56
	2,055,474	8,753,823	23.48	19.49	1.47

An increase in expenditure of \$175,989, or 8.6%, compared with an increase in train miles of 126,453, or 1.4%, & with an increase in the ton miles of 160,544,064, or 17%.

	Passenger trains.	Freight trains.	Mixed trains.
The average number of cars moved per train was.....	4.3	23.8	10.0
And for the corresponding period.....	4.3	23.5	10.5

The comparative cost of repairs per train, engine & car mile was:

	Repairs and renewals of locomotives.		All repairing charges including shop machinery and tools, and marine equipment, &c.	
	1899.	1898.	1899.	1898.
Train.....	Cents. 4.78	Cents. 4.39	Cents. 6.05	Cents. 5.68
Engine.....	3.90	3.64	4.94	4.72
Car.....	0.30	0.275	0.38	0.36

The Superintendent of Car Department reports expenditure, mileage, etc., as follows:

4-year ended.	Cost of Repairs and Renewals	Miles run by cars.			Cost per mile.	
		Passenger.	Freight.	Total.	Car.	Train
					Cents.	Cents.
June 1899	\$ 632,271	14,708,439	128,300,822	143,009,261	456	7.35
" 1898	593,768	14,624,117	124,965,419	139,589,536	425	6.78

An increase in expenditure of \$58,503, or 9.9%, with an increase in car miles of 3,419,725, or 2.4%.

Chicago & Grand Trunk Finances.

President C. M. Hays has issued the following circular to the 1st & 2nd mortgage bondholders, under date of Montreal, Oct. 17:

The capital of the Co., as constituted in 1882 & now existing, consists of:—

1st mortgage 6% bonds C. & G.T.R. Co., due Jan. 1, 1900.....	\$5,437,000
1st mortgage 6% bonds North-Western G.T. Ry., due Jan. 1, 1910.....	563,000
2nd mortgage 5% bonds, due Jan. 1, 1922....	\$6,000,000
Common stock.....	6,000,000

No fresh capital has been raised since the 2nd mortgage bonds were issued in 1882, but in order to provide for the capital & other requirements of the Co. a floating debt has accumulated of \$1,991,300, for which amount the Co. has issued to the G.T.R. Co. its bonds, secured by 3rd mortgage on its railroad, excluding the advances made by the G.T. Co. under traffic agreements towards the deficiencies in the earnings of the C. & G.T. Co. to meet the interest on the bonds, amounting

MICA BOILER COVERING

For Locomotive, Marine and Stationary Boilers

Tested by Mechanical Experts of the C.P.Ry. Co., G.T.Ry. Co., M.C.Ry. Co., Boiler Inspection Insurance Co., and proved to be the

= = Best of All Non-Conductors = =

All Steam users should see the Mica Boiler and Pipe Covering—Flexible, Durable and Highest non-Conductor of Heat in the Market.

Full particulars, reports of trials, testimonials, prices, etc., from

Mica Boiler Covering Co., Limited, Montreal, Toronto and London, Eng.

to a further sum of \$3,207,000. Moreover, additional capital is urgently required for the purpose of the doubling of the line, for its proper equipment, & for the reduction of the gradients. The principal railroads out of Chicago with which the Chicago & Grand Trunk competes have expended large sums in the double tracking & improvement of their property, & it is deemed absolutely essential to enable this Co. to maintain its position in competition with other lines, that it should be placed in a condition to fully develop & economically work the traffic which it would then command. This further capital is estimated for the above purposes to amount to about \$4,000,000. The Co. as at present constituted is unable, without the co-operation of the bondholders, to make provision for these requirements, & for meeting the 1st mortgage bonds on Jan. 1 next, inasmuch as the conditions of the 2nd mortgage prohibit the issue of bonds in excess of the existing 1st mortgage of \$6,000,000. Therefore, there appears to be no alternative but to foreclose the 1st mortgage at the maturity of the bonds on Jan. 1, 1900, & reorganize the capital of the C. & G.T. Co. on a permanently sound basis. It is suggested in the interest of all parties concerned that at the maturity of the 1st mortgage on Jan. 1, 1900, the property be sold under a friendly foreclosure of the two mortgages, & a new Co. organized on the following basis:—

Creation of \$15,000,000 1st mortgage 50-year 4% bonds, interest & principal payable in gold, to be appropriated as follows:—

To be reserved for that portion of the North-Western G.T. mortgage bonds maturing Jan. 1, 1900, which are a prior lien of the C. & G.T. mortgages on the eastern division of the road at par.....	\$563,000
To be issued for the 1st mortgage bonds falling due Jan. 1, 1900, at par (\$484 for each £100 bond).....	5,437,000
	\$6,000,000
To be issued to the 2nd mortgage bond holders at the rate of \$750 for each \$1,000 2nd mortgage bond.....	4,500,000
To be issued for capital purposes.....	4,500,000
	\$15,000,000

Creation of \$6,000,000 of ordinary stock to be issued to the G.T. Co. in repayment of its advances & in full satisfaction of the floating debt of the Co.

The board of the G.T.R. Co., who hold about $\frac{1}{4}$ of the C. & G.T. 1st mortgage bonds & $\frac{1}{2}$ of the 2nd mortgage bonds, have intimated their willingness to assent to the foregoing proposition, & will also agree, in consideration of the reconstruction of the capital account & its appropriation, as above set forth, to enter into a traffic agreement, undertaking to contribute, during the currency of the new 1st mortgage 4% bonds, towards any deficiency in the C. & G.T. earnings that may arise from time to time in meeting such interest, an amount of 30% of its gross earnings on traffic interchanged between the two companies, which, according to past results, would of itself secure the interest on the proposed new 1st mortgage without taking into consideration the largely increased earnings which must naturally follow the doubling & improvement of the line. Holders of the 1st & 2nd mortgage bonds approving the scheme are requested to deposit their bonds not later than Dec. 1 next with Glyn, Mills, Currie & Co., London, Eng., who will issue receipts for them on behalf of Sir C. Rivers Wilson, J. Price, & Lord Welby, who have consented to act as trustees. Holders of bonds in America may deposit their bonds with the Bank of Montreal, in Montreal, or any of its branches. The interest coupons on the existing 1st & 2nd mortgage bonds due Jan. 1, 1900, must be detached therefrom before deposit as above. The coupons thus detached will be paid at maturity. Pending the delivery of the definitive bonds, which will bear interest as from Jan. 1, 1900, the bankers' receipts

will be exchanged for interim trustees' certificates, for which an application for a quotation will be made to the London Stock Exchange.

A London, Eng., cablegram of Nov. 4 says: The reconstruction scheme of the C. & G.T.R. Co. is being opposed by some of the bondholders. Nevertheless the Co. announces to-day further arrangements for an exchange of bonds. The opposing bondholders declare that the G.T. officials have worked the C. & G.T. line in their own interests instead of the interests of the bondholders, that Mr. Hays, who signs as president of the C. & G.T. Co., has no money of his own in it, that as a trustee for the rights of the C. & G.T. debenture holders the G.T. has no right to convert trust property to its own advantage; that the whole matter is a breach of good faith, being an Anglicisation of Yankee methods of foreclosure; and that other companies would offer the C. & G.T. road better terms.

H. W. Smithers, Great Baddow, Essex, Eng.:—"As a holder of the Co.'s 1st mortgage bonds I would recommend my fellow holders not to accept the proposals for conversion just announced without much further consideration. In view of the large number of 2nd mortgage bonds held in Holland, the uncertainty as to their action in the event of default & the possibility of prolonged litigation it would be very unwise of the 1st mortgage bondholders whose security is perfect & whose principal falls due on Jan. 1 next to commit themselves prematurely."

C.P.R. Earnings & Expenses.

Gross earnings, working expenses, net profits and increases over 1898, from Jan. 1, 1899.

Total.....	£1,429,323	£1,256,473	£172,850	

Chicago Terminal & Transfer Co.—After long waiting, this Co. formed in Chicago by A. B. Stickney, of St. Paul, Minn., many years ago, is now going into business under the management of E. W. Winter, of St. Paul. Mr. Stickney bought a large tract of land for this Co. in the western outskirts of Chicago, & the purpose was to use it for the transfer of freight between the various railroads running into the city, so as to save the cost of switching from one depot to another, as is done at the Minnesota Transfer between St. Paul & Minneapolis. Lack of funds during the hard times caused the delay in carrying out the project. It now has the backing of most of the strong Chicago roads.

RAILWAY FINANCE, MEETINGS, &c.

Alberta Ry. & Coal Co.—The report for the year ended June 30 last says, that the aggregate coal sales made during the year amounted to 181,764 tons, against 143,707 during the previous year; the cash earnings, apart from coal traffic, of the Montana Ry. were \$76,745.71 against \$64,383.77. The accounts show a profit of \$11,361 providing for interest on the 4% prior lien debenture stock, of £7,275, which, with the balance brought forward, amounts to £7,202. The directors, however, regret to say that owing mainly to the capital requirements during the year, rendered necessary through increased business, having exhausted the above balance, there is at present no money available with which to pay the "A" debenture stockholders, & that, to provide the necessary funds & additional working capital, it is proposed to utilize the £25,000 of 4% prior lien debenture stock remaining unsold.

Baltimore Coal & Railway Co.—At a meeting of this Co. at Moncton, N.B., Oct. 21, C. Archibald, Halifax; J. H. Harding, St. John; Wm. Steeves, Wasse; J. Ritchie, St. John; W. Taylor & J. W. Patterson, Salisbury; & M. Lodge, Moncton, were present. The money paid over by New York capitalists to the shareholders of the Co. was distributed. The new Baltimore Company will be formed partly of the old board, with the addition of M. Lodge & W. B. Chandler to the new board of directors. Renewed operations are said to be expected soon.

The Alex. Gibson Ry. & Mfg. Co. has taken over the Canada Eastern Ry., including property in the Counties of York, Carlton, Victoria & Northumberland, N.B., valued at \$5,000,000. In addition to the railway the property embraces lumber mills, forest lands & the manufacturing town of Marysville.

Calgary & Edmonton.—Net loss in operating for Aug., \$8,596.49, against net loss of \$3,017.68 for Aug. 1898. Net earnings for Sep., \$10,254.31, against net earnings of \$5,767.93 for Sep. 1898.

Canada Atlantic.—At the annual meeting, Sep. 26, the following officers were elected: President, C. J. Booth; Vice-President, C. McLachlin; other directors, W. Anderson, J. F. Booth, J. A. Seybold, E. C. Smith & N. McIntosh.

Under the provisions of an Act passed at last session of the Dominion Parliament, the Ottawa, Arnprior & Parry Sound Ry. Co. has

been amalgamated with the C. A. Ry. Co., & both are now known under the latter title.

The Canada Atlantic Transit Co., recently incorporated, has elected officers as follows: President, J. R. Booth, Ottawa; Vice-President & Counsel, H. F. Stevens, St. Paul, Minn.; Secretary, J. T. Rose, Duluth; Treasurer & Assistant Secretary, C. T. Fleck, Ottawa; Assistant Treasurer, W. H. Burk, St. Paul; General Manager, E. J. Chamberlain, Ottawa. Most of the officers are connected with the C. A. Ry., with which the new company will operate.

Canadian Pacific.—Land grant 5% bonds of 1881 to the value of \$250,000 have been drawn for redemption at 110 & interest at the Treasurer's office at Montreal; interest to cease Dec. 11.

Central Counties.—W. S. Herrington, of Napanee, Ont., who was recently appointed Commissioner of the Ontario Government to investigate the claims of workmen & others against this Co., a subsidiary of the Canada Atlantic, has not yet completed his investigation & will probably make an interim report to the Government as to the disposition to be made of the Provincial subsidy.

Central Vermont.—The American Loan & Trust Co. recently gave notice that the new securities under the plan of reorganization were ready for delivery.

The Quebec Court of Review has given judgment in the case of Barker vs. the C. V. Ry., with the receivers of the road as opposants & the American Loan & Trust Co., of Boston, as intervenants. The case goes back to 1895, when the Ducey Lumber Co., of Brandon, N.Y., sold some \$3,200 worth of lumber to the C. V. Ry., & gave a promissory note for the amount payable some months later. In the meantime the road went into the hands of receivers. Under the law of Vermont, when a receiver takes charge of a road all the creditors have to stand aside so as to be placed later on an equal footing. There is no preference for any. The Ducey Co. transferred the note, which ultimately stood in the name of E. H. Barker, of Montreal, as prete-nom. The Ducey Co. seems to have concluded that if it could not get paid in Vermont it would try to be paid in Canada, & so sent the note across the line. An action was instituted in Montreal by Barker against the Co., & judgment was obtained for the amount asked for. An execution was taken against the Co.'s property in the Province of Quebec, & a number of cars & locomotives were seized. An opposition to the seizure was at once taken by the receivers & the action taken to review, with an intervention from the American Loan & Trust Co., which had a mortgage on the road. The main question which the court had to decide was: Could the plaintiff, acting for the Ducey Co., be given a preference in Canada that his principal did not possess under the laws of Vermont? or, in other words, if it could not touch the Co.'s property in Vermont, could it come into Quebec & do so, & thus secure a preference over the other creditors of the road? The court unanimously decided it could not. These are the main features of an elaborate judgment which will settle any points for the future regarding such claims on roads running between Canada & the U.S., & the rights of creditors in either country. Therefore the judgment dismissing the demurrer was confirmed with costs; the judgment maintaining the opposition was confirmed with costs; the judgment maintaining the intervention was reversed, & the intervention dismissed with costs.

Dominion Atlantic.—Earnings for 9 months to Sep. 30, \$554,570, against \$467,217 for corresponding period.

The Co. will apply to the Dominion Parliament next session for an act confirming its issues of capital stocks, the conveyance to the Co. by the Windsor & Annapolis Ry. Co., dated Dec. 31, 1895, the mortgage trust deeds made by the Co., & the 1st & 2nd debenture stocks, issued & to be issued, thereunder, to the amount of \$940,000, & also to enable the Co. to increase its capital stock, borrow & secure money upon ships & other outside property of the Co., to create reserves, & for other amendments to the act incorporating the Co.

Great Northern (U.S.A.)—The annual report to June 30 shows the capital stock has been increased from \$25,000,000 on June 30, 1898, to \$90,000,000, & the dividend paid has been raised from 6% paid on the old capitalization to 7% on the present volume of stock. Of the new stock, \$15,000,000 was used to retire the same amount of collateral trust bonds, the only mortgage debt of the Great Northern proper; \$10,000,000 was used to purchase the stock of the Seattle & Montana; \$25,000,000 to acquire the stock of the St. Paul, Minneapolis & Manitoba, & of the remaining \$15,000,000, \$7,500,000 was used to take up new stock of the Eastern Minnesota, to purchase the Spokane Falls & Northern, & to acquire various other properties. The earnings of these lines were:

“Up-to-Date”

If you are you will use

Fairbanks' Standard Railway Track Scales with TYPE REGISTERING BEAM.

They are arranged to impress upon a ticket the figures indicating the weight of the load, thus giving a true and ineradicable record. This record entirely prevents the errors which so frequently arise through mistakes in reading weights.

Send for Illustrated Circular.

RAILWAY SUPPLIES:

HAND CARS. PUSH CARS. MOTOR CARS.
BARROWS OF WOOD AND STEEL. SHOVELS.

THE FAIRBANKS CO., 749 Craig St., MONTREAL.

	1888-9.	1889-90.
Gross earnings.....	\$25,017,004	\$25,577,524
Operating expenses.....	12,164,002	10,854,706
Expenses & taxes.....	13,091,361	11,555,647
Net earnings.....	\$10,920,541	\$11,667,171

The revenue account of the Co., which includes the results of the operation of the Manitoba lines, makes the following showing for 1899:

Gross receipts.....	\$19,057,814
Net earnings.....	8,002,225
Rentals.....	4,835,299
All charges.....	4,016,510
Net charges (less dividend on Manitoba stock).....	417,881
Balance.....	4,764,401
For improvements.....	1,800,000
Surplus.....	2,964,401

The traffic statistics show that the tons one mile increased 11.36%, the car miles 6.24% & the freight train miles only 4.84%. The average train load increased from 316 tons to 336 tons, or 6.29%.

With a drop of 1 1/4% in the average ton mile rate from 9.32 mills to 9.16 mills, the train mile receipts increased nearly 5% from \$2.99 to \$3.13. The reduction in wheat rates averages 1.3c. a bushel, equivalent to about \$875,000 on the tonnage carried. No commodity table is given, but the wheat tonnage is said to have increased 1,913,000 tons, & other business 1,433,000 tons.—*Railroad Gazette*.

Great Northwest Central Ry. Co. Nearly the whole of the stock of this Co., \$450,000 out of \$500,000, having been sold to T. G. Shaughnessy & R. B. Angus, of the C.P.R., the board has been reorganized. J. W. Leonard, General Superintendent of the Ontario & Quebec Division of the C.P.R., has been elected President of the Co., & W. Whyte, Manager of the C.P.R. Western Lines, has been appointed also General Manager of the G. N.W.R.

The Hereford Ry. Co. gives notice of application to the Dominion Parliament for an amendment to its act of incorporation to provide for the removal of the chief office from the township of Eaton, Que., to Sherbrooke, Que.

Intercolonial.—At Montreal, Nov. 7, the Minister of Railways & Canals completed the purchase of the Drummond County Ry. by paying J. N. Greenshields, W. Mitchell, & W. Farwell \$1,438,000, less \$136,000, the amount of the lease, and \$25,000 which has been retained by the Department owing to delay in perfecting certain titles.

London & Port Stanley.—A special meeting of shareholders will be held at London, Dec. 5, to authorize the issue of 1st preferential bonds to secure to the city of London moneys advanced, also to authorize the renewal of mortgage bonds.

The Miles Canyon & Lewes River Tramway Co.'s annual meeting will be held at Victoria, B.C., Nov. 13.

Minneapolis, St. Paul & Sault Ste. Marie.—A St. Paul paper recently printed a story to the effect that in order to get rid of the competition of this line in passenger & freight rates, interested roads had agreed on united action to buy up all the individual holdings of stock & to secure sufficient voice on the board to accomplish the desired purpose. The paper admitted that the C. P. R. has control of a majority of the stock & securities, in view of which it is difficult to see how the would-be directors propose to elect even one member of the board.

Ottawa & New York. The following officers have been elected for this Co. & also for the New York & Ottawa R.R.: G. F. Peabody, Chairman of the Board; H. W. Gays, President & General Manager; G. B. Moffatt, Vice President; L. G. Myers, Secretary; A. Nichols, Treasurer; G. B. Colpas, Auditor & Asst. Secy. & Treas. The change in

the new board was the election of Mr. Gays as a director & President in place of C. B. Hibbard.

Pontiac Pacific Junction.—It was rumored in Ottawa recently that the C.P.R. was negotiating for a lease of this line to provide a short route between Ottawa & Pembroke, & other places up in that locality. The inauguration of such a service when the P.P.J. extension from Aylmer to Hull is completed, would mean the shortening of the distance from Ottawa to Pembroke by 13 miles. The P.P.J. now terminates at Waltham, opposite Pembroke, & the river would have to be bridged. The Canada Atlantic has recently taken over the Pembroke Southern Ry. connecting with its main line at Golden Lake, & is running a through service from Ottawa to Pembroke, the distance being about the same as by the C.P.R. Competition between the lines at Pembroke, as at other points, is keen, & both are naturally anxious to provide a quick service over as short a line as possible. Supt. Resseman, of the P.P.J., says he has no knowledge of the negotiations referred to & we are advised by the C.P.R. management that there is no foundation for the rumor.

A special meeting of shareholders will be held in Montreal, Dec. 14, for the purpose of authorizing the issuing of \$180,000 interim bonds of the Co., given as collateral security in connection with a contract entered into for building a further 9 miles of its railway, from Aylmer to Hull, & confirming directors' action in acceptance of the contract.

Port Arthur, Duluth & Western. In the suit of D. F. Burke the Court has granted an application to compel the purchaser to attend for examination & to answer questions which he refused to answer on his examination on Oct. 27. (June, pg. 164.)

Pullman Palace Car Company. At the annual meeting Oct. 19, R. T. Lincoln was elected President, succeeding to the place which has been vacant since the death of G. M. Pullman. T. H. Wickes was re-elected Vice-President, & A. S. Weinsheimer Secretary. The directors were re-elected as follows: M. Field, O. S. A. Sprague, H. C. Hulbert, H. R. Reed, N. B. Ream, R. T. Lincoln & J. W. Doane. The report of the operation for the year ended July 31, 1899, shows a total revenue of \$11,478,930.03, the total disbursements being \$9,183,465.36, leaving a surplus of \$2,295,464.67. The total assets as given amount to \$57,792,188.72, & the net surplus of assets over liabilities \$3,972,188.72. The number of cars owned & controlled is 2,526.

Pullman-Wagner Consolidation.—Official announcement was made towards the end of Oct. of the conclusion of negotiations for the absorption of the Wagner Palace Car Co. by the Pullman Co. It only remains for the stockholders of the companies to ratify the action of their directors, & for this purpose a meeting of the shareholders of the Pullman Co. has been called for Dec. 5. The assets, including contracts, of the Wagner Co., will be purchased with 200,000 shares of Pullman stock, to be issued for that purpose. It results in being merely a trade of Pullman for Wagner stock, since the capital of the latter corporation is \$20,000,000. The total capitalization of the Pullman Co. will be, when the deal is concluded, \$74,000,000. The Wagner Co. pays 8% dividends, having done so for a number of years, while the stock has within the last year advanced to 200. The Pullman Co. for a number of years paid 8%, but reduced the rate last year to 6, when the capital stock was increased from \$36,000,000 to \$54,000,000. But recently the dividend rate was advanced back to the old figure, a quarterly dividend of 2% being declared. The exchange of shares, therefore, will be that of one 8% dividend stock for another. The Vanderbilt & Morgan interests will be taken into the

Pullman board by an increase in the latter body, & the election thereto of W. K. Vanderbilt, J. P. Morgan, F. W. Vanderbilt & Dr. W. S. Webb. Although for a period of years there was considerable feeling between the Vanderbilt interests & the late Mr. Pullman, it is also true that in the last year before his death Mr. Pullman favored the idea of a union of interests. As a result of the consolidation of the Pullman & Wagner companies, it is thought the railways may have to pay a trifle higher rate per mile on sleeping, chair & dining cars furnished them by the big corporation. *Railway World*.

Qu'Appelle, Long Lake & Saskatchewan net loss in operating for Aug., \$5,861.38, against net loss of \$2,728.78 for Aug. '98. In Sep., 1899, the net loss in operating was \$4,607.45, against net loss of \$3,323.25 in Sep. 1898.

Quebec & Lake St. John earnings for Aug. \$4,838 more than for Aug., 1898.

Quebec Central gross earnings for Sep., \$52,391.49, against \$46,384.31 in Sep., '98; working expenses, \$32,446.86, against \$27,450.78; net earnings, \$19,944.63, against \$18,933.53.

Gross earnings, 9 months to Sep. 30, \$385,400.88, against \$345,450.05; working expenses, \$246,951.00 against \$229,190.63; net earnings, \$138,449.88, against \$116,259.42.

Toronto, Hamilton & Buffalo. It is said there is to be litigation between J. N. Young, the original promoter of this line, & some of the other members of the syndicate. The nominal plaintiff is B. S. Mayer, Assistant Cashier of the Continental National Bank, Chicago. The defendants are J. N. Beckley, Rochester, President of the T., H. & B. R.; the Dominion Construction Co., & the American Trust Co., of Boston. Plaintiff Mayer was, it is alleged, a transferee of J. N. Young of an order for \$100,000 upon J. N. Beckley & the Dominion Construction Co. This represented a portion of moneys expended by J. N. Young & Co. in the construction of the line between Waterford & Hamilton, prior to the amalgamation of J. N. Young & Co. with the Dominion Construction Co. It is claimed by plaintiff that under the terms of agreement the moneys contributed by J. N. Young & Co., & by the Dominion Construction Co. should be returned out of the proceeds of the bonds of the T., H. & B. These bonds have been realized on, but there is a shortage, owing, it is said, to the large sum of interest charged up by defendants for moneys advanced by them, & it is contended by defendants that they are entitled to be paid their interest in priority of J. N. Young's claim.

Victoria & Sidney.—The city solicitors of Victoria, B.C., have recommended that the Provincial Government be requested to call on this Co. to execute to the Government a mortgage of all its property, as security for the repayment of moneys paid by the Government & the city in respect of guarantees, etc. The solicitors contend that the annual statements made by the Co. to the Government are not sufficiently detailed.

The Buffalo & Fort Erie Bridge Co. is building the only foot & vehicle bridge above Niagara Falls. The bridge, or practically two bridges, is to cross the Niagara River from a point between Buffalo & Tonawanda, to Grand Island, across the island, & on to the Canadian shore. The eastern section is the one for which legislation was obtained at Washington in 1898. The location of the bridge has been approved by the War Department of the U.S., the contract has been let for \$4,485,400, & already several piers have been built. The Canadian section will cross from the opposite side of Grand Island to a point in Welland County.

Grand Trunk Betterments, Etc.

The new culverts at Ste. Hyacinthe & Victoriaville, Que., are almost completed.

The Co. has begun the construction of a tunnel in Girouard St., Ste. Hyacinthe, Que., the cost of which is to be borne by the Co. & the city jointly. It will also be completed till next spring.

The toll collector's shelters have been placed in readiness for occupancy on both sides of the Victoria Jubilee bridge & it is expected that the vehicle & foot passenger road ways will be opened to the public almost immediately. The track on the embankment at the approaches to both ends of the bridge is about completed. (Oct., pg. 281.)

The improvements in front of the Bonaventure Station, Montreal, are about completed, including the asphaltting. Next summer there will be flower beds & fountains in the space which heretofore has been very unsightly. Rigid regulations will be enforced in regard to the admission of carter's to the enclosed space. (Oct., pg. 291.)

Work will be continued on the new general office building in Montreal while weather permits, it being the intention to have the building completed as soon as possible. The architect is experimenting with non-inflammable wood, with a view to its introduction in the building, which will be the first attempt to realize in Canada a practical benefit from a discovery which the British Admiralty has employed in the construction of recent war-ships, thus obviating the danger of fire in case of an engagement at sea. The U.S. Government has adopted non-inflammable wood in the internal fittings of its recently built cruisers,

while contractors & builders are giving attention to the wonderful possibilities of its application to private dwellings. With the amount of steel & iron which will enter into the construction of the general offices, the employment of non-inflammable wood would make the building absolutely fire-proof, which is Mr. Hays desire.

The building of the bridge at St. Anne's, Que., has done away with the last tubular span bridge on the system.

The City Council of Kingston, Ont., & the County Council of Frontenac, are considering the question of building a subway under the Co.'s tracks at Montreal St., Kingston.

In addition to the remodelling of the yards at York, near Toronto, extensive improvements are being made in the yards at Fort Erie, Niagara Falls, and Palmerston, Ont. (Oct., pg. 291.)

The Co. will add an additional span to its bridge at Brantford, Ont., next spring, in connection with the city's scheme for flood prevention. The city has agreed to pay 37½% of the cost.

Large up-to-date coal shutes are being built at Sarnia, Niagara Falls & other points. The Sarnia one has a 600 ft. incline for the cars, the building being 280 by 18 feet.

The scheme for the reorganization of the Chicago & G.T. finances, which is detailed on page 319, provides for the double tracking of the line & the revision of grades, etc. H. A. Woods has been appointed engineer in charge of all new work in this connection, with office at Detroit, Mich. It is proposed to build a second track from Port Huron to Chicago, & to reduce grades throughout the line, to compare favorably at least, with other

lines leading to the east from Chicago. To accomplish this, it will be necessary to make diversions from the present line in several places. The work will be done gradually to avoid interruption to traffic. About 60 miles of the work will be opened early next year. For the present, at least, the Co. will do all the train work with its own force.

J. S. Metcalfe & Co., Chicago, have the contract for rebuilding the Co.'s elevator at Elsdon, Ill., recently burned. Work has commenced & it is expected to complete it by Jan. 31. It will hold about 125,000 bus. & will have a transferring capacity of 100 cars a day. The power plant will be equipped with three 72" x 18' boilers, one 22 x 42 Vilter girder bed Corliss engine, one 400 h.p. heater, boiler, feed pump, etc. It will be lighted by electricity & everything about it will be first-class in every respect. It will have 6 legs, 4 no. 9 oat clippers & six 1,400 bus. Fairbank's hopper scales. The roof will be of tar felt & gravel, & the outside covering will be no. 26 painted corrugated iron. The foundation will be of piles & concrete piers. It will be used for transfer & clipping purposes only, not for storage.

C.P.R. Betterments, Construction, Etc.

Atlantic Division.—The following improvements, etc., have been made this year: On the main line between Megantic & St. John, 64,200 ties have been placed in the road, 25 miles of ballasting done, & 24¼ miles of new 73 lbs. rails laid, 4 bridges have been replaced, partly with stone & the balance filled, 7 open culverts have been replaced with permanent box culverts & the openings filled, &

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the following sections, along the Main Line and Branches in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North-West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6 an acre.

Lands in Assiniboia, east of the 3rd meridian, average \$2 to \$4 an acre.

Lands west of the 3rd meridian, including the Calgary District, generally \$3 per acre.

Lands in the Northwest Territory and the Lake Dauphin District, \$3 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest on the same, due in instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or grazing lands.

The following table shows the amount of the annual instalments due on different sections of the acres at different prices under the new conditions:

160 acres at \$3.00 per acre, 1st instalment \$71.90, and nine equal instalments of \$60.

160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.

160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.

160 acres at \$4.50 per acre, 1st instalment \$107.80, and nine equal instalments of \$90.

160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.

160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.

160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the price.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

L. A. HAMILTON, Land Commissioner,
F. T. CRIFFIN, Asst. Land Commissioner,
WINNIPEG.

ENAMELED IRON SIGNS

For Steam & Electric Railways, Steamship, Express, Telegraph, Telephone and Advertising purposes.

Railway Station Names, Street Car Route Signs, Express, Telegraph and Telephone Office Signs, Semaphore Arms, Switch Targets and Advertising Signs of every description of size and color made to order.

Railway, Steamship and Ferry Signs

For doors, etc., 23 x 3½ inches, blue letters and border on white ground, carried in stock with following lettering.

Waiting Room	Ladies' Toilet	Private Office	Dining Room
General Waiting Room	Men's Toilet	Freight Office	Lunch Room
Ladies' Waiting Room	Baggage Room	Ticket Office	Smoking Room
Men's Waiting Room	Agent's Office	Telegraph Office	No Admittance

The following are carried in stock, size 10 x 2½:—

Men Women Exit Fire Escape

Numbers for railway bridges, mile posts, signal houses, etc.; single figures on plates.

These signs last practically for ever, they never fade or tarnish, they are ever bright and attractive, they are absolutely impervious to heat or cold, they are the only signs that will withstand the effects of weather in all climates.

For Prices, Illustrated Catalogues, etc., address

THE ACTON BURROWS COMPANY,

Agents for the Imperial Enamel Co. of Birmingham,
29 Melinda Street, Toronto, Canada.

Resident Agent at Winnipeg, S. A. ERSKINE, P.O. Address Box 190.

13 miles of wire fencing have been erected. A passenger station have been erected at Onawa. A boiler house has been added to the machine shop at Brownville Jct., & the shop & engine house improved. The machine shop at McAdam has been enlarged & a stationary engine, pump & air compressing plant has been installed. Ten houses for employes have been built at McAdam. At West St. John the grain elevator capacity has been increased to 1,036,500 bush., with conveyors serving 5 steamship berths, 4 of which can be operated simultaneously. On the New Brunswick branches 124,600 ties have been placed in the road, & 20 miles ballasted; 3 wooden bridges have been replaced with steel, & 7 renewed in wood; 8 Howe truss spans have been housed in to protect them from the weather; 80 open culverts have been replaced with permanent box culverts & the openings filled; 22 miles of wire fencing have been erected & a quantity of cedar protection work has been built along the banks of the St. John & Aroostook rivers to protect the roadbed from freshets. An engine house has been erected at St. Stephen.

Ontario & Quebec Division.—A large amount of work has been done on this division this year, & some is still in progress. Thirty miles of heavy steel, 73 lbs. to the yard, are being laid on the Sherbrooke section, releasing 60 lbs. rails which are being shipped to the Northwest for use in building branch lines. Three miles of heavy steel rail, 100 lbs. to the yard, are being laid between Montreal Jct. & Adirondack Jct., to carry more satisfactorily the heavy traffic over that portion of the line. On the lines east of Montreal new side tracks have been put in & old side tracks extended to the amount of 20,000 ft. of track for the better accommodation of the increasing traffic.

The second track between Montreal Jct. & St. Annes, 15.6 miles, built this year, has been laid with 100 lbs. rails. The old track between Montreal Jct. & Vaudreuil, 18.9 miles, is being relaid with rails of the same weight. With the possible exception of the Sarnia tunnel this is believed to be the first track in Canada on which 100 lbs. rails have been used. The manufacturers of the Bonzano joints which are being used have turned them out very slowly, delaying the work considerably. The grades between Western Jct. & Dorval have been reduced sufficiently to enable the ordinary locomotives to haul 200 tons more per train than they could formerly handle. (Sep., pg. 267.)

Considerable work has been done reducing grades west of Green Valley & east of Avonmore, which will enable the handling of increased tonnage. Siding facilities at St. Clet, Green Valley, Glen Roy & Suffel stations have been increased considerably, also on the Havelock section. A large amount is being expended near Bathurst & Tweed, changing alignment & taking out many of the sharpest curves. Full particulars of this work were given in our Oct. issue, pg. 291. Nineteen miles of 80 lbs. steel are being laid on Havelock & Toronto sections. About 15 miles have been ballasted on Toronto section, & siding facilities have been increased.

Between London & Woodstock, Ont., 27 miles have been ballasted, also all tracks in Woodstock yard, and 7 miles of 73 lbs. rails have been laid with broken joints. A large number of open cattle guards & culverts have been filled in, & surface cattle guards & under culverts provided.

On the Owen Sound section, about 3 miles of 73-lb. rails have been laid on heavy grades & curves. About 3½ miles of side tracks have been put in to accommodate increased traffic, most of them being at Toronto Jct., & 50,000 ties have been put in the track. On the branches 38,000 ties have been put in, & 2 bridges, one ¼ miles north of Snelgrove, the other ¼ miles west of Arthur, have been erected.

About 7 miles of track has been ballasted on the Teeswater branch.

Some important bridge work has been done, & some is in progress. The original bridge over Yamaska River, near West Shefford, Que., consisted of 1 span deck steel lattice girder, 100 ft. long, on masonry piers with wooden trestle approaches. One new steel girder, 40 ft. long, has been put in at each end of the old span, & the balance of the wooden approaches have been filled in. Two masonry piers have been built to carry the new girders, the work costing about \$10,000.

The old bridge over the Credit River at Streetsville, Ont., consisted of 1 span deck, Howe truss, 126 ft. long, on masonry piers with wooden approaches. The Howe truss span will be replaced with a steel deck truss, 126 ft. long, & the timber approaches will be replaced with 2 deck plate girders, each 40 ft. long, & 1 plate girder, 58 ft. long, on masonry pier & abutments. This work, which is costing about \$16,000, is not completed.

The old bridge over the Grand River at Galt, Ont., consisted of 5 spans, iron deck trusses, on masonry piers, with timber approaches, & was built by the Credit Valley Ry. Co. some 20 years ago. The increased weight of the rolling stock necessitated a stronger bridge, & the old trusses have been replaced with steel pin-connected deck trusses, 5 in number & each about 150 ft. long. The old piers, being in good condition, were used for the new bridge by building them up about 10 ft. higher. The timber approaches were replaced with 3 deck steel plate girders, each about 94 ft. long, on 1 new masonry pier & 2 new masonry abutments. The new bridge is 1,031 ft. long. The grade over the bridge was raised 5 ft. This work was commenced in the spring of 1898 & will be finished this fall. The cost is about \$70,000. The improvement of the Galt grade was done in connection with renewing the bridge. The grade out of Galt going west is about 2½ miles long, & was, before its improvement, very uneven & heavy in places. The total ascent has been reduced 5 ft. by raising the bridge as before mentioned, & the grade has been improved & reduced by filling the low places & by cutting down about 3 ft. at the top. The new grade is now 1% on tangent, compensated on the curve to 0.86% & 0.95%. The track has also been improved by replacing part of the old rail with new rails, 80 lbs. per yard. This work was commenced in 1898 & is now practically completed, costing over \$21,000.

Interlocking & derailling appliances have been installed at Western Jct., where the C.P.R. crosses the Jacques Cartier Ry., which is now a portion of the G.T. system, & at St. Polycarpe Jct., where the C.P.R. crosses the Canada Atlantic Ry.

A good deal of work has been done in improving stations. At North Troy, Vt., a station 55 x 20 ft., & freight sheds 24 x 60 ft., both frame buildings, are being built. The station has stone foundation & will be heated by hot water & equipped with all modern conveniences. Cost about \$4,000. At East Richford, Que., a frame station 20 x 40 ft., costing about \$1,300, is being built. The location has been changed so that the new station will be on the main line & near to the water tank. Richford station, Que., is being supplied with hot water heating apparatus. A shelter station has been built at Little Magog Lake, Que. At Galt, Ont., an office has been built for the agent & freight clerks & the freight shed accommodation has been increased. Woodstock, Ont., has been provided with an improved station, 30 x 80 ft., built of brick on stone foundations. It has a large general waiting room, ladies' waiting room, office & baggage room. The lavatories are fitted with the most improved fixtures, with sanitary plumbing. The building is heated by hot water. The yard has been remodelled & enlarged, & wide platforms

built for the convenience & safe handling of passengers. The freight shed has been moved to a more convenient place & new offices have been provided for agent, roadmaster & clerks. In connection with this work Winnett & Admiral sts. have been closed across the Co's lands, whereby the safety of the public has been greatly increased. The locomotive water service has been improved by erecting 2 modern stand pipes, one for east bound and one for west bound trains, so that engines can be watered while standing at the station. A shelter station has been provided at Crumlin, Ont., & the London & Windsor stations have been renovated.

At Sherbrooke, Que., a crane for handling heavy freight is being erected. Machine shops costing about \$3,000 have been built at Smith's Falls, Ont. A small store house has been built at Toronto. Two grain warehouses, 24 x 30 ft., have been erected at Hornby, Ont. Shelters for live stock awaiting shipment have been provided at Milton, Ayr & Tilbury, Ont.

At Chatham, Locust Hill, Perth & Dalhousie Mills, Ont., Sherbrooke, Magog & Scotstown, Que., 40,000 gal. water tanks are being built on masonry understructures, 2 stand pipes are being provided at Chatham, 1 at Magog, 1 at Locust Hill, & 1 at Dalhousie Mills. These improvements will enable passenger trains to take water in a shorter time & at more convenient places than before. The permanent masonry understructures are, of course, a great improvement on the timber understructures, which decay in 8 or 9 years.

Air testing plants have been provided throughout the yards at Megantic, Que., Smith's Falls, Havelock, Toronto, Toronto Jct., London, Windsor & Owen Sound, Ont., for testing & charging of trains with air so that despatch may be insured to freight by cars being thoroughly charged when trains are made up & that there may be no delay on account of cars having to be charged with air by pump on engine as formerly. Drop pits have been provided in the engine houses at Megantic & Farnham, Que., Smith's Falls, Havelock, Toronto Jct., & London, Ont. Sand & cinder hoists are being put in at Megantic & Farnham, Que., Havelock, Smith's Falls, & Toronto Jct., Ont., & are being equipped with air compressors. Over head coaling chutes for locomotives are being provided at Farnham, Que., Smith's Falls & Havelock, Ont.

Western Ontario Car Shops. The great demand for freight cars has led the management to decide to build additional shops for its car construction. In order to be near the raw material they will be located in Western Ontario. The plans which have been prepared provide for buildings with a capacity of 25 cars a day, & which when running at their full capacity would employ 1,000 men. We are informed that there is no authority for the statement in a Toronto daily paper that they will be located in Toronto, London, Windsor, & one or two other points are spoken of as likely sites, but no definite decision has been announced.

Windsor St. Station, Montreal.—Owing to the scarcity of iron for structural purposes, work in connection with the extension of this building is being much delayed. (Aug., pg. 233.)

Hotel at Ste. Agathe, Que. We are officially informed that there is no truth in the report to the effect that the Co. will build an hotel at Ste. Agathe. An hotel is, however, likely to be built there by the Ste. Agathe Hotel Co., Ltd., which is being formed, with Mayor Prefontaine, R. Wilson-Smith & J. Crathern, of Montreal, as provisional directors, & a capital of \$50,000. (Oct., pg. 291.)

Double Track Montreal to Vancouver.—A St. Paul, Minn., paper says the C.P.R. has announced its intention of double tracking the line from Montreal to Vancouver, that com-

plans for the work have already been awarded to districts, & that it will probably require 7 or 8 years to complete this gigantic undertaking. We have not heard of any such announcement & think the St. Paul paper is a little premature. There is no doubt the great increase of traffic west of Lake Superior will necessitate the early double tracking of the line between Fort William & Winnipeg, arrangements for which are already in progress, but it is hardly likely that the question of double tracking along the north shore of Lake Superior, or west of Winnipeg, has yet been seriously considered by the management.

Main Line Condition.—On returning to Ottawa recently from a trip to the Pacific Coast the Deputy Minister of Railways said the main line from Montreal to Winnipeg was in splendid order, but was a little rough across the prairies owing to the extremely wet weather this year. Through the mountains the roadway was excellent. The permanent way had been wonderfully improved, solid embankments with stone culverts taking the place of trestle bridges.

Ottawa Short Line.—The Co. is said to have secured options on all properties necessary for the building of its line of some 6 miles between the Co.'s station at the Chaudiere, Ottawa, & the round house at Hurdman's Bridge, Ottawa. It is said the cost of the property will be about \$60,000. The proposed line will shorten the route between the two points about 8 miles, as against the present haul by way of the Chaudiere Junction. (Sep., pg. 297.)

Fort William Roundhouse.—Good progress is being made with this building, the stone work & the brick fire wall which divides the building into two parts being completed. The structure is nearly in the shape of a semi-circle, the diameter of the arc being 370 ft., & its radius being 360 ft. (Oct., pg. 292.)

Fort William to Winnipeg. Survey parties have been at work for some time getting up data in connection with the double tracking of the line between these points, but we are informed that nothing will be done this year in respect to the construction of the second track beyond continuing the widening of the bridges, which are being improved to suit for double track. This work has been going on for several years past. A lot of sidings have been lengthened this year to over 3,000 ft. They are located so as to be available for a portion of the second track when required. (Oct., pg. 292.)

Rat Portage.—The new station is being roofed & is expected to be ready for occupation in Dec. (Oct., pg. 292.)

Jack Pine Ties.—The Co. is taking delivery of between 40,000 & 50,000 jack pine ties from Eagle Lake, which are being loaded at Vermillion Bay. They will be used on some of the branch lines now under construction in Manitoba.

The Bonnet Lake Branch will start from the main line at Molson, 45 miles east of Winnipeg, & will be about 22 miles long, but the section touching the lake has not been finally located. A contract has been let to A. C. Smith, of Winnipeg, for grading 10 miles this year, on which rails will be laid as soon as grading is completed. The line will traverse a timber country, sections of which will be very suitable for agricultural purposes when cleared. The terminus will be on the Winnipeg River at a point where it opens out into Bonnet Lake. (Oct., pg. 292.) See under head "Application to Parliament" on pg. 325.

Winnipeg Terminals.—When at Winnipeg recently President Shaughnessy showed a perspective view of the hotel & station building to be erected there. It will be a handsome structure with 3 towers, the principal one of which will be on the corner of Higgins Avenue & Main St. The tower is 10 stories high, with a conical top. The other towers are about 8 stories high, the main parts of the building being 6 stories. The building will have about 320 ft. frontage along Higgins Avenue & about 308 ft. on Main St. The 2 smaller towers are at the extremities of the building. The main entrance, which is beneath the main tower on the corner of Higgins Avenue & Main St., will have a doorway 20 ft. in width. The train shed will be north & east of the hotel & station building. It is expected that work on the hotel & station buildings will commence next spring, but it is not likely that it will be completed next year. President Shaughnessy & Manager Whyte had a conference with the Mayor & Aldermen of Winnipeg about the matter recently, when Mr. Shaughnessy stated that it was desired to lay 6 tracks, in addition to 2 already in existence, across Main St. & it was considered a viaduct or subway should be constructed to facilitate traffic. He proposed that the city construct at its own expense an overhead bridge at an estimated cost of \$104,000, or a subway at an estimated cost of \$100,000, the city to take the responsibility of settling with property owners whose property would be affected by diverting the traffic from the sides of the street by the erection of the subway or viaduct, which would be likely to run from Sutherland Avenue to Higgins Avenue. The Co. also asks for a grant of the blind end of Austin St. to be embraced in the station &

hotel site. It is probable that a by-law in connection with the matter will be submitted to the ratepayers at the next civic election. (Oct., pg. 292.)

Snowflake Branch.—On Oct. 27 we were advised that this branch would be completed & ready for traffic Nov. 1. It starts from the first siding on the Pembina Mountain branch, 118 miles south-west of Winnipeg, & is 17½ miles long. (Oct. pg. 292.) See under head "Application to Parliament" on pg. 325.

Deloraine-Waskada Branch.—The grading has been completed. On Oct. 27 we were informed that most of the material was on the ground & that it was expected to commence track laying on Nov. 1, & to complete it on Nov. 20. The branch is 18 miles long & will be opened for traffic as soon as completed. (Oct., pg. 292.) Power is to be asked from the Dominion Parliament to extend this branch 100 miles west. See under head "Applications to Parliament," pg. 325.

The McGregor-Varcoe Branch is being built from McGregor, on the main line, 22 miles west of Portage la Prairie, to a point near Varcoe on the G.N.W.C.R. On Oct. 28 we were informed that about 19 miles had been graded & that it was expected to complete the grading of 7 miles more this year, but that it was doubtful if any track would be laid this season. (Sept., pg. 267.) See under head "Applications to Parliament," pg. 325.

Pipestone Branch.—Grading has been completed for about 20 miles beyond Antler, which carries it to a point about 69 miles from Menteith Jct. An effort will be made to lay track on this grading this season but it may not be completed. It is expected to complete the grading to 30 miles beyond Antler this year, & to complete track laying on this grading next spring. (Sept., pg. 267.)

Crow's Nest Pass Ry.—There appears to be little doubt that the Co. will not attempt to complete the line from Kootenay Landing to Nelson in the time allowed under the contract with the Dominion Government, viz., Dec. 31, 1900, but that an extension of time will be asked, as it is absolutely necessary on account of the heavy nature of the work. It is probable that a portion of the line from Nelson east, about 25 miles, to Kootenay Lake, will be started very soon, President Shaughnessy having recently expressed himself to that effect at Nelson, & that work will be done in places all along this section. It is likely that one contract will be let for the construction & that the contractor will use his own discretion as to the work, provided he keeps within the time limit to be set. The building of this portion of the line would per-

The Barrett Track Jack....

Recommended as a Standard by the

Roadmasters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low set loads.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting Capacity 10 to 15 tons.

mit of transfers from Kootenay Landing being made in about 2 hours by a car barge. (Sept., pg. 267.)

The Deputy Minister of Railways, C. Schrieber, who recently went over this line, said, on his return to Ottawa, speaking of the portion between Lethbridge & Kootenay Landing, that the Co. had done excellent work this season, notwithstanding the tremendous amount of rain which had fallen. A large force had been at work, & considerable money had been spent on the gumbo cuttings, the banks of which were being sloped so that there will be little trouble from gumbo slides hereafter.

The North Star Mine Branch is a branch of the B.C. Southern Ry., familiarly known as the Crow's Nest Pass Ry., leaving the latter line a mile east of Cranbrook station, thence running north-westerly for 8 miles to the St. Mary's River, which is crossed with two 150-ft. deck Howe truss spans with pile approaches. From this the line follows the east side of the valley for 4 miles, thence bearing north-westerly through Kimberley to the vicinity of the North Star & Sullivan group of mines. Total length of line 19.5 miles. Maximum grade, 147 ft. per mile, & maximum curve with radius of 410 ft. The line is expected to be open for traffic in Dec. (Sept., pg. 267.)

The North Star Mine Co. is building a wire rope tramway, 6,000 ft. long, to convey ore from the mine to the track. It will be operated by water-power.

Arrowhead & Kootenay Lake Branch.—The roadbed is finished & ready for the rails from Lardo, the southern terminus, to Duncan City, a distance of 12 miles. The clearing is completed beyond Duncan City to within a few miles of Trout Lake. A wagon road is finished to Trout Lake, & ties, timber, etc., for bridge work ready. It is expected work will be resumed early next March & then will be carried on rapidly to Trout Lake. Delay in forwarding rails prevented completion this season. A wharf is to be built at Lardo. (Oct., pg. 292.)

Columbia & Western Ry.—Negotiations are going on between the Co. & the city council of Rossland with respect to the establishment of divisional facilities at that point.

At the end of Oct., C. C. McCarthy left Rossland with a survey party & a train of pack horses to run the preliminary lines for a survey for a line to Sophie Mountain, where the Velvet mine, which is owned by a company of which Sir Chas. Tupper is Chairman, is situated. In an interview during his recent visit to Rossland, President Shaughnessy said he had been given to understand that there was considerable tonnage of ore available at Sophie Mountain, & as the C.P.R. was in the transportation business the road would be constructed, provided a practical route could be found. The C.P.R. tracks, he said, would have to be built for about 12 miles in order to reach the mines on Sophie Mountain, while the Red Mountain Ry. could tap these mines by a spur of about 6 miles. If, however, the tonnage was there & a road would pay the C.P.R. would endeavor to reach that section.

On the extension from West Robson to Midway, B.C., track has been laid to Greenwood, 95 miles from West Robson, & this portion of the line is being operated. Five miles of track has also been laid on branch lines from this line to various mines, but operation of the branches has not been commenced. (Oct., pg. 292.)

A large amount of freight has already been carried over the line, & it is going in faster than consignees can accept delivery. Several carloads reach Grand Forks each day, containing freight for Republic, Wash.

Reports from the Similkameen district are to the effect that several parties of C.P.R. surveyors have been taking the elevations of the various passes between the Similkameen

& Fraser valleys, & that it is probable that the route from Midway west will be by way of Princeton, One-Mile Creek, Quilchena Creek & Nicola River to Spence's Bridge, on the main line. This would be a considerably less direct route than to Hope & is hardly likely to be adopted unless the latter prove impracticable owing to the mountain difficulties. When at Vancouver recently President Shaughnessy said the Co. must move very carefully before deciding what to do west of its present operations in the Boundary Creek district, as the work now going on is the heaviest ever undertaken by the Co., the expenditure in B.C. during the past twelve months having aggregated \$14,000,000.

Revelstoke Shops.—In reference to the rumor that the capacity of these shops is to be considerably increased, we are informed that at present they are large enough for the amount of business done, but, of course, will be enlarged as demand requires. A lot of first-class machinery has recently been installed & the shops are well equipped. (Oct., pg. 292.)

Sicamous, B.C.—The station & hotel building are expected to be completed ready for occupation about Dec. 1, but the hotel will probably not be opened till about May 1, 1900. No official announcement has been made as to the running of the hotel, but an unconfirmed press report says that Mr. Patmore, ex-lessee of the Kalamalka hotel, Vernon, B.C., has secured a lease. (May, pg. 140.)

Application to Parliament.—The Co. gives notice of application to the Dominion Parliament next session for an Act authorizing it to construct or acquire & to operate the following railways:

From Deloraine, Man., south-westerly to township 1 or 2, thence westerly 100 miles. A portion of this line, the Deloraine-Waskada Branch, 18 miles, has been built this year, as stated on pg. 324.

From the Manitoba South-Western Colonization Railway, between Manitou and Pilot Mound, Man., southerly to or near the International Boundary. This line, known as the Snowflake Branch, 17½ miles long, has been built this year, as stated on pg. 324.

From a point on the last-mentioned railway in township 1 or 2 easterly 50 miles, also from a point in township 1 or 2 on the said line between the Manitoba South-Western Colonization Ry. & a point at or near the International Boundary, westerly 50 miles.

From McGregor, Man., on the Co.'s main line, westerly & north-westerly to Varcoe, about 56 miles. This line is already under construction. See page 324.

From West Selkirk, Man., northerly & north-westerly to a point on the west shore of Lake Winnipeg, about 60 miles.

From the Co.'s main line at or near Molson, Man., north & north-easterly to Bonnet Lake, or Winnipeg River, about 26 miles. A contract has been let for grading the first 10 miles of this line. See pg. 324.

From the Co.'s main line at New Westminster, B.C., to Vancouver, by such route as may be found most direct & feasible. This is the proposed line to place New Westminster on the main line.

Surveys, Construction, Betterment, &c.

Algoma Central.—The organization of the Ontario, Lake Superior Co., with a capital of \$20,000,000, is attracting attention to the Michipicoten mining district, where some valuable discoveries of iron have been made within the last year or two. F. H. Clergue, of Sault Ste. Marie, is the owner of one of the richest iron deposits, & he has been a leading figure in the formation of the Co. It is expected that the company will devote itself to iron mining, but as the development of the Michipicoten district promises considerable

freight, it will also pay some attention to railway business. A charter exists for the construction of the Algoma Central Ry., which will give connection between the iron mines & deep water on Lake Superior, a distance of some 40 miles. This railway is at present under way, & will be completed to the mines early next season. The extension of the line northwards for a little over 100 miles would enable a junction to be made with the C.P.R. at Missanabie, & this, it is stated, will ultimately be carried out. The O.L.S. Co. is said to have completed arrangements for acquiring the charter of the A.C.Ry., & with it the title to 2,000 square miles of timber & mineral lands. During the first year it is expected to handle no less than 1,500,000 tons of ore from the Consolidated Lake Superior Co. with whom it will have intimate business relations. (Oct., pg. 293.)

Bangor & Aroostook. The extension of this line from Caribou to Van Buren, Me., 33½ miles, has been completed & is being operated. It is intended to connect at St. Leonards, N.B., with the Restigouche & Western, when the latter line, part of which has been built from Campbellton, N.B., reaches St. Leonards.

Canadian Northern. On the extension from Cowan, last year's terminus, towards the Saskatchewan, it is hoped to lay rails this season to about 30 miles beyond Swan River. (Oct., pg. 293.)

Fair progress has been made with grading on the branch from Dauphin into the Gilbert Plains & it is hoped to complete 15 miles this season ready for track laying. (Oct., pg. 293.)

The Cape Breton Ry. Extension Co., which was incorporated by the N.S. Legislature early this year, proposes to build a line from Louisburg, on the east coast of Cape Breton Island to Port Hawkesbury (Point Tupper) on the Strait of Canso, a distance of about 86 miles. At Port Hawkesbury connection can be made with the Intercolonial Ry. Louisburg, which is 2,240 nautical miles from Liverpool, is said to have an excellent harbor, & it is contended that by the completion of the proposed line considerable saving could be made in the carriage of mails from Europe. Press reports say that the Vanderbilt interests are behind the scheme. A survey party is at work under Chief Engineer Armstrong, making surveys from the Port Hawkesbury end. Col. Alton, who is stated to be the General Manager of the Co., is reported to have stated that the scheme has been financed, & that work will shortly be commenced.

Cassiar Central. An unconfirmed press report says that about 4 miles of grading has been done on this line from Glenora, B.C. (July, pg. 209.)

Coast Ry. of N.S.—We are officially informed that on the 20 miles extension from East Pubnico to Barrington the grading is all completed, including the Y at Barrington. Sixteen miles of track have been laid, & 9 miles have been ballasted. The bridges have been erected. Thirteen miles of wire fencing have been completed. Four of the 6 station buildings have been completed, & with two trains working at track laying & ballasting with a large force of men, it is expected that the entire line will be completed ready for operation early in Dec. It is probable that grading will be carried on during the winter season towards Shelburne, but no definite arrangements have been completed in this regard. A small steamer has been secured to connect with the line at Barrington Passage, to run between that point & the important places on Cape Sable Island, also to Port La Tour, North East Harbor & the adjacent islands, in connection with the live lobster shipments & general traffic. It

is expected that the shore steamer of the Yarmouth & S. S. Co. will run between Barrington & Halifax in connection with the road, instead of running all the way to Yarmouth. The Western Union Telegraph Co. is rapidly completing the telegraph line along the railway between East Palmer & Barrington, so that it may be ready for operation when the road is opened. (Oct., pg. 207.)

Dyea, Alaska, to Bennett.—A person who arrived in Victoria, B.C., recently from Skagway, stated that 200 men & 100 horses were engaged in grading for a railway from Dyea to Bennett. In the absence of confirmation, this story should be accepted with reserve, as it is doubtful if capital could be found for another line in that district, the White Pass & Yukon already connecting Skagway & Bennett.

Edmonton, Alta., Bridge. The raising of the piers of the Dominion Government's bridge 8 ft. has been completed, & the iron superstructure is now being placed in position. (Oct., pg. 293.)

Great Northern of Canada. The contractors' engineer recently stated that early next summer the line will be completed from the St. Maurice to the Ottawa, & connection made between deep water at Quebec & Parry Sound. Grading was about to commence on two new sections, from Shawenegan to Montcalm, 53 miles, & from St. Jerome to Hawkesbury, 35 miles. A middle section of the road between St. Jerome & Montcalm has been practically rebuilt. Track laying is still being pursued between Lachute & St. Jerome. A regular train is running between St. Jerome & St. Elizabeth. Many bridges have had to be built, including one over the Ottawa. The contractors hope to have the whole line completed by Aug., 1900. (Oct., pg. 294.)

Great Northwest Central.—The 20 miles extension from Hamiot, Man., to Parkissimo, has been completed. (Oct., pg. 294.)

Intercolonial.—It is said W. Kitchen has been given a contract for enlarging the tunnel through Morrissey's rock, about 5 miles west of Campbellton. It is intended to increase the height of the tunnel about 4 ft.

An extension of about half a mile is being built from the terminus at Pictou, N.S., to the Copper Crown Co.'s works. The work is rather heavy, there being 2 or 3 deep cuttings.

Increase of business at Sydney has necessitated considerable enlargement of the freight shed, also an increase of siding accommodation.

The grain elevator at the deep-water terminus at St. John, N.B., is about completed.

It will have a capacity of about 500,000 bush. (June, pg. 175.)

Interprovincial Bridge, Ottawa & Hull.

On Oct. 26 we were officially informed as follows:—"All the water piers of the bridge are now completed, with the exception of one course & the coping still to be laid on the deep-water pier. Work on the Ottawa approach is now being rushed, & the Hull approach will be started in a few days. The foundations of the piers are composed of concrete deposited in bottomless caissons which were sunk on bed-rock, the concrete being deposited in the usual way in buckets holding about one yard & being tripped when they reached bottom. The best Portland cement was used & the greatest care exercised in mixing, depositing, etc. The concrete for 4 of the water piers was mixed by hand, & for the other 2 piers by a concrete mixer, an excellent machine which gave very satisfactory results. The concrete was so deposited to within a few feet of low-water mark, after which the caisson was pumped out, the concrete levelled off & masonry constructed in the usual manner. The superstructure is exceedingly heavy & massive, & is probably one of the largest bridges of its design in Canada. The cantilever span is 556 ft. long. Considerable trouble was experienced with sawdust, which was around one of the piers to a depth of about 25 ft. The design would have been simplified had it not been for the amount of sawdust under the cantilever span, the depth of which was found, by using a diamond bit, to be about 60 ft. No. 2 pier is also very deep, being about 70 ft. to top of concrete & about 25 ft. masonry over this. Owing to the depth of this pier it was considered advisable, to satisfy everybody concerned of the stability of the structure, to make diamond drill borings through the pier to bed-rock underneath. This test was in every way satisfactory, core being produced all the way down. As far as can be learned this is the first test of the kind on record in the history of concrete in which a core was procured from any depth of bore." G. C. Dunn is acting Chief Engineer for the Bridge Co.

G. H. Duggan, C.E., from whose design the superstructure is being constructed, has supplied us the following information:—"The bridge has a total length of 2,050 ft., consisting of a cantilever span of 556 ft., which together with its anchor arms has a length of 850 ft., one 247-ft. span, one 140-ft. span, 750 ft. of trestle approach on the Hull side & 60 ft. of trestle approach on the Ottawa side. The trusses of the cantilever & other river spans are spaced 24 ft. apart centre to centre, giving room between for a single-track railway

& 2 wide sidewalks. Outside the trusses on each side brackets are extended 19 ft. to provide for the electric railways, & wagon traffic. The bridge has been designed for very heavy traffic,—a load of two 125-ton engines followed by a train of 3,000 lbs. per lineal foot having been taken for the railway track, & trains of 4 electric cars of 30,000 lbs. each on the electric railway tracks, the whole being taken at the railway unit stresses specified by the Department of Railways & Canals."

It is not expected that the superstructure will be erected before next spring. The Ottawa City Board of Works has not sustained the City Engineer's objections to the approaches to the bridge on the Ottawa side. (Oct., pg. 294.)

Inverness & Richmond.—Good progress is being made with the first section of this line from the Strait of Canso to Port Hood, N.S., 30 miles. Tracklaying is going on & it is expected to finish the same early in Dec. Ballasting has commenced, & the section is likely to be operated early in 1900. The present contract with the N.S. Government provides for the building of the line from the Strait of Canso to Broad Cove mines, 58 miles, & it is expected to complete this next year. An extension to Cheticamp, some 50 miles further, is contemplated. Messrs. Mackenzie & Mann were in Nova Scotia recently in connection with the enterprise, & their visit gave rise to press reports that they will develop the Inverness coal fields & ship the coal to Quebec & Ontario points. Cheticamp would be the port for summer shipments. (Oct., '99, pg. 295.)

James Bay.—A partial survey has been made of the proposed 5-mile section from the main line of the Canada Atlantic to the town of Parry Sound, but construction has not been started, & the Parry Sound Star says the survey party is now at work on another route, which would not touch Parry Sound. Some Parry Sounders are said to be in favor of the town itself building the 5 miles, for which bonuses have been granted by the Dominion & Ontario Governments, & which could then be leased to the Canada Atlantic, or to the Toronto-Sudbury line should the latter be built. (Oct., pg. 295.)

Kingston & Pembroke.—There is no present prospect of this line being extended from Renfrew into the mineral belt of Quebec in the vicinity of Bryson, though steps are being taken to interest the Co. in the matter. (Oct., pg. 295.)

Kootenay Ry. & Navigation Co.—The latest report about this Co.'s line from Bonner's Ferry, Idaho, to Kuskanook, B.C., was

A. O. Norton, Coaticook, P. Q., Canada.

to the effect that rails had been laid to within 7 miles of the point at which it will connect with the C.P.R., 4 miles west of Creston, B.C. Tracklaying had then to be stopped owing to want of rails. (Oct., pg. 295.)

On the Co.'s subsidiary line, the Kaslo & Lardo-Duncan, grading is said to be completed from Argenta to Duncan City, B.C.

Lake Erie & Detroit River Ry.—In reference to the report that this Co. will erect a summer hotel at Erieau, we were officially informed on Oct. 23 that nothing definite had been decided on and that it was then uncertain whether the hotel would be built or not. (Oct., pg. 295.)

Manitoba & Northwestern.—The extension of this Co.'s subsidiary, the Saskatchewan & Western, $2\frac{1}{2}$ miles at Rapid City, Man., to connect with the Great Northwest Central, has been completed. See also under head "Great Northwest Central," on pg. 326. (Oct., pg. 295.)

Manitoba & Southeastern.—On Oct. 31 we were informed that track had been laid from La Broquerie, last year's terminus, to a point about 85 miles southeast of Winnipeg & within 23 miles of the International Boundary. Grading was going on, & it was hoped to reach the Boundary before winter. The grading in Minnesota, on the Minnesota & Manitoba Ry., was reported as going on & as likely to reach the Boundary this year to connect with the M. & S.E.R., in which case track would be laid as far as War Road, Minn., which is about 10 miles from the Boundary, & will be a very important lumber point. (Oct., pg. 295.)

Michigan Central.—A contract has been let at \$150,000 for the iron work necessary to add a third truss to the cantilever bridge at Niagara Falls. The foundation work is being done by the Co. (Oct., pg. 295.)

Midland of Nova Scotia.—As mentioned in our last issue track has been laid between Windsor & the Shubenacadie River, 45 miles. Grading from the River to Truro, 15 miles, is about completed; track laying has been started, & it is hoped to complete that section this year. The bridge over the Shubenacadie will not be completed until well on into 1900. (Oct., pg. 295.)

Northern Pacific.—The branch from Portage la Prairie, Man., north towards Lake Manitoba, has been completed for 9 miles. Surveys have been made to the Lake, & it is possible the branch may be extended there next year. The branch from Portage la Prairie northwesterly has been completed to Beaver Creek, 20 miles. (Oct., pg. 295.)

In reference to a possible extension of the last mentioned line to Neepawa, Man., the Co.'s solicitors have written the press, saying among other things: "The most that can be said by way of encouraging an expectation of an extension in that direction some time in the future is that the President has authorized an examination of some sections of the province by a surveying party with a view of considering the question of possible extensions in the future. The deputation from the Neepawa council made very strong & encouraging representations as to the desire of the people of the town & district to have a branch of the company's lines competing for their traffic. We believe that similar representations have been made by other residents of the town interested in transportation. And we are led to hope that amongst others a surveying party may be instructed to make a report on the country tributary to that town."

The Nova Scotia Southern is projected to run from Shelburne, N.S., to New Germany on the N.S. Central & ultimately to Halifax. A provincial charter was granted for it years ago, a few miles were graded near Shelburne & then work was discontinued & the charter

lapsed. Last session the N.S. Legislature revived the charter, to come into operation by proclamation. Unconfirmed press reports say track has already been laid between New Germany & La Have River, & that it is expected to complete the first section of 90 miles by next June & the whole distance of 167 miles from Shelburne to Halifax by the end of 1900. R. G. Hervey, formerly of Brockville, Ont., is the promoter. (Oct., pg. 295.)

Ontario & Rainy River.—Track laying has been delayed by want of bridge lumber, but 5 miles have been completed, & it is expected to keep on till the grading is overtaken, some 40 or 50 miles west. The fine weather of the past month has been very favorable, & the grading on the first 50 miles from Stanley West is rapidly approaching completion. About 1,400 men are employed. A telegraph line has been built along the Port Arthur, Duluth & Western from Port Arthur to Stanley, & is being continued with the tracklaying along the O. & R.R. The completion of 50 miles will carry the railway to the Mattawin iron deposits. See also under head "Port Arthur, Duluth & Western," below. (Oct., pg. 295.)

Ottawa & Gatineau.—Construction is proceeding on the extension from Gracefield, 60 miles from Ottawa, to Maniwaki, & it is expected to take out all the rock during the winter & to finish the work to Maniwaki early next spring or summer. The extension skirts the shores of Castor, Trout, Blue Sea, Abitotbee, & several other large lakes, & will be between 23 & 25 miles in length. (Oct., pg. 296.)

Ottawa & New York.—We are advised that the work of rebuilding the steel bridge over the south channel of the St. Lawrence at Cornwall will be completed so that a through train service may be established through the Adirondacks between Ottawa & New York by July 1, 1900. The line is now being operated locally in two parts, the O. & N.Y. Ry. between Ottawa & Cornwall & the N.Y. & O. R.R. between Hogsburg & Tupper Lake, N.Y. (Oct., pg. 296.)

Port Arthur, Duluth & Western. The gradients & alignment between Port Arthur & Stanley Jct. are being improved to conform to the standard of the Ontario & Rainy River Ry., which will use this line between the points mentioned. (Oct., pg. 296.)

A telegraph line has been built from Port Arthur to Stanley, & is being continued along the O. & R.R. Ry.

It is reported that this line, which runs from Port Arthur, Ont., to Gunflint Mines, 92 miles, & which has been absorbed by the Ontario & Rainy River Ry., will be extended to Ely, Minn., about 45 miles, to connect with the Duluth & Iron Range Ry.

Pontiac Pacific Jct. On Oct. 26 we were advised that about 2 miles of the extension from Aylmer to Hull, Que., had been graded, that track laying would be commenced in a few days thereafter, & that it was expected to reach Hull with the track before the end of this year. (Oct., pg. 296.)

The line between Aylmer & Shawville is being rebalasted.

A by-law to grant the Co. \$30,000 for the establishment of its shops in Hull, has been defeated by the ratepayers, who voted on the basis of their assessment. E. B. Eddy, representing 95% of the E. B. Eddy Co.'s assessment of \$360,000, cast 1,710 votes against the by-law.

The Port Angeles Eastern is the Co. which wants Victoria, B.C., to bonus it to establish a ferry connection between that city & Port Angeles, Wash. The Co. has this season, it is said, built $\frac{3}{4}$ of a mile of trestle at Port Angeles up to the point where the docks will begin. About 6 miles of grading

is completed, & about 10 miles of right of way cleared. The surveys run east from Port Angeles across Sequim Prairie around the headwaters of Sequim Bay & Port Discovery Bay to Quilcene. Surveys are in progress for an extension to Shelton & Olympia, where connection will be made with the Northern Pacific.

Prince Edward Island. A contract for straightening the main line between Colville & Loyalist has been awarded to W. Kitchen, of Fredericton, N.B. Work has been begun & the contract requires it to be completed by June, 1900.

Ten miles of the Murray Harbor branch from Charlottetown is being located by H. J. MacKenzie, brother of W. B. MacKenzie, Chief Engineer of the I.C.R. It is expected that tenders will be asked for at an early date, & that construction will be started early next spring. The country through which the line is located is of a rolling nature, about the same as other portions of the Island, red soil & sandstone. It is fairly well settled all along the line, & would appear to warrant the belief that it would be quite up to, if not superior, to the main line in producing revenue. The gradients & curvature will be much less than in the present lines on the Island. Plans & specifications are being prepared by W. B. MacKenzie for the bridge over the Hillsborough River, & it is expected that tenders for it will be invited shortly. (July, pg. 210.)

Spokane & Northern.—Grading is reported begun on the cut-off from the Spokane Falls & Northern, a short distance north of Dugan, Wash., to run south-east about 3 miles to the G.N. main line. It is stated that the intention is to abandon the section of the S. F. & N. into Spokane when this section is completed. — Railroad Gazette.

St. John Valley & Riviere du Loup.—At the last Dominion Session the subsidy for 59 miles of this line, from Fredericton to Woodstock, was revoked. We are informed by one of the parties interested that a contract has been entered into between the Co. & the New Brunswick Government, which carries with it a provincial subsidy, & that an engineer has made a rough estimate of the probable cost of construction. (Oct., pg. 297.)

The Toronto, Hamilton & Buffalo has been granted an extension of time to Dec. 31, 1900, by Hamilton City Council, for the construction of the spur line to the northeast part of the city. (Oct., pg. 297.)

White Pass & Yukon.—Good progress is reported on the construction of the section between Cariboo Crossing, at the northeast end of Lake Bennett, & the White Horse Rapids, some 40 miles. About 20 miles of grading have been done, and tracklaying will soon be started. It is expected to go on with rock work all winter, & to have the section completed by the opening of navigation. (Oct., pg. 297.)

A Tacoma paper tells the following story about a cargo of 1,700 tons of steel rails which were loaded at Vancouver, & are to be used on the section above referred to:—The rails were made in the U.S., & were originally purchased for building an all-Canadian road to the Yukon from a point on the Stikine river. By the time the rails reached Vancouver the project had collapsed, when the rails were stored, & after some months were sold to a Japanese railway syndicate. This deal fell through, however, & the rails were bought by a Seattle firm, which recently made sale of them to the W.P. & Y.R. It thus happens that the rails will constitute a portion of a road to the Yukon, although it will not start from the terminus originally intended. As they must be taken over U.S. territory they had to be bonded for \$12,000, the amount covering the duty thereon.

Railway Equipment Notes.

The Albert Mfg. Co., Hillsboro, N.B., is building 14 passenger cars built.

Another mogul locomotive has arrived at St. Thomas, Ont., for the Wabash.

It is said the Quebec & Lake St. John Ry. will soon order 2 parlor cars & 20 coaches.

The White Pass & Yukon Ry. is building 100 cars, 60 of which will be box cars, 20 flats, & 20 stock cars.

The Newfoundland Ry. is ordering a number of compound locomotives, 5 sleeping cars, & some other equipment.

The Canada Atlantic's Ottawa shops have turned out 500 freight cars this year, & are now working on another 500 order.

The first locomotive for the Dominion Iron & Steel Co. was recently received at Sydney, N.S. Following are the general dimensions: Cylinder, 18x24; firebox, 34½ in. wide, 64 in. long; driving wheels, 50 in. dia.; boiler, 56 in., style straight; 202 2-in. flues, 13 ft. 3 in. long; wheel base 10 ft. 6 in.; weight, 98,000 lbs.

Four locomotives are being built in the Intercolonial shops at Moncton, N.B. They are of the mogul freight type, weight to be about 101,000 lbs., with 86,000 lbs. on the drivers, cylinders 18"x24", driving wheels 57" diameter, boiler pressure 180 lbs. per square inch, slide valves fitted with American balance valve. The locomotives will be fitted with Westinghouse air brake, sight feed lubricators, & the I.C.R. standard re-starting injectors. Capacity of tank 3,500 imperial gallons. There has been no new work commenced in the I.C.R. shops during October. Rhodes, Curry & Co., Amherst, N.S., have made delivery of 25 box cars of 60,000 lbs. capacity. No decision has been arrived at about the cars proposed to be built at Moncton.

At the recent annual meeting of the American Railway Association, the committee on standard dimensions of box cars reported that 96 roads, owning 464,455 freight cars, & operating 63,337 miles, favored the following

as dimensions for a typical box car: height, 8 ft., measurement taken from floor to bottom of car line immediately over plate at side of car; width, 8 ft. 6 in., measurement taken between linings; length 34 ft., measurement taken between end linings; cubical contents, 2,312 ft.; cubical contents per linear foot, 68 ft. Seventy-three roads, owning 540,222 cars, & operating 74,991 miles of road, did not favor the foregoing, & proposed other dimensions. The committee will continue its efforts at securing a typical box car.

Grand Trunk Equipment.

Following are the general dimensions of the 10 Vauclain compound consolidation locomotives, being built for the Co. at the Baldwin Locomotive Works, as mentioned in our last issue:

CYLINDERS.—High pressure.....	15½ in.
Low pressure.....	26 in.
Stroke.....	28 in.
BOILER.—Diameter.....	66 in.
Working Pressure.....	200 lbs.
FIRE BOX.—Length.....	114 3-16 in.
Width.....	41 1-4 in.
TUBES.—Number.....	260
Diameter.....	2 in.
Length.....	14 ft.
DRIVING WHEELS.—Diameter.....	56 in.
JOURNALS.....	8 x 12 in.
ENGINE TRUCK WHEELS.—Diameter.....	33 in.
JOURNALS.....	5 x 9 1/2 in.
WHEEL BASE.—Driving.....	15 ft. 3 in.
Total.....	23 ft. 6 in.
WEIGHT.—In working order.....	about 145,000 lbs.
on driving wheels.....	
Total.....	about 162,000
TENDER TANK.—Capacity.....	4,500 gallons
WHEELS.—Diameter.....	33 in.
JOURNALS.....	5 x 9 in.

These locomotives are for international service in the hilly districts between Portland & Montreal.

There has been a lull in G.T.R. equipment matters, nothing of any consequence having been ordered during October.

It is said the ordering of some 20 locomotives for the Central Vermont is being considered.

The rolling stock of the Central Vermont is likely to be improved as quickly as possible.

Modifications of M.C.B. Standards.

As a result of the letter ballot certain of the standards & recommended practice of the Association were modified as follows:—

STANDARDS.

Sheet 1.—Size of bolt holes changed to 1 1-16 in.

Sheet 2.—Size of bolt holes changed to 1 1-16 in.

Sheet 7.—Addition of axle with journal 5½ in. x 10 in., & the designation of the different standard axles by a letter.

Sheet 11.—Extension of contour lines; modification of standard limit gauge; change in radius of yoke; additions to the illustration of the automatic coupler.

Sheet 15.—General dimensions only for journal-bearing given.

RECOMMENDED PRACTICE.

Sheet B.—Play of shank of coupler in carry-arm changed to not less than one-half inch on each side.

Sheet C.—Diameter of boring gauge 3½ in. x 7 in., journal changed from 3 15-16 in. to 3 13-16 in. (This is not the result of letter ballot, but the correction of a clerical error.)

Sheet H.—Radius at top of pedestal changed from 50 in. to 5 ft. 0 in. (This is not the result of letter ballot, but the correction of a clerical error.)

Sheet I.—Fletcher journal box lid eliminated & sheet 1 used to illustrate the twist gauge for M. C. B. couplers, gauge for worn M. C. B. couplers; location of air brake parts on cars & label for air brake hose.

Sheet K. (new sheet).—Illustration of drop test machine & details for M. C. B. couplers.

These changes & additions have been made & lithographs illustrating the same are ready for delivery.—Railroad Gazette.

A. O. Norton, Coaticooke, Que., manufacturer of ball-bearing lifting jacks, has added additional special new machinery to his already well equipped plant, to keep up with the increasing demand for his product. He reports several large export orders.

Canadian Pacific Equipment.

The 12-compound locomotives mentioned in our last issue as having been ordered in the U.S. are to be built by the Richmond Locomotive Works, Richmond, Va., to be delivered in May next. An order has also been placed for the manufacture in Canada of 10-compound locomotives to be delivered by next spring. They are to be of the same type as a previous order for 6 which are about to be delivered, the general specifications being the same as for those to be built at Richmond, & which were given in our last issue.

Eleven freight cars a day are being turned out at the Co.'s shops at Perth, Ont., & as will be seen by reference to pg. 323, it is proposed to establish car shops of large capacity in Western Ontario.

At the Co.'s Hochelaga shops there are being built 2 1st class coaches & 2 standard wing plows. The coaches will be 65 ft. long, equipped with wide vestibules, standard steel platforms, electric light, steam heat, Westinghouse high speed triple brakes & C. P. R. standard 6 wheel trucks.

The following additional orders have been placed at the Co.'s shops at Perth, Ont. : 60

CYLINDERS.	
Diameter of cylinders	22 ins.
Stroke of piston	28 ins.
Horizontal thickness of piston	18 ins.
Diameter of piston rod	3 1/2 ins.
Kind of piston packing	Cast iron
Size of steam ports	18 x 1 1/2 ins.
Size of exhaust ports	18 x 2 1/2 ins.
Size of bridges	18 x 8 ins.

VALVES.	
Greatest travel of slide valves	5 1/2 ins.
Outside lap of slide valves	3/4 in.
Inside lap of slide valves	1 1/2 in.
Lead of valves in full gear	1-10 in.

WHEELS, ETC.	
Diameter of driving wheels outside of tire	55 ins.
Material of driving wheels, centers	Main, cast steel ; Inter., steel cast iron
Tire held by	Shrinkage
Driving box material	Main, cast steel ; Inter., steel cast iron
Diameter & length of driving journals, main only	9 ins. diameter, 8 1/2 ins. dia. x 10 ins.
Diameter & length of main crank pin journals, (main side 7 1/2 x 5 ins.)	7 in. dia. by 6 1/2 ins.
Dia. & length of side rod crank pin journals, (15 x 4 ins.)	Inter., 6 ins. dia. x 4 1/2 ins.
Engine truck, kind	2-wheel swing bolster
Engine truck, journals	6 ins. dia. x 10 ins.
Diameter of engine truck wheels	30 ins.
Kind of engine truck wheels	Plate

BOILER.	
Style	Straight
Outside diameter of first ring	72 ins.
Working pressure	200 lbs.
Material of barrel & outside of fire box	Carbon steel

Both locomotives are equipped with Westinghouse 6 in. air pumps. The side tanks are supported by means of heavy braces resting upon the frames. In front this brace is a part of the guide yoke. The 3 tanks are all connected, & water is taken in at either one of the side tanks. The injectors take their supply from the back tanks. The total water capacity is quite equal to that of most tenders of the ordinary type. The cylinder saddle is double bolted to the smoke-box. About the only deviation from strict American practice is seen in the placing of the air pump upon the front end. The main & intermediate driving wheels have bald tires.

RAILWAY APPOINTMENTS, Etc.

Canadian Pacific. C. R. Hosmer, who was recently elected a director of the Co., has announced his intention of resigning the position of Manager of the Co.'s telegraphs, which he has held since their inception. As a director of the Co. he will no doubt pay special attention to the Co.'s telegraph matters. Jas Kent, Superintendent of the Eastern Division of the Co.'s telegraphs, is likely to be

DOUBLE END CONSOLIDATION LOCOMOTIVE FOR SYDNEY AND LOUISBURG RY.

45 ft. furniture cars, 100 30 ton Rogers' ballast cars, 700 standard 30 ton box cars, 200 standard 30 ton flat cars. Work has not yet been started on these.

The narrow gauge locomotives which were used on the Columbia & Western Ry., between Trail & Rossland, B.C., before it was standardized, are to be sent to the Chilliwack district, New Westminster, having been sold to a dyking contractor there.

It is said the Minneapolis, St. Paul & Sault Ste. Marie Ry. will order 10 heavy decapod locomotives, probably early next year.

Sydney & Louisburg Locomotives.

This Co. has recently added to its equipment 2 double end locomotives, 1 mogul & 1 consolidation, which are believed to be among the largest double enders ever built. An illustration of the consolidation one is given on this page. Following are particulars regarding it :

GENERAL DIMENSIONS.	
Gauge	4 ft. 8 1/2 ins.
Fuel	Bituminous coal
Weight in working order	239,000 lbs.
Weight on drivers	170,000 lbs.
Wheel base, driving	15 ft.
Wheel base, rigid	15 ft.
Wheel base, total	36 ft. 3 ins.

Thickness of plates in barrel & outside of fire box	3/4 in.
Horizontal seams	Butt joint sextuple riveted, with welt strip inside & outside
Circumferential seams	Double riveted
Fire box, length	41 ft. 7-8 ins.
Fire box, width	7-8 ins.
Fire box, depth	F. 70 1/2, B. 67 1/2 ins.
Fire box, material	Carbon steel
Fire box, plates, thickness	Sides 5-10 in., back 3-4 in., crown 3-8 in., tube sheet 1 in.
Fire box, water space	Front 4 ins., sides 3 1/2 ins., back 3 1/2 & 4 ins.
Fire box, crown staying	Radial stays 1-1-8 ins. dia.
Fire box, stay bolts	1 in. dia.
Tubes, material	Charcoal iron, no. 1
Tubes, number of	348
Tubes, diameter	2 ins.
Tubes, length over tube sheets	13 ft. 10 ins.
Fire brick, supported on	Studs
Heating surface, tubes	17,600 sq. ft.
Heating surface, fire box	1,760 sq. ft.
Heating surface, total	19,360 sq. ft.
Grate surface	33-21 sq. ft.
Grate style	Rocking
Ash pan, style	Sectional, dampers front & back
Exhaust pipes	Single, high
Exhaust nozzles	5 1/2 ins., 5 1/2 ins., 5 1/2 ins.
Smoke stack, inside diameter	40 ins.
Smoke stack, top above rail	41 ft. 9-206 ins.

TENDER.	
Wheels, number of	4
Wheels, diameter	28 ins.
Journals, diameter & length	5 in. dia. x 9 ins.
Tender trucks	4 wheel center bearing wing spring bolster carrying back end of engine
Water capacity	4,200 U.S. gallons
Coal capacity	1 tons

promoted to the managership, though no official announcement has yet been made.

A. D. MacTier, heretofore General Baggage Agent, has been appointed General Fuel Agent, with office at Montreal. This is a new position. Heretofore fuel has been purchased by the General Purchasing Agent & distributed by the Car Service Agent, but the vast growth of the Co.'s business has made it desirable to have a special officer to attend solely to fuel matters. Mr. MacTier has been in the Co.'s service since 1887, & before that was with the Southeastern Ry., now a part of the C.P.R. system.

R. H. Morris, heretofore Chief Clerk of the General Baggage Department, has been appointed General Baggage Agent of all lines of the Co., with headquarters at Montreal, in place of A. D. MacTier, promoted. Agents & train baggagemen on Western division will address Mr. Morris at Winnipeg, those on the Pacific division will address him at Vancouver.

E. Emery has been appointed Assistant Auditor of Passenger Receipts, with headquarters at Montreal. Mr. Emery, who is a son of a former Assistant Postmaster of Montreal, has been in the C.P.R. employ since the early days, & has been Chief Clerk in the

office of the Auditor of Passenger Receipts for a number of years.

In connection with recent changes in the Audit Department, notice is given that all bills from other lines for settlement, except freight overcharge claims, should be addressed to J. Leslie, Auditor of Disbursements, Montreal. Freight overcharge claims should be addressed to J. R. Steele, Freight Claims Auditor, Montreal.

In connection with the recent promotion of A. C. Henry to be General Purchasing Agent, & the appointment of E. N. Bender as Assistant General Purchasing Agent, F. E. Gautier who has been for some years in charge of the local purchasing office for the Western Division at Winnipeg, & A. J. Dana, who has held a similar position for the Pacific Division at Vancouver, have each been given the title of Assistant Purchasing Agent.

The time service on the lines east of Fort William has been reorganized. R. J. E. Scott has been appointed Chief Inspector of Time Service, with office at Montreal. His jurisdiction does not extend west of Fort William.

C. N. Coburn, Assistant Engineer on the double track work between Montreal & St. Annes, has been appointed Resident Engineer at Smith's Falls, Ont., succeeding A. E. Kirkpatrick, who has taken a position on the Egyptian Government Railways.

J. M. Guenette has succeeded J. B. O'Brien as Roadmaster on the Montreal & Ottawa section. S. J. Faught, heretofore section foreman at Nipissing Jct., has been appointed Roadmaster on the Sault Ste. Marie branch, between Wellwood & Sault Ste. Marie, vice W. S. Smith, resigned.

W. B. Way, despatcher at North Bay, has been appointed Chief Despatcher at Chapleau, Ont., succeeding C. Murphy, appointed Acting Superintendent.

J. B. McTaggart, of Fort William, Ont., has been appointed Superintendent of the Bridge & Building Department at Moose Jaw, Assa., vice P. Henselwood, resigned.

In reference to the change in the Superintendency of the Crow's Nest Pass branch, mentioned in our last issue, it may be stated that M. H. MacLeod, who temporarily discharged the combined duties of Engineer & Superintendent, will hereafter confine his attention to engineering matters, being in charge of the location and construction of lines in East Kootenay. He will also act as Engineer of the Crow's Nest Pass branch. His headquarters are at Cranbrook, B.C.

Central Vermont.—D. A. Sheedy, Superintendent of Bridges & Building, has resigned to resume his former position with the Edge Moor Bridge Co., at Edge Moor, Del. He has been succeeded by J. E. Toohey, heretofore with the Edge Moor Bridge Co.

J. J. Todd having resigned, J. P. Benny has been appointed Roadmaster of 1st & 2d districts. Office at Palmer, Mass.

Grand Trunk.—Jos. Munday, heretofore Chief Train Despatcher at Montreal, is appointed Superintendent Terminals, Portland, Me., including freight & stock yards at Deering. Office, Portland, Me.

G. F. Cotter, has been appointed Chief Train Despatcher at Montreal, succeeding J. Munday, promoted.

The following changes have been made in regard to road-foremen of engines, Eastern Division: T. Hardy, territory changed to 1st & 3rd districts, & 2nd district, Island Pond to Richmond; headquarters at Island Pond, Vt. F. Payette, territory changed to 2nd district, Richmond to Montreal, & 4th & 5th districts; headquarters at Montreal. N. B. Whitsel, appointed road-foreman of engines 6th & 7th districts; headquarters at Belleville, Ontario.

H. A. Woods has been appointed Engineer in Charge of all new work in connection with revision of grades & double tracking of the Chicago & Grand Trunk Ry. Office at Detroit, Mich.

E. H. Hughes, Western Passenger Agent, Chicago, having resigned, the position has been abolished.

Intercolonial.—W. K. Reynolds, Press & Advertising Agent at Moncton, N.B., has resigned.

J. Hardwell, Division Freight Agent, Montreal, has been appointed Assistant General Freight Agent with headquarters at Montreal. He will still attend to the duties of Division Freight Agent between Montreal & Dalhousie, N.B., & continue to act as Foreign Freight Agent.

H. A. Price, District Passenger Agent, Montreal, has been appointed Assistant General Passenger Agent.

J. W. Bryson, of the Montreal ticket office, has been appointed City Passenger Agent there, succeeding H. J. Sriver, assigned other duties.

Lake Erie & Detroit River.—Owing to the small amount of passenger business across Lake Erie, O. J. Hammon will, for the time being, take charge of both the freight & passenger business of this Co.

Northern Pacific.—A. Lovell has been appointed Superintendent of Motive Power, with office at St. Paul, Minn., & the office of Assistant Superintendent of Motive Power, previously held by him, has been abolished.

Oxford Mountain.—At a meeting of stockholders A. H. Moore & E. F. de Varnnes, were elected directors.

Sydney & Louisburg Ry.—P. L. Naismith having resigned his position with the Dominion Coal Co., A. N. McLennan, heretofore Roadmaster, has been appointed to succeed

him as Superintendent of Railway & Shipping. Mr. Naismith will remain for some time in the Co.'s employ in an advisory capacity in connection with the department over which he has presided. The foregoing is taken from the official circular. A press report says Mr. Naismith has received an appointment from the Alberta Ry. & Coal Co. at Lethbridge, Alberta.

White Pass & Yukon.—J. P. Rogers has been appointed Division Superintendent of the Pacific & Arctic Ry. & Navigation Co., B. C. Yukon Ry. Co., British Yukon Mining, Trading & Transportation Co., collectively known as the White Pass & Yukon Route, with headquarters at Skagway, Alaska, vice F. H. Whiting, resigned. This division includes the line as at present operated between Skagway, Alaska, & Bennett, B.C., together with the line in course of construction between Bennett, B.C., & Closeleigh, on the Lewis River below White Horse Rapids, N.W.T., distance from Skagway, 111 miles.

C. Moriarity, General Roadmaster of the Great Northern (U.S.A.) on the Cascade division, has resigned to accept a similar position with the White Pass & Yukon Ry.

Mainly About People.

"Canada's Hymn of Empire," written by A. Cox, Treasurer & Superintendent of Supplies of the G.N.W. Telegraph Co., has been set to music.

W. R. Callaway, General Passenger Agent of the Minneapolis, St. Paul & Sault Ste. Marie Ry., had an attack of fever in Oct., but has recovered.

Kenneth Bethune, son of the Superintendent of the G.N.W. Telegraph Co., at Ottawa, was married Oct. 11 to the daughter of H. N. Kittson, of Hamilton.

Lucius Tuttle, formerly Passenger Traffic Manager of the C.P.R., & now President of the Boston & Maine, has been also elected President of the Maine Central.

T. A. Burrows, M.L.A. for Dauphin, Man., & Land Commissioner of the Canadian Northern Ry., was married at Owen Sound, Ont., Oct. 25, to Miss G. K. Creasor.

D. G. Thompson, Manager of the Montreal Transportation Co. since 1869, died Nov. 5, having been attacked with paralysis while on the Montreal Board of Trade on that day.

Hamilton, eldest son of W. R. Baker, General Manager of the Manitoba & Northwestern Ry., died at Dawson City early in Oct., of typhoid fever. His body was taken to Winnipeg.

To Los Angeles and Southern California.

Every Friday night, at 10.35 p.m., a through Tourist Car for Los Angeles and Southern California leaves the Chicago, Milwaukee & St. Paul Railway Union Passenger Station, Chicago, via Omaha, Colorado Springs and Salt Lake City, for all points in Colorado, Utah, Nevada and California.

In addition to the regular Pullman porter, each car is accompanied by an intelligent, competent and courteous "courier," who will attend to the wants of passengers en route. This is an entirely new feature of tourist car service and will be appreciated by families or by ladies travelling alone. Particular attention is paid to the care of children, who usually get weary on a long journey.

These tourist cars are sleeping cars supplied with all the accessories necessary to make the journey comfortable and pleasant, and the berth rate (each berth will accommodate two persons) is only \$6.00 from Chicago to California. Ask the nearest ticket agent for a tourist car folder, or address A. J. Taylor, Canadian Freight and Passenger Agent, 8 King Street East, Toronto, Ont.

The Royal Trust Co., which has been incorporated in Montreal, includes in its directorate Lord Strathcona, Sir Wm. Van Horne, R. B. Angus, C. M. Hays, T. G. Shaughnessy, C. R. Hosmer & Jas. Ross.

S. F. Forbes, ex-purchasing agent of the Great Northern (U.S.A.) has been appointed Assistant Superintendent of Motive Power of the Central of New Jersey, with headquarters at Salt Lake City, Utah.

It is reported from Seattle, Wash., that A. N. Gray, General Freight & Traffic Manager, & E. G. McMicken, General Freight & Passenger Agent of the North American Trading & Transportation Co., have resigned.

C. Schrieber, Deputy Minister of Railways, returned to Ottawa Nov. 1, from a trip over the C.P.R. to the Pacific coast, during which he inspected the Crow's Nest Pass Ry., & the Sault Ste. Marie canal. He was accompanied by a party of ladies.

J. A. MacMahon, of Dundas, Ont., who died in Toronto, Oct. 14, carried out some important contracts, including the Canada At-

Sir Wm. Van Horne recently visited East Selkirk, Man., where he is starting a 3,000 acre farm, with the intention of stimulating the progress of the Red River Valley as an agricultural district. Sir William thinks the land around Winnipeg is as good as any further west, & he means to demonstrate this.

E. H. Hughes, who was recently replaced as Assistant General Passenger Agent at Chicago by G. T. Bell, & was given the position of Western Passenger Agent, has left the Co.'s service & has been appointed General Contracting Passenger Agent of the New York, Chicago, & St. Louis, with headquarters at Chicago.

The Michigan Central R.R. Co. has a very satisfactory way of recognizing service in its behalf. It places old & faithful employees on the retired list with a pension, which is continued during the remainder of the life of the pensioner. W. J. Martin, formerly Division Superintendent, after 35 years of faithful & valuable service for the road, was placed on the retired list & given a pension sufficient to enable him to enjoy the comforts of life during

Mr. Shaughnessy in the West.

The first trip made by Mr. Shaughnessy over the C.P.R. to the Pacific Coast since his election to the Presidency, which occupied from Oct. 13 to Nov. 6, was very satisfactory, particularly on account of the hearty welcome accorded him at the various points at which he stopped. He was accompanied throughout the trip by Chief Engineer Peterson & by H. S. Holt, of Montreal. Various officials of the Co. travelled with the President through the territory in their respective jurisdictions, Manager Whyte, of the Western Lines, & Land Commissioner Hamilton going with him from Fort William to the Pacific Coast. The President & his immediate party travelled in his official car the Metapedia. On the outward journey they went over the Crow's Nest Pass branch, visiting Nelson & Rossland & going along the Columbia & Western extension from West Robson as far as Greenwood, B.C., returning via Robson, & going up the Columbia to Revelstoke & on to the Coast, the trip extending to Victoria. On the return journey the main line was left at Moose

Net to Baldwin Loco. Works Jan. 2, 1900

The above illustration represents the method adopted by the Baldwin Locomotive Works of accurately ascertaining the weight on the separate axles of a locomotive. Each pair of wheels is placed on a separate Fairbanks scale, each of which is complete in itself & is capable of registering a weight of 60,000 lbs. For the purpose of easy adjustment & transfer, the foundation frame of each scale is mounted on a set of small truck wheels bearing on the track rail.

lantic Ry. bridge at Coteau Landing, & a number on the C.P.R., G.T.R., & M.C.R., as well as the dry dock at Levis, Que.

J. B. Laurie, formerly G.T.R. Storekeeper at London, Ont., & now Purchasing Agent of the Central Vermont, at St. Alban's Vt., visited London recently, & was presented with an address & travelling bag from the clerks of the stores & car departments of the G.T.R. there.

Jas. R. Cameron, who died at Spokane, Wash., Oct. 7, was born in Nova Scotia in 1860, & has been engaged in railway contracting in the west since the early days of the C.P.R. & the Northern Pacific. His latest work was on the C.P.R. Crow's Nest Pass branch.

Granville Cunningham, formerly Manager of the Montreal Street Ry., & latterly Manager of the Birmingham, Eng., Tramway Co., has been appointed Manager of the General Electric Underground Ry. in London, Eng., & has removed from Birmingham to London.

the remainder of his days.—St. Thomas Times.

D. D. Mann, of Mackenzie, Mann & Co., arrived at Vancouver, B.C., Oct. 18, from China. On returning to Montreal he intimated in an interview that his visit had been a successful one, but declined to give any particulars. Speaking of Chinese railways in general, he said, the Imperial Chinese Ry., owning about 330 miles, one line being from Tien-Tsin to Peking, 75 miles in length, comprises the whole system, except a little road of 12 miles connecting the bar or port with Shanghai. The Chinese travel in great numbers on the line between Tien-Tsin & Peking. This is a well-built road, it is double-tracked & almost as solidly built as English lines. The engineering department is in charge of Mr. Kinder, an Englishman, but fully 80% of the employees are Chinese. A portion of the line between the coast & Peking runs through a barren country, but the last 50 miles is a fairly well populated agricultural district. The railway comes to only within 5 miles of Peking, as the prejudices of the people will not permit the locomotive coming any nearer the city.

Jaw, the party travelling by the Minneapolis, St. Paul & Sault Ste. Marie, taking the main line again at Sudbury. The party were entertained at public dinners at Grand Forks, B.C., & at Vancouver, & were tendered a great deal of private hospitality.

In Vancouver Mr. Shaughnessy was present at a largely attended meeting of the Board of Trade, at which an address was presented, congratulating him on his election to the Presidency & submitting a number of important matters for his consideration, including the desire for closer & more direct communication between Vancouver & the Kootenay & Boundary Creek districts, the establishment of railway communication between Vancouver & Steveston, & the improvement of the steamship service to Dawson. Gratification was expressed at the Co.'s action in erecting substantial & commodious terminal buildings in Vancouver. After some remarks by members of the Board on subjects alluded to in the address & on other matters, Mr. Shaughnessy spoke at considerable length. Following are extracts dealing with the principal points:

I recognize the desirability of having more direct communications with the Boundary Creek & West Kootenay districts, but I consider the problem is a most serious one. In speaking of the distance from Vancouver to Greenwood & Grand Forks, as the route lies, we are far away from our estimate of the distance by rail. We have most serious obstacles to overcome, & we are not prepared to say, as yet, that there is any practical road between Vancouver & the Boundary Creek country. No doubt a line can be built from Penticton to Midway, shortening to some extent the distance because it would substitute a rail haul for a wagon haul, but it would not be wise for the Co. to proceed with a line to Penticton, or any other point in that vicinity, without first knowing how to get along to territory further west. We have spent vast sums in that country recently by building the most expensive piece of line ever undertaken by the Co. It opened up a country which I hope will be very productive, but we can expect very little return for years to come, & we must now carefully investigate the territory west of us before we can decide what our next movement will be."

"Without making a positive statement on the subject, or specifying a time limit, I think I may assure you that in the near future a road will be provided for a portion of the distance between Vancouver & Steveston at any rate. My own impression is that the direct line will have at least two spurs, & we are now looking into that matter. In the meantime, either directly, or through some other channel, I hope we shall shortly be able to commence the construction of the line."

"The question of improved steamship service between Vancouver & Skagway, or some other Alaskan port, is, I appreciate, of very great importance indeed. It is unfortunate that at present so large a portion of the trade of the Yukon country is being done through channels other than Canadian, & that so large a portion of the traffic is carried in ships other than Canadian. I discussed the subject to some extent yesterday with the C. P. Navigation Co.'s officials at Victoria, & in endeavoring to determine what should be done with some of their ships this subject was mentioned. A difficulty that they raised & no doubt it is a serious one—is the fact that while our steamers are not permitted to do a coasting trade between U.S. ports & Canadian ports, U.S. steamers can come to Canadian ports & do a coasting trade. It seems to me that strong representation should be made to induce the Government to enforce against foreign ships just the same regulations that they enforce against ours. This probably would have the effect of encouraging some of the Canadian lines to provide a suitable service. In anticipation of a very large Yukon trade, two years ago we purchased two ships in Europe, & built a good many river boats here. The rail-

way route we had in mind at that time was, unfortunately, not approved; at least the Government were unable to furnish the necessary assistance to secure the construction of the railway lines between the water stretches. We found that our boats were rather too large for the purpose, & they were put into other trade. We dislike to engage in the steamship business unless it be absolutely necessary. We prefer to have that part of the route covered by some private shipping company, but if that be not done within a reasonable time, we must see if we cannot give some assistance in that direction also."

"While in Victoria yesterday I had a talk with the C. P. Navigation people about the service between Vancouver & Victoria. It has been unsatisfactory for a good while past, & I intimated pretty clearly that improvement must at once be made. My own idea is that we should have a day boat, that the boat leaving the wharf here on the arrival of our train should be a direct continuance practically of that train to Victoria. It should leave immediately on the arrival of the train, carrying passengers, mails & baggage only, & should go to Victoria just as quickly as possible. On the other hand, the boat leaving Victoria should make a direct connection with our east-bound train. A difficulty that was raised by them was the fact that under those circumstances Victoria people coming to Vancouver for the transaction of business involving only a very short time would be compelled to remain over night, & that passengers going from Vancouver to Victoria would require to be away two nights. I think that can be overcome very readily & economically, if they do the right thing. Two first-class freight boats, with 10 or 12 suitable cabins, travelling at a rate of 13 or 14 knots, could leave either port at, say, 10 o'clock at night, & reach either port at 10 o'clock in the morning, making it very convenient for those who wish to do their business in one day in either city. The difficulty is to get these boats, as they cost a considerable amount of money, & can only be used on this route. I recognize this difficulty. We are not anxious, of course, to do anything unfair to the people with whom we have had pleasant relations for so long a time, but I hope they will be able to provide other channels of trade for which the boats can be used. Meantime, so soon as it can be arranged the Islander will be put on the route permanently, making the run during the day, but the night steamer would not require to make the speed of the day boat, as it could reach either city early the following morning. I do hope that the day of the Yosemite & Rithet on that route is past."

J. C. McLagan brought up the question of the Chilliwack railway. He said that it was well known that this district was the most important agricultural section of the Province, & he would like to see this scheme furthered

as well as that of the railway to Steveston. There were fairly good roads now in the direction of Steveston. The C.P.R. had a line & bridge across the Fraser at Mission, & it only was a matter of 28 miles of a line from Abbotsford to Chilliwack. Many of the C.P.R. officials had gone over the proposed route & had found that the undertaking would not be a very serious or difficult one. Nothing else that could be done for the people of Vancouver or the Fraser Valley would conduce more to their interest than the building of this line. He had been assured that it was a matter of physical impossibility for a railway to come out at Hope, & he thought the line he mentioned would become eventually part of a trunk line up the Fraser Valley. He had had, too, a long correspondence with the Dominion Minister of Railways, & he could state positively that any feasible scheme for a railway south of the Fraser would receive the careful consideration of the Government. The people of this section were practically shut out from travel in the winter time, & there were many difficulties in navigation all the way along to Hope & Yale, where the steamers formerly ran. He was assured that instead of giving grants of money year after year for the improvement of the river, the Federal Government would much rather give a lump sum in aid of a line of railway paralleling the river."

On the evening of the same day the Vancouver Board of Trade entertained Mr. Shaughnessy & his party at dinner at the Hotel Vancouver, there being a large & very representative attendance. In the course of his reply to the toast of his health Mr. Shaughnessy said he did not need to say anything to them of the great mind of Sir Wm. Van Horne, his wonderful originality, his marvellous constructive genius, but he could tell them what probably his most intimate friends alone knew, that no bigger heart was ever created. But he had not gone out of the firm, & he still came occasionally down to the shop, & he knew that if at times he found it difficult to reach the estimate of the people he would only have to call into counsel the former president of the railway."

The C.P.R. was an unique corporation. When he used this expression, he did not refer particularly to the vast mileage covered & the equipment of the line, as to the variety of its interests. For instance, they were common carriers, like other railways, but there was a land department, which had the care of a vast estate almost as large as a principality. Then there were the steamship interests, now operated on the lakes & one ocean, & he hoped soon to be operated on the other, the systems of cables & telegraphs, the express department, hotels, etc., & he did not think they had forgotten to pay some attention to the laundries & barber shops & even prize packages were sold under the direct supervision of the management. No system could be complete

PLANS AND SPECIFICATIONS.

without comprehending the smallest details, & in this there were employed a staff of 28,000 men. Amongst these there were lawyers & other professional men, & out in B.C., where he supposed they needed some moral advice, they even retained missionaries.

He had mentioned to them the variety of interests & he would like to say something about the officers of the corporation. In order to make that organization perfect, to properly care for the affairs of the Co., the greatest possible care was required on the part of the Co.'s managers, general superintendents, traffic officers & others of the staff. He had been with the Co. almost since its inception, & previous to that had had 14 or 15 years' experience in railway life. He knew pretty thoroughly the organization of the railway from one end of the continent to the other, & appreciated it in every detail & he knew he could say without fear of contradiction that no railway in the world ever had, or has had, the same competent, loyal or energetic staff as that of the C.P.R. Without such a staff, no amount of ability or energy on the part of the higher officers of the Co. would be effective, & with it they were able to distance their competitors.

Charles Rudolph Hosmer.

The newly-elected director of the C.P.R., whose portrait is given on pg. 313, is the son of the late Hiram P. Hosmer, & was born at Coteau Landing, Que., Nov. 12, 1851, & educated there. He commenced telegraphy at the age of 14. When he was 21 he was appointed Superintendent of the Dominion Telegraph Co., then the active competitor of the Montreal Telegraph Co., & in 1881 became President of the Canada Mutual Telegraph Co., an ally of the Mutual Union Telegraph Co. of the U. S. A. In 1886, when the C.P.R. decided to establish a commercial telegraph system, Sir Wm. Van Horne selected him for the position of Manager, which position he has occupied ever since, the system having grown under his management to its present vast proportions. He has announced that he will shortly retire from the position & it is said that in addition to attending to his important private interests he will represent in Montreal an important foreign banking house.

Soon after Mr. Hosmer's appointment to the management of the C.P.R. Co.'s telegraphs, an alliance was formed with the Mackay-Bennett cable & allied telegraph interests, which threw him into close personal contact with John W. Mackay, of Bonanza fame, & a warm friendship sprang up between them. Mr. Hosmer has for some time been Vice-President of the Commercial Cable Co., & in addition to being a director of the C.P.R. is also a director of the Merchants Bank of Canada, Montreal Gas Co., London & Lancashire Insurance Co., Canada Paper Co., Edwardsburg Starch Co. & other important enterprises.

RAILWAY PROJECTS.

Brandon & Southwestern. Notice is given of application to the Dominion Parliament for an act to extend the Brandon & Southwestern Ry. (projected) from Brandon, Man., to Gladstone, thence to or near Carman, thence to Winnipeg, also from or near Carman to the International Boundary line in range 5 or 6, also from township 8 or 9, range 7 or 8, to the boundary in township 1, range 16 or 17, & from township 5 or 6, range 12 or 13 to the boundary in township 1, range 11 or 12, & to increase the capital stock of the Co., & for other purposes.

Cascade to Carson.—E. Miller, solicitor for L. A. Manly & other applicants, gives notice of application to the Dominion Parliament to incorporate a company to construct & maintain a railway from the International Boundary line near Cascade, B.C., westerly, following the valley of the Kettle River to the boundary line at or near Carson, with a branch from or near Grand Forks, to 50 miles up the North Fork of the Kettle River, following the valley of that river, also with a branch from or near Grand Forks, by way of Greenwood to the International Boundary line at or near Midway, & for other powers.

Columbia River to Vancouver, &c.—S. Curtis, Rossland, gives notice of application to the B.C. Legislature to incorporate a company to construct and operate a railway from the Columbia River, south of Lower Arrow Lake, westerly to Vancouver, via Rossland & Sheep Lake, & via or near the various

construct & operate branch lines to the coast on either side of the Island, & with other powers. This is understood to be in the interest of the Esquimalt & Nanaimo Ry.

Cross Creek to Stanley.—The projectors of this proposed line of 6 miles from Cross Creek Station on the Canada Eastern, for which a Dominion subsidy was re-voted last session, have been assured by the New Brunswick Government that a Provincial subsidy will also be granted upon the Co. entering into a contract with the Dominion Government & giving satisfactory assurance of its ability to build & operate the road.

Dalton Trail to Lynn Canal.—J. T. Bethune, P. F. Scharschmidt, F. P. Armstrong & J. S. Harvey give notice of application to the B. C. Legislature to incorporate a company to construct & operate a railway from the northern boundary of B.C. at or near the point of intersection of the Dalton Trail, via Chilkat Pass to or near Kluckwan, or as near to the shores of Lynn Canal as the Province has the power to grant.

Dawson City to Dominion Creek.—Belcourt & Ritchie, solicitors, Ottawa, give notice of application to the Dominion Parliament to incorporate a company under the name of the Deutsche Klondike Gesellschaft, to construct & operate a railway from Dawson City, Yukon, along Bonanza Creek & across the dome to a point upon or near claim no. — on Dominion Creek, a distance of about 55 miles altogether, & for other powers.

Dyea River to Lake Bennett.—D. G. Macdonell, solicitor, Vancouver, gives notice of application to the B. C. Legislature, to incorporate a company to construct & operate a railway from or near Dyea River, on the International Boundary between B. C. & Alaska, to or near Lake Bennett, & for other powers.

French River to Portage du Fort.—Perkins & Fraser, solicitors, give notice of application to the Dominion Parliament to incorporate a company to construct & operate a railway from the District of Parry Sound, Ont., at or near the mouth of the French River, through the Districts of Parry Sound & Nipissing & the County of Renfrew to Pembroke, thence through the County of Renfrew to or near Portage du Fort, Que., with power to erect bridges across

the Ottawa River & other rivers necessary for the purposes of the undertaking, & for other powers.

The Hurontario Ry. Co. was incorporated by the Ontario Legislature in 1874, the Act being amended in 1892 to 1897. The Co. has power up to 1902 to begin, & within 5 years thereafter to construct a railway from Toronto to Georgian Bay, also other powers, particularly authority to utilize the water of Lake Simcoe & the Nottawasaga & Humber rivers, for power, etc. & to supply Toronto & other cities with water. D. Blain, Toronto, President of the Co., says the proposal is to build an air line of 66 miles between Toronto & the mouth of the Nottawasaga River, a few miles east of Collingwood. A preliminary survey shows that the maximum grade going

FIRST PASSENGER TRAIN LEAVING LAKE BENNETT, B.C., ON THE WHITE PASS & YUKON RY.

This train left Lake Bennett July 6, 1899, & carried as freight about \$200,000 in gold dust.

points where the Kettle River intersects the International Boundary Line, & crossing Okanagan River south of Okanagan Lake, & via or near Princeton, on the Similkameen River, & via New Westminster, & with power to operate & construct branch lines up & down the Similkameen River from or near Princeton to the International Boundary Line, & extending northward to Nicola Lake, & thence to Kamloops, & also to Spence's Bridge; & for other powers.

Comox to Cape Scott.—H. M. Hills gives notice of application to the B.C. Legislature to incorporate a company to construct & operate a railway from Comox District, Vancouver Island, northerly, to or near Cape Scott, or some other suitable point at or near the north end of the Island, with power to

south would be 20 ft. per mile, and going north 20 ft. per mile, with practically no curves except on the watershed, & that the construction would be easy. In a pamphlet recently issued he says the line would, however, be more costly than an ordinary railway, "as the heaviest rolling stock now in use will be employed. If this is so why should the line cost more than lines on which such rolling stock is now used? He continues: "The rails will be 100 lbs. to the yard * * * with locomotives weighing from 220,000 to 250,000 lbs., & steel hopper cars carrying 60 or 100 tons." He estimates the cost of a single-track line at \$3,000,000, double-track \$5,000,000. The Co. has applied to the Dominion Government for aid.

Labelle to St. Ignace du Nominique.—The Northern Colonization Ry. Co., incorporated at the last Dominion Session, has organized by electing the following:—President, Hon. J. D. Rolland; Vice-President, H. Chauvin; other directors, J. d'Halveywn, E. J. Ramboth, H. Lefebvre, C. B. Major, M. P. P.; Secretary, E. Rodier. The distance between the points above mentioned is 24 miles, & we are informed it is hoped to build the line next year. It would connect with the C.P.R., which reaches Labelle from St. Therese Jct., 19.8 miles from Montreal, by a branch of 80.5 miles. Of this branch about 70 miles from St. Jerome to a point beyond Labelle was built as the Montreal & Western Ry., & was worked for a number of years by the C.P.R. for a percentage of earnings. In 1896 the C.P.R. bought the M. & W. Ry., to be paid for in 30 annual instalments of \$30,000 each, representing principal & interest, which is about equivalent to the purchase of the line at \$6,000 a mile.

Lewes River to Takhina River.—Lewis & Smellie, Solicitors, Ottawa, give notice of application to the Dominion Parliament to incorporate a company to construct a railway or tramway from Fifty-Mile or Lewes River at or about 25 miles below the northerly end of Lake Marsh, Yukon, following approximately the course of the river on either side thereof, to or near the mouth of the Takhina River, with power to construct & maintain branch lines not exceeding 10 miles in length to mining properties in the vicinity of a creek situate about 6 miles southerly from the mouth of the Takhina River, & for other powers.

Lindsay, Bobcaygeon, & Pontypool.—The Dominion Parliament having at its last session re-voted the subsidy for 40 miles of line between Pontypool & Bobcaygeon, Ont., the directors of the Co. are taking steps for the early submission of bonus by-laws in the municipalities interested. Lindsay will probably be asked for a bonus of \$25,000. In the municipality of Ops, where a by-law was defeated some years ago, opinion is said to have changed in favor of the scheme. Lindsay papers support it on the ground that it will give the town C.P.R. connection.

The Morris, Portage & Midland Ry. Co. was incorporated at the last session of the

Manitoba Legislature to build a railway from Morris, on the Red River, 42 miles south of Winnipeg, to Portage la Prairie, with a branch from the main line, in township 6, range 10 west, to Carberry, Neepawa & the western boundary of the Province, also a branch from the starting point at Morris to the eastern boundary of the Province in township 10. It is said that steps are being taken to organize the Co., & that a preliminary survey is contemplated.

Ottawa to Brockville.—G. E. Kidd, solicitor, Ottawa, gives notice of application to the Dominion Parliament to incorporate a company to construct & operate a railway either by steam or electricity from Ottawa, Ont., to or near Brockville, & expropriate & acquire lands & water-power & construct & develop water-power for the purpose of generating electricity along the line of the railway, or elsewhere, with power also to construct & operate a ferry on the River St. Lawrence, between Brockville & Morristown, N.Y., & there connect with the U. S. system of railways, & to acquire & maintain docks, wharfs, piers & elevators on the River St. Lawrence, at or near Brockville, & for other purposes.

Ottawa-Hull Bridge.—Perkins & Fraser, Solicitors, Ottawa, give notice of application to the Dominion Parliament to incorporate a company to construct & operate a railway & general traffic bridge across the Ottawa River from the City of Ottawa, between the easterly side of Bank St. & the westerly side of Kent St. produced to the river, to some point in Hull, Que., with the necessary approaches from any station which the Co. may erect in Ottawa or Hull for railway, street railway, tramway, carriage, foot & passenger traffic purposes; & for other powers.

Taku Arm to Atlin Lake.—Robertson & Robertson, Victoria, give notice of application to the B.C. Legislature to incorporate a company, with power to construct & operate a tramway or railway from Taku Arm, Cassiar, near where the Atlin River joins Taku Arm, along the northern side of the Atlin River to Atlin Lake, near where the Atlin River flows from Atlin Lake, & for other powers.

Vancouver Island & the Mainland.—Besides the Port Angeles ferry project described in our June issue, the City of Victoria has under consideration three other plans for mainland connection, each involving a large expenditure. The C. P. Navigation Co. has offered a much improved service in return for a bonus of \$250,000. McKenzie Bros., of Vancouver, have made a proposition looking to the securing of 20 minute train service between Victoria & Sidney, & the establishing of an 18 knot ferry between Sidney & Vancouver. A committee of citizens appointed in May to consider what was known as the De-Cosmos scheme, has reported in favor of transcontinental connection via Boundary Bay. The engineer's report, based on an exploration survey, recommends that the Victoria & Sidney Ry. be extended to the most convenient

harbor north of Sidney, & that from this point a passenger steamer & a car ferry steamer be operated to a point on Boundary Bay. From this terminus a line to be built following the course of the Nicomeck River for 12 miles, & making junctions as follows:—With the Great Northern Ry. about 6 miles from White Rock; with the C.P.R. & the Seattle & International at a point on the main line, about 30 miles east of White Rock. This route would pass within about 2 miles of the N.P. terminal at Sumas City, running thence to Chilliwack, through a fine agricultural country. The estimated cost of the enterprise is: Victoria-Sidney extension, \$150,000; ferries, \$200,000; White Rock to Chilliwack road, \$1,500,000. This plan, notwithstanding the large outlay involved, is the favorite in Victoria.

A by-law embodying the Port Angeles proposition has been before the city council for some time, & may or may not come before the people, as certain amendments made in committee are unsatisfactory to the promoters, the amount of subsidy having been cut down by half. As at present amended, the by-law provides for an annual subsidy of \$8,750 for 20 years, being about half the estimated cost of the ferry & terminal facilities at both ends. An important development in this connection is the improvement now being arranged for in the C.P.N.'s Victoria-Vancouver service as a result of C.P.R. President Shaughnessy's recent visit to the coast. The fast str. *Islander* is now being overhauled to go on this route, and will make the daily return trip entirely by daylight. The freight service is also to be improved, though definite plans are not yet announced. It is hardly necessary to say that the C.P.N. Co. is not a part of the C.P.R. system. (Aug., pg. 239.)

Vancouver to New Westminster.—Davis, Marshall & Macneill, Solicitors, Vancouver, give notice of application to the B.C. Legislature to incorporate a company to construct & operate a railway from the line of the C.P.R. in or near Vancouver, to the Westminster branch of the C.P.R. in or near New Westminster.

The Vancouver Northern & Yukon Ry. Co. will apply to the B. C. Legislature for an act extending the time within which it may complete its undertaking, to empower it to extend its proposed railway from or near Vancouver, or some other point on Burrard Inlet, to the north or south shore of the Fraser River near New Westminster, & to change its name to the Vancouver, Westminster Northern & Yukon Ry. Co.

Railway Passes for Bridge Directors.

An important case was tried at Toronto before Chief Justice Meredith, on Oct. 31 & Nov. 1. It was an action by the Niagara Falls Suspension Bridge Co. & the Niagara Falls International Bridge Co., the Canadian & U.S. companies respectively which control the single arch bridge at Niagara Falls, against the G.T.R. Co., to compel that Co. to

furnish to the directors & officers of the bridge companies passes over all the U.S. roads which make use of the bridge. The suit was founded upon an agreement made in 1853, between the bridge companies & the Great Western Ry., whereby the railway was given the right to extend the privilege of using the bridge to other companies, & it agreed with the bridge companies to procure from all railway companies with which arrangements should be made for the use of the bridge, free tickets for the directors & officers of the bridge companies to pass over their railways.

In the course of the trial, it appeared that three other actions had been brought against the G.T.R. Co. under the same agreement, one in Canada & two in New York State, all of which had been decided in favor of the bridge companies. The principal defence relied upon by the G.T.R. Co. was that when the rent of the bridge was increased in 1875, the bridge companies relieved the G.T.R. Co. from the obligation to furnish passes, & that it was thereafter under no obligation to do so. At the conclusion of the case judgment was given in favor of the plaintiffs, with costs. The plaintiffs claimed that they were entitled to be refunded all fares which had been paid by their directors & officers over the U.S. roads during the time that the passes were withheld, & the action was referred to a referee to settle the amount of the judgment. The G.T.R. proposes to proceed with an appeal.

Ontario Corporation Taxation.

Under the act passed at the last session of the Ontario Legislature, the following amounts have been received:

Banks	\$37,900
Railways	19,000
Street railways	6,093
Telephone companies	4,445
Gas & electric light companies	4,900
Insurance companies	69,780
Loan companies	25,300
Natural gas, sleeping cars, &c.	12,650
Trust companies	5,330
	\$184,898

C.P.R. Co.'s Telegraphs.

Since pgs. 329 & 341 of this issue were made up, the resignation of C. R. Hosmer as Manager has been officially announced, Jas. Kent, heretofore Superintendent of the Eastern Division, being appointed to succeed him.

W. J. Camp, heretofore Electrician of the system, has been appointed Superintendent of the Eastern Division, with headquarters at Montreal, succeeding Mr. Kent. The position of Electrician is abolished.

A. W. Barber, heretofore City Manager at Toronto, has been appointed Superintendent of the Ontario Division, with headquarters at Toronto, succeeding H. Pingle.

B. S. Jenkins, heretofore Superintendent of the Western Division at Winnipeg, has been appointed General Superintendent of Telegraph Lines west of Fort William, with headquarters at Winnipeg.

Jas. Wilson continues as Superintendent of the Pacific Division, with headquarters at Vancouver.

The Carillon & Grenville Railway.

"An odd institution that has lately come under my notice," said a friend of mine the other day, "is the railway 12 miles in length, between Grenville & Carillon on the Ottawa River. This railway is employed for the transport of passengers & baggage going by steamer from Montreal to Ottawa & vice versa. The train, which consists of a locomotive & one car, makes only one trip per day, leaving Carillon on the arrival of the boat from Montreal, & on the return, leaving Gren-

ville on arrival of the steamer from Ottawa. The line runs through fields some distance from the river. The roadbed & rails cannot be seen except at close range, being overgrown with grass. At a glance the engine is seen to be an old timer, & probably will not stand a pressure of more than 30 to 40 lbs. It looks very like the first locomotive put into service on the old Northern Ry., & which I understand was built at Good's foundry, on Queen Street, Toronto. An old gentleman, grey haired & grey bearded, attired in a long black coat, white tie & high collar, & presenting the appearance of a superannuated preacher, occupies the dual position of conductor & brakeman. Notwithstanding his antiquated appearance, however, he seemed to be rather more than up-to-date in his movements, for on the whistle sounding 'down brakes,' he responded so quickly that the locomotive & car were brought to a stop some distance before the platform which does duty as a station, was reached, & the train had consequently to be started up again to reach its destination." In concluding his description, my friend remarked that the old conductor must have a great task on his hands in making up his daily returns for the railway company.—"By the Way," in Canadian Electrical News.

Finnigin to Flannigan.

Sup'rintindint wuz Flannigan;
Boss av the siction wuz Finnigin;
Whiniver the kyars got offen the thrack
An' muddled up things t' th' divil an back,
Finnigin writ it to Flannigan.
Aft'her the wrick wuz all on again;
That is, this Finnigin
Repoorted it to Flannigan.

Whin Finnigin furst writ to Flannigan,
He writed tin pages—did Finnigin.
An' he tould jist how the smash occurred;
Full minny a tajus, blunderin' wurrd
Did Finnigin write to Flannigan
Aft'her the kyars had gone on agin.
That wuz how Finnigin
Repoorted to Flannigan.

Now Flannigan knowed more than Finnigin—
He'd more idjucation—had Flannigan;
An' it wore'm clane an' complately out
To tell what Finnigin writ about
In his writin' to Muster Flannigan.
So he writed back to Finnigin:
"Don't do sich a sin agin;
Make 'em brief, Finnigin!"

When Finnigin got this from Flannigan,
He blushed rosy red—did Finnigin;
An' he said: "I'll gamble a whole month's
pa-ay
That it will be minny an' minny a da-ay
Before Sup'rintindint (that's Flannigan)
Gits a whack at this very same sin agin.
From Finnigin to Flannigan.
Repoorts won't be long agin."

Wan da-ay on the siction av Finnigin,
On the road sup'rintindint by Flannigan,
A rail gave way on a bit av a curve
An' some kyars wint off as they made the
swerve,
"There's nobody hurted," sez Finnigin,
"But repoorts must be made to Flannigan."
An' he winked at McGorrigan,
As married a Finnigin.

He wuz a-shanty in thin, wuz Finnigin.
As minny a railroader's been agin,
An' the shmoky ol' lamp wuz burnin' bright
In Finnigin's shanty all that night—
Bilin' down his repoort, wuz Finnigin!
An' he writed this here: "Muster Flannigan,
Off agin, on agin,
Gone agin,—Finnigin.

December 1880

Steel Rail Prices.—Railway managers who have been ordering steel rails for next summer's delivery have recently discovered that railmakers have a decided unwillingness to do so at the basis of present prices. Railmakers have been unfortunate in the recent upward movement. They have supplied rails continuously below market prices. Hence their present unwillingness to sell rails largely at \$11, which may be worth \$18 when delivered. Authorities agree pretty well that an unusual amount of railroad building will be undertaken next spring. In other lines a strong upward tendency continues to manifest itself. Bars, merchant steel plates, shapes, pipes, tubes, all are fractionally higher than even a week ago. The urgent demand for raw material is indicative of higher prices & finished products later on. Plate mills see no sign of relaxing demand, despite some idle rumors to the contrary. The question of ore prices will be fixed a month sooner this year. The question of transportation will remain in abeyance. Several serious features are to be dealt with, & opinions at present have very little value.—*Railway & Engineering Review*, Chicago, Oct. 21.

Central Vermont.—Gen.-Manager Hays, of the G.T.R., accompanied by Vice-President & Gen.-Manager Fitzhugh, Col. Walker, President of the Atcheson, Topeka, & Santa Fe Ry., Gen. McCullough, Vice-President of the Erie R.R., & Mr. Baker, of Boston, all members of the directorate of the C.V., made a trip over the line in the middle of November. This was referred to in some daily papers as likely to lead to further reorganization of the C.V., but this is not likely. The trip was simply an annual inspection one. The line has already been thoroughly reorganized, & it is not thought any further change is to be made.

White Pass & Yukon Ry. At the recent annual meeting of the B.C. Yukon Ry. Co., at Victoria, the following were elected:—President, S. H. Graves; Vice-President, W.

Wilson; other directors, J. Dunsmuir, A. C. Flumerfelt, E. C. Hawkins, H. M. Hills, R. Cassidy. Secretary, A. Davey.

Here is a unique verdict by a coroner's jury on a man who was killed by a switch engine:—"We, the jury, find that the deceased came to his death at the hands of a switch engine, after being sat on by the coroner for two hours & half."

ELECTRIC RAILWAYS.

Ontario Electric Railways.

Bracebridge to Muskoka Lake.—An electric railway between these points is talked of.

Fort Erie to Chippewa.—A deputation waited on the Ontario Government on Oct. 8, in connection with the proposal to build an electric railway between these points, & suggested the terms desired. (Sept., pg. 277.)

The Hamilton Consolidations.—On Nov. 30 the Main st. office & the terminus near the G.T.R. station at Ferguson avenue of the Hamilton & Dundas Ry. will be discontinued, & on Dec. 1 the cars will run to the Radial station on Gore st., as the city terminus of the road. A switch will be put in at the intersection of Queen & Herkimer streets & the cars run over the street railway tracks. The track on Main st. is the property of the H. & D. Co., but it is probable the Hamilton, Grimsby & Beamsville will acquire running powers over it.

Hon. J. M. Gibson recently laid before the Hamilton City Finance Committee the proposition of the promoters of the proposed electric railway to Guelph & Galt. He stated that it was proposed to build a first-class line, so as to have the cars run almost at the same speed as a steam railway. The plan was to build a double track from Hamilton to a point near Rock Chapel, where lines will branch out to Guelph & Galt. The promoters considered that the most feasible route was along

Vine st. to Oxford st., across Dundurn park below the edge of the bluff, & through Harvey park. He did not think Dundurn would be injured, but Harvey park would be damaged to some extent. An alternative route was along York st., which would have to be widened by 20 ft. near Queen st. It was esti-

mated that the right of way for this route would cost \$100,000. Mr. Gibson said the Co. would be at considerable expense, the cost of construction being heavy on account of the bridges required, & it was thought the city should render some assistance. On behalf of the Co. he made the following alternative propositions: 1. To accept a bonus. 2. For the city to buy right of way and give it to the Co. 3. For the city to make some abatement in the percentage, etc., paid by the Street Ry. Co. equivalent to the amount of the bonus required.

J. Moodie, jun., & J. G. Gauld are suing the Cataract Power Co., Hon. J. M. Gibson, J. Dickenson, M.P.P., J. Patterson, J. Moodie, sen., & J. Kamerer, to have the court set aside a by-law passed by the defendants, or the Cataract Power Co., last Aug., for increasing the stock of the Co. from \$250,000 to \$3,500,000. The Co. was originally capitalized at \$99,900, the stock being principally taken up by the five Johns of the syndicate. Then the stock was increased to \$250,000, & it is alleged that the first stockholders signed an agreement by which the additional stock to be subscribed should be preference stock to the extent of a 7% dividend over the stock of the original holders. Of this preference stock the younger Moodie held the largest share. He claims that he was opposed to the by-law providing for the increase of stock to \$3,500,000, for the transfer to the defendants of a large portion of the stock, & for the issuance of 5% cumulative preference stock, & the plaintiffs allege that when the Government issued letters patent to confirm the by-law in question it did so under a misapprehension of plaintiff Moodie's position in the matter. Plaintiff Gauld is suing for recognition as a stockholder of the Cataract Power Co.

Hamilton, Grimsby & Beamsville Electric Ry.—For some time it has been rumored that the Cataract Power Co. is anxious to secure this line & complete its amalgamation of the radial railways, but the promoters always denied that they were negotiating. It is now reported that the President of the St. Catharines & Niagara Central has an option on the H., G. & B., & that he is acting for the Cataract Power Co.

London St. Ry.—At a meeting of shareholders, Sep. 29, it was decided to increase the capital from \$350,000 to \$400,000, the new stock to be offered to the present shareholders at par, pro rata, according to their respective holdings.

Estimates of the loss by the Co.'s employees' strike figure up to \$197,000, of which the Co. is said to have lost \$60,000, the men \$13,000, the balance being lost by merchants & in damage to property.

Metropolitan Electric Ry.—Particulars respecting the connection of this Co.'s track with the C.P.R. at North Toronto, will be found under the head of "Railway Committee of Privy Council," on an earlier page of this issue.

The Co. has added an electric locomotive to its equipment.

Ottawa Electric Ry.—Good progress is being made with the $4\frac{1}{2}$ miles line from Hintonburg to Britannia, & it is expected to complete it early in Dec. Some portions of the work are heavy. It includes several cuts, one through solid rock, a number of fills, & some large culverts. Rails weighing 72 lbs. are being used. Four cars are being built, one a combination baggage & passenger, 35 ft. long, to seat 40 passengers; the other 3 passenger cars, 50 ft. long, to seat 40 passengers. (Sep., pg. 277.)

The City Council is negotiating with the Co. to run a spur line to the Varsity oval. It is proposed to have a belt line out Nicholas st. from Theodore, along Somerset st. to King, thence down King to Theodore again. President Ahern shows no disposition to refuse to

build the projected line, and it will consequently be constructed early next spring if the idea meets with the approval of the Council & of the people.

Owen Sound.—Owing to the extraordinary & unexplained opposition of half the members of the town council, the proposal to build an electric railway in the town & through the country to McLaughlan Park has been abandoned, for the present at least. The proceedings of the council during the discussion of the question were of the most undignified nature, & from the calibre of some of the members, as shown by their conduct in council, we should think anyone would be taking considerable risk to invest capital in any enterprise that would be in any way subject to them. (Oct., pg. 307.)

The Port Stanley Electric St. Ry. Co., recently incorporated, was projected by the London & Port Stanley Gravel Road Co. It is proposed to build a line along the gravel road between Port Stanley, St. Thomas & London, with possibly a branch to Aylmer. (Oct., pg. 307.)

St. Catharines, Niagara Falls & Toronto Ry.—Under date of Oct. 7 we were advised as follows:—"All the wooden trestles & bridges are either to be removed by change of grade, filled in, or replaced by steel. New ties have been placed the full length of the road. All fish plates are to be removed & continuous rail joints substituted. The extension to Port Dalhousie will be commenced as soon as legal difficulties regarding the rights of way can be overcome. The material for the Port Dalhousie extension is now at St. Catharines on the ground. Preliminary surveys have been made to Hamilton. It is the intention of the Co. to convert the road into a high speed electric line, somewhat similar to the Buffalo & Lockport. The cars, however, will be somewhat larger & more powerful. The freight will be handled by electric locomotives. The work of rebuilding the old road is now going on as fast as possible, although we are somewhat hampered on account of our inability to get steel." (Oct., pg. 307.)

St. Catharines to Wellandport.—An electric railway between these points, via Fonthill & Pelham, is talked of.

St. Thomas Electric Ry.—The receipts for the quarter ended Sep. 30 were \$6,009.47.

The St. Thomas Times says the Co. has issued a circular stating it is insolvent & asking its creditors to accept preferred stock for their claims. Power has been granted the Co. to issue \$15,000 preferred stock divided into 150 shares of \$100 each. This stock is to run for 20 years and to bear interest at 6%, payable half-yearly. The by-law provides that after 10 years the directors can call in all the stock on giving 6 months' notice. The preferred stockholders are to have 2 directors on the board, & to have a share in the dividends after 4% is paid to the ordinary shareholders. After paying the Co.'s liabilities the proceeds of the stock are to be used for the completion of the park, the purchase of more cars, the putting in of signals at the crossings of the L. E. & D. R. Ry., & for sidings & improvements to equipment.

The Co.'s employees struck recently, but the difficulties were soon arranged and they returned to work.

Sarnia Street Ry.—We are officially informed that this Co., which now operates a horse-car system, proposes to build 7 miles of electric railway, if satisfactory arrangements for franchise can be made with the municipal corporation. Work is likely to be begun next spring so that the road may be completed in time for the summer traffic. The shareholders are to be asked to accept stock in a new company at the rate of 75c. on the dollar of their present holdings. (Oct., pg. 307.)

Toronto Railway.—The gross earnings are:

	1899.	1898.	Increase.	Decrease.
Jan.	\$95,960.12	\$86,500.36	\$9,187.76	
Feb.	91,800.30	82,402.19	9,458.11	
Mar.	103,234.88	92,318.42	10,916.46	
April.	95,212.37	86,898.83	8,313.54	
May.	104,806.62	92,070.35	12,736.27	
June.	109,093.18	94,119.32	14,973.86	
July.	116,824.94	104,302.92	12,522.02	
Aug.	123,282.70	110,300.54	12,982.16	
Sept.	137,621.10	138,021.74		\$400.64
Oct....	111,495.37	99,650.16	11,845.21	
	\$1,089,091.58	\$87,186.83	\$1,002,273.46	\$400.64

Increase, Jan. 1 to Oct. 30, \$101,874.75.

The city's percentage upon the revenue for Oct. was \$8,918.86.

The City Solicitor has notified the Co. that it must immediately comply with the by-law & construct vestibules on both ends of its cars.

An agreement has been entered into between the Co. & the town of Toronto Junction, which provides that the Co. extend its system as far as Keele St., on which it is to give the same service as is given on the Queen & Dundas St. line. The Toronto Suburban St. Ry. is given concessions in the way of exemption from water rates & mileage rates, in return for which it is to extend its lines farther into the country. Superintendent Gunn informed the Council on Nov. 12 that the rails for the double-tracking of Dundas St. east had arrived, & that work would be commenced at once. He said the Co. had new time-tables printed, & assured the Council that cars would be running by the end of Nov. if the weather would permit the work to go on. It is reported that the Co. has secured an option on a block of land at Toronto Junction, south of Dundas St., which it is proposed to convert into a park.

Toronto Suburban St. Ry.—Information respecting arrangements with Toronto Junction will be found under head of Toronto Ry. above. (Oct., pg. 307.)

The Council of the Township of York has passed a by-law authorizing the execution of an agreement with the Co., allowing it a renewal of its present charter with an extended area of operation. The agreement provides for the operation of a railway extending from the present limits of the township along Dundas St., Weston Road, & the allowance between the 5th & 6th concessions. The Co., by the agreement, does not receive a perpetual right, but at the end of 30 years the township may purchase the road if it so desires. The agreement provides for a limit of speed of 20 miles an hour, a franchise for 20 years, & if concurred in by legislation, renewable for periods of 30 years, to be arranged by special arbitration. The Co. is exempted from township taxes for 10 years, & provision is made for allowing till Dec. 1, 1902, for starting the extension, & 2 years from that date for the completion of the work.

Quebec Electric Railways.

The Hull Electric Co. gives notice of application to the Dominion Parliament for an act to confirm an agreement by which the C.P.R. Co. covenanted to sell to the H. E. Co. the branch line between Hull & Aylmer for \$100,000.

Montreal Park & Island Ry.—Judge Archibald gave judgment, Nov. 6, in the case between the town of St. Louis & this Co. Last June the townspeople tore up the Co.'s tracks because it failed, they claimed, to live up to its contract with the town. The Co. took out an injunction claiming that it was working under a Federal charter & could not be touched by the town. The judge ruled that before securing its Federal charter the Co. entered into its contract with the town & the injunction was dissolved. The case will be appealed.

Montreal St. Ry. At the annual meeting Nov. 2, the following report was presented for the year ended Sept. 30. The statement of the past year's business shows a net profit

of \$1,770,01, as compared with \$601,704.18 for the previous year. Out of this there have been declared 4 quarterly dividends of \$1,000 each, amounting in all to \$478,333.33, leaving a surplus of \$152,537.28, of which (following the policy established last year) \$5,000 has been added to the contingent account, & there has been charged against that fund an amount of \$8,575.00 expended during the year for tenders of a new type & for other special renewals. The road-bed, rolling stock & other property have been maintained in a high state of efficiency, & the cost thereof, as in previous years, has been charged to operating expenses. While it will be noticed from the statement that the business continues to increase satisfactorily, the percentage of operating expenses shows an increase of 3.08% as compared with last year. This increase is due to the fact that a larger amount has been expended in the maintenance of road-bed & rolling stock, to increased wages, increased car-mileage, & a general advance in the cost of all materials & supplies. The buildings & rolling-stock destroyed by fire at Hochelaga on Sept. 16, 1898, have been replaced by others of the latest & most modern type. Car-shops, machine-shops, blacksmith-shops & motor-shops have been erected at Hochelaga, those at Coté Street having proved too small to cope with the increased business. Large additions to the rolling-stock necessitated corresponding additions to the car storage capacity. To meet this, running-sheds & car-storage sheds have been erected, & are in course of erection, at Hochelaga & on St. Denis St., north of the C.P.R. The rolling-stock has been increased during the past year by the addition of 64 closed motor cars, 100 open motor cars, 1 pay car & 12 electric sweepers, & there are under construction 36 closed motor cars of increased seating capacity, all of which will be available for service this winter. It was decided, after careful consideration & consultation with the city authorities, to change the type of fender in use for another, which it is believed will afford greater protection against accidents. The result of the cast-welded rail joints introduced last year has been satisfactory, & our experience justifies the expense of gradually applying the

system to the whole line. During the past year the Co. has paid to the City of Montreal the following amounts, viz.: taxes on earnings, \$70,811.42; on account of snow clearing, \$60,456.00; real estate and business taxes, \$8,832.13; a total of \$140,099.55. This information has been asked for by certain shareholders, & should be noted by all, as the city departments are advancing the claim that the Co. must contribute a greater proportion of the expense of snow removal, as well as largely increased taxation, both of which claims your directors are contesting, believing such demands to be unjust & uncalled for by the Co.'s contract with the City.

STATISTICAL STATEMENT, 1892 TO 1899.		1892	1893	1894	1895	1896	1897	1898	1899

A Popular Route to New York

Canadian Pacific, and Toronto, Hamilton and Buffalo Railways in connection with the New York Central & Hudson River Railroad. *****

Leaving Toronto in the evening at 5.20 p.m. in one of the through sleeping cars of the Wagner Co., you are landed at Grand Central station, in the very heart of the City of New York, 4th Avenue and 42nd Street, at 8.15 next morning, adjacent to all hotels and business houses and avoiding the annoyance of transfer.

This is also the route of the famous
"EMPIRE STATE EXPRESS"

Fastest Train in the world.

Call on nearest ticket agent of the C.P.R. or T.H. & B. for further information, or address

 OFFICES THROUGHOUT THE CIVILIZED WORLD
 EXECUTIVE OFFICES
 NOS. 346 and 348 BROADWAY, N.Y. CITY, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

CORRESPONDENCE INVITED

The President, Senator Forget, said he had nothing to add to the report, but would be glad to answer any questions.

Mr. Boas said he had compared the statement with that of the year preceding, & found that \$300,000 had been put to capital account, which had been credited to rolling stock & running expenses. Had this been added on the one side & deducted on the other, or had it been taken to build new cars & the new building in the east end, or had the sum for those purposes been taken out of the profits?

The President replied that Mr. Boas was making a mistake. The amount not paid up was \$154,000 only. What could be very well charged to capital account was so charged. For instance, there had been an increase of \$188,836 last year, gross. That had been earned by increasing the men's wages & increasing the car mileage. The total increased expense against the \$188,836 had been \$139,000. Everything that could, by renewals & so on, be charged to capital account had been charged. If the rails on half a mile of road were replaced by better rails, costing \$4,000 or \$5,000 more, the additional expense was charged to capital, & the other was charged to revenue.

E. P. Hannaford criticised the report because it did not state the mileage of tracks & quantity of material used. He asked information as to the welding of joints, & complained of the noise made by cars. The President said any shareholder could have the information as to mileage, material, etc., but the board had not judged it in the interest of the Co. to make such information public.

Manager Wanklyn said, with regard to the policy in adopting the cast welding of joints, that it was manifest to all people connected with street railways that the low joint question was the greatest problem which had to be met. Mr. Hannaford had based his remarks on his experience on large railways, but it had to be borne in mind that on a line like the G.T.R. repairs to the rail joints could be comparatively easily effected. Mr. Hannaford, when on the G.T.R., had had men continually parading the track, ready to attend at once to any defect. But repairing a joint on a street-car track involved opening the street & obstructing traffic. It was impossible to be always rooting up paved streets, so a permanent joint had to be inserted. The length of the rails had been increased from 30 to 60 ft., which had reduced the number of joints by half. That was one remedy. In Buffalo electric welding had been resorted to, & one solid rail the entire length of the line had been made. It had been found there that, owing to the expansion & contraction of metals, the rails broke at intervals of 1,800 ft. This gave eighteen hundred feet rails. The Montreal Co. had not adopted the electric process, as being too costly, but he had gone to Minneapolis & there had examined the welding process which had given satisfaction after some years of trial. He had had a small plant erected in Montreal on his return & 1,000 joints had been welded last year as a trial. The result had been such that it had been decided to weld 7,000 more & the Co. in-

tended to go on until the whole line had been covered. The improvement on St. Denis St. from the adoption of the new process was already marked in the diminution of noise & oscillation & in the wear & tear of rolling stock & rails. This process has been adopted in Baltimore, Washington, Philadelphia & Chicago, as well as Minneapolis, & it gave universal satisfaction. As to noisy cars in Montreal, that some cars were noisy, he admitted, & they would continue to have noisy cars until they "scrapped" the original equipment. They had old equipment in which it was impossible to instal the gear case. There were 10 or 15 such cars. It was only rarely that these cars ran. The noise had diminished during the last few months. The old equipment had been gradually going out of service, & soon they would be able to avoid all complaints. Lately Mr. Bell, of the Jamaica government, who had been visiting different American cities for the purpose of studying the street car systems, had pronounced Montreal's cars much less noisy than those of New York & other cities.

Mr. MacDonald said he had audited the company's books for 32 years. What should be charged to capital & what to revenue account was clearly understood at the present day.

The President said no arrangement had been made with the G.T.R. about crossing the Victoria Jubilee Bridge, & the matter had practically fallen through.

The usual resolution granting \$6,000 for directors' services was adopted, & the directors were re-elected as follows:—Hon. L. J. Forget, J. Ross, R. B. Angus, K. W. Blackwell & F. C. Henshaw.

The gross earnings are:

	1899.	1898.	Increase.
Oct.....	\$145,877.20	\$133,619.63	\$12,257.57

In the suit of Gareau vs. the Co., the plaintiff claimed that his property had been injured by the vibration, smoke & noise proceeding from the Co.'s power house, which is situated between William & Barre streets. The Co. pleaded that in erecting & operating its power house it acted under rights secured to it by legislative enactment, but Judge Gill held on Oct. 4, that the exercise of statutory powers was no defence to an action for nuisance resulting from the use of the powerful machinery in question.

Quebec Ry., Light & Power Co.—At a special general meeting of the shareholders, Oct. 9, the directors were authorized to issue the remaining unissued stock of the Co., amounting to 5,000 shares, or any part thereof that they may deem necessary.

St. Hyacinthe Electric Ry. Co.—Application is to be made for the incorporation of a company under this title, to build an electric railway in the counties of St. Hyacinthe & Bagot.

Electric Lines in Western Canada.

British Columbia Electric Ry.—Earnings & expenses for September:

Net earnings April 1 to Sep. 30	\$77,600	\$88,469	\$10,869+
Increase			
Decrease			

The falling off in the Westminster traffic receipts from those of Sep., 1898, is due to the fact that in 1898 the receipts were largely increased by people who went to see the city after the great fire. The work of rebuilding brought also an abnormal amount of freight to the line in Sep., 1898.

The Co. continues to improve its system. It has put in a line to English Bay, & will lay a branch along Davie St. as soon as the rails arrive. Two new coaches have been put on the Westminster branch. The capital expenditure in Vancouver for the year ended June 30 last is stated as follows:

New track.....	\$39,000
Incandescent lighting plant.....	28,800
Arc lighting.....	5,950
Motor.....	2,685
Boiler	3,175
Power house & car barn (not completed).....	35,340
Cars & equipments.....	8,400
Land & buildings.....	16,000

\$112,875

General Manager Buntzen says it will take over \$100,000 to complete the Co.'s work now in hand in & about Vancouver.

A new ticket system, with limited tickets, has been put in force in Vancouver, & the sale of monthly tickets has been abolished. Conductors' fare boxes have also been introduced. In Victoria the ticket system has also been changed, unlimited tickets are sold at 6 for 25c.; limited, good from 6 to 8 a.m., & 5 to 7 p.m., 8 for 25c.; & school children's, good from 8 a.m. to 5 p.m., except Saturdays & Sundays, 8 for 20c. Transfers are now granted from any city line to Esquimalt for an additional 5c. fare. The conductors' fare box is also to be introduced in Victoria.

A five minute service is promised in Vancouver for next spring.

The Nelson Electric Tramway Co., Ltd., a subsidiary company to the British Electric Traction Co., Ltd., Donington House, Strand, London, Eng., is constructing an electric tramway in Nelson, B.C. A few years ago Nelson consisted of a few shacks, now it is a thriving town of 6,000 people, & is making daily strides towards becoming the most important inland town in the Province, and certainly the first to construct a tramway. The B.E.T. Co.'s board includes some notable men in England, among them Sir C. Rivers Wilson, President of the G.T.R. The Nelson local directorate comprises F. W. Peters, President, Capt. T. J. Duncan, W. A. MacDonald, Q.C., J. Laing Stocks, & T. C. Duncan, Secretary. The construction of the line is in charge of C. Halifax Hall, C.E.

The route the line will take is as follows:—Starting from the end of the Government Wharf west up Front St., past the Provincial Jail & the Hume Hotel, reaching Baker St. by Josephine St., west on Baker St. to Railway St., this being the important business portion of the town, passing the four banks & the leading business houses & stores. The temporary terminus on Railway St. is within 200 yards of the C.P.R. station, the reason for not connecting with the station being that an important railway siding would have to be crossed with a steep approach for the cars. It would also be necessary to obtain powers from the Privy Council for leave to put in a diamond crossing & maintain a watchman, this, with the near prospect of the railway moving its present station to higher ground on the west end of Baker St., has influenced the directors to stop construction at Railway St. A branch from the above route leaves Baker St. at Stanley, climbing 350 ft. in four-fifths of a mile to Houston St. At this terminus is the skating rink owned by the Tramway Company, which, with the two curling rinks, is now being put in thorough repair. The electric light will be used & the whole building brought up to date for winter amusements. Another branch leaves the Government Wharf for the eastern limits of the city, & then for one mile into the suburb called

view, passing the Spokane & Northern Ry. Station. The distance in all will be 3 miles of construction to be completed this fall, of which 2 miles of track is now laid.

In a mountain town such as Nelson, lying on a steep-side hill sloping down to Kootenay Lake, the question of grades is a formidable one. The maximum grade used is 13%, & the climbing is generally continuous. This obstacle, however, is somewhat balanced by the monopoly this gives a tramway of all the transfer business of the town. Livery carriages here are practically unknown, & the geographical features of this portion of B.C. are not encouraging for the ownership of private carriages or bicycles. The minimum curve is 60 ft. radius, & a T rail weighing 60 lbs. to the yard is used. This rail is adopted owing to the city not yet having paved streets.

The electrical construction & equipment is in charge of L. A. Campbell, Manager of the West Kootenay Power & Light Co., & the power will be supplied from that Co.'s station at Bonnington Falls. The power will be transmitted to a lower working voltage by oil-cooled transformers, & then will drive a synchronous motor of 450 h.p., which will be directly connected to a railway generator of the same size. This unit, to be correct, is named a motor generator. The alternating current will then be converted into a direct current. The cars are of the most modern design, & are built with removable vestibules & double trucks; each car will be equipped with four 40 h.p. motors, that is, each car will have a capacity of 160 h.p. This great power is necessary, owing to the steep grades. The cars are painted a claret color, & in appearance, combined with all the latest improvements in construction, are second to none in the country. The overhead trolley system has been adopted, & the material & construction are of the best. The poles are 25 ft. above ground, smoothly trimmed down & pointed off at the top; they are to be painted a third of the way up a dark green & the remainder a light green, making a strong contrast to the unsightly poles that are in use in many towns in Canada & the U.S.

When this line is completed & running, Nelson will be able to boast of a tramway equal to any on the continent. There has been no stint of money in the construction & equipment, & the best to be got has been acquired. The company owns close upon \$100,000 of real estate & property in the city, including two business blocks, which in itself speaks for the faith placed by the parent company in the future of Nelson. (Oct., pg. 308.)

Winnipeg Electric Ry.—The belt line from Broadway over the Osborne st. bridge to Fort Rouge has been completed. (Oct., pg. 308.)

Maritime Provinces & Newfoundland.

Digby, N.S., to Bear River.—It is proposed to try & secure the construction of an electric railway between these points.

Moncton, N.B.—Rumors are again afloat as to possible extension of the electric railway, but there is nothing definite.

St. John's, Nfld.—The power house for the electric railway has been located at Petty Harbor. The sub-station will be near the dockyard. A number of cars for the line have already reached St. John's from Montreal.

Electric Railway Notes.

The London, Eng., County Council has adopted the conduit system of electric street cars on the projected large extensions. This is the first time an English corporation has adopted this method, overhead wires being in use throughout the United Kingdom. The innovation was only accomplished after considerable opposition.

A New York newspaper reporter was recently detailed to test the possibilities of New York's remarkable street railway transfer system. Taking advantage of the ordinary transfer privileges, he succeeded in travelling unchallenged 107½ miles, making 87 transfers for a single 5c. fare, his ride occupying 24 hours. He stated that he could have gone on indefinitely, especially as he had ridden over only a portion of Manhattan Island.

A company has been formed in Montreal to build an electric railway in Georgetown, Demerara, for which a concession was obtained some time ago. The directors are: Sir Wm Van Horne, President; B. F. Pearson, Senator McKeen, A. Kingman, W. B. Chapman, & J. Hutchinson. A number of Canadian capitalists are also said to have acquired control of the Trinidad horse railway, & to intend to convert it into an electric road.

The Havana Traction Co., which was incorporated some time since under the laws of New Jersey, recently completed its organization as follows:—President, Sir W. C. Van Horne; Vice-Presidents, P. A. B. Widner, Philadelphia; R. A. C. Smith, New York; Secretary, J. M. Ceballos, New York; Treasurer, F. Nichols, Toronto; other directors, Hon. G. A. Cox, W. Mackenzie, Z. A. Lash, W. R. Brock, A. E. Ames, B. E. Walker, Toronto; W. L. Elkins, T. Dolan, Philadelphia; T. F. Ryan, New York; W. Barbour, Pateron, N.J.; H. F. Booth.

Two important long-distance trolley lines are projected in the U.S. One is to be built in Northern Ohio, between Toledo & Norwalk, about 60 miles. It will be designed for a speed of 40 miles an hour, & will be worked from one central power station to be established at Fremont. A three phase alternating current will be used, which will be transmitted each way at a high voltage. Six sub-stations will be established about equal distance from each other along the line, with a seventh in the power house at Fremont. The current will be transmitted at about 15,000 volts, & stepped down & transformed at

THE FIRSTBROOK BOX CO., LIMITED. CROSS ARMS, TOP PINS, AND SIDE BLOCKS, TORONTO.

LELAND HOTEL, Winnipeg Man., W.
D. Douglas, Proprietor. Rooms en suite with baths and all modern conveniences. Rates \$2 to \$4 a day. Special rates for families and large parties, according to accommodation and length of time. Though moderate in price the Leland is first-class in every respect. It is especially adapted to please the commercial trade. It is in the centre of the wholesale and retail district. It is in direct communication with all parts of the city by car lines. It is supplied with the purest spring water from flowing well on the premises.

TO THE DEAF.

A rich lady, cured of her Deafness and Noises in the Head by Dr. Nicholson's Artificial Ear Drums, has sent £1,000 to this Institute, so that deaf people unable to procure the Ear Drums may have them free. Apply to Department O. B., The Institute, "Longcott," Gunnersbury, London W., England.

RIPANS

THE WONDERFUL MEDICINE

They relieve Distress from Dyspepsia, Indigestion and Too Hearty Eating: are a perfect remedy for Dizziness, Nausea, Drowsiness, Bad Taste in the Mouth, Coated Tongue, Pain in the Side, TORPID LIVER.

They regulate the Bowels.
They Cure Sick Headache.
A Single One Gives Relief.

WANTED

A case of bad health that R-I-P-A-N-S will not benefit. R-I-P-A-N-S, 10 for 1 cent, or 12 packets for 48 cents, may be had of all druggists who are willing to sell a low-priced medicine at a moderate profit. The banish pain and prolong life. One gives relief. Accept no substitute.

Note the word R-I-P-A-N-S on the packet.
Send 5 cents to Ripans Chemical Co., No. 10 Spruce St., New York, for 19 samples and 1,000 testimonials.

EUGENE FIELD'S POEMS A \$7.00 BOOK...

THE Book of the century. Handsomely illustrated by thirty-two of the World's Greatest Artists.

Given Free

to each person interested in subscribing to the Eugene Field Monument Souvenir Fund. Subscribe any amount desired. Subscriptions as low as \$1.00 will entitle donor to this dainty artistic volume.

"FIELD FLOWERS."

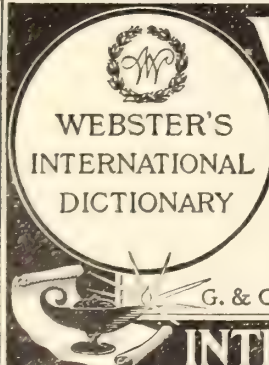

(cloth bound, 8x11), as a certificate of subscription to fund. Book contains a selection of Field's best and most representative works and is ready for delivery.

But for the noble contribution of the world's greatest artists this book could not have been manufactured for less than \$7.00.

The fund created is divided equally between the family of the late Eugene Field and the fund for the building of a monument to the memory of the beloved poet of childhood. Address:

Eugene Field Monument Souvenir Fund,
(Also at Book Stores) 180 Monroe St., Chicago.

If you also wish to send postage enclose 10 cts.

WEBSTER'S

Hon. D. J. Brewer, Justice of U.S. Supreme Court, says: "I commend it to all as the one great standard authority."

It excels in the ease with which the eye finds the word sought; in accuracy of definition; in effective methods of indicating pronunciation; in terse and comprehensive statements of facts and in practical use as a working dictionary.

Specimen pages, etc., sent on application.

the sub-stations. At each sub-station will be 3 transformers & 2 rotary convertors, with the necessary switchboard & controlling apparatus. The other line is to be between Buffalo, N.Y., & Erie, Pa., about 70 miles.

General Telegraph Matters.

The C.P.R. Co.'s Telegraph is building a line from Harriston to Listowel, Ont.

The C.P.R. Co.'s Telegraph has strung a third quadruplex wire between Montreal & Toronto.

The C.P.R. Co.'s Telegraph has closed the offices at Comaplix, B.C.; Mazokama, Ont.; Rondeau, Ont.; & Russeltown, Que.

The Dominion Government telegraph line between Kamloops & Nicola, B.C., is about completed. An agitation is on foot to have it operated as a telephone line.

An unconfirmed report says the Ontario & Rainy River Ry. Co. proposes to establish telegraph connection between Port Arthur & Duluth by way of Ely, Minn.

The B.C. & Alaska Cable Telegraph Co. proposes to lay a cable between Juneau & Skagway. R. Moore, of the Western Union, wants the Juneau people to give a \$10,000 bonus.

In the suit of Morrow vs. G.N.W.T. Co. an order was recently made for examination for discovery of the Vice-President & Secretary of the Western Union Telegraph Co. at New York.

It was intended to locate the C.P.R.'s commercial telegraph staff on the 5th floor of the new station at Vancouver, but it has been decided to erect a separate building for the purpose, east of the station.

A contract has been awarded for 165 tons of wire for the telegraph line to be built by the Dominion Government between Quesnelle & Atlin, B.C., to connect the present B.C. system with the Yukon line.

C. R. Hosmer, who was recently elected a director of the C.P.R., announces that at the end of the year he will retire from the position of Manager of the Co.'s telegraph, which he has held since 1886.

The Dominion Minister of Public Works says he hopes to get the 300 miles extension of the Government telegraph line along the north shore of the St. Lawrence to the Straits of Belle Isle completed by next spring.

Mr. Chapman, of Montreal, has been interviewing the Dominion Public Works Department, to secure the adoption of wireless telegraphy between the Labrador coast & Belle Isle, where the Scotsman was wrecked, also to Sable Island.

The C.P.R. Co.'s Telegraph has opened the following offices: Cascade City, B.C.; Grand Forks, B.C.; Fort Steele Brewery, B.C.; St. Eugene Mission, B.C.; Camp McKinney, B.C.; Finmark, Ont.; Clarenceville, Que.; Ethelbert, Man.

A large amount of reconstruction of the pole line on the Western & Pacific divisions of the C.P.R. Co.'s Telegraph is now going on & it is expected that by the end of next year there will be an entirely new line of poles between Fort William & Vancouver.

The Government telegraph line from Lake Bennett, B.C., was completed to Dawson, Yukon, Sep. 28, & the branch to Atlin has also been completed. It is 593 miles from Bennett to Dawson, & the Atlin line is 75 miles long. The total cost is said to have been about \$117,500, the Dawson line having averaged \$225 a mile & the Atlin one about \$200. Fifteen operators have been installed.

The Spokane & Northern Telegraph Co.'s line has been extended via Republic, Wash., to the International Boundary, from which point its subsidiary, the Yale-Kootenay Tele-

graph Co. has built to Midway & Greenwood, B.C. A second wire is being strung to Curlew, whence a single wire will run to Grand Forks, B.C. The S. & N. T. Co. connects with the Western Union lines. (Aug., pg. 251, Oct., pg., 309.)

The Commercial Cable Co. has called a special meeting of shareholders for Dec. 4, for the purpose of voting upon the proposition to increase its capital stock from \$10,000,000 to \$15,000,000. Of the issue, \$3,333,333 is to be offered to the present shareholders at par, this being at the rate of 1 share in 3 of the present holdings. The new stock is to be paid up 25% on Jan. 20, 25% Feb. 20, & 50% Mar. 20. The new stock is to carry dividend from Jan. 1, & will thus be entitled to quarterly dividend payable April 1. The additional money is required for another cable, owing to the largely increased business of the Co.

The C.P.R. Co.'s Telegraph is being extended along the Columbia & Western Ry. from West Robson towards Midway, B.C., as fast as track is laid, offices being opened at the principal stations. The line is being most substantially built with a 4 pin arm on top of the poles, carrying 2 wires at present. It is very likely that in time some of the through wires will follow this route. Another wire, in addition to the two now in use, will be strung from Nelson to Rossland, & one from Nelson to Robson, to connect with one of the wires into the Boundary Creek district.

The following tariff of charges has been put in force on the Dominion Government Yukon line: From Bennett to Cariboo Crossing, 50c. per 10 words, & 5c. for each additional word; to Tagish, 60 & 5; Miles' Canyon, 75 & 5; White Horse, 75 & 5; Lower Laberge, \$1 & 10; Hootalinqua, \$1.25 & 10; Five Fingers, \$2 & 15; Fort Selkirk, \$2.50 & 15; Dawson City, \$3 & 15. Between Skagway & Bennett the White Pass & Yukon Ry.'s telegraph charges \$1 for 10 words, & 5c. each additional word, making the through rate from Skagway to Dawson, \$4 for 10 words, & 20c. for each additional word. From Ontario & Quebec points to Vancouver, between which place & Skagway messages are conveyed by steamer, the charge is \$1 for 10 words, & 7c. for each additional word, so that the through rate from Ontario & Quebec points to Dawson is \$5 for 10 words & 27c. for each additional word.

The following reply to a correspondent is given in the Monetary Times, whose editor is a director of the G.N.W.T. Co.: "In 1881 the Great Northwestern Telegraph Co. of Canada leased the wires & other property of the Montreal Telegraph Co. extending over all the Eastern provinces of Canada, & over part of Manitoba, & several of the northern States. It also leased the wires of the Dominion Telegraph Co. in Canada. Then these two sets of lines were merged into one for purposes of economy. The terms of lease were that 8% upon the \$2,000,000 capital of the Montreal Co. & 6% upon that of the Dominion Co. should be paid annually. For this bargain the Western Union Telegraph Co. of the U.S. became guarantor. For several years the G.N.W. Co. was able to pay this enormous rental, even with the low rate of tolls (25c for 10 words). But when the C.P.R. Co.'s Telegraph came into existence, & the Bell Telephone Co. built lines connecting towns the business was so divided that the G.N.W.T. Co.'s revenue fell off. It has not paid dividends to its shareholders for years. But the payments to the lessors have gone on regularly every year, & the shareholders of the M. T. Co., & of the D. T. Co. get their dividends regularly of 8 & 6% respectively. The extent of wires handled by the G.N.W. Co. is 40,000 miles, & of the C.P.R. about 25,000 miles."

W. F. Snyder, manager of the W. U. cable office at North Sydney, N.S., died Oct. 9. He

was a member of the old school of telegraphers, & a finer operator never touched a key. His Morse was perfect & his speed marvellous. He began his telegraph career in his native city, Philadelphia, Pa., in 1855, when 12 years old. His first office was at Magnolia, Md.; he was soon after transferred to Princeton, N.J., then to Washington, D.C., then to Petersburg, Va., in 1859; then in the following year to Baltimore, & a year later to Philadelphia. There for a while he was in the main office of the American Telegraph Co., & afterwards manager of the branch office in the Stock Exchange, between which & New York was started the first special stock circuit in the U.S. In 1863 he returned to Baltimore, first as manager of the People's Line office, then of the American, & later of the W. U. T. Co. In 1867 he entered the latter Co.'s cable service, first at Plaister Cove, N.S., next in 1870 in the Cable Room, New York, & in the latter part of that year as manager at Duxbury, Mass. In 1865, upon the incorporation of the staff of the Anglo Cable Co., with & under the management of the W. U. T. Co., at Plaister Cove, Mr. Snyder returned to that station, & in Oct. of the same year transferred the joint staff & business to North Sydney, where he continued as manager until his death.—Telegraph Age.

British Columbia Telephones, Limited.

At the 1st annual meeting at the head office at Huddersfield, Eng., Oct. 10, the following report was presented:—During the year the progress of the business has been very satisfactory. The number of subscribers to all the subsidiary companies on June 30, 1899, was 1424 as compared with 1127 on June 30, 1898; a net gain of 297. Notwithstanding the loss occasioned by the fire in New Westminster in Sep., 1898, the dividends expected from the subsidiary companies will yield a total profit of £6,018 11s. 1d., being the sterling equivalent of \$30,000. Before distributing these profits the New Westminster & Burrard Inlet Co. has set aside £1,581 10s. 6d. towards the cost of constructing a new switch-board, which has been found necessary in consequence of the large increase of subscribers. The directors are obtaining full information as to the several systems in use, & as soon as they are in a position to select the best the work will be proceeded with. At the end of the financial year, the directors arranged at the joint expense of this Co. and The Yorkshire Guarantee & Securities Corporation, to send an accountant to B.C. to audit the accounts of the businesses controlled by both companies. The figures above given have been verified by him. The profits available for distribution are as follows:—

Dividends to be declared by subsidiary companies	£6008 11 1
LESS:—	
English offices—Secretary's salary, auditors' fees & incidentals...	£182 19 2
Fee of trustees for debenture stock holders, income tax and bank interest and charges.....	65 16 5
	£248 15 7
	£5769 15 6
The following deductions have to be made:—	
Interest on purchase money to date of payment	£1002 10 11
Interest on debenture stock to June 30, 1899	505 7 3
	£1008 18 4
Leaving a balance of.....	£4761 17 4

The directors recommend that this be disposed of as follows:—

Dividend on preference shares to June 30, 1899, already paid	£700 10 0
Interim dividend of 8% per annum (free from tax) to December 31, 1898, on ordinary shares, already paid.....	272 18 1
Dividend on ordinary shares at 8% per annum (free from tax) to June 30, 1899.....	900 0 0
To carry to reserve fund	1888 0 0
To write off cost of registration in B. C. & parliamentary expenses	30 15 0

The report & accounts were adopted & the dividend recommended was declared & has been paid. £400 were voted as directors' remuneration. The retiring director, W. Farrell of Vancouver, B.C., was re-elected. The other directors, who are resident in England, are E. Gray, Chairman; F. Priestman & J. Wheatley. The secretary is W. H. Hughes. The chief officers in B.C. are R. K. Houlgate, Comptroller; H. W. Kent, Construction Superintendent & Manager, both located at Vancouver.

On Nov. 2, the Secretary issued a circular to shareholders from which the following is extracted: The purchase of the whole of the shares in the Victoria & Esquimalt Telephone Co., which was referred to by the Chairman at the annual meeting, has been completed. By this purchase the Co. acquires the telephone systems in Victoria & Esquimalt, and so completes its control of practically all the telephone systems in B.C., both on the Mainland & on Vancouver Island. It is believed this acquisition will greatly strengthen the Co.'s position, & very materially improve the value of its general undertaking. The Mainland & Vancouver Island are connected by telegraph only, but it is now probable that a submarine telephone cable will be laid. In the event of this being done, subscribers to the Co.'s principal systems, whether on the Mainland or on the Island, will be able to communicate one with another. The revenue derived from the Victoria & Esquimalt system has hitherto been very satisfactory, but it is anticipated that the improvements & extensions under this Co.'s management, which have had so beneficial an effect on the other systems owned by the Co. will also considerably increase the revenue from the V. & E. system. In order to provide funds for the purchase of the shares of the V. & E. Co. which has been fixed at £27,250, it has been decided to make the following issue of debtenture stock and shares, viz.: £10,000 of 4½% 1st mortgage debtenture stock at 102½; 1000 6% cumulative preference shares of £10 each at £10 10s. a share; 1000 ordinary shares of £10 each (£7 10s. a share paid), at £8 10s. a share. The reserve fund & the sum carried forward from last year's account, after deducting directors' remuneration, amount to £1,425 4s. 3d., & in addition to this,

£1,581 10s. 6d. has been set aside by the subsidiary companies for the purpose of constructing a new switchboard. These two amounts are equivalent to £1 a share premium on the ordinary shares originally issued. The whole of the premiums realized on the debtenture stock & shares now to be issued will belong to the Co., & will be utilized for the purpose of further extensions which are rendered necessary by the continued development of the business. The circular is accompanied by application form for debtenture stock & shares. Existing holders will have preference in allotment in proportion to the amounts already held by them respectively. A cablegram has been received from Vancouver intimating that all the present shareholders of this Co. resident in B.C., wish to subscribe their pro rata amounts of the new issue. The debtenture stock is secured by a 1st mortgage trust deed charging the whole of the property & undertaking of the Co., & is issued in multiples of £10. It is redeemable at the Co.'s option at any time before July 1, 1908, at £110% on giving 6 months' notice; or on, or at any time after July 1, 1908, at £105% on giving 6 months' notice.

On the formation of the Co. the following contracts were entered into: An agreement dated Oct. 11, 1898, between the Western Canada Telephone Co., (whose shareholders are the Yorkshire Guarantee & Securities Corporation, The Northern Counties Investment Trust, J. Wheatley, W. D. Shaw, F. Priestman, J. Crowther, R. I. Critchley, J. H. Wade, G. Sheard, F. W. Bentley, & G. P. Norton) as vendor of the one part & B.C. Telephones, Ltd., of the other part. An agreement containing an option of purchase of shares in The New Westminster & Burrard Inlet Telephone Co., dated May 10, 1898, addressed to W. Farrell, & signed by or on behalf of the following shareholders in such company, viz.: E. M. Tatlow, A. Leaycroft, J. C. Keith, W. Godfrey, J. M. Lefevre, O. Plunkett, H. W. Kent, C. Sweeney, The Mercantile Development Co., H. Abbott, G. E. Corbould, & J. C. Armstrong, & in addition there were contracts or transfers of shares from other shareholders in the N.W. & B.I. T. Co., and many other contracts, agreements & arrangements with various persons connected with the business & concerning the formation of the Co. & the subscription of the capital offered to the public.

General Telephone Matters.

The Bell Co. has declared a 2% dividend for the quarter ended Sep. 30.

The Yarmouth Telephone Co. is building an 8 mile line between Belleville & Springhaven, N.S.

An agitation is on foot to have the Nicola, B.C., telegraph line changed to a telephone line.

The North American Telegraph Co. is putting a new telephone exchange in at Tweed, Ont.

The Carman, Man., Telephone Exchange Co. has been incorporated, with a capital stock of \$2,000.

The Citizens Telephone & Electrical Co., Rat Portage, Ont., has had its capital stock increased from \$40,000 to \$90,000.

The Bell Co. has decided to construct a copper metallic long distance line between Winnipeg, Portage la Prairie & Neepawa, Man.

The Bell Co. has laid a steel armoured submarine telephone cable with six conductors across the St. Lawrence River between Prescott, Ont., & Ogdensburg, N.Y.

The Vernon & Nelson Co. has reduced its rates in Rossland, B.C., within a radius of a mile from the central office, to business tele-

phones, \$2.50 a month, 2 for \$4; residences, \$2.

Telephonic communication has been completed between the lighthouse on Belle Isle, at the entrance to the Straits, situated 600 feet above the sea, & the powerhouse, near the sea level, two miles distant on the south-west extremity of the island.

The Bell Co. is making extensions & improvements to its lines on the south side of the St. Lawrence. Underground conduits have been laid as far as the Victoria Bridge, Montreal, & it is expected to have the line to St. Lambert finished in a short time.

The Merchants Telephone Co. wants to extend its service to the town of Westmount, a suburb of Montreal. The Bell Co. offers, if exempted from taxation for five years, to enter into a contract for that time to supply domestic telephone service at \$30, & business service at \$50.

The Bell Co. has decided to make some improvements in the service between Montreal & Quebec, & has entered into arrangements with the Canadian Electric Light Co., of Chaudiere & Levis, by which it is expected that Montreal & Quebec will shortly be connected by a telephone line independent of the one now in use via Three Rivers.

The Kootenay Lake Telegraph Co. is improving its service in Nelson, B.C. A continuous day & night service was inaugurated last month, the under-ground return system is to be changed to a metallic system, & the Blake transmitters will be replaced by long distance transmitters. The switchboard now in use at Vancouver is to be transferred to Nelson.

Notice is given that application will be made to the B.C. Legislature for the incorporation of a company to construct & operate telephone lines in the district of East Kootenay. The capital is placed at \$50,000. It is proposed to build first between Golden & the Windermere district, to connect with the mining camps of Canterbury, Atholmer, Windermere, Peterboro & Boulder, & then to make connection with Cranbrook or Fort Steele, as a point from which to operate lines in various directions, embracing among other places Moyie, Wardner, Elko, Kimberley & Wasa.

At the recent annual meeting of the Merchants Telephone Co. in Montreal, the President reported that the business was increasing, that it is the intention to connect with as many outside lines as possible, & that negotiations were on foot to this end. The following directors whose term had expired, were re-elected: A. S. Hamelin, L. H. Henault, R. Moisan, S. Larcheveque, & J. B. Thibault. The following officers were elected: A. S. Hamelin, President; J. E. Beaudoin, Vice-President; J. M. Marcotte, Secretary, & L. E. Beauchamp, Treasurer.

Superintendent Kent, of the B.C. Telephones, Ltd., recently returned to Vancouver from an eastern trip, during which he ordered for the Vancouver office a branch terminal multiple board from the Bell Co. Mr. Kent states that for an 800-wire office Vancouver's exchange answers more calls than cities of the same size in the east. An average of 13½ calls a day is registered in Vancouver to each subscriber, which makes a total of 12,000 messages a day. In addition to improving the Vancouver system a metallic circuit will be put in the Victoria system which is now controlled by the same company.

The Boundary Creek, B.C., Telephone Co.'s business is to be worked in connection with the telegraph line which has been built from Spokane, Wash., via Republic into the Boundary Creek district. The Co. has already opened telephone exchanges at Greenwood, Phoenix & Midway. A metallic circuit is being put in between Greenwood & Midway, & an extension to Grand Forks is contemplated.

With the Columbia Co.'s system already in use, the Boundary Creek Co.'s now being put in, & the Vernon & Nelson Co.'s to follow shortly, the district will have three telephone systems competing for its business.

E. Edison, jun., claims to have solved the problem of transatlantic telephoning. By his invention he says it will not take a very powerful current to send a message across the ocean. He has taken more than 3,000 miles of wire & subjected it to the same pressure & the same conditions, as nearly as possible, as those of the ocean, & he has been quite successful. He submerged the spindle on which the wire was, subjected it to a heavy pressure, & at the same time made the spindle revolve at the rate of 10 or 12 revolutions a minute. It was found that the sounds were carried very distinctly. It has been decided that one relay station in the ocean will be sufficient; but it will not be necessary to keep a bevy of hello girls there, as messages will be resent by mechanical devices. —Globe.

A new telephone company is appearing on the scene, & is anxious that its voice shall be heard. Application has been made to the Board of Works, Toronto, from a patent company, on behalf of the inventor of the Dodge system, Post Mills, Vt., asking the Council to grant a building permit to a joint stock company, organized to take over the above system, lay wires, etc. A similar application has been made in Montreal. The amount of rivalry which might be supposed to exist in Chicago, where some of the streets are 27 miles in length, & telephones of greater proportionate necessity than in any city on the continent, does not prevent the upholding of high prices. To a business street 9 miles south of the post office, the telephone charge is \$241 a year, payable quarterly in advance. Even this charge does not include free connection with suburban points, some of which are within the city's expanded limits, extra charges of 10 to 15c. a call are made. —Journal of Commerce.

The Bell Company is proceeding to contest in the courts the assessment of \$500,000

placed upon its plant by Montreal assessors. The city's assessors estimated the value of the plant at \$500,000, which embraces conduits, poles, wires & other paraphernalia. The Co.'s solicitors have filed a petition protesting against this assessment as excessive & illegal, contending the assessors in arriving at their conclusions have proceeded upon erroneous principles, not having fixed the conduits, wires, poles & cables at their actual value as required by the charter of the city. They allege that in making the valuation the assessors have valued the whole of the conduits, poles, wires & cables as a going concern, & have improperly & illegally considered the same in connection with the exercise of the Co.'s franchise, & in connection with the value of the whole line operated by the Co. throughout the different wards of the city, & even outside of it, & considered the value of telephonic line regarded as a complete system, & the business value of these articles to the Co. as part of the means whereby it exercises its franchise, or their income producing value, whereas by law & by the terms of its charter, the franchise of the Co. cannot be taxed by the city of Montreal as real estate, nor can any portion of the Co.'s property be taxed, carrying with it any corporate rights of the Co. They proceed to state that the assessors in appraising the actual value of the conduits, poles, wires & cables under the terms of the Quebec statute could only tax the property itself, separate & distinct from any other property of the Co., & disassociated from the rest of the system of which it formed part. Finally, they state that the actual value of the conduits, poles, wires & cables does not exceed \$75,000, consequently they ask that the assessment be reduced from \$500,000 to \$75,000.

Among the Express Companies.

The Dominion Ex. Co.'s money orders are payable at all offices of the Maritime Ex. Co.

LeB. Coleman has been appointed Route Agent of the Canadian Ex. Co., in charge of

New Brunswick lines, with headquarters at St. John, N.B.

The Dominion Ex. Co. has offered a reward of \$2,500 for information which will lead to the conviction of the person or persons who broke into the office at Joliette, Que., Aug. 14, & stole a quantity of valuables.

The merchandise rate between North Sydney, N.S., & all points reached by the Newfoundland Ry. Ex. is \$2 per 100 lbs. In addition to rate to North Sydney, from there to destination, graduate and charge as per general classification on 50 lbs. or less; over 50 lbs., 2c. a pound. C.O.D.'s may be accepted at classification card charge. The Newfoundland Ry. Ex. will not handle money.

The B.C. Ex. Co. recently broke all previous records in quick transit, over the Cariboo road. An express left Barkerville at midnight on Monday, & reached Ashcroft at 2 a.m. Thursday, having covered the 285 miles in 50 hours. The actual time was considerably less than 50 hours, as the driver had to lay off at Soda Creek for 6 hours, & at other points along the road time was lost in changing horses, etc.

The Alaska Pacific Ex. Co. gives notice of the following winter service to Dawson City. Tariff between Puget Sound ports and Dawson:

Merchandise, \$2.50 a pound; minimum charge \$2.50.

Money, currency or gold, 2%; minimum charge \$2.50.

Letters, \$1 each.

Money Orders, 2%; minimum charge \$1.

The Co. will make special trips during the winter to Dawson & return, the frequency of them depending largely upon the volume of business offered for shipment. Shipments must be accompanied by certified invoices in quadruplicate. Duty will be assessed at frontier port, & will average about 35% ad valorem. The duty, & all charges on merchandise shipments, forwarded during the winter, must be prepaid by the shipper. All shipments accepted subject to delay & at owner's risk or freezing.

RAILWAY FINANCE, MEETINGS, &c.

Atlantic & Lake Superior.—It is said the Dominion Government is considering the advisability of leasing this line & of granting assistance for the improvement of the Paspebiac terminus.

British Columbia Southern Ry. It is said that at the next session of the B.C. Legislature some of the members opposed to the Government will attack the validity of the land grant to this Co. It is contended that the Co., having received a Dominion as well as a Provincial charter, the land grant, which the Provincial charter carried with it, should in consequence of the Co. having received a dual charter, revert to the province. The B. C. S. R. Co. made such arrangements with the C.P.R. Co., as enabled the latter to proceed with the construction & completion of the Crow's Nest Pass Ry. The land grant, or a considerable portion thereof, which the original charter carried with it, went to the C.P.R. During the negotiations which were carried on between the Dominion Government & the C.P.R., amongst other concessions asked by the Government from the Co., & which were agreed to, was the alienation to the Government of 50,000 acres of coal lands. Those controlling the B.C. Southern charter & the land grant retained a considerable portion of the grant, containing what are believed to be some of the best coal lands in Kootenay. The contract with the B.C.S.R. Co. was made during the time of the Turner administration in B.C., & it is said that the succeeding administration, of which Mr. Semlin is Premier, has issued a Crown title for at least a large percentage of the land in question to the companies interested, so that it is difficult to see what can now be done in the matter, & there is no reason to fear that the companies' titles are in the slightest respect insecure, though judging by what ex-Attorney-General Martin, of B.C., has done in the past, he would not hesitate to attempt repudiation if he thought he could make any political capital by so doing. Fortunately for the sake of the companies & for the reputation of the province, the matter is one that, if pushed, will have to be decided by the Courts, & not by the Legislature.

Calgary & Edmonton.—Net earnings for Oct., \$11,108.00 against net earnings of \$8,476.18 for Oct., 1898.

The Canada Atlantic Co. recently sued the village of Rockland, Ont., for a declaration that the Co. was entitled to the bonus benefit granted them by the village by by-law, & was entitled to the issue of \$6,000 worth of debentures thereunder, & for a mandamus. It was held by Judge Rose on the evidence, that the railway was not built & completed to the village within the two years required by the by-law, & the action was dismissed with costs, with a stay for 30 days.

Canadian Pacific. In preparation for the ½-year's interest, due Jan. 1, on the 4% debenture stock of this Co., & on the 4% debenture Stock of the New Brunswick Ry. Co.,

the transfer books were closed Dec. 1, & will reopen Jan. 2.

C.P.R. stock has been bought steadily by investors of late. It is stated that there is now more stock in the names of Canadians than at any time in the history of the Co.

Coast Ry. of Nova Scotia.—T. Robertson, M.P.P., President of this Co., says there is no truth whatever in the report that the line has been sold to the Dominion Atlantic Ry.

Dominion Atlantic net earnings 10 months to Oct. 31, \$643,425 against \$538,564 for corresponding period.

JAMES GUTHRIE SCOTT,

Secretary & Manager of the Quebec & Lake St. John Railway & of the Great Northern Railway of Canada.

Duluth, South Shore & Atlantic. President Shaughnessy, of the C.P.R., confirms the report that arrangements have been made between this subsidiary Co. & the Chicago, Milwaukee & St. Paul Ry., providing for a connecting train service between points in the mineral range section of the D., S.S. & A. line & the south. Arrangements have also been effected whereby the C., M. & St. P. trains will use certain sections of the D., S.S. & A. line, leading into Marquette, Mich., thus avoiding the necessity of a double service. D., S.S. & A. stock has advanced as a result.

The Fort Erie Ferry Ry. Co.'s annual meeting will be held at Fort Erie, Ont., Dec. 20.

Intercolonial & C.P.R. A press despatch of Nov. 11 said.—“Sir Wilfred Laurier had a long conference to-day with the Minister of Railways & General Manager Pottinger, of the I.C.R., when it is understood that the relations of the I.C.R. to the C.P.R. & the winter port question were discussed.”

The Kaslo & Lardo-Duncan Ry. Co. gives notice of application to the Dominion Parliament for an act to extend the times limited for the construction & completion of its works, & to authorize the Co. to convey or dispose of its railway & works. This Co. is a subsidiary of the Kootenay Ry. & Navigation Co. & will probably be merged in the latter.

Manitoba Southwestern Colonization Ry.—Blake, Boissevain & Co. recently announced that the coupon due Dec. 1, on this Co.'s 1st mortgage bonds, would be paid by them on & after that date in London, Eng., at the rate of 4s. 1½d. per dollar, or in New York, at the agency of the Bank of Montreal, at the option of the holders. This line is operated as a branch of the C.P.R., which Co. owns all its capital stock.

Northern Pacific Right of Way.—At Spokane, Wash., recently, Judge Prather rendered an oral decision in the matter of the N.P. R.'s claim to 200 ft. on each side of the track as its permanent right of way. The case involves the title to real estate, the value of which is said to aggregate millions. The claim of the Co. rests on the contention that, once granted 200 ft. on each side of its track through the public domain as right of way, no part of this property could ever be taken up or disposed of. The decision of the court is in effect that except for a strip of land actually needed for the railway's right of way, the public can acquire full title to the remainder by adverse possession, if the railway fails to make use of it. Just how much would reasonably be held to be necessary for the safe operation of trains, the court did not decide, but it held that the entire 400 ft. could not be presumed to be necessary. The Co. will appeal to the Supreme Court.

Northern Pacific Bonds.—Notice is given that 898 of the general 1st mortgage \$5,000 registered bonds, or a total par value of \$4,490,000, have been drawn for the sinking fund in accordance with the requirements of the Trust Mortgage. All the outstanding bonds (both coupon & registered) issued under the mortgage have been called for redemption. The bonds so designated will be paid at 110 & accrued interest on presentation at the office of the Central Trust Co., of New York, interest to cease Jan. 1, 1900. This payment is important to stockholders & bondholders alike, to the stockholders because, the redemption being from the proceeds of land sales, there will be a large saving in fixed charges; to the bondholders because, with the retirement of these old 1st mortgage issues, the new bonds created at the time of the reorganization become substantially the only ones of the whole system, excepting only the 182 miles of the old St. Paul & Northern Pacific. In other

TORONTO, CANADA, DECEMBER, 1899.

TO ADVERTISERS.

The steam & electric railways, the steam-
ship, express, telegraph & telephone com-
panies in Canada are large buyers.

Their purchasing agents and other offi-
cials throughout the Dominion, from the
Atlantic to the Pacific, are on THE RAIL-
WAY & SHIPPING WORLD'S subscription list.

It is the only one paper that reaches
them all.

If you want to do business with any of
the companies mentioned above, an adver-
tisement in this paper will prove a good
investment.

Canadian Freight Association.

PRESIDENT, J. W. Loud, Montreal; 1st VICE-PRES.,
W. B. Bulling, Jr., Montreal; 2nd VICE-PRES., W.
Macmillan, Buffalo, N.Y.; SEC. TREAS., J. Earls, To-
ronto.

NEXT ANNUAL MEETING at Montreal, Oct. 17 & 18, 1900.

Canadian Ticket Agents' Association.

PRESIDENT, F. W. Churchill, Collingwood, Ont.; 1st
VICE-PRESIDENT, W. Jackson, Clinton, Ont.; 2nd VICE-
PRESIDENT, J. N. McNamara, Walkerton, Ont.; 3rd
VICE-PRESIDENT, W. H. C. McKay, St. John, N.B.;
SEC. TREAS., E. de la Hooke, London, Ont.; AUDITOR,
S. H. Palmer, St. Thomas, Ont.

EXECUTIVE COMMITTEE, W. H. Harper, Chatham,
Ont.; C. E. Morgan, Hamilton, Ont.; T. Long, Port
Hope, Ont.; J. W. Tierney, Arnprior, Ont.; C. C.
Young, London, Ont.

NEXT ANNUAL MEETING at Hamilton, Ont., Oct. 10,

Canadian Marine Engineers' Association.

HONORARY PRESIDENT, O. P. St. John, Toronto;
PRES., H. Parker, Toronto; 1st VICE-PRES., A. J. Wood-
ward, Toronto; 2nd VICE-PRES., D. F. Campbell, To-
ronto.

COUNCIL, T. W. Good, W. Harwood, R. Binch, To-
ronto; P. J. Carr, Port Dalhousie; J. E. Kane, King-
ston.

TREASURER, H. Brownley, Toronto; SECRETARY, S.
A. Mills, Toronto; GUARD, H. Bowler, Toronto; AUDI-
TORS, D. L. Foley, Toronto; E. J. O'Dell, Owen Sound.

Track Supply Association.

PRESIDENT.—F. E. Came, Montreal.
FIRST VICE-PRESIDENT.—R. J. Davidson, Hillburn,
N.Y.
SECOND VICE-PRESIDENT.—W. H. Frisby, Three Riv-
ers, Mich.
HON. SECRETARY-TREASURER.—Acton Burrows, 33
Melinda Street, Toronto.
NEXT ANNUAL MEETING at Montreal, Oct. 16, 1900.

words, the \$90,000,000 of prior lien 4% will now
be straight 1st mortgage on all but 182 miles
of road, & the general lien 3% a 2nd mort-
gage. As the bonds to be retired are 6%, the
reduction in fixed charges through the reduc-
tion will be about \$270,000 a year. The N.P.
has been enjoying great prosperity of late.
Inducements were offered the old 1st mort-
gage bondholders to exchange their obliga-
tions for the new issue, & the bonds not re-
tired in this way have during the last two
years been redeemed from land sales, until
now, a final call disposes of the whole amount.

Qu'Appelle, Long Lake & Saskatchewan.
—Net loss in operating for Oct., \$79.49,
against net loss of \$1,976.85 for Oct., 1898.

Quebec & Lake St. John earnings for
Sep., \$7,255 more than for Sep., 1898.

Quebec Central gross earnings for Oct.
\$44,924.60, against \$40,404.67 in Oct., '98;
working expenses \$28,726.50, against \$24,-
637.58; net earnings \$16,198.30, against
\$15,767.09.

Gross earnings 10 months to Oct. 31 \$430,-
325.48, against \$385,854.72; working ex-
penses \$275,677.30, against \$253,828.21; net
earnings \$154,648.18, against \$132,026.51.

The London, Eng., Stock Exchange com-
mittee has ordered the Co.'s £200,000 4%
debenture stock to be quoted in the official
list.

The Salisbury & Harvey Ry., which runs
from Salisbury, N.B., on the I.C.R., to Albert,
45 miles, which has been in financial difficul-
ties for some time, has, according to press re-
ports, been sold, the names of A. McElwee,
Major Catlin & J. R. McDonald, of New
York, & M. Lodge, of Moncton, N.B., being
mentioned as among the buyers. Mr. Mc-
Elwee is said to be interested with others in
mining in Albert county & in the development
of the shale property at Baltimore, N.B., & it
is said to be likely that the line will be extended
to Moncton & that a branch will be run to the
Baltimore shale property. (Sep., pg. 257.
See also "Baltimore Coal & Ry. Co., Oct.,
pg. 320.)

The Temiscouata Ry. Co.'s annual meet-
ing was held Dec. 5, when the following were
elected:—President, C. Riordan; Vice-Pres-
ident, F. Grundy; General Manager, T.
Crockett; other directors, W. Cook, J. N.
Greenshields, A. H. Cook, J. H. Walsh;
Secretary, D. B. Lindsay.

The United Counties Ry. has, it is said,
been secured in the interest of the Rutland
Ry. The U.C. extends from Sorel, Que., on
the St. Lawrence River, via St. Hyacinthe, to
Iberville, 66 miles, & has running powers over
the Montreal & Atlantic Ry. (C.P.R.) from
Yamaska to Sorel, 10 miles. Of the mileage
owned, but 61 miles, from St. Robert Jct. to
Iberville, is operated. Last year an extension
of about 22 miles was built under the name of
the East Richelieu Valley Ry., from Iberville
to Noyan Jct., where connection is made
with the Canada Atlantic. The U.C.R. was
built for political purposes, & its financial
position became so involved that it passed into
the hands of the Bank of St. Hyacinthe. The
Manager has recently been in England endeavor-
ing to make some arrangement in regard
to its bonds, & since then a new company has
been formed which is to take over the rail-
way, with headquarters in Montreal. The
Rutland R.R. is understood to have a major-
ity of representatives on this board. The
Rutland Ry. has for some months had under
construction a line from Burlington, Vt., to

Rouse's Point, N.Y., & an extension is to be
built at once from Alburg, Vt., under the
name of the Rutland & Noyan, to connect
with the U.C.R. at Noyan Jct., & to give a
through service between Sorel & New Eng-
land points. This is expected to augment the
Canadian export trade by way of Boston, &
it is said an agreement has been reached with
the Dominion Government by which Boston
freight originating on the Intercolonial is to
be sent by the new route.

Wabash.—On account of increased earn-
ings the directors have decided to pay 3% in-
terest on the \$3,500,000, series A bonds. The
last interest payment on them was in July,
1896. It is expected the earnings will also
provide for some distribution on the B bonds,
of which \$26,000,000 are outstanding.

White Pass & Yukon receipts—3rd week in
Oct., \$64,822; last 10 days Oct., \$8,188; 1st
week Nov., \$11,178.

C.P.R. Earnings & Expenses.

Gross earnings, working expenses, net
profits and increases over 1898, from Jan. 1,
1899.

Land Commissioner Hamilton announces
that the Co. will offer to Manitoba farmers,
who wish to go east this winter on the Christ-
mas excursion rates & succeed in selling any
of the C.P.R. lands, \$10 for every 160 acres
disposed of. In previous years farmers have
been instrumental in selling the Co.'s lands &
this year any work they do in this respect
will receive recognition. Maps of each mun-
cipality are being prepared for their use.

Grand Trunk Earnings, Expenses, &c.

The following statement of earnings sup-
plied from the Montreal office, includes the
G.T. of Canada, the Chicago & G.T., & the
Detroit, Grand Haven & Milwaukee Rys.:

Alberta Railway & Coal Company.

The annual meeting was held in London, Oct. 25, when the report of the directors for the year ended June 30 was presented, as follows:

The coal sales during the year were 184,764 tons, against 143,797 during the previous year. The cash earnings, apart from coal traffic, of the Montana Ry. were \$76,745.71, against \$64,383.77. The balance of profit, after providing for the interest on 4% prior lien debenture stock, is £7,275 10s. 10d., which, with the balance of £16 9s. 8d. from last year's accounts, the auditors have certified as payable to the "A" debenture stockholders in virtue of their resolution passed April 1, 1896. The directors regret to say that owing mainly to the capital requirements of the Co. during the

year, rendered necessary through increased business, having exhausted the above balance, there is at present no money available with which to pay the "A" holders, & that to provide the necessary funds & additional working capital, it is proposed to utilize the £25,000 of 4% prior lien debenture stock remaining unsold. Since June 30 last the volume of the Co.'s business, both in coal sales & in railway traffic earnings, has been larger than during the same period of last year. The Co. has commenced to transport Crow's Nest coke to Montana for use in the smelters there. The demand for this article, which is carried by the Co. over its entire railway between Lethbridge & Great Falls, is, in the opinion of the President, very likely to increase, and if so the Co.'s traffic receipts should correspondingly improve. The irrigation works on the lands sold by the Co. & by the Lethbridge Land Co., are proceeding satisfactorily. The Canadian North West Irrigation Co. expects that the entire main canal system up to Lethbridge will be finished early in 1900. The directors are of opinion that the efforts of the Irrigation Co. towards improving & settling the lands will have a satisfactory effect on the business of the Alberta Co.

REVENUE ACCOUNT YEAR ENDED JUNE 30, 1899.

RECEIPTS.	
Balance on following accounts:	
Railway & colliery.....	\$18,439 2 0

The report and accounts were adopted, & the directors were re-elected as follows:—President, E. T. Galt, Lethbridge, Alta.; Vice-President, Col. K. R. B. Wodehouse, London, Eng.; other directors, W. Burdett-Coutts, M. P., E. Crabb, Hon. T. C. Farrer, E. Waterhouse, London, Eng.; Sir R. W. Cameron, New York; W. M. Ramsay, H. Joseph, Montreal.

Pullman Co.—At a stock-holders' meeting at Chicago, Dec. 5, the action of the directors in buying the property of the Wagner Palace Car Co. was ratified. The capital was increased from \$54,000,000 to \$74,000,000, & the name of the Co. changed from Pullman's Palace Car Co. to the Pullman Co. The number of directors was increased from 7 to 11. The new directors are: W. K. Vanderbilt, J. P. Morgan, F. W. Vanderbilt & W. S. Webb. The old directors are: M. Field, R. T. Lincoln, N. B. Ream, J. W. Doane, O. S. A. Sprague, H. C. Hulbert, H. B. Reed.

Grand Trunk Betterments, Etc.

The new station at St. Hyacinthe, Que., has been opened.

The Victoria Jubilee bridge, having been finally completed, was further opened on Dec. 1 for foot passenger & vehicle traffic. A scale of tolls has been established under which foot passengers pay a cash toll of 5c. or 6 tickets for 25 cents. Bicyclists pay 10c. cash, the other fares ranging up to 75c. for 3 or more horses & vehicle loaded. The completion of the bridge is a great public convenience as heretofore the only crossing has been by ferry, which has been liable to interruption in the spring & fall. Notwithstanding this some people are complaining of the tolls charged & the matter has been brought under the notice of the Minister of Railways, who stated that in granting a subsidy towards the building of the bridge no provision was made for government control of tolls. There was no mention made of anything more than provision for other railways to secure entrance to Montreal. There was no clause in the general railway act which would cover the case in question. Personally he was not aware of what rates were being charged for pedestrians or vehicles; but it did seem to him that they would be arranged on a scale to invite rather than to drive away probable traffic. Further than this there was nothing that he could say. He had not in his possession the schedule of charges for crossing by the ferryboat, but considering that the bridge is almost two miles in length, he did not incline to believe, so far as a glance at the situation showed him, that 5c. or 6 tickets for 25c. was excessive.

The yard at Trenton, Ont., is being raised and otherwise improved. At Gananoque the station is being moved so as to provide a better location for yard accommodation.

The yards at York, near Toronto, which are being remodelled, are expected to be completed by the end of Dec. The accommodation is being increased from a capacity of 500 cars to 1,500. (Oct., pg. 291.)

A third track, to facilitate the passing of freight trains, is being built between Mimico & New Toronto, on the Toronto-Hamilton line.

Correspondence has recently taken place between Brantford city authorities & General Manager Hays, respecting the running of the Co.'s through Detroit & Niagara Falls trains via Brantford so as to place that city on the Main Line. Mr. Hays said in a letter to the City Clerk: "This question has been before the management in previous years, & while the advantage to our mutual interests in the change referred to has been conceded, the Co. has been deterred from taking action relative thereto owing to the hard times & consequent financial stringency existing. The season is now too far advanced for us to undertake anything in the direction desired this year, but we will be glad to again take the matter up for consideration & we may later on be able to lay before you a plan for consummating the change desired & asking your co-operation to that end. Should such a plan receive a favorable reception I have no doubt that I would be able to obtain the necessary authority to complete the work next year."

In regard to locating the freight station at Brantford on the south side of the tracks, instead of on the north as at present, & utilizing the old car shops for freight sheds, Mr. Hays said that the old car shops were unsuitable, & that better facilities could be acquired at but little greater cost by erecting a building specially adapted for freight purposes.

Owen Sound citizens recently petitioned the Co. to extend its line down the bank of the river to Division-Frost St. bridge, & received a reply from Superintendent Jones expressing the Co.'s willingness to comply with the request if the right of way could be secured

from the town. The matter is now before the lower courts. It is probable that the line will only be extended to Dunn's boat house, & not as far as first proposed.

The extension from Port Huron, Mich., to the Jenks shipbuilding yard, which has been referred to as a branch, is only a side track to build a few cars, & is likely to be built by the Jenks Co.

During 1899, 13 miles of second track have been laid between Montreal & Toronto, which leaves only about 46 of single track from Port Hope to Port Union. A surveying party is on this section, & if business is good it will be double tracked in the near future. The second track from Hamilton to Niagara Falls is laid out, & the work will be proceeded with next season. As we have already announced, it has been decided to double track the line from Port Huron to Chicago in the near future, & 10 miles of grading from Port Huron west are about completed. On the main lines 315 miles have been laid with 80 lbs. steel rails, while 285 miles of these rails, replaced by the 80 lbs., have been laid down on the branch lines, the latter being from 72 to 70 lbs., & replacing in turn rails of from 56 to 60 lbs. So it will be seen that 60 miles of the lines have been greatly strengthened & improved. From Portland to Chicago there are now laid 720 miles of standard 80 lbs. rails, while the steel in the balance of the main line between those points average from 72 to 79 lbs. During 1899, 1,826,857 ties have been put in, 1,344,374 being cedar, purchased in Canada. The Co. has put down this year 321 miles of gravel & 50 miles of cinder ballast, 123 miles of fencing, & 63 miles of yards & sidings.

Some additional information as to improvements on the system, received too late for insertion here, will be found further on in this issue.

C.P.R. Betterments, Construction, Etc.

Windsor St. Station, Montreal.—It is expected to continue work throughout the winter with some 150 men cutting stone & preparing the iron & steel work. (Aug., pg. 233.)

Ontario Car Shops. London is pressing a claim for the location of these proposed shops, relying on a clause in an agreement with the West Ontario Pacific Ry. Co., which built the line between London & Woodstock, & leased it to the Ontario & Quebec Ry., the lease being assigned to the C.P.R. The clause reads:—"That the companies will, in the event of their building at any time, car & machine shops, or either of them, for the manufacture of cars or locomotives, on any part of the division of their line of railway between Toronto Jct. & the River Detroit, or the River Detroit & the Niagara frontier, locate & build & maintain the same in the city of London." In reply to a communication from Sir Jno. Carling & others, President Shaughnessy said:—"Whenever circumstances make it necessary to provide additional car or locomotive building shops in Ontario, the claims of London will not be overlooked." No definite announcement has been made that the shops in question are to be built, but the impression prevails that if they are it will be in Toronto. (Nov., pg. 323.)

Owen Sound Branch.—A recent trip of some of the Co.'s officials over this branch gave rise to a press report that the proposed reduction of the grades would be gone on with at an early date. We are informed that nothing has been decided on in regard to the matter. (Aug., pg. 233.)

Hochelaga Foundry.—A contract has been let for building an addition.

Montreal to Fort William.—Upwards of 100 miles of heavy rails have been laid this

year, & a good deal of ballasting has been done.

Ottawa Connecting Line.—The Co. is evidently in earnest in regard to the proposal to secure a direct connection between its main transcontinental line at Ottawa & the Montreal-Ottawa short line. It is proposed to improve the grades between Carleton Jct. & Ottawa, the object being to handle the large increase in traffic from the Northwest passing through Ottawa to Montreal by the M. & O. line. By forming a connection the already over-burdened line between Smith's Falls & Vaudreuil will be relieved. Practically the whole right of way from the Co.'s Sussex St. station to the Ottawa central station has been secured. C.P.R. officials were induced to acquire this independent right of way through the failure of negotiations with the Canada Atlantic for the use of that Co.'s line between the Central station & the C.P.R. track, near Mechanicsville. At all events options were secured upon property lying between the Montreal & Ottawa right of way near the Rideau & the canal, opposite the mouth of Patterson's Creek, along the north side of the creek to Bank St., thence westward to Concession, Bell & Preston streets, near the point of the C.A. crossing of the C.P.R.'s Prescott line. Then, these options maturing, the C.P.R. people decided to purchase rather than forfeit the amounts of the options. The C.P.R. is now in a position to construct the link without expropriation. The right of way secured would carry the C.P.R. track across the city about 100 yards south of the C.A. line, necessitating a second level crossing on Bank St. This the City Council wants to avoid, & the members are trying to get the two companies to agree to a joint use of the C.A. tracks as above mentioned, or else to get the C.P.R. to build immediately alongside the C.A. Manager

The Northey Gas or Gasoline Engine.

In Connection with Pumping Machinery for Tank Duty.

"BUILT FOR HARD WORK."

Railway Officials will find the Northey Engine to be a marked improvement over steam or other forms of power for this duty. It is simple of construction, and easily managed, necessitating only the turn of a fly-wheel to start, while it can be going at full speed in a few seconds and be shut down on the instant. Needs no engineer to look after it, the station hands can do all that is required, while it will run for hours at a time with little or no attention. The Engine is compactly built and of the best materials; it uses either gas or gasoline for fuel, and its safety and economy with either have proved it to be the most satisfactory power in the market.

We will cheerfully send Booklet and every information upon request.

The Northey Mfg. Co., Limited, ¹⁰³²KING ST. SUBWAY, Toronto, Ont.

Tait says the C.P.R. offered to pay the C.A. one-half the interest on the original cost of the line, & a wheelage percentage on the cost of maintenance. (Nov., pg. 324.)

Fort William.—When at this division point recently General Superintendent Osborne said the Co. contemplated further improvements in the yards. (Oct., pg. 292.)

Fort William to Winnipeg.—Surveys for the double tracking of the line between these points have been completed as far as Dexter, 372 miles from Winnipeg. (Nov., pg. 324.)

The Bonnet Lake Branch, from the main line at Molson, 45 miles east of Winnipeg, has been graded for about $3\frac{1}{2}$ miles. On Dec. 4 we were informed that grading was then going on, owing to favorable climatic conditions, & that work would be continued as long as necessary this winter. It is not expected any rails will be laid before spring. (Nov., pg. 324.)

Winnipeg Terminals.—The illustration on this page is from a rough preliminary perspective sketch of the proposed hotel & station

the importance of Main st. These steep grades are made necessary by the intersection of Fonseca & Sutherland streets, which would be blocked if the bridge approaches were made longer. The approaches might be made longer & allowed to cross these streets if the side streets were also raised to meet the approach. That would not, however, be quite satisfactory, unless Main st. & the two cross streets were permanently raised to their full width. With reference to the subway, the grades are much easier than on the bridge, & he considers that the subway would be the least obstruction to traffic, both in the subway & on the portions of Main st. alongside of it. The approximate cost of the subway, exclusive of the railway tracks, ties, etc., he estimates at \$73,000. The portion of the subway covered by the tracks, a distance of 148 ft., would have to be furnished with lights during the day. There might also be occasions when the water in the river would rise sufficiently to flood the deeper part of the subway. If a subway is adopted provision should be made to cross the tracks on the surface temporarily, to

Souris, Man., Locomotive House.—A 3 or 4 stall building is to be built at this point on the Southwestern Branch.

Pipestone Branch.—On Nov. 30 track was reported as being laid to the North Antler Creek, over which a large bridge was being built. (Nov., pg. 324.)

Crow's Nest Pass Ry.—H. S. Holt, of Montreal, who went over this line recently, said on his return: "It is a well-built road, & can be made as good as the older portions of the C.P.R. with a little effort, & this will be done as circumstances justify. Part of the work has been very heavy, yet, no doubt, a great deal of freight will be carried over this road, & the heavy outlay will be amply justified. The heavy sections no doubt cost \$50,000 a mile, & I believe the entire line from Lethbridge to Kootenay Lake will, when finished, have cost \$30,000 a mile." The development of the coal & coke industry was alluded to, Mr. Holt saying that the Crow's Nest Coal Co. had 108 ovens at work, & were erecting 80 more. They cannot, in fact, begin to supply the demand for coke, which is sent to the

PROPOSED CANADIAN PACIFIC RAILWAY HOTEL AND STATION FOR WINNIPEG.

building, shown by President Shaughnessy in Winnipeg recently. On Dec. 2 we were officially informed that the plans were still in the architects' hands and that they had not been finally decided on, so that the design as shown in the illustration may be varied. It is said that the architects have recommended the use of white stone & white brick, but some of the officials favor red sand stone & Bonnet Lake brick. The Co. has not yet secured all the land it requires for hotel & yard purposes. It is said one owner is asking a very large price for his property & that he disputes its being expropriated for an hotel site. The question of expropriation has been submitted to the Minister of Railways.

Winnipeg's City Engineer has reported to the Council on his examination of the plans of the overhead bridge on Main st. & the subway proposed for this crossing. He does not think that the overhead bridge as proposed would be found satisfactory on account of the grade on the south side approach, which is 9.1 per 100 ft. The north approach at 6.8 per 100 ft. he considers too steep for a street of

avoid the possibility of obstruction to traffic by high water. (Nov., pg. 324.)

The Snowflake Branch, which runs from the first siding on the Pembina Mountain branch, 118 miles southwest of Winnipeg, to Snowflake, 17½ miles, has been completed & opened for traffic. A grain elevator & warehouse have been erected at Snowflake, also an elevator at Purvis, about 7 miles from Snowflake. The country through which the line runs is well settled with prosperous farmers. (Nov., pg. 324.)

The Deloraine-Waskada Branch, 18 miles, has been completed & opened for traffic. Grain elevators are being built at the midway station, Goodlands, & at Waskada. (Nov., pg. 324.)

The McGregor Varcoe Branch, from McGregor, on the main line, 22 miles west of Portage la Prairie, to Varcoe, on the G.N.W.-C.R., had, on Dec. 4, been graded about 22 miles. No track had then been laid & we were informed that it was unlikely, taking into account the advanced stage of the season, that any track would be laid this year.

smelters at Trail, Northport, & at Great Falls, Mont., & the fact of the Canadian article being able to compete with the U.S. at the last named point, speaks for its quality. As a matter of fact, the smelters claim it is the best coke made, while the cost of smelting ore has been reduced from \$11 to \$6 a ton. (Nov., pg. 325.)

An unconfirmed press report credits the Co. with the intention of building a branch from Bruce's Point, on the C.N.P. line, to Golden.

There appears to be no doubt that the construction of the section of this line between Nelson & Balfour on Kootenay Lake will be gone on with at an early date. Between Nelson & Five Mile Point, 4.3 miles, the ground is pretty well covered by the Spokane & Northern Ry., whose track is close to the lake shore almost the entire distance, leaving scarcely room for another line. It is thought the C.P.R. will endeavor to secure running powers over this section. Tenders have been received for building between Five Mile Point & Balfour, & an announcement is daily expected in regard to them. (Nov., pg. 324.)

The B.C. Southern Ry. Co., under whose charter the Crow's Nest Pass Ry. is being built, gives notice that it will apply to the Dominion Parliament next session for an act authorizing it to complete at any time before the end of 1904 its western section, which is to run from Kootenay Lake to a favorable place for crossing the Fraser River, to New Westminster, thence to Burrard Inlet, & shall include a branch line to Nelson via Salmon River; also to extend the time for the construction of a branch line from or near the forks of Michel Creek by way of Michel Creek to Morton Creek. (Nov., pg. 324.)

When at Nelson recently President Shaughnessy stated that the Co. had decided to make it a division point & that the rearrangement of the yard would be at once proceeded with. This would embrace extensive improvement along the water front, including the building of shops, an improved station & another wharf. He had looked over the ground & appreciated the inconvenience which had been occasioned during the high water of 1897, & in the rearrangement contemplated such provision would be made as would prevent a re-occurrence of the difficulty. General Superintendent Marpole has since been in negotiation with the Council, & it is understood the following arrangement will be made. Instead of the city taking a deed to the present recreation grounds, a five-years' lease of the grounds to be taken, in return for which the Co. will give the city a deed to 40 acres to be selected from the land of the Co. adjoining Addition A. The Co.'s shops & other improvements to be exempted from municipal taxation for 10 years, the blind ends of Vernon, Baker, Victoria & Slocan streets to be condemned & turned over to the Co. It is inferred that the Co. does not intend to close Baker st. at the intersection of Railway st., but to grade the street from this point & use it as the approach to the new station & freight shed.

Kaslo Wharf.—A press despatch reports that a strip of waterfront 80 to 100 ft. wide & 250 ft. long, at the C.P. landing at the foot of Front st., sank out of sight Dec. 11. The water is now 120 ft. deep where teams backed up to receive freight from the floating wharves. All the piling which the C.P.R. has been driving for the past season, on which to build its wharves, & which would have been completed in a few weeks, dropped out of sight without a moment's notice. Two wharves were being built side by side, that of the C.P.R. having about 100 ft. of work done upon it, while the Kaslo & Slocan Ry. Co.'s was about all completed. The last pile was being driven when

the collapse occurred. This is the second time Kaslo has suffered damage of this nature.

Arrowhead & Kootenay Lake Branch.—Grading has been completed for 15 miles from Lardo, the southern terminus, & work has been opened up for 20 miles further. Owing to the impossibility of getting rails this fall, work has been closed down until spring. (Nov., pg. 325.)

The A. & K. Ry. Co. gives notice of application to the Dominion Parliament for an Act declaring its works to be for the general advantage of Canada, & to extend until the end of 1905 the period within which it may complete its works.

Columbia & Western Ry.—One survey has been completed for the proposed branch to Sophie Mountain. The line as run will be 15 miles long & will have a 1% grade as far as the summit of Sophie Mountain, & a 3% grade down the west side of the mountain to the Velvet mine. There will have to be a switch on the west side of Sophie Mountain, & a new survey will probably be made to get rid of this. The surveyed line goes from the end of the spur to the War Eagle mine, & from there along the side of Red Mountain. From Red Mountain it skirts along the side of O.K. Mountain, thence to Record Mountain, & along its side & the side of Sophie Mountain to its summit. Then it goes down the west slope of Sophie Mountain to the Velvet mine, which is likely to be the terminus for the present. Doubtless, if built, it will be extended to other properties in that section when they have reached the shipping stage. (Nov., pg. 325.)

On the extension from West Robson to Midway, work is being pushed on the Bull Dog tunnel which is 3,000 feet long, & it is expected to be in operation by March. The mountain is now crossed by switchbacks.

A daily train service has been established between Rossland & Greenwood, via West Robson, the road having practically been taken over from the contractors &, with the exception of the tunnel already referred to, only ballasting remains to be done. Both freight & passenger traffic are satisfactory. The passenger travel is increasingly heavy & the quantity of freight already exceeds expectations. Chief Engineer Tye says he thinks it probable the traffic to Midway will soon attain to much greater proportions than present appearances suggest, since the development of many mineral claims in the mining camps of the West Fork & other tributaries of the Kettle River, those of Camp McKinney &, too, those of Myers Creek & other mineral sections across the line, will largely swell the

volume of transportation the new railway will be required to provide for.

On Dec. 2 we were informed that track-laying would be continued from Greenwood to Midway, as soon as tracklaying had been completed on the 22 miles of spur lines, over half of which had then been done. (May, pg. 139. Nov., pg. 324.)

H. S. Holt, of Montreal, who recently went over this line says: "We travelled over this road from Robson to Greenwood, &, although it is the most costly piece of road I have ever passed over, either in Canada or the U.S., it is certainly the best built. The heaviest portion is laid with 73 lbs. rails, & the outlay of the first 100 miles will certainly not be less than \$40,000 or \$45,000 a mile. All this has been done without the aid of one cent a mile from the Government. The C.P.R. has spent \$14,000,000 in B.C. alone this year, & I consider its policy both a wise & plucky one. In the U.S. mining regions the mine-owners have generally had to make their own connections with the trunk lines, but in B.C., wherever there is a probability of a camp becoming a producer, the C.P.R. lays down branches, & thus the mines are placed in immediate touch with the country's railway system, as well as with the different smelters on both sides of the boundary line."

There seems to be little doubt that the management has about made up its mind that the proposed route for the continuation of the line from Midway by way of Penticton to the main line at Hope is not desirable & that the route mentioned in our last issue will be followed instead. This would be from Midway, via Keremeos, to near Princeton, through Otter Valley, down Quilchena Creek, near Quilchena; westerly to Nicola Lake, skirting the left bank of Nicola River which it will probably cross somewhere near the Twenty-two Mile House & then follow the right bank to Spences' Bridge on the C.P.R. main line. Two engineering parties are at work on this route, one working from Nicola Valley towards Spences' Bridge, the other from Nicola Valley towards Princeton & Keremeos. It is said that the new route, in addition to avoiding the almost impossible crossing of the mountains at Hope, will tap the rich mineral belts of the Similkameen, Otter Flat & the Nicola Valley, run through the coal fields which are very extensive & valuable, & traverse extensive grazing country. Chief Engineer Tye, of the C. & W.R. has recently been over the route. (Nov., pg. 325.)

A full report of Mr. Shaughnessy's remarks on this question before the Vancouver Board of Trade will be found in our Nov. issue, pg. 332.

MICA BOILER COVERING

For Locomotive, Marine and Stationary Boilers

Tested by Mechanical Experts of the C.P.Ry. Co., G.T.Ry. Co., M.C.Ry. Co., Boiler Inspection Insurance Co., and proved to be the

All Steam users should see the Mica Boiler and Pipe Covering—Flexible, Durable and Highest non-Conductor of Heat in the Market.

Full particulars, reports of trials, testimonials, prices, etc., from

Mica Boiler Covering Co', Limited, Montreal, Toronto and London, Eng.

The Victoria Colonist thinks the adoption of the route above outlined means the indefinite postponement of the proposed line from the Coast to the Interior south of the Fraser River & says: "With such a line in operation there will be very little inducement for any company to build through the Hope mountains for the sake of establishing connection with the Coast. We ought to realize that there is no reasonable prospect that Victoria will have any connection with the C.P. system or highway of traffic into Yale & Kootenay except by way of Vancouver. This is something which the people of Victoria ought to be very careful to understand."

Vancouver Terminals.—Work has commenced on the erection of a station in the east end of the city at Heatley Ave. crossing. (Sep., pg. 267.)

A recent press despatch from Vancouver stated that the Co. was about to connect Stimson's wharf & that of the Union Steamship Co., making a wharf of about half a mile in length, that the work would cost \$30,000 & that a shed 350 ft. long would be built. We are informed that this work is simply the continuation of the improvements covered by the conditions of the exemption by-law, particulars of which were given in our May issue, pg. 142. The work now in hand is an extension of the wharves easterly 500 ft., with a 300 ft. warehouse thereon, & from this a connection by trestle will be made with the so-called Stimson's wharf. The present work involves an expenditure of about \$50,000. (Sep., pg. 267.)

The question of building a bridge over the yard tracks from Abbott to Carrol streets is before the City Council.

Westminster-Vancouver Loop Line.—As mentioned in our last issue the Co. has given notice of application to the Dominion Parliament for power to build from its main line at New Westminster to Vancouver. In a recent interview General Superintendent Marpole said: "It is the intention to build a line connecting the two cities, but as to when it will be built & route to be followed I can at present say nothing. These matters will be settled after the charter has been obtained & much will depend upon the character of that charter. We may build the line next year, but I am not in a position to speak definitely." (May, pg. 140.)

Condition of Main Line and Western Branches.—Quotations have already been given from a recent interview with H. S. Holt, of Montreal. He also said, "I had not been over the main line for eight years, & the road, as seen the other day, is simply beyond recognition. The original rails of 56 lbs. have been replaced by 73 lbs. Solid embankments & stone & iron bridges are the rule rather than the exception. The C.P. is now practically a permanent railway from end to end, while the complete ballasting is also an important feature. When the central section, between Winnipeg & Calgary, was constructed, it was impossible to secure ballast of a permanent character, although the sections around Lake Superior & through the Rockies have long since been put in a first-rate condition. This work is now being done between Brandon & Calgary, & by the middle of next year the permanent ballasting of the C.P.R. will have been completed from end to end. This is a feat which no other transcontinental railway can boast of, although some of the Southern roads were built 25 years before the Canadian road. Eight years ago, when I was out to the Coast, the section of 214 miles, remembered as the Onderdonk work, was composed of grasshopper trestles. All this has been replaced by solid stone-retaining walls & permanently filled in, & the same will apply all along the line. The whole work is nothing short of a marvel, & no one who has not been to see can realise the wonderful transformation that has taken place from Montreal to Vancouver. We also

travelled through southern Manitoba, & where nothing but the open prairie existed 8 years ago, are now towns of 2,000 & 3,000 people, provided with electric light, waterworks, & all the accessories of thriving & modern communities. At every siding I saw 5, 6, & sometimes 7 elevators, & everywhere people appeared to be prosperous & satisfied with their lot. Winnipeg has made marked progress in the way of large & handsome buildings, as well as in greatly improved streets. The same can be said of Vancouver. On Granville St. there is a succession of banks & other buildings that would be a credit to any of our largest eastern cities."

Mineral Range Ry.—The Railroad Gazette states officially that this Co. has completed the Grasse Pointe extension from Arcadian Jct., Mich., to Arcadian Mill, 86 miles, with a 2 mile branch to Arcadian Mine. We think a mistake has been made in the statement of mileage.

Surveys, Construction, Betterment, &c.

The Alberta Railway & Coal Co., we are officially informed, is not at present considering the question of widening the gauge of its line between Lethbridge & the International Boundary, & of its subsidiary line, the Great Falls & Canada Ry., from the Boundary to Great Falls, Mont. (Aug., pg. 235.)

The Canada Atlantic has installed electric signals at the Concession, Le Breton, Division & Rochester St. crossings, Ottawa.

Cape Breton Ry. Extension Co.—On Nov. 29 we were informed by a Nova Scotia Government official as follows: "There is no contract in existence between the N.S. Government & the promoters of this line of railway, that I am aware of. On Jan. 22, 1895, an agreement was made between the Cape Breton Ry. Extension Co. & the N.S. Government for the construction of 30 miles of this railway, from Port Hawkesbury to St. Peters, in consideration of a subsidy of \$3,200 a mile, but nothing further was done. The contract is liable to forfeiture through lapse of time, as the construction was to commence in May, 1895, & the line was to be completed before Aug. 1, 1896. I understand the matter is now being revived; Col. Alton is the principal promoter in Nova Scotia. J. S. Armstrong, C.E., has a party of engineers making a location survey."

The operations are being carried on under the name of the Canso & Louisburg Ry. Co., with offices in Boston & New York City, & at Port Hawkesbury, N.S. The officers are: President, A. W. Mausur; Vice-Pres. & General Manager, H. Alton; Secretary, B. Wilkins; Treasurer, W. H. Dunlap; Chief Engineer, J. S. Armstrong. Surveys are being made. (Nov., pg. 325.)

Canadian Northern.—On Dec. 6 we were officially informed that on the extension from Cowan, last year's terminus, towards the Saskatchewan, 53 miles of track had been laid, & it was expected to lay altogether 75 miles before closing down for the season. Grading was going on & the track was being kept close up with the grading. On the branch from Dauphin into Gilbert Plains, 15 miles had been completed, & track laying was expected to begin immediately, as material was arriving. (Nov., pg. 325.)

A considerable addition is to be made to the car-shop at Dauphin.

Central Vermont. Improvements in the road-bed are likely to be undertaken at an early date, & the double tracking of a portion of the line is rumored.

Coast Ry. of Nova Scotia.—President Robertson stated in Halifax, Nov. 29, that fairly good progress was being made with the 20 miles extension from East Pubnico to Barrington, track having been laid to the station grounds at Barrington Passage, & it was ex-

pected to run trains to that point by Christmas. The telegraph line had been completed, & also the stations except those at Barrington Passage & Shag Harbor. Mr. Robertson further said, "Our contract with the N. S. Government was originally to build a line from Yarmouth to Lockeport. No action was taken by the Coast Ry. Co. to renew that contract because we were engaged in negotiations to build a line to Halifax. Now that the Nova Scotia Southern line is being constructed, our Co. has decided for the present to hold to the original contract between Yarmouth & Lockeport. My business here is to ask for a renewal of the old contract on the old terms. The engineers are making preparations for starting of work on the next 10-mile section between Barrington Passage & Clyde. The rails for 7 miles of this section, as well as a large quantity of ties, etc., are already on hand. There is nothing whatever in the rumor about the sale of the Coast line to the Dominion Atlantic Ry. A proposition for a traffic arrangement between the two lines has been submitted. At present passengers over both lines, in order to make a transfer at Yarmouth, have to drive a distance of nearly a mile, & an arrangement would be of material benefit to both lines. I hope to see it carried into effect. Our business is increasing. The receipts average 30% over the same months of last year." (Nov., pg. 325.)

The Cumberland Ry. & Coal Co., has built a locomotive shed at Parrsboro, N.S.

Dyea, Alaska, Yukonwards.—L. D. Kennedy, of Seattle, Wash., who is interested in a scheme to build a railway from Dyea, with a tunnel through Chilkoot Pass, is reported to have recently said at Skagway, "The grading of a railway approach to the tunnel entrance has been begun, & is being pushed as rapidly as possible with the facilities at hand. We have 12 teams with scrapers, & would put on a larger force could we get all the scrapers we need. The grade will be extended from tide-water at Dyea to Canyon City, 9 miles, this fall. If the necessary equipment for grading can be secured, we can finish the work in 30 days, or before the frost fills the ground. The distance from tide-water to the tunnel entrance is 17 miles, but we shall not attempt to extend the grade that far this winter. If we get enough scrapers we shall run three shifts of workers daily. The road to the tunnel from the water will be an electric system." (Nov., pg. 236.)

Referring to the scheme, the Skagway Alaskan says: "It is rumored that New York capital, with an eye to the opening in Alaska for a railway from the coast to the Klondike country, has been looking over the Dyea route & the one from Haines, & has not fully determined which it prefers, but that the Haines route has been looked upon a little more favorably than the other. Those who have the matter in hand have sought to find which of the available courses might furnish the greatest local traffic or tap the most promising intermediate territory. With this end in view, it is said, the Haines route looks the most promising, for the reason it will lead through what is considered a rich copper country, & one that may furnish a good traffic in carrying minerals to tidewater. The only course that could be followed, it is argued, after crossing the Chilkoot Pass, to get into a productive country, would be to diverge to the northwest from Lindeman, & traverse that stretch of country lying a considerable distance to the West of Yukon."

Edmonton, Alta., Bridge.—The erection of the superstructure is going on, & it is expected to have the bridge completed by Feb. (Nov., pg. 326.)

Great Northern of Canada. Some members of the management met in Montreal, Nov. 28, with Col. McNaught & other New Yorkers interested in this line, & discussed the building of an elevator at Quebec, to be

and on the ground that the C.N. will secure from the Canada Atlantic at Hawkesbury. It has not yet been decided whether the Co. will build an elevator, or if it will be undertaken by private enterprise similar to the proposition that has been made for Montreal. In any case the elevator, when erected, will have a capacity of 1,000,000 bushels, & it is said it will be started early in the spring & completed in time for the opening of the new route from Quebec to Parry Sound, in Aug. (Aug., pg. 325.)

Another matter that is to come up for decision shortly is the building of a branch line to Montreal from Joliette. The main line, however, is to be completed first.

The contractors' engineer reports that grading is all but completed on the two sections from Shawenegan, Que., west 53 miles to Montcalm, & from St. Jerome, west 35 miles to Hawkesbury. The middle section between Montcalm & St. Jerome, 28 miles has been practically rebuilt. Eight miles of rails are relaid, ties renewed, & culverts & trestles rebuilt. Track laying was begun towards the end of Aug., & including the renewed section, there are 60 miles of rails laid. The section between St. Jerome & Lachute is about completed. At the end of the season there will remain only the section between Lachute & Hawkesbury, & between the Maskinonge River & Riviere du Loup. About 16 miles of ballasting is completed east of Montcalm, & a regular train is running over the old line & to a point 14 miles beyond Montcalm. The superstructure of the Hawkesbury bridge will be begun about Dec. 15, & the contractors must have the false work removed before ice breaks up in the spring. Among the smaller bridges are those over the Maskinonge & Riviere du Loup, each 1,000 ft.; the East Yamachiche, 500 ft.; the Chicots, 350 ft., & the West Yamachiche, 250 ft. (Nov., pg. 326.)

Intercolonial.—The management finds it necessary to secure more room on the northern side of the yard at the St. John, N.B., station, & will be compelled to take possession of Lombard street. In doing this, of course, it will be necessary to make a new street, & to take properties now facing on the street. The operation will be an expensive one, as property has become valuable in that locality. Owners have been approached, but the prices asked are considered so high that expropriation proceedings may be resorted to.

Interprovincial Bridge, Ottawa & Hull. It is now said that the erection of the super-

structure will be commenced this month. A track has been laid from the C.P.R. north shore line to the Hull end of the bridge, so that the material for the superstructure may be taken over it. (Nov., pg. 326.)

James' Bay. Parry Sound townspeople fear that the 5 mile section from the Canada Atlantic to the town of Parry Sound may not be built as proposed. At a recent meeting of the Board of Trade, the Secretary said that Mackenzie, Mann & Co. asked the town to give a bonus of \$15,000, exemption from taxation for 21 years, right of way on town property & a grant of all water frontage owned by the town. The town made a counter proposal to give \$12,000 instead of \$15,000, but no reply was received. Later indications were not wanting that the Co. was seriously entertaining the idea of projecting a line from the vicinity of Maple Lake station north through the Balsam settlement, getting as near Dunchurch and Loring as possible, & on to French River, endeavoring to find a crossing over the French River nearer Lake Nipissing than Contin's Island. The Secretary was authorized to renew correspondence with Mackenzie, Mann & Co. (Nov., pg. 326.)

Kootenay Ry. & Navigation Co.—On Nov. 24 it was stated that this Co.'s subsidiary line, the Bedlington & Nelson, had been completed to within 2 miles of Kuskanook, its terminus on Kootenay Lake, & that it was expected the track would be laid on this short piece a few days thereafter. (Nov., pg. 326.)

Manitoba & Southeastern.—On Dec. 6 we were officially informed that track had been laid from La Broquerie, last year's terminus, to a point 103 miles from Winnipeg, & that the remaining 5 miles to the International Boundary was being graded. Grading from the International Boundary to War Road, Minn., at the southwest corner of the Lake of the Woods, had been completed, & it was expected to have track laid to War Road, 115 miles from Winnipeg, before Christmas. (Nov., pg. 327.)

Midland of Nova Scotia.—Track laying is proceeding between Truro & Shubenacadie River, 15 miles, & it is expected to be completed during Dec. Only the bridge over the Shubenacadie will then remain to be completed. (Nov., pg. 327.)

It is rumored that this line may be extended from Windsor to connect with the Nova Scotia Southern Ry., which is being built from New Germany to Shelburne, N.S. The M.R. Co.'s charter also provides for an extension

of the line from Truro to the Straits of Northumberland.

Northern Pacific.—The branch from Portage la Prairie, Man., northwesterly 20 miles, was opened for traffic Dec. 1, stations having been established at Horizon, Ridgeway, Youill & Beaver. On Dec. 4 the Co. gave a free trip to Winnipeg & return to the residents along the new line, about 1,000 availing themselves of the privilege. The branch from Portage la Prairie, Man., north towards Lake Manitoba, was also opened Dec. 1, stations having been established at Alpha & Town Line. (Nov., pg. 327.)

Interlocking apparatus is being put in at the points at which the N.P. crosses the C.P.R. & the M. & N.W.R., near Portage la Prairie.

It is expected the Co. will erect a large station at Portage la Prairie next year.

Nova Scotia Southern.—President R. G. Hervey favored us with the following information on Dec. 2:—"Our line, now under construction, is from Shelburne Harbor to a junction with the Central Ry. at New Germany, 76½ miles, & from Indian Gardens, a point midway between those towns to Liverpool, 19½ miles more. The contract for the construction of the line was let last January to C. B. Wilkins & Co., who commenced Feb. 1, & have prosecuted the work vigorously. They have laid about a mile of track, using 70 lbs. rails, from New Germany westward to the crossing of La Have River, where they are erecting a steel bridge of 4 spans, 2 of which are now in place, & the other 2 are expected to be finished within the next 10 days. Beyond this, they have 15 miles ready for track; & they are pushing the grading at the same time both from the Shelburne & Liverpool ends, & expect to complete the whole line next summer. Our chief engineer, A. Mitchell, is surveying the line from New Germany into Halifax."

The Chief Engineer reported to the President, Nov. 14, as follows:—"The heaviest portion now building is at the New Germany end, where, about a mile from the junction with the Central Ry., the line crosses the gorge through which flows the La Have River, & then cuts through the hills on the western side of the river. The track is carried over 4 steel spans on granite piers, 45 ft. high. Of this the sub-structure is completed & the spans are building. The track is laid from the Central Ry. to the bridge, & can be laid for 20 miles beyond as soon as the bridges, including 4 other spans between New Germany & Caledonia, are in place. The next heaviest section is the 9 miles beginning at Shelburne at

the southern end & across the valley of the Jordan River. The earth & rock work on this section is about half done, & is being completed by Wheaton & Sons, who have a sub-contract for 15 miles. The entire work yet let is under contract to C. B. Wilkins & Co., to extend from the Central Ry. at New Germany, N.S., southwest to Shelburne, an ocean harbor, with a branch of 19½ miles to Liverpool. This branch is being built by Tupper & Minard, sub-contractors, who are vigorously pushing the grading."

The Act passed at the last session of the N.S. Legislature to revive this Co.'s charter has been put in force by proclamation, but we were informed on Nov. 30 that no contract had been entered into by the Government for payment of subvention. (Nov., pg. 327.)

Reference has already been made to a rumor that the Midland Ry. of N.S., will be extended to connect with this line, & that its charter authorizes it to also extend from Truro to the Straits of Northumberland. The Nova Scotia Southern will connect with the Coast Ry. of N.S., now being built from Yarmouth east, & the extensions of the Midland above mentioned would provide a through line from Yarmouth to the Straits of Northumberland. The Maritime Merchant says: "The amalgamation of these lines & an extension of the service to include a steamship service across the Straits to Prince Edward Island, would result in the building up of an important highway & a large traffic would no doubt be developed. As there already exists a frequent service of steamers between Yarmouth & Boston, this would open up a new route between the Island & Boston which would greatly facilitate travel."

Ontario & Rainy River.—On Dec. 3 we were informed as follows: "Track has been laid west from Stanley for 8½ miles, & it is proposed to lay 40 miles, if possible, this winter, the grading for which will be finished by the middle of Dec. The grading is well under way over the first 100 miles from Stanley & that distance will be finished early next spring. The Rainy Lake bridge will not be built this winter, but material for it will be got out." (Nov., pg. 327.)

D. D. Mann said in a recent interview at Port Arthur that he did not think the line would run into Fort Frances, but would probably be about 6 miles from it.

W. Mackenzie is credited with saying that the O. & R.R. will be completed by 1901, so as to give another through route to Winnipeg, with its connection the Manitoba & South-eastern.

After negotiations between Port Arthur Town Council & Messrs. Mackenzie & Mann, on behalf of the O. & R.R. Ry., a draft agreement has been prepared under which the Co. is to receive a bonus of \$50,000 & exemption from taxation (except for school taxes) for 21 years. In return the Co. will place all its lake terminal works there. Access to the water front is provided for at Arthur & Pearl streets. In an interview while the negotiations were on, Mr. Mann said: "Whatever we do here will be on a scale superior to any work the C.P.R. has done at this point. We expect to put on a line of boats in 1901 that will make 20 miles an hour." He declined to say where the eastern lake terminal would be.

Ottawa & New York. An Ottawa despatch says: The Department of Railways & Canals has accepted plans submitted for protection to the piers of the O. & N. Y. R. bridge, under construction over the St. Lawrence River at Cornwall. The investigation following the accident to the piers revealed the fact that the bottom was solid enough to hold the weight, but owing to the depth of the water & the rapid current it was deemed advisable to reinforce the substructure. It is proposed to rip-rap the pier nearest the island with heavy stone blocks of half a ton or a ton each, piling up sufficient of them to protect

the concrete from ice action. The pier near the Cornwall canal is in deeper water, & to secure it an annular steel caisson will be built & sunk around the present crib several feet below the bottom of the river. This will be filled with concrete, & the new & old material knit together as far as may be to form one solid mass, the whole being tied with cables imbedded in concrete to insure perfect solidity. The work will involve heavy expense, but the railway management is determined to put up a bridge that will stand any possible strain & give absolute security to the travelling public. (Nov., pg. 327.)

Pontiac Pacific Jet.—Of the extension from Aylmer to Hull, Que., about 3 miles has been completed to Deschene. No more track will be laid till spring. The entrance of the railway to the Ottawa central depot from the Interprovincial bridge will entail a considerable amount of hard and expensive work, notwithstanding that the distance is less than a mile. Almost the entire way there is much rock work. Along the line by the Major's Hill park considerable stone work will be necessary, & it is hoped to have most of the foundation completed by the time frost stops this work. It is proposed to continue work all winter, & in order to facilitate operations rails have been temporarily laid from Dufferin bridge along the side of the park. The construction should easily be completed by spring, as heavy steam drills & a good-sized staff of men are now employed, & will be through the winter. (Nov., pg. 327.)

Quebec Bridge.—We are officially informed that nothing definite has yet resulted from the negotiations with one of the firms which put in a tender. (Oct., pg. 296.)

Rutland & Noyan.—See under "United Counties Ry.," pg. 346.

Salisbury & Harvey.—It is said to be the intention to extend this line to Moncton, N. B., crossing the Petitcodiac River near the Moncton bridge, & also to build a branch to the Baltimore shale property. (See pg. 346.)

Tilsonburg, Lake Erie & Pacific.—We are officially informed that this line will be extended from Tilsonburg, Ont., to either Ingersoll or Woodstock, & probably both places next spring, & that there is no truth in the report that the Baltimore & Ohio Ry. will operate it. (Oct., pg. 297.)

The Toronto, Hamilton & Buffalo freight sheds at Hamilton are, it is said, to be enlarged owing to the increase of business.

White Pass & Yukon.—The following official information about the section between the north end of Lake Bennett & White Horse Rapids, was furnished us under date of Nov. 14, "The route from Bennett lies along the east shore of Lake Bennett; the first 12 miles being very heavy rock work—precipitous mountain peaks running directly into the deep water of the lake. The other 15 miles of the 27 are along ordinary mountain-side, & are of more easy or average construction. At the north end of Lake Bennett, at what is known as Caribou Crossing, a bridge about 500 ft. long will be put in with a draw span so as not to interfere with the navigation of the lakes & river. From Caribou Crossing to a point on the river below White Horse Rapids, at the new townsite of Closeleigh, a further distance of 44 miles, the conditions are as follows: The first 13 miles cross a rolling sand-hill country with occasional marshes, being remains of old glacier lakes. Wherever the ground is covered with moss & timber the glacial ice is still encountered in the gravel at a depth of 2 ft. under the moss. Fifteen miles from Caribou Crossing 2 high bridges cross the canyon at the lower end of Lewis Lake. This lake was drained by an earth cut & lowered 75 ft. The road then passes along the east shore of Lewis Lake, crossing former islands & peninsulas, & is of quite remarkable location. At the upper end

of Lewis Lake we again get out into the Watson River valley by a series of deep gravel cuts. From Lewis Lake on there are several miles of nearly level grade & light work along the valley. The line then passes along the shores of Ruth Lake & Cougar Lake & approaches the banks of the Lewes River, in the vicinity of Miles' Canyon. The road is here in very heavy cuts & fills, passing through a series of knolls & deep depressions left by the former glaciers. Just behind the White Horse Rapids the road is placed on a bridge under a steep sand bluff for about ¼ mile, & then emerges on a broad level bench at Closeleigh, in the vicinity of the enormous copper mines which lie at a distance of about 2½ or 3 miles, in almost a semicircular form. The gradients on the line between Bennett & Caribou will be a maximum of 1½%, although

the line as first established will have a very few sections of 2% grade, to be taken out in the near future. Maximum curvature, 15 degrees. M. J. Heney, of Bennett, B.C. is the contractor. At this writing about 30 miles of the work have been graded between Caribou & Closeleigh. Work will be continued all winter. Construction along the lake-side will be commenced by Nov. 20. One engine & work train are now on the track at Caribou. Track-laying will be commenced about Nov. 20, & continued for a distance of 17 miles this fall. The balance of the track will be laid when navigation opens in the spring. The work between Caribou & White Horse is expected to be finished & in operation by June 1. The section along the lake-shore will be put in operation some time in July next. In the meantime goods will be transferred by steamers between the ends of track, Lake Bennett being considered a long ferry." (Nov., pg. 327.)

Canadian Pacific Equipment.

In our Sep. issue we briefly referred to the two magnificent trains which the C.P.R. Co. had then just put on the fast limited run between Montreal & Ottawa on the Short line via Val d'Audouville. The Atlantic type locomotives used on these trains were fully described & illustrated in our Oct. issue. They are giving good service, but have not yet had an opportunity of showing what they are capable of in the way of records. This is due to the fact that the schedule which was intended to be made with them is not yet inaugurated on account of improvements being made in the track. They are at present running between Ottawa & Montreal, 111.4 miles, & are scheduled to make the run in 2 hours & 25 minutes, but the down train from Ottawa is held 5 minutes at Ottawa on account of other sta-

tion work. They make 3 stops, slow down 3 times for diamond crossings, & run slow at Ottawa end about 2 miles, & at the Montreal end about 1 mile, & 6 miles in one place for curves. Extra stops are sometimes made, & they have a record of picking up 15 minutes' detention without any trouble.

Each train also comprises a baggage car, a combination 2nd class & smoker, a 1st class & a parlor car. They were built at the Co.'s Hochelaga shops at Montreal under the supervision of Master Car Builder Apps.

The parlor cars Temiskaming & Lievre are massive structures built on a model to emphasize a lofty ideal & display in detail the architectural perfection prevalent throughout the train. The style used in the ornamentation is the Empire. The large plate glass windows, crowned with beveled plate lights, & the 6 oval windows set with cathedral glass in soft

tints give the cars a very imposing exterior appearance. A considerable amount of ingenuity has been used in planning out the interior, the whole object considered being the comfort of the travelling public. The entrance to the main parlor is along a gracefully curved passage, panelled flush in rich mahogany with inserted carved mouldings. The main parlor has a very striking appearance, being in carefully selected prima vera. The large windows are divided by richly carved panels, each having an inserted oval mirror. The windows, of which there are 12 in this room, are fitted with inside sashes, the plate glass being set in a brass frame hinged to the sash. This, while it adds richness to the window, is intended to facilitate the cleaning of the glass. Each window is fitted with the latest improved fixtures for operating the roller blinds. The whole is finished by rich silk lambrequins &

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the odd numbered sections along the Main Line and Branches, and in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6 an acre.

Lands in Assiniboia, east of the 3rd meridian, average \$3 to \$4 an acre.

Lands west of the 3rd meridian, including the Calgary District, generally \$5 per acre.

Lands in Northern Alberta and the Lake Dauphin District, \$4 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest is divided into ten instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or grazing lands.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions:

160 acres at \$4.00 per acre, 1st instalment \$71.00, and nine equal instalments of \$60.
160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.
160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.
160 acres at \$4.50 per acre, 1st instalment \$107.85, and nine equal instalments of \$90.
160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.
160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.
160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the usual cash instalment.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

Write for maps and full particulars.

ENAMELED IRON PLATES

For Doors, etc., in Stations, Hotels, Offices, etc., carried in stock for Prompt Delivery.

Any of these Signs can be shipped on the day an order is received.

SMOKING ROOM

Size 23 x 3½ inches. Oblong, figured ends, white ground, blue letters, lined & tipped:

Waiting Room.	Ladies' Toilet.
General Waiting Room.	Men's Toilet.
Ladies' Waiting Room.	Agent's Office.
Men's Waiting Room.	Freight Office.
Baggage Room.	Private Office.
Dining Room.	Telegraph Office.
Lunch Room.	Ticket Office.
Smoking Room.	No Admittance.

NO ADMITTANCE

Size 10 x 2¼ inches. Oblong, oval ends, white ground, blue letters, lined & tipped, hollowed.

Exit.	No Admittance.
Fire Escape.	No Road.
Fresh To-day.	Office.
Gentlemen.	Please Shut the Gate.
Ladies.	Private.
Lavatory.	Refreshments.
Men.	Women.

STICK NO BILLS

Size 18 x 3½ inches. Oblong, square ends, white ground, blue letters, lined & tipped.

Furnished Apartments. Smoking Prohibited.
Please Shut the Door. Stick No Bills.

PUSH PULL

Oval, size 2 x 3 inches, white ground, blue letters, tipped, hollowed, lettered Push, Pull, as above.

Oblong, size 3 x 1½ inches, white ground, blue letters, tipped, lettered Push, Pull, as above.

Perpendicular, square ends, size 12 x 3 inches, white ground, blue letters, lined & tipped, lettered horizontally or perpendicularly, Push, Pull.

ENAMELED IRON SIGNS

For Steam & Electric Railways, Steamship, Express, Telegraph, Telephone & Advertising Purposes, of every description, size & color, made to order.

Railway Station Names, Switch Targets, Semaphore Arms, Whistle & Diamond Crossing Signs, Numbers for Railway Bridges, Sections, Mileage Signal Houses, etc.; Street Car Route Signs; Steamship & Ferry Signs; Express, Telegraph & Telephone Office Signs; Agency, Office, Store, Wagon, Cart & Advertising Signs; Street Names & Numbers; Door Numbers.

These signs last practically for ever, they never fade or tarnish, they are ever bright and attractive, they are absolutely impervious to heat or cold, they are the only signs that will withstand the effects of weather in all climates.

FLOOR PLAN CANADIAN PACIFIC RAILWAY PARLOR CARS, TENISKAMING AND LIEVRE.

draped curtains. The parlor is divided into 3 parts by 2 gracefully constructed arches, which, with artistic brass inserted grills, richly carved columns & draped silk curtains, give a very striking rich effect. The parlor is furnished with 1 settee, 1 sofa & 21 chairs, all being richly covered & upholstered in the Turkish style of upholstery, the carpet having been especially designed for these cars. The lines of the ceiling are in Empire, with a dark olive green ground, ornamented in gold. The whole treatment of the ceiling adds richness to the appearance of the room. The centre ceiling is ventilated by 12 long oval top sashes set with cathedral glass of intricate Empire design. The state room is similar in design to the main parlor, excepting that the wall panels, above the dado, are covered with rich old gold silk. This room also has a large window treated in the same manner as in the main parlor. Rich cathedral glass in the passage partition, a sofa & 2 upholstered wicker chairs complete it. This room is intended for a family or small party. The Co. has made a departure in these cars, as heretofore the male passengers only were considered as entitled to have their separate assembly room in the smoking room. In these cars the Co. has provided a ladies' room, which is as richly decorated as the main parlor, & has a nickelene washstand, drinking cooler, a large mirror, dressing cabinet & 2 cosy seats upholstered in gold bronze plush. This consideration on the part of the Co. will, no doubt, be fully appreciated by ladies. Special mention must be made of the commodious smoking room. On entering this room the attention is at once attracted to the wall panels. These are veneered with a specially selected San Domingo mahogany, the best that could be obtained in the country. The panels are trimmed with carved moulding, & divided by finely carved pilastres, which pass from the floor to the roof. The passage side is relieved by a cathedral window in soft tints of mottled glass. The entrance is draped with a portiere of olive green velours. The room is finished with 4 corner seats upholstered in olive green plush, 2 wicker chairs & a nickelene washstand.

Next in order are the 1st class or day coaches, of which there are 4, which have some new features contributing alike to comfort & elegance. The exterior is similar to the parlor cars, having wide vestibules, steel platforms, mahogany finish & 6 wheeled trucks. The length is 57 ft. 2 in., total length, 65 ft. The inside vestibules at each end are finished in carefully selected mahogany. The main room, when illuminated by the electric lights, has a very elegant appearance. This room is sub-divided by 2 arches across the car, each having 4 fluted columns surmounted with carved capitals supporting the arch, the base of column resting on the seat backs. The bulkheads & side finish are tastefully panelled & embellished with carved pilastres & molding. The ceiling is in the Empire style & richly ornamented in olive green on a gold ground. All the woodwork is beautifully handpolished. The window roller blinds are fitted up with patent fixtures. The seats are of a new pattern, & upholstered in rich terra cotta plush, & the aisle is carpeted with Wilton carpet imported especially for these cars. The seating capacity of each car is 68 passengers. Toilet rooms for ladies & men are located at either end of the car.

The combination 2nd class & smoking cars are in most respects similar to the 1st class, having wide vestibules, steel platforms, & 6 wheeled trucks. The inside is divided into 3 parts, comprised of an inner vestibule, 2nd class compartment, & smoking room. The general design of the inside is similar to the 1st class, the entire car being finished in mahogany & beautifully hand polished. The inside vestibule has a toilet room fitted with a nickelene washstand, a mirror, & flushing

FLOOR PLAN AND ELEVATION OF U.P.R. COMBINATION SECOND CLASS AND SMOKING CARS.

hopper. The 2nd class compartment is furnished with upholstered seats, upholstered in green and red leather. The smoking room is furnished with a wide chair, upholstered in plush. These are arranged along the side of the car, allowing the smoker, as he is enjoying his pipe, to view the scenery. As in the 1st class cars, the bulkheads & side finish is tastefully carved & ornamented with carved panels & mouldings. The lines of the ceiling are of the Empire design, the ornamentation being tastefully carried out in shaded gold on a ground of firm color.

The cars are lighted by electricity, each car generating its own current, steam heated, & equipped with the wide vestibules, standard steel platforms, 6 wheeled trucks, 40 in. steel tire wheels, & Westinghouse quick action high speed triple brakes & air signal. The interior finishings are in old gold mouldings & special design. The method of electric lighting is unique. For emergencies, & in addition to the regular dynamo, under each car is located an auxiliary battery sufficient to light a dozen or more lamps in each car. The battery is connected with the main switch box, & when the dynamo is running is continually being charged, & is therefore ready for instantaneous use. Beside this, there is a connection between each car for use, should the dynamo give out, or the battery on one car become exhausted, whereby power generated on other cars will furnish the necessary lights.

On page 355 we give floor plans of the parlor cars, & of the combination 2nd class & smoking cars.

The Co. has commenced to discard the use of oil lamps in the passenger cars, substituting electric light. Under the system adopted each car has a dynamo attached underneath the car body & ingeniously connected with a belt to the truck axles. Although the light thus furnished is steady & brilliant, it is still in the experimental stage. A large amount of work is being done remodelling & modernizing the older passenger & sleeping cars.

Over 200 standard 30 ton box cars were turned out of the Perth shops during Nov. & they are now being completed at the rate of 11 a day.

No new work is being done at the Farnham shops at present as they are being worked to their fullest capacity on passenger & freight car repair work.

The Minneapolis, St. Paul & Sault Ste. Marie Ry. has ordered 600 box cars of 60,000 lbs. capacity. It is officially stated that the Co. is not in the market for locomotives.

Railway Equipment Notes.

The Canada Atlantic is building 50 flat cars at its Ottawa shops.

The Esquimalt & Nanaimo Ry. is having 200 box cars built, of 60,000 lbs. capacity.

No special orders for equipment were completed in any of the G.T.R. shops during Nov. Many of the locomotives are being fitted with steel snowplows.

An official statement by the management of the Algoma Central Ry. gives the equipment as follows: locomotives 4, passenger cars 10, freight cars 390. This probably includes orders placed & not delivered.

The Great Northern (U.S.A.) passenger cars over the entire system are to be painted olive green. The sombre brown that since the beginning has been the prevailing color is to be done away with & a color in contrast to any other now in use is to take its place.

The White Pass & Yukon Ry. is building more cars than were mentioned in our last issue. The order comprises 50 box, 30 stock & 50 flat cars. Superintendent Rogers is credited by a press despatch as stating that 4 locomotives, 2 compound & 2 simple, have been ordered for Feb. delivery.

During Oct. the Baldwin Locomotive Works broke all records of the establishment in the number of finished locomotives turned out. The product of the works for that month was 104, & as there were 26 actual working days in the month the output represented an average of 4 locomotives a day. The best previous record of the works was 96 in one month some years ago. This was nearly equalled by the output for Nov., when 92 locomotives were turned out. The works are being run to their utmost capacity, & the firm is making strenuous efforts to turn out 100 engines during Dec. A crane with a span of 158 ft. has recently been installed in the erecting shop. It will lift a 196,000 lbs. locomotive 40 ft. in the air, carry it 336 ft. & set it down again in 3 minutes & 36 seconds.

Sydney & Louisburg Locomotives.

Last month we gave an illustration of a large consolidation double end locomotive, recently added to the Sydney & Louisburg Ry.'s equipment, & mentioned that a double end mogul had also been added. An illustration of the latter is given on pg. 357. Following are its general dimensions:

Weight in working order.....172,000 lbs.
" on drivers.....122,000 lbs.

Wheel base, driving.....	13 ft. 2 in.
" " rigid.....	13 ft. 2 in.
" " total.....	32 ft.
Diam. of cylinders.....	19 in.
Stroke of piston.....	26 in.
Outside diam. of first ring.....	62 in.
Working pressure.....	180 lbs.
Thickness of plates in barrel & outside of firebox.....	9-19 in., 1/2 in., 7-16 in. & 5-8 in.
Firebox, length.....	90 in.
" depth.....	Front, 66 1/2 in.; back, 56 1/2 in.
" crown staying.....	Radial stays, 1 in. diam.
" stay bolts.....	7-8 in. & 1 in. diam.
Tubes, number of.....	236
" length over tube sheets.....	12 ft.
Heating surface, tubes.....	1,472.49 sq. ft.
" " firebox.....	125.43 sq. ft.
" " total.....	1,597.92 sq. ft.
Grate.....	26.23 sq. ft.
Water capacity of tender.....	3,700 U.S. gallons
Coal.....	5 tons

RAILWAY APPOINTMENTS, Etc.

Algoma Central.—Following is the official organization of this line up to date: President, F. H. Clergue; Secretary, H. C. Hamilton; Treasurer, B. J. Clergue; General Manager & General Freight & Passenger Agent, E. V. Clergue; Auditor, C. P. Worthington; Purchasing Agent, A. M. Harnwell; Master Mechanic, W. H. Munro; Master Car Builder, Robert Lang; Master Car Painter, T. H. Baker; Foreman Repairs, H. Derrer; Chief Engineer, J. A. Wilde; offices, Sault Ste. Marie, Ont.

Central Vermont.—W. J. Robertson having resigned, Jas. Coleman has been appointed Master Car Builder; office at St. Albans, Vt.

J. A. Southard having resigned, the office of Division Freight & Passenger Agent at New London has been abolished. All reports & correspondence will hereafter be addressed to the undersigned, J. Pullen, General Freight Agent, and S. W. Cummings, General Passenger Agent.

F. W. Baldwin having resigned, C. E. Soule has been appointed Superintendent; office at St. Albans, Vt.

W. T. Sutphen, heretofore Chief Train Despatcher, has been appointed Assistant Superintendent of the Southern Division; office at New London, Conn.

S. B. Kramer has been appointed Chief Train Despatcher, vice W. T. Sutphen, promoted; office at St. Albans, Vt.

Grand Trunk.—G. F. Cotter, whose appointment as Chief Train Despatcher at Montreal we announced in our last issue, was formerly Chief Train Despatcher for the Illinois Central at Jackson, Tenn. B. D. Benson, heretofore with the Western New York & Pennsylvania at Buffalo, N.Y., has been appointed Assistant Chief Train Despatcher.

Early in Nov. Jos. Robb, for many years

THE BARRETT TRACK JACK.

Recommended as a standard by the
Road Masters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low set loads.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting capacity
10 to 15 tons.

foreman of the Brockville, Ont., shops, resigned, being succeeded by W. Marshall, of London, Ont., who was only able to hold the position a few days, owing to illness. J. McKay, of Stratford, has since been appointed.

Intercolonial & P.E.I.—J. B. Lambkin, District Passenger Agent, Halifax, & H. A. Price, District Passenger Agent, Montreal, have been appointed assistant general passenger agents, each with headquarters as at present. Mr. Lambkin will still attend to the duties of District Passenger Agent east of Dalhousie, N.B., & Mr. Price to the duties of District Passenger Agent west of Dalhousie, N.B., including Dalhousie.

W. H. Price, Chief Clerk in the General Passenger Department, has been appointed New England Agent, with headquarters at Boston, Mass., a new office. H. H. Melanson, Rate Clerk in the Department, has succeeded Mr. Price as Chief Clerk.

H. J. Scriver, who was mentioned in our last issue as having been succeeded as City Passenger Agent at Montreal by J. W. Bryson, has been retained as a clerk in that office.

Spokane Falls & Northern.—C. Shields, Vice-President & General Manager of this

Mainly About People.

Jas. Ross, of Montreal, has succeeded the late Hugh McLennan as a director of the Bank of Montreal.

Sir Rivers Wilson, President of the G.T.R., & Lady Wilson, are spending some weeks at Brighton, Eng.

R. A. Ross, Consulting Electrical Engineer for the C.P.R., has returned to Montreal after making a tour of the world.

The Duke of Cambridge was recently the guest of Lord & Lady Mount-Stephen at Brocket Hall, Hertfordshire, Eng.

J. A. Cuttle has been appointed Manager pro tem. of the Montreal Transportation Co., in place of the late D. G. Thomson.

N. Tomney, C.P.R. Store-keeper at Moose Jaw, Alta., was run over in the yard there recently by a car & instantly killed.

It is said the office of the General Freight Agent of the Dominion Atlantic Ry. is to be removed from Halifax to Kentville, N.S.

Mrs. J. T. Craig, daughter of D. Brown, Assistant General Freight Agent G.T.R., Chicago, died there Nov. 29, aged 31.

C. McGrath, of Lethbridge, Land Commissioner of the Alberta Ry. & Coal Co., is to be married in Montreal, Dec. 19, to Miss Mabel Galt, daughter of the late Sir A. T. Galt.

D. G. Sturrock has been appointed Manager of the Toronto office of the C.P.R. Co.'s Telegraphs, succeeding A. W. Barber, promoted to the Superintendency of the Ontario Division.

D. Budge, of Halifax, has been appointed General Superintendent on this side of the Atlantic of the Halifax & Bermuda Cable Co. & the Direct West India Cable Co., with quarters in Halifax.

Winnipeg Town Topics mentions a rumor that W. R. Baker, General Manager of the Manitoba & Northwestern Ry., & Mrs. Baker are contemplating a prolonged visit to the Southern States.

Just before the recent Manitoba elections, Hon. Hugh J. Macdonald resigned the solicitorship of the C.P.R. Land Department & retired from the firm of Macdonald, Tupper, Phippen & Tupper.

C. A. E. Huddart, midshipman on H.M.S. Doris, who was killed recently while fighting

DOUBLE-END MODEL LOCOMOTIVE FOR SYDNEY AND LOUISBURG RAILWAY.

line, & Assistant General Superintendent of the Great Northern (U.S.A.), has resigned. He was at one time on the Western Division of the C.P.R. P. T. Downs has succeeded him on the G.N., but we are not advised as to the filling of the S.F. & N. vacancy.

Wabash.—R. Doyle has been appointed Trainmaster of the Buffalo Division, with headquarters at St. Thomas, Ont., succeeding T. J. Costello, resigned.

White Pass & Yukon. The officers are: S. H. Graves, President, Chicago; E. C. Hawkins, General Manager; S. M. Irwin, Traffic Manager; E. B. Hussey, General Purchasing Agent; A. L. Berdoe, Auditor, all with offices at Seattle, Wash.; F. C. Elliott, Secretary; J. W. Probert, Treasurer, with offices at Chicago; J. H. Hislop, Assistant Chief Engineer; J. P. Rogers, Division Superintendent, with offices at Skagway, Alaska; F. P. Meyer, City Passenger & Freight Agent, Seattle; J. H. Greer, Commercial Agent, Victoria, B.C.; C. W. Cook, Agent, Tacoma, Wash.; C. W. Joynt, General Agent at Skagway; A. H. B. MacGowan, Agent, Vancouver, B.C.; S. P. Brown, General Agent, San Francisco; S. E. Adair, Agent, Dawson, Yukon.

Mrs. J. G. Hampton, wife of the Superintendent of the North American Telegraph Co., died at Deseronto, Ont., Nov. 20, aged 33.

A. Fairbairn, Paymaster of the Montreal St. Ry., has been appointed Comptroller of the West India Tramway Co. at Kingston, Jamaica.

W. Ellis, at one time Superintendent of the Welland Canal, died at St. Catharines, Ont., Dec. 15, aged 75. He was formerly a railway contractor.

The office of W. Kelly, Jr., General Passenger Agent of the Niagara Gorge R.R., has been removed from Buffalo, N.Y., to Niagara Falls, N.Y.

W. G. Ross, Comptroller of the Montreal Street Ry., has been elected Second Vice-President of the Street Railway Accountants Association.

It is said the General Passenger Agent & the General Freight Agent of the Intercolonial Ry. have each had their salaries "increased from \$2,100 to \$2,400.

D. S. McKenzie, night chief of the C.P.R. Co.'s telegraph office at Vancouver, has been appointed Manager of the Government telegraph office at Dawson, Yukon.

at Graspan, South Africa, was a son of Jas. Huddart, who is well known in Canada in connection with the Canadian-Australian steamship service.

Capt. T. H. Browne, of Montreal, died recently at Havana, where he went as engineer for the electric railway. He was at one time engaged on the construction of the Montreal & Ottawa Ry., & afterwards became Dominion Government architect for the Province of Quebec.

B. S. Jenkins, recently appointed General Superintendent of the C.P.R. Co.'s Telegraphs west of Fort William, has been Superintendent of the Western Division since 1883. Then the Winnipeg office staff consisted of the manager, 2 clerks, 4 operators, & 3 or 4 messengers. To day it has 15 clerks, 40 operators & 30 messengers.

E. V. Holcombe, Superintendent of Sleeping & Dining Cars, Great Northern Ry. (U.S.A.), died suddenly in the street in St. Paul, Minn., Nov. 26, of heart disease. He was born in Cincinnati, Ohio, in 1834, was at one time a steamboat captain on the Mississippi & was afterwards Manager of the Winnipeg & Western Transportation Co. at Winnipeg.

A. W. Barber, recently appointed Superintendent of the Ontario Division of the C.P.R. Co.'s Telegraphs, was born in Toronto 15 years ago, & has been in telegraph work all his life. He was with the Montreal Telegraph Co. as a boy, then with the Dominion, & later was Manager of the Canadian Mutual Telegraph Co. Fourteen years ago, on the organization of the C.P.R. Co.'s Telegraphs, he entered its service.

Sir Geo. Kirkpatrick, who died at Toronto Dec. 13, was a director of the C.P.R. Co. & President of the Dominion Express Co. The body was taken from Toronto to Kingston, Ont., by a special C.P.R. train & was buried at Cataract Cemetery. Among the pallbearers were Sir Wm. Van Horne, T. G. Shaughnessy, E. B. Osler & W. D. Matthews, of the C.P.R. directorate; J. Cassells, Secretary of the Dominion Express Co., & Nicol King.

W. J. Camp, recently appointed Superintendent of the Eastern Division of the C.P.R. Co.'s Telegraphs, was born in 1855, commencing his telegraph career with the Dominion Telegraph Co. in 1874, under C. R. Hosmer. He held various positions in the telegraph companies in Canada & the U.S. until 1886, when he entered the employ of the C.P.R. Co.'s Telegraphs as electrician, which position he held up to the time of his present appointment.

Jas. Kent, recently appointed Manager of the C.P.R. Co.'s Telegraphs, was born in Montreal, Jan. 15, 1854. He entered the service of the Montreal Telegraph Co. as messenger shortly after leaving school in 1868. He was promoted to the operating room as check boy, & after a short time became an operator. After working as such for five years, he was appointed night chief, & subsequently day chief for the same Company, which position he held until 1886, when he resigned to accept the position of chief operator of the C.P.R. Co.'s telegraphs at Montreal, which opened for business that year. In 1890 he was promoted to the superintendency of the eastern division of the system, & held this position up to the time of his present appointment.

James Guthrie Scott, whose portrait appears on pg. 345, of this issue, is the son of the late Hugh Erskine Scott, of Quebec, Manager of the Montreal & Quebec steamers. The ancestors of his mother, nee Margaret Chillas, who were of Scotch & Acadian stock, went to Quebec in 1759. He was born in Quebec City, Feb. 13, 1847, was educated at the High School there, & commenced his business life in the lumber trade, being con-

nected with the Montmorency & Three Rivers mills for a number of years. He entered railway service in 1875 as Secretary of the Quebec & Lake St. John Ry., of which he is now Secretary & Manager. In 1893 he became also Secretary & Manager of the Great Northern Ry. of Canada. He is a member of the Church of England, & politically is neutral. In 1863 he married Sophy Mary, daughter of the late Alfred Jackson, M.D. She died in 1892.

Hugh McLennan, President of the Montreal Transportation Co., died suddenly Nov. 21. He was born in Glengarry, Ont., in 1825, & received his education there. In 1842 he went to Montreal & entered the service of the line of steamers plying between Montreal & Kingston as purser. In 1850 he became wharfinger & freight agent for the company in Kingston, & in 1851 he removed to Montreal in the same capacity. In 1853 he & his brother John founded the firm of J. & H. McLennan, which carried on a grain & transportation business until John retired in 1867. The business was then enlarged, under the title of the Montreal Transportation Co., & Hugh McLennan was made its President, a position he held until his demise. He was also very largely engaged in the grain trade, & was one of the heaviest shippers from Montreal. He was at one time President of the Intercolonial Coal Co. & the Black Diamond Steamship Co., & was for some time the Board of Trade's representative on the Harbor Commission, besides holding other important offices.

Chicago & Grand Trunk Ry.—It was recently announced that the time for depositing the Co.'s 2nd mortgage 5% bonds with Glyn, Mills, Currie & Co., London, Eng., on behalf of the trustees, had been extended from Dec. 1 to 15.

Grand Trunk Betterments.—In addition to the work enumerated on pg. 348, a great many bridges have also been built, the number from Montreal to Island Pond being 35, with a total measurement of 2,966 ft., all of steel & masonry, & capable of carrying the very heaviest traffic that can possibly pass over the road. Between Montreal & Brockville, 1,071 ft. of bridging has been done, 206 ft. being double tracks at Ste. Anne, with 71 ft. at Suspension Bridge, N.Y. Masonry is also being completed for steel bridges at Ste. Anne, 1,330 ft.; Vaudreuil, 1,380 ft.; Isle Perrot, 142 ft.; and the Trent River at Trenton, 438 ft., making a total of 3,290 ft., all of which will be in position early in the new year. The G.T. has employed from 350 to 500 men in track laying during the last 3 months, & the force was

largely increased after the strike, to make up for the 5 weeks that had been lost. There have been from 4,000 to 4,500 men at work on maintenance of way, the line comprising 4,180 miles, 450 of which is double track.

Fire Fighting by Railway Employees.—The Ontario Deputy Commissioner of Crown Lands, as referee appointed by the High Court to decide a claim by O'Neil & Ferguson, railway contractors, against the St. Anthony Lumber Co., has handed out his decision. The contractors were constructing a section of the Ottawa, Arnprior & Parry Sound Ry. when a fire broke out in the St. Anthony Co.'s limits near Whitney. At the request of the Ontario bush rangers the railway men fought the fire, about 200 men being engaged on & off for a week. The contractors asked the St. Anthony Co. to pay the actual wages of the men for the time so employed. The request was refused, on the ground that the railway construction contributed to the fire, & that the bush rangers were not agents for the Co. There was a great bulk of evidence, & judgment was given against the St. Anthony Co. for \$653. Mr. White found that the rangers have power to call for assistance in the event of fire at the expense of the lessees. If his finding is sustained by the High Court, the decision will form a most important precedent.

Manitoba & Northwestern Ry. The selection of M. & N.W.R. lands, made jointly by the Manitoba Government & the Co., under an act passed last session of the legislature, has been completed. The arrangement was that the Co. should transfer to the Government 542,000 acres of its land in settlement of claims against it. This has been selected—213,000 acres in Manitoba & the balance in the Territories. The inspectors who made the selection state that they found extensive tracts of the very finest agricultural lands northwest of Yorkton, & that Manitoba will have a valuable asset in the lands.

The M. & N.W.R. Co. gives notice of application to the Dominion Parliament for an act authorizing it to complete within 7 years from the passing of the act an extension of the main line from Yorkton to Prince Albert, an extension of the Shell River branch from Russell to the northern or western boundary of Manitoba, a branch from the main line between Portage la Prairie & Arden running northerly eastward of the Riding Mountains to the northern or western boundary of Manitoba, & a branch from the main line between Westbourne & Beautiful Plains northwesterly in the direction of Lake Dauphin or Duck Mountains.

RAILWAY PROJECTS.

Alaska & Northwestern.—Belcourt & Ritchie, solicitors, Ottawa, give notice of application to the Dominion Parliament, for the incorporation of a company to build & operate a railway from or near Pyramid Harbour, Lynn Canal or from or near the International Boundary in the vicinity of Lynn Canal, through the Chilkat Pass, & by the Dalton Trail to or near Fort Selkirk, Yukon, & with other powers.

Atlin to Discovery, Etc.—Langley & Martin, solicitors, Victoria, give notice of application to the B.C. Legislature to incorporate a company to build & operate a tramway from Atlin to Discovery, Cassiar District, & from either or both those places to any other places in Cassiar district, & with other powers.

C.P.R. Projects.—The C.P.R. will be very active at Ottawa next session. In addition to the applications enumerated in our last issue, pg. 325, & to applications for extension of time in connection with the completion of the Crow's Nest Pass, & Arrowhead & Kootenay lines, applications will be made as follows:—

For power to build, or acquire & operate a railway from or near Morden on its Pembina Mountain Branch, to or near Miami, thence to or near Carman, Man.; also a railway from between Hartney & Souris, on its Souris branch, to between Boissevain & Ninga on the Manitoba & South Western Colonization Ry.

For power to construct, or acquire & operate a railway from Osborne on its Pembina Mountain Branch, to between Manitou & Morden on the said branch; also from Osborne to Carman & thence westerly & south-westerly to the line of the Manitoba South-Western Colonization Ry. between Cartwright & Boissevain; also from a point on its Souris branch, between Lauder & Monteith, easterly & north-easterly to between Glenboro & Treesbank on the Glenboro extension of that branch; & also from West Selkirk northerly & north-westerly direction to a point on the west shore of Lake Winnipeg about 60 miles, thence north-westerly to the Little Saskatchewan River.

Cassiar Tramways.—E. A. Jenns, solicitor, New Westminster, gives notice of application to the B.C. Legislature to incorporate a company to build & operate tramways & telegraph & telephone lines in Cassiar district, & with other powers.

Fort Simpson, Teslin & Dawson Ry. Co.—D. Scott, solicitor, Ottawa, gives notice of application to the Dominion Parliament to incorporate a company under this name to build & operate a railway from or near Fort Simpson, B.C., to Dawson, Yukon, via Teslin Lake, & with other powers.

Grand Forks, B.C., to Republic, Wash.—There has been a lot of talk lately about building a line between these points. First, rumor said it was to be done by the C.P.R., then the Great Northern (U.S.A.) was spoken of. When both these companies denied the impeachment, J. P. Graves, of the Grand Forks smelter, said, "If nobody else undertakes it, we are prepared to build it next year. No doubt our smelter at Grand Forks would receive considerable tonnage from the Republic mines."

A little later C. J. McCuaig, the Montreal mining broker, who is largely interested in mines in B.C. & in Washington, said, "If President Hill, of the Great Northern, who has held a charter for two years, authorizing the building of a line from Republic to the Boundary line, will not give assurances at once that he intends to go ahead without delay, I will undertake with my associates to build the road next summer. Connection will be made at the Boundary with a five-mile railway from Grand Forks. In this relation I am considering a project for the establishment of

a matting plant at Grand Forks for the B.C. mine & the Republic mine. A large quantity of the higher grade ore of the Republic camp would naturally seek the smelter at Grand Forks. The route between the two places presents no difficulties from an engineering standpoint. The water-grade of the Kettle River can be followed nearly all the way."

Next Mackenzie, Mann & Co. were mentioned by a Grand Forks correspondent, who said that Hugh Sutherland had been over the line in their interest. In an interview at Republic he was credited with saying: "Prosperity would, of course, come more expeditiously if you had proper transportation facilities, & I can speak with all assurance that if a U.S. railroad is not built into Republic from the south in the near future, a line will be built from the north. Further than this I am not at liberty to speak on the question."

A St. Paul, Minn., despatch says: "The Great Northern will not build its Republic line this year. This information comes from a high official of the Co., who added that Mr. Hill says further that when he does build into Republic it will not be up the San Poil River, but from a line he intends to construct into the Okanagan country. A business man who has mining interests in Republic camp, recently sounded Mr. Hill on the matter of his proposed line into Republic, & quotes the Great Northern chief as saying: 'I shall not build in there at present. The tonnage will not justify the extension. The ores there yield to local treatment, & those fellows need not expect me to build a railway to haul out nothing but gold bullion.'"

The Grand Valley Ry. Co. gives notice of application to the Dominion Parliament for an act to empower it to acquire & operate a line of ferry boats running from Port Dover, Goderich & other points to all points on the Great Lakes; to build & operate a railway from Goderich through the counties of Huron & Perth, passing through or near Leadbury, Milverton & Heidelberg, to Berlin, thence southerly through or near Blair, Preston, Galt, Ayr, Paris, Brantford, Waterford & Simcoe, to Port Dover, also branches running from Berlin to Listowel, to Elora, & to Stratford; to empower the Co. to connect with & enter into running arrangements with railways situate within a distance of 3 miles from any portion of its line; to authorize the Co. to build & operate telephone & telegraph lines for commercial purposes, & to sell & lease electricity; to change the name of the Co. to the Port Dover, Grand Valley & Goderich Ry. Co.; to increase the capital stock to \$2,600,000; to ratify & confirm the Ontario statutes, 1895, chap. 97, & 1896, chap. 102; to authorize the Co. to enter into agreements with the Michigan Central Ry. Co., & the Wabash Ry. Co., for connections & traffic arrangements; to have it declared that the Co.'s railway is under & subject to The Railway Act of Canada.

Greenwood & Phoenix Tramway Co. C. R. Naden, D. Ross & G. H. Collins give notice of desire to form a company under this name, under the B.C. Tramway Company Incorporation Act, to build & operate a tramway running northerly & southerly through Greenwood, thence easterly to Phoenix; also from Greenwood westerly to Deadwood Camp; from Greenwood northerly to Long Lake Camp & from Greenwood to any point within a radius of 15 miles to which the Co. may wish to extend its tramway, also with power to build & operate telegraph or telephone lines in connection with the tramway, & with other powers.

Greenwood & Vicinity.—Leamy & Gray, solicitors, give notice of application to the B.C. Legislature for an act to enable the city corporation of Greenwood to build & operate a tramway from Greenwood to Phoenix Camp,

Deadwood Camp, Long Lake Camp, Central Camp, & any other point within 15 miles of Greenwood, & with other powers.

Guelph to Goderich.—At a meeting in Guelph, Ont., Dec. 14, there were 84 delegates representing Guelph, Goderich & the 23 municipalities through which the proposed line would pass. The extension of the C.P.R. westerly to Lake Huron seemed to be regarded as the most feasible scheme for supplying the desired railway facilities. The construction of this line would, it was estimated, involve an expenditure of about \$11,000 a mile, or a total of about \$1,000,000. There are no great engineering difficulties to be overcome. The Guelph Jct. Ry. Co.'s line from Guelph to Campbellville, 16 miles, would form the link from the main line. To the construction of this Guelph contributed \$200,000, & it now holds bonds of the Co. to that amount. At the time the building of the junction line was proposed, the intention was to go to Schaw, but the railway was carried to Campbellville, 5 or 6 miles further, on the strength of an alleged promise by Sir Wm. Van Horne, that eventually it would be extended to Goderich. The delegates were of opinion that in view of the large expenditure by the Dominion on Goderich harbor, the Dominion should be called upon to subsidize a project for giving that port more direct communication with the east. The views of the conference were embodied in a series of resolutions. One of these declared in favor of the extension of the Guelph Jct. Ry. to Goderich, in view of the great need of that section of Ontario for railway communication, & the fact that Goderich had been made a harbor of refuge, & was the natural outlet of that part of the province for trade with the Northwest. Another resolution requested Toronto's co-operation. A committee was appointed to further the scheme, Mayor Nelson, of Guelph, being Chairman, & W. E. Buckingham, of Guelph, Secretary.

Horseshoe Bay to Alberni Canal, Etc.—Bodwell & Duff, solicitors, Victoria, give notice of application to the B.C. Legislature to incorporate a company to build & operate a railway from Horseshoe Bay, Nanaimo district, Vancouver Island, north-westerly via Nanaimo Lakes, to the head of Alberni Canal, with a branch to the headquarters of Chemainus River, & with other powers.

Johnston Strait to Upper Campbell Lake.—Davis, Marshall & Macneill, Solicitors, Vancouver, give notice of application to the B.C. Legislature to incorporate a company to build & operate a railway from Johnston Strait, Vancouver Island, a short distance west of Chatham Point, to Upper Campbell Lake, with a line from the main line to Johnston Strait, a short distance east of Bear River; & a branch to the Salmon River, & with other powers.

Kootenay & Yale Tramways.—Macdonald & Johnson, solicitors, Nelson, give notice of application to the B.C. Legislature to incorporate a company to build & operate tramways, telegraph & telephone lines in Kootenay & Yale districts; to acquire the business, etc., of the Nelson Electric Tramway Co., & of the Rossland & Sophie Mountain Electric Ry. Co., & with other powers.

Lake St. John Ry.—There is a strong agitation in the northern part of Quebec for the extension of this line to James Bay.

The Lindsay, Bobcaygeon & Pontypool Ry. is projected to run from Bobcaygeon, via Lindsay, to the main line of the C.P.R. at or near Burketon, Ont. The promoters have been very active of late holding meetings in the towns & rural municipalities interested, & bonus by-laws are being submitted in several municipalities. The line, if built, will practically be an extension of the C.P.R. to Lindsay.

The Pontiac Pacific Jct. Ry. gives notice of application to the Dominion Parliament

for an act authorizing it to build & operate a railway from or near Quyon, or Shawville, Que., to Pembroke, Ont., & to construct a line of its railway not exceeding 30 miles. The C.P.R. runs from Ottawa 80 miles to Waltham, which is on the Quebec side of the Ottawa River, about opposite Pembroke. Quyon is 32 miles from Ottawa, & Shawville 40 miles, both being on the C. & S. line.

Pyramid Harbor to Dawson. Logan, Jenks & Outhit, Solicitors, Amherst, N.S., give notice of application to the Dominion Parliament to incorporate a company to build & operate a railway from or near Pyramid Harbor, on the Atlantic Inlet, near the head of the Foul Bay Canal, or from the International Boundary line at or near Kluckwan, to Dalton's Post on the Dalton Trail, following the Dalton Trail to Fort Selkirk, thence to Dawson City, & with other powers.

Vancouver & Lulu Island. Notice is given of application to the B.C. Legislature to extend the time for the completion of this line.

Vancouver Island & the Mainland.—The Victoria City Council has been presented with a largely signed petition, asking it to pass & submit to the ratepayers a by-law authorizing the city corporation to subscribe for stock not exceeding \$500,000 in any company incorporated for the purpose of acquiring & operating the Victoria & Sidney Ry., & of extending it into the business part of the city of Victoria, & to a convenient harbor north of Sidney; & for the purpose of establishing & operating a ferry system between such extension on the Saanich peninsula, & some convenient point on the mainland of B.C. south of the Fraser River, & also for building & operating a railway from such point on the mainland through Delta, Surrey, Langley, Matsqui, Sumas & Chilliwack, or such portion of the proposed undertaking or any alternative as may be deemed most in the public interest.

A. L. Belyea, Solicitor, has given notice of application to the B.C. Legislature to incorporate a company to carry out the scheme outlined in the above mentioned petition. (Nov., pg. 334.)

Victoria to Eastern Boundary of B.C. Dumbleton & Anderson give notice of application to the B.C. Legislature to incorporate a company to build & operate a railway, with telegraph & telephone lines, from Victoria to the eastern boundary of the province, with branch lines from the main line to mining camps or coastal points, & with other powers.

Kootenay Railway & Navigation Co.—We are advised that the shareholders' meeting this year will be of a purely formal character. The Co. assumed possession of the property on Jan. 1 last, & as the books are closed in Canada on Jan. 30 each year, there will be no report or accounts to submit to the shareholders until after June 30, 1900, when a period of 18 months will be covered.

Railway Committee of Privy Council.

Lake Erie & Detroit River Ry. & Michigan Central Ry.—When the Dominion Parliament last session voted a subsidy for the extension of the L.E. & D.R. from Ridgetown to St. Thomas, Ont., it was provided that it should be payable only in the event of adequate running rights over the Canada Southern Ry. between the points mentioned not being granted to the L.E. & D.R., on terms to be approved by the Railway Committee. The case came before the Committee Nov. 7, when Z. A. Lash for the L.E. & D.R. intimated that that Co. would pay to the M.C. interest on the expenditure necessary to build a line from Ridgetown to St. Thomas, with other alternatives. He held that no advantage in the way of precedence in running rights should be given the M.C., as in that event the concession would be of no avail. Local communities & customers would inevitably be disappointed in the freight service to be furnished by the L.E. & D.R. line. Nothing short of precedence of its trains would answer the requirements of the district.

Nicol Kingsmill, Q.C., for the M.C., stated that that Co. objected to the granting of a bonus for the extension of the L.E. & D.R. The object of asking the bonus was to fill the gap that would interfere with its going to the Niagara River. The country between St. Thomas & Ridgetown had been made by the Canada Southern, which had received no bonus from the Dominion Government. The M.C., nevertheless, was ready to meet the L.E. & D.R. Co. half way, or was prepared to have it construct a line, but the M.C. objected to the Government bonusing a line that would be in opposition to the non-bonused Canada Southern. The L.E. & D.R. Co., he held, wanted the bonus & not the running powers. The M.C. would be ready to give the through passenger trains of the M.C. precedence, then the L.E. & D.R. through passenger trains, next the local passenger trains of the two companies to have equal rights; next the through freight trains of the M.C. with live stock or perishable freight, & finally the similar trains of the L.E. & D.R. Local trains to have equal rights, & special arrangements to be made for special trains. The L.E. & D.R. not requiring the use of M.C. terminals, the former line would not be compelled to use them & pay therefor.

Mr. Lash thought the proposed arrangement in respect of precedence of trains would be unsatisfactory.

The L.E. & D.R. Co., Mr. Kingsmill asserted, had offered an inadequate sum for the annual lease of the line. The part of the line referred to was worth about \$1,000,000, & the M.C. would accept \$25,000 a year for running rights. The cost of maintenance of the L.E. & D.R.'s own line would be about \$30,000 a year. The Minister of Railways having enquired if the rental asked was agreed on would the M.C. put down a second track, Mr. Kingsmill said 19 miles of this stretch

of the line was double tracked already, & if the Government would give \$3,200 a mile for the remaining 25 miles, the M.C. would certainly double-track it.

Judgment was reserved.

Metropolitan Ry. Co. & C.P.R.—An application to the M.R.Co., to connect its track with the C.P.R. by a switch on the west side of Yonge st., North Toronto, came before the Committee Nov. 7, B. B. Osler opposing for North Toronto & J. S. Fullerton for Toronto. Mr. Osler contended that the Committee had not jurisdiction to consider the application, sec. 173, defining the Committee's powers, not providing for the union of an electric railway with a steam road. Mr. Fullerton contended that the Committee had no power to direct the M.R. Co. to occupy any portion of Yonge st. without the consent of Toronto, W. Burwick, Q.C., for the M.R. Co., maintained that it was a railway within the meaning of the Act, the Co.'s charter including all the provisions of the Ontario Railway Act.

The matter was adjourned to Nov. 11, when a compromise was arrived at, Mr. Fullerton consenting for Toronto to an order being made without prejudice to the rights of other parties. Mr. Osler, for North Toronto, asked the Committee first to refer the case to the Supreme Court to settle the question of jurisdiction to unite the two railways, & suggested that if freight trains were to be permitted to pass over the M.Ry., it should be on a time schedule, so that the public might know at what hours Yonge st. would be safe for vehicular traffic.

After the Committee had consulted, it was announced by Mr. Blair that in the matter of jurisdiction the members were unanimously of opinion that they could act on the case. There did not appear to be sufficient reason why they should delay action or refuse to make an order in this case. It was therefore made as follows:

"The Metropolitan Ry. Co. having applied to the Railway Committee for permission to connect its tracks with the tracks of the C.P.R. by means of a switch in the city of Toronto, & the Committee having heard counsel for the applicant, the city of Toronto, the town of North Toronto, the County of York, & the C.P.R., respectively, & having duly considered the evidence submitted, & counsel on behalf of the city of Toronto consenting thereto, hereby approves of the applicant connecting its tracks with the tracks of the C.P.R. by means of a switch in the city of Toronto on the following conditions, that the connection is to be made on the east, not the west, side of Yonge st.; the applicant to pay all the cost of the change of location up to \$2,500. Should the cost exceed this amount the excess is to be borne by the applicant & the city of Toronto, so that the city shall not be liable for more than one-half of such excess. The point where the line of the applicant shall connect with the tracks of the C.P.R. to be on the property of the C.P.R., between its present northerly track & the southerly building north

Richmond Locomotive and Machine Works,

RICHMOND, VIRGINIA, U.S.A.

BUILDERS OF

Adapted to every variety of service.

Change cut

of said track. The applicant shall not run freight trains of more than 3 cars, exclusive of the motor, on Yonge st., & shall not run freight trains at a greater speed than 6 miles an hour through the towns, unincorporated villages, the unincorporated village of Thornhill, & that part of Yonge st. south of North Toronto, or on any other part of Yonge st., at a greater speed than 15 miles an hour. The applicant shall not operate its railway by any other power than electricity on Yonge st., & in its operation shall be subject to such agreements as may be or have heretofore been entered into between the County Council of York & the applicant. This order is subject to the reservation of the right by the Committee, & the recognition of said right by the applicant, to make such orders as may hereafter be deemed expedient respecting the time & mode of running freight cars & trains. Truck cars run in connection with a passenger car or cars shall not be considered freight cars within the meaning of the order."

Notwithstanding that this order was agreed

was made from the railway siding to within a couple of feet of the street line. The whole question is now before the courts. The M.R. Co. has applied for the order of the Railway Committee to be made an order of the court, & the Toronto Ry. Co., under fiat from the Attorney-General of Ontario, has entered suit to test the legality of the Railway Committee's order.

Lansdowne Avenue Crossing, Toronto.

The application of the City of Toronto for a crossing over the C.P.R. & G.T.R. tracks at Lansdowne Avenue, came before the committee Nov. 7, & a few days later an order was issued directing that the city "may have a temporary crossing at rail level, for foot passengers only" over the railway tracks, "up to & including Feb. 20, 1900, on condition that the city shall, at its own cost, provide & keep a watchman at the crossing day & night, & shall make the approaches & crossing safe for the travelling public before the crossing is used for traffic. The Committee further directs, that after Feb. 20, 1900, all crossing

of the Railway Committee to build a subway, that it could not build without first obtaining permission under the Ontario Government municipal act, & that the plans submitted by the City showed that the construction of a temporary crossing would be a work of much expense. The City based its power to build the crossing upon sec. 14 of the Railway Act, & upon sec. 11, sub-section Q, which provides that whenever the Railway Committee find it necessary that streets should be laid across the tracks of a railroad they shall apportion the costs. On Nov. 30 the Chancellor enlarged the case for two weeks, leaving it in statu quo until the G.T.R. brings its appeal against the decision of the Railway Committee before the Governor-in-Council. In the meantime there will be no level crossing.

The Brotherhood of Locomotive Engineers is said to have decided to select a site in Cleveland, Ohio, for permanent headquarters. The land & building will cost \$300,000.

THE LARGEST BRIDGE TRUSS THAT HAS BEEN.

to on behalf of Toronto by the corporation counsel, in the presence of a deputation of three aldermen, the arrangement was repudiated by the Mayor & Council, & Mr. Osler was retained to test the jurisdiction of the Railway Committee in the matter. North Toronto followed by applying for an injunction restraining the M.R. Co. from using Yonge St. as a branch railway for the passage of heavy freight cars & motors to & from the C.P.R., & to restrain the M.R. Co. from converting the highway into a railway right of way, notwithstanding any order to the contrary of the Railway Committee. On Nov. 25, acting on the authority of the Railway Committee's order, the M.R. Co. put a force of men at work with horses, scrapers, etc., to make the connection, but they were stopped by force by the Toronto police, & on the application of the city counsel the Chancellor granted an injunction stopping further work till after the hearing. The workmen were then set at work upon the C.P.R. property on the east side of the street, & the necessary excavation

at the said place shall be discontinued, unless the city shall prior to such date elect to construct a permanent subway in lieu of such crossing, & shall satisfy the Committee that bona fide & reasonable progress is being made in the construction of the subway; in which event the Committee will grant an extension of time for the continuance of the temporary crossing while the construction of the subway is being prosecuted with such despatch as shall be satisfactory to the Committee. The detail plans of subway & the works of construction thereof to be approved by the Chief Engineer of Government Railways, & the cost of subway, including all consequential damages, costs, charges, & expenses in connection therewith, to be borne one-half by the City & the other half by the two companies equally.

The G.T.R. at once entered suit to prevent the City from making a temporary crossing, basing it upon three grounds, that the City had no right to erect such a crossing while it was undecided whether to accept the order

A Large Truss for the C.P.R.—The illustration on this page shows one of two latticed trusses just used by the C.P.R. in the reconstruction of its bridge over the Credit River, near Streetsville, Ont., & which are said to be without doubt the largest single pieces of structural work ever shipped. Each measures 126 ft. in length over all, by 15 ft. deep, has 5½ panels, weighs 80,000 lbs., & stands when loaded on specially low & heavy cars, 19½ ft. from top of rail to top of truss. The trusses were hauled to the siding at Streetsville, where, after being connected by bracing into a complete span, the latter was loaded on cars & hauled about ¼ of a mile to the bridge site, where the span was lifted off the cars by 2 sets of the heaviest block & tackle ever used in Canada, hung from 2 high gantries. The cars were then run out from under the span & the old bridge, a single span deck Howe truss, was moved to one side, after which the iron span was let down into position. We are indebted to the Hamilton Spectator for the use of the illustration.

Railway Operating Notes.

All G.T.R. stations are being equipped with new standard clocks.

The Canada Atlantic will shortly put in effect the standard train rules of the American Ry. Association.

Increased pay is said to have been granted to a number of Intercolonial station agents, operators & dispatchers.

Arrangements are being made to install the electric train staff system on the C.P.R., between St. Anne's & Vaudreuil, Que., & it may also be put in on the freight track between Western Jct. & St. Luc Jct.

During Nov. a series of conferences were held in Montreal between the G.T.R. management & representatives of the conductors & trainmen, at which differences which had arisen were settled to the mutual satisfaction of both sides.

A recent press item stated that preparations were being made to use coke on the passenger locomotives of the I.C.R. This is probably a premature statement. We understand that experiments in the use of coke are being made on two locomotives, but it is too early to give results.

The Minneapolis, St. Paul & Sault Ste. Marie has abandoned the plan put in force several years ago, in which the locomotive drivers were allowed to hire their own firemen, & which created considerable comment at the time. Hereafter the Co. will hire the firemen & will assign them to duty wherever they are needed.

The G.T.R. has made a change in the numbering of its through trains. Hitherto, for instance, when a train left Chicago for the east it received a number as it left the station, but at different points it got another number. In future the number the train receives at the starting point will be retained until it gets to its destination. The numbers of local trains will remain the same.

The Canada Atlantic now operates the Pembroke Southern Ry. under the title of Pembroke Division. What was formerly

known as the Eastern Division of the Ottawa, Arnprior & Parry Sound Ry. is now operated as the Middle Division of the C.A.R., & what was formerly known as the Western Division of the O. A. & P. S. Ry. is now operated as the Western Division of the C. A. Ry.

The Ontario Court of Appeal has confirmed the judgment in the case of Barclay vs. the Lake Erie & Detroit River Ry., an action for damages for negligence which had been before a jury. The court upheld the finding of the jury that the Co. should have a man stationed at crossways to warn passengers. In this case shunting was done on the high-ways, & was dangerous to pedestrians, as citizens were not acquainted with the procedure of making up trains.

A number of very heavy engines, not heretofore used, of the consolidation compound class, are now in service on the Ontario & Quebec Division of the C.P.R. south of Montreal, giving most satisfactory results as to increase of tonnage, amounting to about 50% per train, & also as to better time. Improvements in through freight service from New England points to the west & northwest have been effected, whereby from 12 to 14 hours is gained in the through run, on account of the improved method of handling & better train service on the route south of Montreal.

It has been rumored lately that the C.P.R. dispatcher's office at Fort William will be removed to Rat Portage, but no definite conclusion has been arrived at. A local dispatching office has been established at Rat Portage for the Rat Portage section, the dispatchers who handle it having been removed from Rat Portage to Winnipeg. The headquarters of the Superintendent & dispatchers of the Medicine Hat, Crowfoot & Calgary sections & connecting branch lines, have been removed from Medicine Hat, Assa., on the Pacific Division; the dispatchers for the Kootenay lines have been moved from Trail to Nelson.

Rhodes, Curry & Co., Amherst, N.S., are reported to have contracts on hand for railway work amounting to over \$700,000.

Piece-work in Railway Shops.

Some months ago we published a circular issued by Mechanical Superintendent Joughins, in reference to the adoption of piece-work in the Moncton shops, its adoption or not being perfectly voluntary with the men. It is said that the men who have adopted it have, as a rule, done well, in proof of which the Moncton Transcript publishes the following details from pay-sheets. The names are withheld for obvious reasons, but the class of work is specified and the amount named was that received for the month in addition to the regular monthly wages:

Improving Northwest Stock.—Land Commissioner Hamilton, of the C.P.R., has notified the Northwest Government that as most of the thoroughbred stock which was recently sent from Ontario was distributed in Manitoba, eight car loads of thoroughbred bulls will be given free transportation from Ontario to the Territories. It is understood that the Territorial Government is arranging with breeders to send buyers to Ontario to pick up animals.

Lubrication of Cars.

At a recent meeting of the Central Railway Club the following report on lubrication of freight & passenger equipment was presented:

All boxes on passenger equipment cars should be re-packed at least once a year, the re-packing to commence about May 1 each year, using $\frac{1}{2}$ old & $\frac{1}{2}$ new packing, taking the better portion of the old & turning the balance over to freight car use if considered to be in fair condition. Cars should be suitably marked on the trucks, showing the date re-packed. All passenger equipment cars going through the shops for overhauling should be entirely re-packed, & where wheels & axles are renewed, new brasses should be used. Particular attention should be paid to the condition of the trucks, close attention being given to the equalizing bars & pedestals, also to the renewal of dust guards if defective. Oiling of cars to be done only at ends of road, unless cars are put in train at an intermediate station; no oiling to be done other than the above unless made necessary by reason of hot box or other cause of like nature. All boxes should, however, be opened at main line inspection points & examined as to their condition.

All freight cars should be re-packed whenever stopped for repairs, using the old packing turned over from passenger equipment with the addition of such new packing as may be necessary. Trucks should be put in proper condition, particularly dust guards & oil box covers, also boxes re-packed where wheels & axles have been renewed—new brasses to be used in such cases. Packing that is removed, if in good condition, should be put to soak for at least forty-eight hours, & may then be used again under freight cars. Oiling to be done similar to passenger. Close attention should be given to cars received in interchange, & such quantities of packing used as may be deemed necessary to put car in good condition to run safely over the line. In cases of hot box would suggest the use of saturated waste instead of oil. Great care should be taken in all cases of cars re-packed to see that it is done in a manner to insure the proper lubrication of the journals.

The Committee suggests the use of an oil equal in quality to the Galena car oils; the use of lighter oil in winter than in summer; that all packing be allowed to soak at least 48 hours before using; that all shops & inspection points be instructed as to a uniform manner of packing the boxes; that the use of cooling compounds or patented packing is unnecessary; that boxes be examined at least every 200-miles run; that the use of oil cans by train crews be abolished, crews to be supplied with saturated waste instead.

The Albert Southern Ry., which runs from Alma, on Chignecto Bay, to Derry's Corners, N.B., with a branch of 3 miles to Harvey, is reported in a press despatch to have been sold to the purchasers of the Salisbury & Harvey Ry., referred to on page 346. The A.S. connects with the S. & H. at Albert. The road was opened June 15, 1892, & was sold Dec. 6, 1892, at sheriff's sale, since which it has been operated by W. A. Trueman, as trustee, in the interest of the creditors. For the year ended June 30, 1898, its gross earnings were \$3,106.96, & its net earnings \$564.36.

Port Arthur, Duluth & Western Ry. The Master-in-Ordinary at Toronto on Dec. 18 dismissed the motion of D. F. Burk, of Port Arthur, by which he preferred a claim to \$155,000 bonds of this Co., which is in liquidation. The judgment was founded on the fact that the ownership of the bonds is now the issue of a suit in the higher court. The bonds are in the possession of the Toronto General Trusts Co., in trust for the estate of the late J. Lee, A. B. Lee, & the Canadian

Bank of Commerce. Mr. Burk's claim is on the grounds of money advanced & services rendered.

Superintendent.—“Were the sleeping cars on fire when you passed the wreck?”

Conductor.—“I did not see any sleeping cars, sir. When we got there they were all smoking cars.”

SHIPPING MATTERS.

Suspension of Coasting Laws.

So far the formal announcement of the Dominion Government's future policy in regard to the suspension of the coasting laws has not been made, & as a result there is a great deal of uncertainty & anxiety in shipping circles, which the Government should take steps to remove without further delay. In this connection it will be well to bear in mind Sir Wilfrid Laurier's reply to the deputation which waited upon him in Ottawa on Nov. 22, when he practically admitted that a mistake had been made, & that it would not be repeated, & that if the coasting laws were to be again suspended it would only be after parliamentary action. Sir Wilfrid said:

“The main question, I believe, is to keep our coasting laws for Canada & for Canadian shipping. We are anxious to do that, but it was represented to us that our Canadian upper lake fleet was inadequate for the increased trade, & there appeared to be some reason for so believing. The blue books show that in so far as Ontario is concerned her shipping is declining. Of course, Capt. Gaskin showed that a great deal of the Province's shipping is registered at Montreal. This weakens the statement that the blue books made. Another question is, is the shipping adequate? Can it take all the grain from Fort William in the autumn? It was represented to us that it could not. The Montreal Board of Trade said so two or three years ago, & passed a resolution asking us to allow U.S. ships to load there for export. The Winnipeg Corn Exchange asked the same thing, & we had reason to suppose that they were correct. You say that they were not. One thing that forcibly strikes me is that only one U.S. vessel was chartered, & it inclines me to think that your ideas are largely right. The Government will not lose sight of what Mr. Osler said in opening. If the new system be continued it will be by legislation, & I may say further that unless Parliament amends the coasting laws this Order-in-Council will not be repeated. It was not our intention to make it a permanent part of our policy. We believed that if what we heard was true it would have a stimulating effect on Canadian shipping. We believed that we would either have to build more or let the U.S. shipowners help us in moving our vast crop. We did it most reluctantly, & we believe that this action will convince everybody that we Canadians all want Canadian trade to be carried in Canadian bottoms.”

Unless a definite announcement is received from the Government at an early date, the Toronto Board of Trade, which has been especially active in connection with the matter, will do well to press for one, so that vessel owners may know just where they stand. Should an adverse decision be given, steps must be taken to thoroughly arouse the country on the question & to bring it before Parliament next session. The crisis in the shipping industry is such that a committee of the House of Commons, or failing that a committee of the Senate, should be appointed to consider the causes of the decadence & to secure testimony from all parts of the Dominion.

The Marine Review, of Cleveland, Ohio, ventures the opinion that “Canada's coasting regulations will probably hereafter be a dead letter on the lakes during the grain-shipping

season, though they will remain on the statute books & be enforced at other times.” It is of vital importance that no effort should be spared to prevent the fulfilment of this prediction.

The feeling of shipping men is indicated in a letter from J. H. G. Hagarty, Managing Director of the St. Lawrence & Chicago Steam Navigation Co., who, in referring to a report that the Conners syndicate, which has recently obtained concessions in the Montreal harbor, had secured options upon the Rosedale, Algonquin & other Canadian vessels, says: “To those who are acquainted with the marine business on the lakes, this may seem too absurd to require any reply, but as there are some who may not understand it, I would like to say that, while I know nothing of the Conners syndicate further than that it has not secured options upon the Rosedale or the Algonquin, I presume it is composed of business men, & is not likely to desire to do so. No one in his sane senses would purchase a Canadian steamer at the present time, or until the question of giving the coasting trade away to the Americans is finally settled.”

Montreal Elevators & the St. Lawrence Grain Trade.

The most important event of the month in transportation matters has been the agreement entered into between the Montreal Harbor Commissioners & what is known as the Conners syndicate. On Nov. 28 the Commissioners invited proposals to be sent in within two days from people willing to erect grain elevators at Montreal Harbor. W. J. Conners, Buffalo, N.Y.; Hon. R. Harcourt, Treasurer of Ontario; A. Brunet, Montreal, & Elias Rogers, Toronto, put in a definite proposition on Nov. 30. J. R. Booth, of the Canada Atlantic Ry., wrote that it was impossible to prepare a proposition in the short time allowed, that his Co. would require, at least, 1,500 by 100 ft., with additional space for extension, as sites for elevators & warehouse accommodation both in the west & east ends of the harbor, that the probable size of elevator to be erected would be of 1,500,000 bus. capacity. The Prescott Elevator Co., which a year ago offered to erect elevators if the same privileges were given it as asked for by the Conners syndicate, wrote that it had given up the idea when it seemed likely that the Government would furnish the funds to do the work. It considered the time allowed by the Commissioners too short for the matter to be taken into consideration. The Montreal Warehousing Co. wrote asking that nothing be done until it had a chance, H. & A. Allan asked for a lease of one of the new piers for 50 years in consideration of which they would erect an elevator for the common use of all the inland carriers, rates to be subject to the approval of the Harbor Board. The Montreal Transportation Co. wrote that it was ready to furnish the Board with a proposition for the erection of an elevator. The Montreal Terminal Railway Co. requested that the Board would not commit itself until the Co. had an opportunity to make a proposition.

The Commissioners promptly decided to deal with the Conners syndicate, & after a lot of negotiation & a number of meetings, entered into an agreement. The Commissioners' decision met with considerable opposition from a considerable section of the press, from members of the Montreal Corn Exchange & from one of the Commissioners, Jno. Torrance, who dissented from it. A member of the Corn Exchange applied for an injunction to prevent the Commissioners accepting the Conners' offer, but this was refused by the court. The agreement is summarized as follows:

The Commissioners allot to the syndicate for 40 years 1,170 ft. of the lower portion of Windmill Point pier lying between Windmill Point basin or slip, or the canal & canal basin;

& 1,500 by 27 1/2 ft. of the opposite southerly side of Windmill Point slip or basin, on the shore intended to be constructed. The syndicate agrees to erect on the 1st named site a 1st-class elevator, or a combination elevator of 1,000,000 bus. capacity & 1st class modern warehouses, so that the full space will be readily used in their operation, the cost of such improvements to be not less than \$1,350,000. & on the 2nd named site similar 1st class elevator or elevators & freight warehouses of not less than 3,000,000 bus. capacity, utilizing the whole space, & costing not less than \$1,350,000. The Commissioners also allot for 40 years space for at least one large elevator & freight warehouse on or in connection with one of the already constructed or proposed piers, or on shore, in the portion of the harbor below St. Mary's current, to cost at least \$1,350,000. Rights of way over the sites necessary for the trade of the port are reserved. Construction of the elevator & warehouses on the 1st named site is to be commenced forthwith, & on the other sites as soon as their condition permits, the work of construction to be prosecuted as fast as practically possible. Plans & specifications of structures to be subject to the approval of the Commissioners & of the Governor-in-Council. Every vessel or barge, by whomsoever owned, shall have its regular turn at the wharves or elevators, & equal privileges in the use of the facilities for handling freight shall be extended to all carriers. Rates for unloading, storing & loading grain & for handling at least the principal other commodities shall be reasonable & subject to the approval of the Commissioners & the Governor-in-Council.

In the 1st season after 18 or 20 ft. of water is provided at Port Colborne, on a sufficient area to allow large lake vessels to tranship cargoes, there will be transported to Montreal & handled through the elevators & facilities of the syndicate at least 25,000,000 bus. of wheat or the equivalent in weight of other grain, flour or meal, & in each season thereafter 35,000,000 bus. of wheat or the equivalent in weight of other grain, flour or meal, subject to the breakage of canals, act of God & public enemy, & causes beyond the control of the syndicate or its successors, & to the extent prevented thereby. Should the syndicate in any three consecutive years after the 1st year in which it is bound to handle through its elevators & facilities 35,000,000 bus. of wheat annually or its equivalent, fail to handle for three years an aggregate of 105,000,000 bus. of wheat or its equivalent, the agreement shall be null & void, & the sites, together with the elevators, warehouses & appurtenances thereunto belonging, shall revert & belong to the Commissioners without payment to the syndicate, & clear of all in-

cumbrances & adverse claims. The syndicate to have the preference of renewal of the allotment on terms to be agreed upon with the Commissioners, the Commissioners to have the right on giving one year's notice to have the right to take over the buildings, plant & business carried on at the various sites at their then actual values to be agreed on, or settled by arbitration. The syndicate to furnish the Commissioners \$50,000 security for the performance of the contract.

While the negotiations were pending in Montreal Mr. Connors was frequently interviewed by the daily papers, & made a number of important statements. He says the syndicate intend to build up a port at Montreal that will give employment on the wharves & piers to between 2,000 & 3,000 men, instead of about 700 as at present; that it will bring from 1,600 to 2,000 vessels to Montreal during the navigation season, instead of about 800 as at present. Now two-tenths of the grain of the Canadian West reaches Montreal; the rest goes to the railways & New York, Boston & other ports have the benefit of it. The syndicate hopes to take the other eight-tenths to Montreal. Traffic can be handled more cheaply in Montreal than in New York. The syndicate will have its own steamers to take the grain from the lakes to Montreal. Mr. Connors said: "Our object is not to compete with New York or any route; it is the railways that we mean to compete with. We believe that we can utilize the splendid waterways you have in such a way that we can beat the railways in competition for the grain traffic. We do not say, of course, that we will get it all, but we shall get a big share." At Chicago Mr. Connors stated that the steamships to be built by the syndicate will be employed in the winter both in the coast trade & in carrying grain to Liverpool. In another interview Mr. Connors said: "Some day in the future most of the grain of the continent will come down this Canadian waterway from the West, to one of the islands in the mouth of the St. Lawrence. Here an extensive system of elevators will be erected, within 1,800 miles of Europe. Long tows of barges will come to this grain depot all the way from Chicago. Huge ocean steamers will carry it quickly to the other side. This may take some time, but my prediction will some day be realized."

R. A. Waite, architect, Buffalo, has been appointed to take charge of the elevator & dock work at Montreal & Port Colborne, Ont., the syndicate proposing to build a 1,500,000 bush. elevator there, for transshipping purposes. Mr. Waite says he proposes that the Montreal elevators shall give a panoramic effect to the port, rather than be a series of eyesores, as is the case at Buffalo & other

grain centres. In outline they will be similar to a large office building. One will be a three-decker, measuring 230x600 ft., while the second will be a two-decker, 700x275 ft.

Mr. Connors states that the syndicate will build a fleet of about 15 steamships for the grain train, that they will be of the most modern type & superior to any now on the inland waters. They will be 245 ft. long, 42 ft. beam, 14 ft. draught, 80,000 bush. capacity, with a speed of about 14 miles. Each steamship will have two barges as tow, the barge capacity to be 100,000 bush. each. It is said orders have been placed for some of them already to be built in Toronto & on the Tyne & that it is possible some may be built at Collingwood.

The attitude of the two principal railway companies towards the contract is shown in the following interviews, which were given early in Dec. President Shaughnessy said: "The C.P.R. Co. has not so far taken up any definite position with regard to the Connors elevator scheme. As a private citizen I may say that I should be delighted to see the large quantity of grain & the additional ships, which the syndicate has promised to bring to Montreal. The interests of the port, however, would need to be very carefully guarded in making a bargain with this Buffalo syndicate. The agreement would have to be very strictly supervised in order to see that it did not confer privileges on the syndicate not intended to be given by the Harbor Commissioners. Speaking for the Co., I may say that the C. P. R. will always expect a sufficiently extensive area for terminal facilities to enable it to

NOTICE: The Canadian Pacific Railway Company will apply to the Parliament of Canada at its next session for an Act authorizing the Company to construct or acquire, and to operate a railway from Osborne on the Pembina Mountain Branch of the Company's railway; south-westerly to a point between Manton and Morden on the said Branch; also a railway from Osborne westerly to Carman, and thence westerly and south-westerly to some point on the line of the Manitoba South Western Colonization Railway between Cartwright and Boissevain; also a railway from a point on the Souris Branch of the Company's railway between Laurier and Menteith easterly and northeasterly to a point between Glensboro and Treesbank on the Glenboro Extension of said Branch; and also a railway from West Selkirk in a northerly and north-westerly direction to some point on the west shore of Lake Winnipeg, about sixty miles, thence north-westerly to a point on the Little Saskatchewan River, with power to issue in aid of the construction and equipment of each of the said railways bonds which will be a first lien and charge thereon with the same effect as if it were being built by the Company as a branch line within the meaning of Section One, Chapter Fifty-one of the Statutes of 1888, or in lieu of such bonds Consolidated Debenture Stock conferring on its holders equal rights in all respects, and a rank *pari passu* with holders of such Consolidated Debenture Stock as the Company has been heretofore authorized to issue, and for other purposes.

By Order of the Board.

CHARLES DRINKWATER,

MONTREAL, 13th December, 1899. Secretary.

Rhodes, Curry & Co.,

Ltd.,

Railway and Street Cars

of all descriptions.

Special Cars for Coal, Ore,
Lumber, &c., with Ball-
Bearing Wheels. * *

Car Wheels, Castings, Forgings, &c.
AMHERST, NOVA SCOTIA.

To Los Angeles and Southern California.

Every Friday night, at 10.35 p.m., a through Tourist Car for Los Angeles and Southern California leaves the Chicago, Milwaukee & St. Paul Railway Union Passenger Station, Chicago, via Omaha, Colorado Springs and Salt Lake City, for all points in Colorado, Utah, Nevada and California.

In addition to the regular Pullman porter, each car is accompanied by an intelligent, competent and courteous "courier," who will attend to the wants of passengers en route. This is an entirely new feature of tourist car service and will be appreciated by families or by ladies travelling alone. Particular attention is paid to the care of children, who usually get weary on a long journey.

These tourist cars are sleeping cars supplied with all the accessories necessary to make the journey comfortable and pleasant, and the berth rate (each berth will accommodate two persons) is only \$6.00 from Chicago to California. Ask the nearest ticket agent for a tourist car folder, or address A. J. Taylor, Canadian Freight and Passenger Agent, 8 King Street East, Toronto, Ont.

All Cuts used in the RAILWAY AND SHIPPING WORLD, and owned by the Publishers, are

handle its business. When this is refused it will have to go elsewhere. The Harbor Commissioners propose to give immense concessions to this syndicate. About a quarter of a mile of harbor frontage is involved. The Connors syndicate, from the immense power which it will wield, might easily become extended into something in the future, which is not contemplated or apprehended at present. One thing which has struck me in connection with this Connors elevator scheme is that it may be the entering of the thin edge of the wedge to secure, by Americans, the abrogation of Canadian coasting laws. It is very possible that there are American interests behind this syndicate which control large numbers of American bottoms. These may see a chance to profitably engage in Canadian trade & run between Canadian ports. Of course this must be guarded against. No such thing should be permitted to happen unless through a reciprocal arrangement between the two countries. The C.P.R. will be delighted to see this huge grain traffic pass through Montreal if the interests of the port can be satisfactorily safeguarded. It will take, however, a very careful supervision of the contract to ensure this."

Traffic Manager Reeve said: "The G.T.R. supports the claims of the Montreal Warehousing Co. in the matter of supplying the port of Montreal with elevator facilities. This Co. has the requisite charter for engaging in operations of this kind. We also support the claims of the Canada Atlantic Ry. This road should be given one of the best sites in the harbour, instead of having its claims summarily disposed of in the manner in which they were treated by the Harbor Commissioners. The C.A. has shown more interest in the grain trade than any other factor in the trade. It could come in over our line & go right to the elevators. About the Connors elevator scheme, well, I'm suspicious of it myself. If the tendency of the syndicate is not to decrease the charges it will drive the C.A.R. to Quebec & the G.T.R. to Portland. Connors is acting for a combine of big American grain dealers; I do not care to give the names of those interested. If Connors has arranged the combine upon which he told me he was engaged, he will force every one of the Montreal grain dealers out of the business. They may give up and take a holiday to South Africa. The success of this Connors scheme would not, in my opinion, be a good thing for the port of Montreal. If the Harbor Commissioners are going to give away these valuable concessions, let them be given to interests bound up in the port of Montreal—to corporations locally interested. It is true that the Harbor Commissioners offered the C.A.R. a site for an elevator, but it was near coal shoots, where it would never do to handle grain. There would be too many claims for damages to pay."

Canadian Shipping Statistics.

An appendix to the annual report of the Department of Marine recently issued shows that the total number of vessels remaining on the register books of the Dominion on Dec. 31, 1898, including old & new vessels, sailing vessels, steamers & barges, was 6,643, measuring 693,782 tons register tonnage, being a decrease of 41 vessels & a decrease of 37,972 tons register, as compared with 1897. The number of steamers on the registry books on the same date was 1,909, with a gross tonnage of 267,237 tons. Assuming the average value to be \$30 a ton, the value of the registered tonnage of Canada, on Dec. 31 last would be \$20,813,460.

The number of new vessels built & registered in Canada during last year was 278, measuring 24,522 tons register tonnage. Estimating the value of the new tonnage at \$45

a ton, gives a total value of \$1,103,490 for new vessels.

Lindsay, Ont., & Dawson City, Yukon, were established ports of registry during last year.

No. of vessels & no. of tons on the registry books of Canada, Dec. 31, 1898:

	No. of Sailing Ships & Steamers	No. of Steamers	Gross Tonnage Steamers	Net Tonnage Sailing Ships & Steamers
New Brunswick	603	117	9,858	864,557
Nova Scotia	2,107	146	19,747	202,179
Quebec	1,377	322	75,349	144,447
Ontario	1,452	924	99,419	134,180

Inland Marine Insurance.

The marine insurance companies doing a cargo & hull business on the inland waters have had a most successful year, & have all made money. Insurance on ordinary risks, that is, propellers & wooden craft, expired at noon Nov. 30, & the insurance companies absolutely refused to extend the policies, no matter what premium was offered. The craft affected by the expiration of the policies, which always expire on the last day of Nov., were those plying mostly on Lake Erie & Lake Ontario & the St. Lawrence River. The big steel boats running on Lake Superior to Buffalo, such as the big Toronto freighters, the Rosedale & Algonquin, had insurance up to Dec. 5, which meant that it was Dec. 10 before their insurance expired, for if they are out of port when the contracts expire the insurance companies carry them till they reach their port of destination. The present season is in direct contrast to last year, when some very heavy losses were made by the insurance companies, many of them just at the last of the season & due to having renewed contracts. On Nov. 30, this year, the marine insurance

companies knew they were away in pocket as a result of the season's operations, & they took no chances by extending the insurance. In fact, it is said that the three companies having offices in Toronto, have out of this season's profits, not only made up last year's losses, but are still a considerable amount to the good.—Globe.

Dominion Notices to Mariners.

The Department of Marine has issued the following notices:—

No. 85. Nov. 6, Quebec, new buoy placed at Three Rivers.

No. 86. Nov. 15, Quebec, Ste. Croix Bar range lights. Newfoundland, Flower Island light in operation.

No. 87. Nov. 16, British Columbia, buoy replacing beacon on Kelp Bar. Buoy off Virago Rock in Portier Pass. Uncharted rock in Portier Pass.

No. 88. Nov. 20, New Brunswick, changes at Little Belledune light station, U.S.A. Changes in fog signals on Maine coast.

No. 89. Nov. 28, British Columbia, lighthouse on Pointer Island. Lighthouse on Dryad Point, Campbell Island. Hydrographic notes, vicinity of Dryad Point lighthouse. Uncharted rock in Metlah-callah Bay. Removal & change in color of Hodgson reefs buoy, Erratum.

No. 90. Nov. 29, New Brunswick, buoys off Cape Tormentine. Improvements in Shipigan buoyage.

No. 91. Dec. 1, Nova Scotia, Sambro Harbor light.

No. 92. Nova Scotia, Whistling Buoy off Pennant.

Yukon & Northern Navigation Matters.

The C.P. Navigation Co. is making preparations to compete for next year's trade with the North. At the beginning of the year R. Hall, who has been for some time connected with the Bennett Lake & Klondike Navigation Co. at Victoria, leaves the service of that Co. to act as Skagway representative of the C.P. N., where he will have the oversight of its steadily increasing northern trade.

The American Transportation & Trading Co.'s str. Roanoke is for sale, & it is altogether probable that the Co. contemplates retiring from business as Alaskan passenger carriers. It has no idea, however, of abandoning its freight carrying & Yukon mercantile business. This sale of the Roanoke would mean also a disposal of the Co.'s fleet of river boats, which according to report have not been a money making investment. It would also necessitate the purchase by the Co. of one or more freight vessels with only such passenger carrying accommodations as are needed for the Co.'s employees.

A letter received early in Dec. from a Dawson correspondent, dated Oct. 13, said:—"A general feeling exists here that the Canadian Development Co. called in its boats earlier than the weather demanded, especially in view of the fact that its steamers carried the mail. It is reliably reported that this Co. has made a fortune out of its season's work. The freight blockade at the upper end of the river is causing considerable anxiety among business men in Dawson. The latest arrivals in town assert that it is impossible for anyone who has not seen it to conceive the amount of freight that lies along the route all the way from Skagway to White Horse. It is estimated that 2,000 tons at least have congested between these points, while every steamer up the coast is loaded heavily. The river steamship companies were aroused to a sense of the situation early in Sep., & have been making strenuous efforts to clear the blockade. But, owing to the advanced season, the futility of such an effort is apparent, & it is a fore-

the conclusion that between 1,000 & 2,000 tons must remain undelivered until spring. There is no fear of any actual shortage in any goods in Dawson during the winter, as the large trading companies are amply supplied, and prices will advance & essentials will be cornered. The real sufferers will be general merchants & miners. Many of the former have gone out to Skagway with the intention of disposing of perishable goods; the latter will in many instances lose a winter's work by reason of the non-arrival of necessary machinery. A long line of heavily laden scows & barges, built by steamboat companies & desperate shippers, stretches down the river from White Horse to Dawson, some making successful progress, others aground, others, mayhap, doomed to wreckage. If the weather remains fine they will continue to arrive at intervals during the next two weeks, it may be until the close of Oct. After that their fate is problematic.

"The last down-river boat left Dawson for St. Michael's two weeks ago. Within the last week several parties have left Dawson in open boats, & considerable anxiety is felt about them by their friends. Men who take such chances are playing with death, with all the odds in favor of the grim visitor. The Yukon River freezes first at its mouth, the cold weather beginning there a month earlier than it does in Dawson. About this time the river at St. Michael's must be closed with ice or else so choked up with floes as to make navigation, especially in an open boat, practically impossible. The chances of these people reaching St. Michael's this winter are very slender; while the life risk is proportionately great."—Globe.

Various correspondents have written us with reference to recent fluctuations in the shares of the Klondike Mining & Promotion Co. We believe it has had a fairly prosperous year. Possibly the results may not have been so good as last year, but until the accounts come to hand, shareholders will exercise judgment by again perusing the circular containing extracts from the managers' letters at Dawson City & Victoria. Under date of Sept. 6th, the directors are informed "we have now as much freight as we can handle, in fact the boats have to bring it down in scows, owing to the limited carrying capacity of the steamers. From reports I believe that the season will not be so long as it was last year, as the cold weather has even now commenced to set in." Thus it would appear as if the pressure of goods was so great that the Co. was unable to handle it all; indeed, corroboration of this promise is given in a later statement in which it was estimated "that between Skagway, Bennett & White Horse, there must be 12,000 tons, & it will be impossible for all the goods to get through this winter." Undoubtedly, the Co.'s boats upon the Yukon have all they can do, & at that time (Sept. 25th) were the

only ones then making headway with low water. The route into Klondike is still probably congested with freight, a fact which would induce owners to keep their goods at Skagway rather than at any other intermediate point. The White Pass Ry. is taxed to its utmost to take care of all the freight offering, yet it can handle 200 tons a day, & the steamers leaving Bennett together with scows from that point could, when running, take away 150 tons daily. Thus, with the river navigation closed for the season, there is every indication that the congestion at White Horse is of immense proportions, & the Manager, when writing towards the end of Sept., considered that "everything points to an enormous lot of goods, etc., going forward next spring. A man has just been in Victoria & offered me 20c. a pound if I will guarantee to get him 8,000 lbs. into Dawson. Sorry we cannot accommodate him." The White Pass Ry. is constructing an extension from Caribou. If the piece along Lake Bennett proves easy blasting it is possible it may be finished at the same time, if not, there will be 27 miles between the two sections of the railway, & if that distance proves to be so formidable that it cannot be completed for a year, the railway company purposes putting on mammoth scows to convey the cars from Bennett to Caribou. The outlook before the Co. appears, therefore, to be as favorable as in the past, for whatever irresponsible rumors there may be in circulation, these statements at least are genuine.—B.C. Review.

British Columbia Shipping.

The C.P.N. Co. has had an electric search-light put on the str. Tees, & one will also be put on the str. Danube.

The Victoria Board of Trade is trying to get the steamboat service improved between there & Puget Sound. Improvements to Victoria's inner harbor are also being urged.

There is said to be a possibility of a direct line of steamers being established between Vancouver & Vladivostok, when the trans-Siberian railway is completed in about a year.

The Department of Marine has sold to E. Winckelman, of Seattle, the old str. Sir Jas. Douglas, which went out of service in B.C. waters 3 years ago, being too slow. She was built at Victoria in 1884.

It is said that arrangements are in progress for the organization of another company to run steamers between Golden and Windermere. The project contemplates the building of a boat to run on the Columbia river on the lowest stages of water till the river freezes up.

Reports from Manila state that the C.P.R. steamers Athenian & the Tartar, which were employed by the U.S. Government carrying

troops, etc., to the Philippines, performed the work in a most satisfactory manner. The Athenian recently carried 180 men & 500 horses, while the Tartar took two batches of 1,500 men each. When these ships return to the Pacific Coast they will resume their usual work.

R. P. Rithet & Co., Victoria, report little change in grain & tonnage markets. Foreign markets for wheat continue weak & while the few vessels available for charter are holding for full rates, exporters are unwilling to pay prices demanded. Business has therefore been very limited. The lumber market is exceedingly active, & large orders have recently been placed with leading export mills. Tonnage, however, is almost unobtainable, & owners who have offered their vessels have found ready takers at high rates, even if 6 & 8 months distant.

President Shaughnessy's recent interview with the C.P.N. Co.'s management is bearing fruit. The str. Islander is undergoing extensive repairs & also alterations to her cabin accommodation to fit her for the promised daylight run. The improved service will probably begin in Feb. It is said the Islander will leave Victoria at 7 a.m., arriving at Vancouver at noon, & leaving on the arrival of the Pacific express. It is intended to run the str. Charmer daily as a freight and passenger boat if business warrants. She is to leave Victoria about 1 p.m., & arrive at Vancouver about 6 p.m., departing at midnight, arriving back at Victoria at 6.30.

Manitoba & Northwest Territories.

McDougall & Secord will build a steamboat at Athabasca Landing this winter to ply on the upper reaches of the Athabasca river & as far down as Grand Rapids.

Navigation on Lake Winnipeg lasted till unusually late this year. On Nov. 20 a steamer left Selkirk with a cargo for Norway House, & on Dec. 1 another one left to make calls at lake ports.

The screw st. Lady of the Lake, owned by Capt. W. Robinson, which was sunk in Lake Winnipeg recently, was built at Selkirk, Man., in 1897. Her dimensions were length 105 ft., breadth 18 ft. 5 ins., depth 8 ft. 9 ins., tonnage, gross 201, register 155.

The three steamboats on the Athabasca belonging to the Alaska Trading & Transportation Co. were recently sold by the sheriff, McDougall & Secord being the purchasers. The steamer at Athabasca Landing brought \$400, the one at Fort Smith \$300 & the one at Fort McMurray \$60.

Members of the Winnipeg City Council & Board of Trade made a trip the full length of Lake Winnipeg late this season & have presented a report stating that the development of the

vast resources of the lake is at a standstill, owing to there being no direct steamboat connection with an established market, that this want has lost Manitoba at least \$100,000 a year for the last 10 years & that the City of Winnipeg should insist on the navigation of the Red River between Winnipeg & Lake Winnipeg being improved without further delay. Attention is also called to the total absence of Government protection for mariners on Lake Winnipeg, which has been traversed by Canadian steamers for more than 20 years. There is no Government chart of the lake, & very few lights or safeguards, & practically no money has been expended on wharves or landing places except at Gimli, where boats seldom have occasion to call.

Richelieu & Ontario Navigation Co.

The Montreal-Quebec boats ceased running Nov. 25.

It is expected that the construction of the Co.'s hotel at Murray Bay, Que., will be gone on with during the winter.

It is said the annual statement will show a large increase this year, the earnings being about \$960,000, against \$728,000 in 1898. Much of the increase is credited to the improvement in the service by the addition of the str. Toronto.

No tenders were sent in recently for the ferry service between Montreal & St. Helen's Island, but the Co. wrote saying it was willing to continue to operate the ferry on practically the same terms as the last agreement, under which nothing was paid to the City. The conditions laid down by the City were unacceptable to this Co. & everyone else.

Milloy & Co.'s lease of Yonge st. wharf, Toronto, having expired, the R. & O. N. Co. has leased it for 3 years. The Niagara Navigation Co., Lakeside Navigation Co., Toronto Ferry Co., & other owners of vessels using the wharf heretofore will continue to do so. Another pier is to be built from Scott st., 300 ft. long, to accommodate the str. Toronto.

Ontario & the Great Lakes.

The str. Maple Leaf was badly damaged in a collision with the str. Van Horne on the Lake of the Woods recently.

Tenders have been invited by the Dominion Department of Public Works for the extension of the breakwater at Port Elgin, Ont.

The C.P.R. Upper Lakes steamships are laid up at Owen Sound for the winter. The str. Rosedale & Algonquin are also wintering there.

The Rideau Canal locks closed for the season Nov. 30. The U.S. Canal at Sault Ste. Marie closed Dec. 11, the Canadian Canal remaining open until Dec. 20.

The slip dock at Erieau, Ont., having been completed, the Lake Erie & Detroit River Railway Co.'s large car ferry Shenango is calling there to land & take on passengers to & from points in Ohio.

The Myles Transportation Co., Ltd., has been incorporated to carry on a navigation & transportation business on the lakes. The provisional directors are: R. & J. T. Williamson, Niagara Falls, N.Y.; C. J. Myles, R. O. MacKay & Mrs. E. Dillon, Hamilton, Ont.

The str. Niagara, of St. Catharines, owned by J. & J. T. Mathews, Toronto, foundered Dec. 5, about 8 miles east of Long Point, Lake Erie, Captain McGlory & the 15 hands on board being lost. She was built at St. Catharines in 1875, length 135 ft. 6 ins., breadth 26 ft. 3 ins., depth 12 ft. 2 ins., tonnage gross 468, register 302.

The largest steamer which ever arrived in Montreal intact after passing through the

canals, is the Porto Rico, from Toledo, Ohio, which went through in Nov. She is 225 ft. long & 32 ft. beam, & has a gross tonnage of 1,257, net 840, & draws light, 10 ft. of water. She was bound for New York, to engage in passenger service to the island of Porto Rico.

The Dominion Minister of Public Works has before him plans for the improvements to be made at Port Colborne, sanctioned by Parliament last session. It is said a breakwater will first be built along with a few wharves suitable for the transfer of cargoes. An attempt will be made to get the work under way soon. The appropriation available is \$120,000.

The schooner Wave Crest, owned by J. J. Turner, of Peterboro', & chartered by the Toronto Electric Light Co. to carry coal from Charlotte to Toronto, when abreast of Thirty-Mile Point Dec. 7, encountered a heavy northern squall, & went ashore at Oak Orchard on the south side of the lake. A tug from Kingston was unable to get to her assistance owing to rough weather.

The str. Imperial, running between Windsor, Amherstburg & Pelee Island, & owned by the Kingsville & Pelee Island Navigation Co., caught fire Nov. 25, while lying at Amherstburg dock. The upper cabin was the only loss sustained by fire, but the cargo of potatoes & fish was partly destroyed by water. Insurance, \$7,500 on boat. Shippers lose the damaged cargo.

The str. Constance, owned by Homer & Co., Gravenhurst, which runs on the Muskoka Lakes, is having 16 ft. added amidships. The high pressure 30 h.p. engine & boiler are being replaced with a fore & aft compound condensing engine & boiler of 150 h.p. When altered she will have a speed of 12½ miles. She was built at Gravenhurst in 1898, her present dimensions being: length, 65 ft.; breadth, 13 ft.; depth, 5 ft.; gross tonnage, 42.

The Niagara Navigation Co.'s annual meeting was held in Toronto Dec. 12. The Manager's report for the past year was approved, directors were elected & a resolution was unanimously adopted expressing sympathy with Sir Frank Smith in his long illness. The officers now are: President, Sir Frank Smith; Vice-President, B. Cumberland; Manager, Jno. Foy; Auditor, R. H. McBride; other directors, J. J. Foy, E. B. Osler, W. Hendrie.

The Hamilton Steamboat Co.'s report, presented at the recent annual meeting showed that the past season was one of the most prosperous in the history of the Co. The directors were re-elected, as follows: President & Managing Director, M. A. Kerr; Vice-President, M. Legatt; Directors, G. E. Tuckett, F. W. Fearman, G. F. Tuckett, S. Jones & H. B. Witton; Manager, W. E. Bishop. The shareholders unanimously decided that in consideration of the very successful season Managing Director Kerr take a trip to Europe at the expense of the Co. in consideration of his valuable services.

The Rideau Navigation Co. is seeking incorporation with \$100,000 capital. It is said the C.P. & New York Central Rys. are interested, & that Capt. Noonan will be manager, the str. James Swift, which he now commands on the Kingston-Ottawa route, to be taken over by the new Co., also the steamer now being built at Kingston, & which is intended to make tri-weekly trips between Clayton, N.Y., & Ottawa. She will be 112 ft. long, 28 ft. beam, 7 ft. deep. The upper cabins will occupy a space of 84 ft. in length, with 32 state rooms. The engine will be triple expansion, 81" 13" 21" by 14" stroke; water tube boiler 8 ft. wide, 9 ft. long, 8½ ft. height, with 42 ft. grate surface & 1,400 ft. heating surface, steam pressure 200 lbs., h.p. 500, speed of piston, 600, speed of boat 12½ to 13 miles, draft 4 ft. 9 ins., cost \$20,000.

St. Lawrence canal construction, which was carried on to a considerable extent last winter in pursuance of the policy of having the 14-ft. system of navigation ready for 1899, will be practically at a standstill this winter. Such work as remains to be done on the enlargements between Prescott & Montreal cannot be done during winter. It consists mainly of finishing up contracts. Some work will be done before spring, however, upon the Trent Valley canal, several sections of which are under contract. Tenders have been asked for about 9 miles between Trenton & Frankford. Hon. J. R. Stratton announced at the recent annual meeting of the Peterboro-Trent Waterways Association, on the authority of the Dominion Government, that it was intended to complete the balance of the section between Balsam Lake & Lake Simcoe, which would require about \$900,000, & that prior to last session the Government had concluded to construct with reasonable despatch the section from Peterboro to Lake Ontario.

The ratepayers of Collingwood have almost unanimously voted a bonus of \$50,000 to the Dry Dock & Steel Ship Building Co., of Collingwood, Ltd., which is to take over the business of the Collingwood Dry Dock & Wrecking Co. The principal shareholders of the old company, T. & J. J. Long, C. Cameron & P. M. Campbell, are also in the new company & have associated with them Capt. Alex. McDougall, of West Superior, Minn., well known in connection with whaleback construction. Under the terms of the by-law the Co. agrees to establish a first-class steel ship building yard at Collingwood with plant & machinery capable of constructing at one time 4 of the largest class of steel vessels required in the navigation of the upper lakes, to maintain & operate the same for 30 years & to invest at least \$100,000 in the establishment of the industry. Half of the \$50,000 bonus is to be paid when the machinery is on the ground ready to operate & the balance when the keel of the first steel steamer is laid. The town grants the free use of the Hurontario st. slip for launching & for a dry dock when necessary. It is said a large portion of the plant will be in place by the end of Feb. & the whole by the end of May, & that the Co. will start work at once on a large steel freighter for the Northern Navigation Co., & on a passenger steamer for Brown's Windsor & Sault line.

During the season of navigation recently closed 42 vessels passed out of existence. Their total tonnage was 8,195, & they were worth \$226,200. Last year 58 vessels, with an aggregate tonnage of 29,194 tons & worth nearly \$500,000, were lost. Ships are now building at lake yards to carry over 100,000 tons in a single trip, & costing over \$8,000,000. There were 569 losses all told on the lake in 1898 & 386 this year, divided as follows: Ashore, 168; foundered, 15; burned, 28; waterlogged, 11; dismantled, 4; disabled, 81; ice, 5; collision, 73; capsized, 1. Lake Erie was the scene of the most losses, 92; Lake Michigan, 61; Lake Ontario, 10; Green Bay, 9; Lake Huron, 43; Detroit & St. Clair Rivers, 69; Soo River, 49; Georgian Bay, 2; Welland Canal, 1. Nearly 40% of all these losses was caused by disasters in the narrow connecting lake channels, such as the Detroit River & the Sault passages. Chief among the causes was overcrowding, with strandings & collisions resulting. Many vesselmen are of the opinion that as vessels have been increasing in size until they are too big for the waterways, there must be larger & deeper channels provided, particularly at the Sault, where the two blockades caused more loss than any direct disaster shipping ever experienced. Such accidents are always liable to occur, & Lake Superior shipping interests will never be safe until another channel is cut to avoid the danger.

The U. S. Deep Waterways Commission has reported in favor of a system of dams in the upper Niagara River to raise the lake levels. It is said the Dominion Government will object on the ground that the dams may not only maintain the lake levels, but may raise them. If they should do this, the lower lands in Essex & Kent counties might be submerged. It is claimed that a great deal has been expended in draining these lands. Speaking on the subject recently, the U. S. Secretary of War said: "The Deep Waterways Board informs me that the structure will not cost over \$1,000,000 at the most, & probably not more than \$800,000. Yet this dam will save the government over \$1,000,000 already appropriated for deepening harbors & channels in Lake Erie & Detroit River. The Board has informed me that by its plans & surveys it will recommend a dam that will raise the lower end of Lake Erie from 2½ to 3 ft. This will deepen all the harbors on that lake about that much & will add from 20 ins. to 2 ft. to the depth of the water at the Limekiln Crossing. It will even raise the water of St. Clair Flats & Lake St. Clair about 1 ft., & will tend to hold back any permanent lowering of the level of Lake Huron by the washing out of St. Clair River, a process which has already done much damage. The dam will do away with the necessity for appropriations for deepening channels & harbors which have been growing greater & greater from year to year. For the Detroit River alone an appropriation of over \$500,000 is now awaiting expenditure, & we are led to believe by recent publications that this is merely the beginning of an unending expenditure for dredging & blasting."

Province of Quebec Shipping.

The St. Lawrence channel between Montreal & Quebec is being dredged to a depth of 29 ft. in low water.

The str. Princess Louise, recently burned near St. John's, Que., was built at Wolfe Island, Ont., in 1879. Her dimensions were: Length, 94 ft.; breadth, 18 ft. 5 in.; depth, 4 ft. 9 in.; gross tonnage, 115.

The enlargement of the Lorne graving dock at Quebec will extend it to 600 ft. in length, which will make it capable of receiving any vessel entering the St. Lawrence. The pres-

ent dimensions are: Length, 445 ft.; width at coping level, 100 ft.; width at bottom, 73 ft.; width at entrance, 62 ft.; depth of water on sill at high-water spring tides, 26½ ft.; neap tides, 20½ ft. The cost was \$910,000. The extended dock will be large enough to accommodate such huge ocean liners as the Teutonic, which is 582 ft. long, or the New York, which is 580 ft. It could not, however, accommodate the Oceanic, which is 704 ft. over all.

During the season of navigation recently closed there has been a decrease, not only in the number of steamships making the port of Montreal, but also in the tonnage. The 801 seagoing vessels making the port this year had a tonnage of 1,517,611, as compared with 868 vessels last year, with a tonnage of 1,584,072. The decrease is accounted for very largely by the fact that in the spring of 1898 there was a very large influx of steamships which came to take out grain & lumber, particularly the former. This year the trade in this line, which was largely made up of foreign grains, has been lacking. Another factor which had a tendency to decrease the tonnage this year was the putting off of a number of steamers & engaging them transporting troops, etc., to South Africa.

Maritime Provinces & Newfoundland.

The Lunenburg, N.S., Marine Ry. Co.'s capital stock has been increased from \$25,000 to \$40,000.

The Reform Shipping Co., Ltd., has been incorporated by Dominion letters patent, with a capital of \$21,000, W. L. Lovitt, of Yarmouth, N.S., & others being the incorporators.

H. M. Whitney, of Boston, Mass., & A. J. Moxham, General Manager of the projected iron works at Sydney, N.S., are said to be making arrangements for locating a steel ship-building plant at North Sydney.

Incorporation has been secured for separate companies to own the ships Kings County, Kambira, Harvest Queen, Canada, Skoda & Conductor, a fleet managed & heretofore principally owned by R. Burgess, of Wolfville, N.S.

Between Halifax & Shelburne, N.S., there are 45 vessels, mostly schooners, being built,

the aggregate value being estimated at about \$225,000. A large number of Lunenburg schooners have recently been sold to St. Pierre parties, hence the demand for new ones.

In Prince Edward Island recently one of the leading Liberals hoisted a series of ships' flags to welcome Sir Louis Davies, who was visiting his town. The flags were signals, & they read "Alter your course." The foregoing may not be true, but it is a good story anyway.

The Dominion Atlantic Ry.'s str. Prince Arthur has taken the Prince Edward's place on the Boston-St. John, N.B., route for the winter. She was turned out of the Hull shipyards on June 10 last. She is 308 ft. long by 38 ft. beam. Her registered speed is 19 knots, but on her final trial trip she made a speed of 20¾ for 300 miles. She furnishes accommodation for 600 passengers—550 1st class & 50 steerage. She has 4 decks.

Arrangement has been made between the Plant Line & the Newfoundland Ry., which will give Halifax a new steamship service between Halifax & St. John's. It will be operated by the Plant Line in conjunction with its Boston & Halifax service. The steamer, which has been built to the order of R. G. Reid for the Newfoundland Ry. Steamship Line, has been named Glencoe. She has made a satisfactory trial trip on the Clyde & started for Canada Dec. 11. She is to perform a regular winter weekly service.

ELECTRIC RAILWAYS.

Pavements Between Street Railway Tracks.

By C. H. Rust, City Engineer, Toronto.

In 1891 the exclusive privilege of operating the street railways in the city of Toronto, for 30 years, was disposed of to a company now known as the Toronto Ry. Co. The clauses of the agreement, made between the city & the Co., that refer more particularly to this paper, read as follows:

"The purchaser shall maintain the ties, stringers, rails, turnouts, curves, etc., in a state of thorough efficiency & to the satisfaction of the city engineer, & shall remove, renew or replace the same as circumstances may require, & as the city engineer may direct.

This illustration represents a group of Boston & Maine Railway yardmen demonstrating the practical part of the

U. S. CAR PUSHER

by testing the device, which proved very satisfactory. Biggest part of those present are perfectly familiar with car moving by hand power, and this cut shows how many there were who said our pusher was all right. This device is manufactured by

F. E. CAME,

17 Place d'Armes Hill, Montreal.

Factory, Moreau Street.

When a street upon which tracks are now laid is to be paved in a permanent manner, on concrete or other like foundation, then the purchaser shall remove present tracks & sub-structures, & replace the same, according to the best modern practice, by improved rails, points & sub-structures of such description as may be determined upon by the city engineer as most suitable for the purpose, & for the comfortable & safe use of the highway by those using vehicles thereon, & all changes in the present rails, tracks & roadbed, construction of new lines or additions to present ones, shall be done under the supervision of the city engineer and to his satisfaction.

"(A). In the event of the purchaser desiring to make any repairs or alterations to the ties, stringers, rails, turnouts, curves, etc., on paved streets, the purchaser shall repave the portion of the roadbed so torn up at his own expense.

"II. When the purchaser desires or is required to change any existing tracks or sub-structures for the purpose of operating by electric or other motive power, approved by the city engineer & confirmed by the council, the city will lay down a permanent pavement in conjunction therewith upon the track allowance (as herein defined) to be occupied by such new tracks & sub-structures. This shall first apply only to existing main lines & thereafter to branch lines or extensions of main lines & branches, as & when the city engineer may from time to time recommend & the city council may direct & require; but such tracks as are now laid on a permanently formed roadway must, when so required as aforesaid, be changed by the purchaser as hereinbefore provided, without any change of roadbed being made or any expense occasioned to the city thereby."

Under the terms of the agreement the Co. pays the city \$1,600 a year per mile of double track, & 8% of the gross receipts. When the receipts exceed \$1,000,000, 10% is to be paid. To raise the money for constructing these permanent pavements debentures were issued, payable in 10 years, & the revenue derived from the mileage and percentage of gross receipts is used to pay interest & sinking fund upon these, the total amount of bonds issued being \$1,210,776, & the annual payment to provide interest & sinking fund is \$149,136. This is at present very nearly the amount received from the Co., but as these pavements between the tracks will last for a much longer period than 10 years, in a few years there should be a considerable revenue derived from this source.

A great diversity of opinion has arisen as to the meaning of the word "permanent," used in connection with pavements. In 1888 this question was in the High Court of Justice before Judge Rose, in a case brought by the corporation of Toronto against the old Toronto St. Ry. Co., & after a considerable litigation it was finally settled, without, however, the judge giving his opinion as to the meaning of the word "permanent." When the present Co. obtained its franchise, the interpretation of the word was again subjected to a great deal of discussion, & in 1893 the continuation of the work of changing the rails by the Co., & the construction of the pavements were postponed from April until Aug., pending a settlement as to the meaning of this word. The writer has always taken the ground that in this case the word "permanent" refers to pavements with a concrete foundation, & this has since been taken as the meaning of the word as mentioned in these clauses. It is a great pity that this word should be so frequently used in connection with pavements. It would certainly be well in future cases to state explicitly what is a permanent pavement.

In compliance with the provisions contained in the previously mentioned clauses, in the spring of 1892 plans & specifications for paving

the track allowance on King, Queen, Yonge & other streets were prepared, & on June 28, 1892, the Co. laid down a temporary track on King St., west of Simcoe St., & the contractor for the pavements commenced work. The work of changing the tracks & constructing permanent pavements on the above streets was carried on continuously until winter set in (with the exception of a week's intermission during the time of the Industrial Exposition). The amount of track taken up & relaid this season was 29.9 miles. The rail adopted by the Co. & approved of by the city was a 6½ in. steel girder rail, weighing 70 pounds to the yard, & having a web three-eighths inch in thickness & a base of 4½ ins. wide. A slight alteration was afterward made in the size of the base, making it 5 ins. instead of 4½. The rail now weighs about 73 lbs. to the yard. From experience since gained a heavier section of rail should have been used. The following are the quantities required to build a mile of single track: 114,714 tons of 73 lbs. rails per mile; 5.85 tons of fish plates, 17 lbs. per pair; 1,800 cedar ties; 1 ton of spikes, ¾ lb. each; 1 ton of bolts & nuts, 1 lb. each.

The work of constructing these pavements & the laying of new rails was carried on continuously until the work was practically completed in 1894, there being only a few extensions constructed since. In constructing these new pavements the Co. took up the old rails, tamped the gravel under the ties, put down new rails & lined & leveled them & the paving contractor did the rest of the work. It may be of some interest to give the amount of work done in each year, the average cost per lineal foot (the width paved being 15 ft. for double track), the average rate of progress per day & the different classes of paving material:

1892—29.9 miles single track cost..\$322,555.00
1893—26.1 miles single track cost.. 392,030.00
1894— 9.8 miles single track cost.. 116,942.61

Average cost per lineal foot of double track for the different classes of pavement during these years was:

Asphalt.....	\$5 23
Granite.....	2 43
Brick.....	4 21
Cedar blocks.....	3 83

This covers the cost of stone or scoria tooting, but where granite was used the contractor was allowed to relay the blocks that were on the street. Average amount done per day was:

Asphalt—131 lineal feet of double track.
Granite—56 lineal feet of double track.
Brick—73 lineal feet of double track.
Cedar blocks—96 lineal feet of double track.

In 1894, on McCaul St., the method of construction was slightly altered as to the system of laying the granite or scoria tooting. It was found that when the blocks were laid as headers and stretchers that the water lodged next to the block & assisted in destroying the asphalt. To prevent this it was decided to lay scoria blocks, 4 x 5 x 9 ins., parallel to the rail, & then lay the asphalt. The practice had been to lay the first 6 ins. of concrete up to the bottom of the rail, then lay the scoria blocks in mortar, & finally put in the remainder of the concrete. On this street a change was also made in this respect. The whole of the concrete was put in at once & while still wet scoria blocks were pounded into it, & left to consolidate with the concrete before the asphalt was laid down. In any extension constructed since 1895, wooden ties have been dispensed with & steel tie bars, 2 x 3-8 ins., placed 6 ft. apart, are used, the rails being laid on a solid bed of concrete 8 ins. in depth by 20 ins. wide. This method of construction is much superior to the first type adopted, & is largely used in other cities. After an experience of 6 years of the different materials used, it is evident that with the conditions existing in Toronto, asphalt is

not a suitable paving material to be used between street railway tracks. After having been down only 4 years, the asphalt commenced to disintegrate. This was at first more noticeable where the asphalt joined the tooting, but it was not long before the rest of the material between the rails commenced to wear into holes. This was due probably to the following causes: The lack of proper foundation under the ties, which was shown by the settlement of the rails in several places, the impossibility of properly tamping the asphalt between the tooting, & the constant watering of the asphalt, rendered necessary by the dust caused by the passage of the cars, & also by climatic conditions. Upon King St., which was the only asphalt pavement laid without tooting, a rut was soon formed, rendering necessary constant repairs. The fact of the lip of the rail not being quite as high as the head, & the gauge of the track being 4 ft. 10⅞ ins. instead of 4 ft. 8½ in., probably had a great deal to do in forming this rut.

As previously mentioned, the first pavements were laid in 1892, & in 1897 it became necessary to commence tearing up the asphalt & replacing it with granite, scoria or brick, depending upon the amount of travel upon the street. By 1900 all the asphalt between the rails will have been replaced by a more permanent material. Up to the present 7½ miles of this work have been done. As these asphalt pavements were guaranteed for 5 years, arrangements were made with the contractors whereby they substituted brick for this asphalt, & were paid \$1.50 a square yard, but afterward, when the guarantee expired, the price paid for substituting scoria for asphalt averaged about \$2.40 a square yard. This includes taking up the old asphalt & also 4 ins. of concrete. The amount spent up to the present in substituting a more permanent material than asphalt is \$137,340.19. In putting in blocks in place of asphalt, the asphalt was first taken off & then the concrete had to be picked out so as to afford room for the blocks, which was bedded on a cushion of sand. Fortunately, on most of the streets the concrete was put in between the rails just to a depth of 4 ins., & it was not a very difficult operation to take this out. Granite is no doubt the most durable material to use between street railway tracks, but owing to the very strong opposition of the cyclists to this material not so much of it was used as the department would have liked, & scoria blocks, imported from England, were used instead. On streets where there was not a great deal of travel Canadian bricks were used. Cement grout was almost entirely used for this work, although some filling was done with paving pitch; but cement was found to be the most satisfactory. Owing, however, to the impossibility of stopping street car traffic while this work was in progress, it was very difficult for the filling to become properly set. On King St., during the past summer, where we were substituting scoria block for the asphalt, a portion of the pavement between the tracks was laid with concrete. It has been down now some two months, but not long enough to know the result.

Maritime Provinces & Newfoundland.

St. John Railway.—The case of Hesse vs. this Co. has recently been before the Supreme Court at Ottawa on the appeal of the plaintiff from an order of the Supreme Court of New Brunswick granting a new trial. The case is of considerable interest, especially on account of the heavy damages awarded at the trial. Jos. Hesse, the plaintiff, on July 17, 1898, with two companions, boarded an open car on King St., St. John. When the car had reached the foot of King St., which is a steep incline, the whole brake gear beneath the car went to pieces. This was known to the con-

motor & motorman of the car, but, having consulted, they allowed the passengers to remain on the car, & received others on board. They allege that they did this because they thought they could so use the electric energy itself as to supply the place of the disordered brake gear. In such an emergency there were two modes of applying the electric energy to control the car on a down grade, upon which they hoped to rely, viz., the application of the reversing power in the motor, & the application of the direct power from the power house. They started the car from the foot of King St. across Market Square, a level space, & ran it rapidly up Dock St. Hill. It passed quickly over the crest and began the descent of Mill St. Hill. There being no brakes, the motorman had recourse to the reversing power in the motor, to check the speed of the car, but there was no response; the apparatus was out of order; as a last resort he invoked the direct power from the power house; here, too, as the result of some accident just at that moment, in the power house, the direct power was shut off from the car, which, by its own momentum, went plunging down the steep grade. The plaintiff stood up in the car & laid hold of the iron bar that runs from the floor to the top, & put his left foot out upon the first step extending along the side of open cars, prepared, to be on top if the car should topple over when it would have reached the curve ahead. But, when the car reached the curve at the junction of Mill St. with Main, it jumped the track & went straight ahead across Main St. towards the sidewalk. When the front wheels of the car struck the curb-stone & leaped up on the sidewalk, the concussion broke plaintiff's hold on the iron bar in front of him & threw him violently to the pavement, breaking his left leg above the ankle, so that the bones pierced through his clothing. He was removed to the public hospital, where on July 24, 1898, blood poisoning being imminent, the foot was amputated above the ankle. The plaintiff, at the time of the accident, resided at Providence, R.I., & was a teacher of the organ & piano. He was engaged as organist & choir director in the Roman Catholic cathedral there, & had been for about 10 years prior to the injury complained of. The plaintiff alleged in his declaration & offered evidence to prove at the trial, that the loss of his left foot wholly incapacitated him from playing upon the organ or piano, & in consequence his power to earn money as a musical performer, as well as a teacher of instrumental music was wholly destroyed. The trial took place at the Circuit court in St. John in Mar. 1899, before Judge Van Wart & a jury, & a verdict was rendered in favor of plaintiff for \$25,000. The Co. moved before the Supreme Court of New Brunswick, in April, 1899, for a new trial, upon the grounds of improper reception & rejection of evidence, mis-direction by the trial judge, & excessive damages. The rule was made absolute for a new trial in June, 1899, by Tuck, C.J., & Hanington & McLeod, J.J.; Van Wart, J., the trial judge, dissenting. The appeal from the judgment ordering a new trial was argued at the Oct. sitting of the Supreme Court, the argument lasting three days. On the plaintiff's side it was mainly almost entirely devoted to the question of excessive damages, in connection with which evidence was given of the different services of the church at which plaintiff officiated as organist & the remuneration received. The result of the appeal, as decided by the Supreme Court, is that the rule for a new trial stands, but is restricted entirely to the amount of damages, & the plaintiff succeeds to the further extent that while his appeal is dismissed he has not to pay the costs. The Chief Justice & Judge Gwynne dissented from the judgment, holding that the rule for a new trial should be discharged & judgment entered for appellant according to the verdict.

NOTICE.—The Arrowhead & Kootenay Railway Company (incorporated by an Act of the Legislature of British Columbia, 61 Victoria, Chapter 47) will apply to the Parliament of Canada at its next session for an Act declaring the works which the Company is, by its Act of Incorporation, authorized to construct to be works for the general advantage of Canada, extending until the end of the year 1905, the period within which the Company may complete its works, & giving such powers to the Company as to the maintaining & operating or disposing of its railway & works as are usually given to Railway Companies incorporated by the Parliament of Canada.

By order of the Provisional Directors,
CHARLES DRINKWATER, Secretary.
Montreal, 20th November, 1899.

A Popular Route to New York

Canadian Pacific, and Toronto, Hamilton and Buffalo Railways in connection with the New York Central & Hudson River Railroad. ♦♦♦♦♦

Leaving Toronto in the evening at 5.20 p.m. in one of the through sleeping cars of the Wagner Co., you are landed at Grand Central station, in the very heart of the City of New York, 4th Avenue and 42nd Street, at 8.15 next morning, adjacent to all hotels and business houses and avoiding the annoyance of transfer.

This is also the route of the famous

"EMPIRE STATE EXPRESS"

Fastest Train in the world.

Call on nearest ticket agent of the C.P.R. or T.H. & B. for further information, or address

GEORGE H. DANIELS,

Genl. Passr. Agent, Grand Central Station,
NEW YORK.

LOUIS DRAGO,

Can. Passr. Agent,
TORONTO, ONT.

H. PARRY,

Genl. Agent,
BUFFALO, N. Y.

LELAND HOTEL, Winnipeg Man., W.
D. Douglas, Proprietor. Rooms en suite with baths and all modern conveniences. Rates \$2 to \$4 a day. Special rates for families and large parties, according to accommodation and length of time. Though moderate in price the Leland is first-class in every respect. It is especially adapted to please the commercial trade. It is in the centre of the wholesale and retail district. It is in direct communication with all parts of the city by car lines. It is supplied with the purest spring water from flowing well on the premises.

ceeding from the Co.'s power house, situated between William & Barre streets, the Superior Court dismissed the action and the Court of Review has confirmed this judgment. (Nov., pg. 339.)

A correspondent of the Montreal Herald having asked why the Co. will not allow passengers to get on & off at the front end of cars, Superintendent McDonald has replied as follows: "The reason for not permitting passengers to get on & off the cars at the front end is simply a measure of precaution for the protection of passengers from the danger which attends getting up & down at the front end of the cars. Further, on account of the hills & heavy grades, which are much steeper & more frequent here than in any other city in Canada, it is necessary to prohibit passengers from riding on the front platform in order that the motorman may not be interfered with in the management of the car. The difficulty of controlling a car on the heavy grades in Montreal is not to be compared with the same duties in Toronto, where the roads are perfectly level & the conditions entirely different."

At a recent meeting of the city Finance Committee the question of keeping the streets clear of snow caused a lively discussion between the aldermen & the President & Manager of the Co. The contract between the city & the Co., which has been in force for the last 5 years, expired Nov. 1, & the question of making a new contract came up. By the old contract the Co. paid the city \$1,650 a mile & the city kept the streets clear of snow, & the Co. had to keep its own tracks clean. In the 5 years this cost the city \$101,328; & the Co. \$266,236. The Co. objected & said it was willing to pay half the cost, but could not pay two-thirds, as it had been doing. The aldermen tried to talk the Co.'s officials out of this position, but could not do so, & decided to approve of the Road Committee's action in reporting to Council to adhere to the by-law, which says:—

"The Co. shall, under instructions from the city, keep the track free from ice & snow, & the city may, at its option, remove the whole or such part of ice & snow from curb to curb, as it may see fit, from any street or part of street, in which cars are running, including the snow from the roofs of houses, thrown or falling into the streets, & that removed from the sidewalks into the streets, with the consent of the city, & the Co. shall be held to pay half the cost thereof."

In the interpretation of the by-law is where the dispute comes in. The Co. says it means that the cost of removing the snow from curb to curb is to be divided equally. The city says no. The Co. must first clear its tracks, & that not by throwing the snow on the streets, but by taking it away, & then pay half the cost of removing the rest of the snow. The Co. says it will go to Court about it, & the committee says go ahead.

E. W. Olds, Superintendent of Rolling Stock, & T. E. Mitten, General Superintendent of the Milwaukee Electric Ry. & Light Co., recently spent some days in Montreal to look into the M.S.R. Co.'s system. In an interview Mr. Mitten said:—"Our mission here is for educational purposes. We have had an electric system in Milwaukee for the past 7 years, & our mileage is over 165 miles of track, to accommodate a population of between 280,000 & 300,000. We have spent immense sums of money on equipment, etc., & believe ourselves thoroughly up-to-date, but we have had to come to Montreal to learn something more. Your street railway system here has the reputation in the U.S. of being the best conducted system there is in America. I mean by that, that you serve more people with greater satisfaction & in a more systematic fashion than in any other similar city on the continent. I speak as one who knows, when I say that. I have been on all routes, & the service every-

where is excellent. In Milwaukee our fares are 5c. straight & we sell 20 tickets for \$1. Our transfer system is similar to yours. We are allowed to travel between 8 & 15 miles an hour, averaging 8½ miles. The city ordinance compels us to have fenders on. They are similar in construction to yours, only they are below the platform instead of in front of it. We have an average of seven fatal accidents a year, & in only one instance since 1892, when the electric system was adopted, has a jury censured the Co. or held it responsible. The U.S. courts hold that before a company can be held responsible for accident the injured party must have proved that he exercised all due precaution. Thus, if a man walks across a street at an intersection & is knocked down by a car, he cannot justify a claim for damages unless he can prove that before crossing he 'stopped, looked & listened' to find out if there was any probability of danger. Our city charter gives us the right of way, & it is on this principle the courts act. I am a street railway man of considerable experience & I can assure you that I have never yet known of an accident for which the injured party was not to a great extent responsible. 'Stop, look & listen;' this ought to be taught in the public schools as a headline for copy, & if that were done accidents would be minimized."

Ontario Electric Railways.

Berlin to Port Dover.—It is said progress is being made with this project, the idea being to build from Berlin via Blair, Roseville, Ayr, Paris, Brantford, Waterford, & Simcoe to Port Dover. The promotion is being done by what is termed the Clarke-McNair Syndicate, & L. H. Green, a Montreal engineer, has been going over the route. An unconfirmed press report says the syndicate has bought the Grand Valley Ry. Charter, which gives power to build from Berlin to Galt, also that it has bought the Ayr toll road & that it has an option on the Cavan water-power, owned by the Grand River Electric Power Co. There is difficulty in securing a franchise in Paris. Promoter Clark says the road will go through; that prominent New York financiers are at his back, & that it is the intention of the Co. to apply for an amended charter for the Grand Valley Ry. Co. & to acquire the street railways of Berlin & Brantford. The President of the Brantford St. Ry. Co. informs us that no arrangement for its sale has been entered into.

Fort Erie to Chippawa.—It is announced that the Niagara Falls Park Commissioners have reached an agreement with the Fort Erie Electric Ry. Co., under which the latter will be allowed to extend its line for 13 miles along the bank of the Niagara River to Slater's Point. This extension will bring the line within 2 miles of Chippawa, but the ground between the two points is already occupied by the Niagara Falls Park & River Ry., which has not, however, been running cars between Slater's Point & Chippawa this season, & if it fails to do so much longer the Park Commissioners may cancel the agreement & transfer running rights to the Fort Erie Co. In return for the franchise from Fort Erie to Slater's Point the Fort Erie Co. has agreed to acquire a right of way, giving a width of 66 ft. over the land to be traversed, & to pay a yearly rental. The terms as to the rental have not been divulged, but it is stated that the amount will begin at about \$2,000, & increase every subsequent 5 years, until at the end of 15 years the maximum is reached. In considering the question of the right of way two courses were open to the Commissioners. They had either to purchase the land themselves at very considerable cost & then sell a portion of it to the railway company for the purposes of a track, or to require the company to obtain the land with the right to occupy 20 or 24 ft., setting apart the bal-

ance as a carriage way. The Commissioners adopted the latter course as being more in the public interest. The land in question forms part of the chain reserve extending along the bank of the river from Chippawa to Fort Erie. Farmers along the route are willing to afford a right of way to the railway & to move their fences back, but the bank for a considerable distance has been washed away through the erosion of ice or water, & there would hardly be sufficient width at some places for carriages to pass. The Park Commissioners, therefore, insist upon the railway company purchasing a width of land sufficient not only to lay its tracks, but to give a carriage way of 40 ft. The company will also be required to make good the bank at points where gaps exist, & strengthen it against further inroads. The acquisition of the necessary right of way will cost the company about \$50,000. The agreement between the Commissioners & the company will be submitted to the Ontario Government for ratification. (Nov., pg. 336.)

The foregoing appeared in the Toronto Globe. The Chairman of the Park Commissioners informs us that it is not altogether correct. Pending the Government's action he will not make any further statements.

The Hamilton Consolidations.—J. Moodie, Jr., followed up the legal proceedings mentioned in our last issue by issuing a writ against the Cataract Power Co. to set aside the letters patent recently issued granting the Co. enlarged powers. It is said that he is, however, being settled with, & that he will get \$143,000 for an actual expenditure of \$38,500 in the Co.'s stock. (Nov., pg. 337.)

The London St. Ry. Co. has gone to the Court of Appeal with its case against the city assessment of \$150,000 upon its rails, poles, wires, etc. The Co. seeks to have it declared that the material in question should have been assessed on the basis of scrap.

Metropolitan Electric Ry.—See under "Railway Committee of Privy Council," on an earlier page of this issue.

Niagara Falls & Wesley Park Tramway Co.—A press despatch says that the Sutherland Improvement & Development Co., of New York City, has secured a controlling interest in this Co., & proposes to change the line from a horse one to electricity by July 1, 1900, that a deposit of \$1,000 has been made with the Town Council, and that the line will be extended to Fall's View & out to Lundy's Lane.

Niagara, St. Catharines & Toronto Ry.—The following officers were recently elected: President, J. A. Power, Lansingburg, N.Y.; Secretary & Treasurer, A. P. Colvin, Glens Falls, N.Y.; other directors, J. W. Herbert, Helmetta, N.J.; J. W. Flavelle, Z. A. Leash, & A. Jarvis, Toronto, Ont.; J. L. Lees, Fonda, N.Y.; General Manager, F. A. Cheney; General Freight & Passenger Agent, W. N. Warburton.

The work of converting the line from steam to electricity is rapidly progressing, & it is expected to have passenger cars in operation between St. Catharines & Niagara Falls by Jan. 1. The cars will be of a special type, with heavy cross seats, electrically equipped with 4 motors of 50 h.p. each. (Nov., pg. 336.)

Ottawa Electric Ry. The line being built between Ottawa & Britannia will be a double track railway for the whole distance. It will connect with the city tracks at Holland Avenue, & will run through a most picturesque country, commanding a fine view of the Ottawa River, to a sandy beach at Britannia-on-the-Bay. The rails are 72 lbs. standard railway section, with long fishplates, each having 6 bolts. The ties are placed at 2 ft. centres. Bonding is done with 4.0 copper wire. The centre pole construction is used throughout. The trolley wire is of the figure 8 shape, & will entirely avoid the flashing at the supports which occurs in the use of the ordinary round wire. The poles will be painted for the whole distance, as well as the fence posts on either

side of the right of way. The rolling stock will consist of closed & open cars, each 50 ft. in length, mounted on double trucks. Each car will be equipped with four 50 h.p. latest type Westinghouse motors. The line is almost straight, & will permit of very high speed being attained. The cars will run into the city of Ottawa & round what is known as the Sandy Hill Loop. At the Britannia end they will also turn by going around a loop, thus avoiding the turning of the trolley at any portion of the line. (Nov., pg. 337.)

Queenston, St. Catharines & Port Dalhousie Electric Ry. Co. T. D. Cowper, solicitor, has given notice of application to the Ontario Legislature for an Act to incorporate a company under this name, with power to construct & operate an electric railway from Queenston through Niagara township to St. Catharines, & thence to Port Dalhousie, & with other powers.

The Sarnia St. Ry. Co. has issued a prospectus stating that having determined to electrify its road, it offers from \$30,000 to \$50,000 of its unsubscribed stock for subscription. The Co. has conducted its business as a horse-car railway since 1874, always at a profit; is now paying 5% dividend, & has a surplus of \$5,000 accumulated since 1892, as a cash asset; besides a large amount of plant & assets immediately available for use in electrifying the road, & also very considerable assets which can be turned into money as soon as the change is accomplished. The Co. has made a close estimate of the value of its plant & assets which can be properly used in the construction of the road & in its operation when electrified, & is reducing the present holdings of stock, \$38,600 to the amount of such estimated value, namely, \$28,950. The Co. proposes to construct its electric line from the Tunnel Station to the town over its present location, then northerly through the town over Front & Christina Streets, continuing the road to Point Edward, thence to & along the shore of Lake Huron; & to lay a branch line to the south part of the town near the proposed wire works; in all about 6 or 7 miles. The Co. expects to get power from the Electric Light Co. on advantageous terms. The Co. has procured an estimate of the cost of construction & earnings of the proposed new road by its engineer, J. H. Jones, who reports that the probable cost of the road, after having added a very considerable sum for unseen expenses, will be \$100,000. To provide for this the Co. proposes to utilize the present plant & assets so far as available for the construction of the road, to raise by subscription of stock from \$30,000 to \$50,000, & to borrow the balance on bonds of the Co. The engineer has further made what the Co. believes to be a conservative estimate of probable earnings, which shows that the same will be sufficient, after paying all the costs of operation & maintenance, & providing a fund for payment of interest & a sinking fund for the payment of its bonded debt, to pay a handsome dividend to the shareholders. The Co. proposes that after the stock has been subscribed, that the present directors shall withdraw, & that a new board shall be elected by the entire shareholders, who will then undertake the construction of the road. The Co. desires to bring before the attention of intending investors the fact of the present road having been run at a profit to its shareholders; the permanent advancement the town has made within the past two years, & the most encouraging existing indications of the future prosperity of the town & the community, the valuable charter the Co. has being such as cannot now be obtained, & that the Co. is composed almost entirely of residents of the town, who have the best interests of the town in view; & also desire to make special notice of the natural advantages of the locality for the operation of a success-

ful street railway, embracing the ordinary town services similar to other places, & in addition thereto the traffic to the Tunnel Station, & the ever increasing summer resort & excursion business to the lake shore.

We are informed that if the stock offered is taken up, the letting of contracts for rails, ties, motor cars, generators & overhead construction will be at once taken up. (Nov., pg. 337.)

Toronto Railway.—The gross earnings are:

Nelson Electric Tramway.—The rolling stock will, to begin with, consist of 3 cars. The pole line to convey the electric power from Bonington Falls to Nelson has been completed. Six copper wires & 2 telephone wires have been strung. Good progress is being made with track laying. (Nov., pg. 339.)

Trail to Rossland.—Col. Topping, of Trail, B.C., who has for some time been urging the feasibility of an electric railway between there & Rossland, states that he is making progress & that it is very probable that a line will be built next year.

Hauling Freight by Electricity.—In the larger cities we may soon expect to see freight trains running on the electric street railway as a part of the regular traffic. Such action is contemplated in Toronto. There the Metropolitan Ry., which runs electric cars in the County of York on roads north of Toronto, has made arrangements to connect with the C.P.R. on Yonge St. The object is to deliver freight from the C.P.R. station throughout the city & suburbs. Already we have in the work being done by the Kingston St. Ry. Co. the initial step in that direction here. The plan has many advantages. It would prevent the wear & tear of streets which result from heavy drayage, & would lessen the cost of repairs. Farmers could avoid the necessity of long drives to the city, & as a result, provisions would probably be cheaper. The cars could stop at any number of points along the road & collect the freight, a thing impossible to the ordinary freight train on the regular railway lines. Then, too, the work of hauling the freight cars could be done more economically on an electric road. Altogether,

the scheme has many points in its favor.—Kingston, Ont., News.

Government Bonuses to Electric Railways.

—In referring to the application by the Cataract Power Co. to the city council of Hamilton, Ont., for aid in the construction of an electric railway from there to Guelph & to the probability of the Co. asking the city of Guelph for aid to extend the line to Mount Forest, the Guelph Mercury says: "If municipalities are to be expected to bonus electric lines, is there any reason why the legislature should not also be looked to for assistance? Many points, like Guelph, did not share proportionately in the advantages of the railway aid granted by the province a few years ago with Toronto & some other places. The Toronto, Grey & Bruce & both branches of the Credit Valley Ry., for example, were antagonistic to Guelph interests. They diverted to Toronto much trade which formerly came here. No doubt electric railways would enable us to get some of this trade back again, so that, from this city's point of view at least, provincial assistance to such lines should be favorably regarded. Probably a great many other parts of the province would take a similar view of the matter."

The Ontario Government's Policy.—In a recent speech Provincial Secretary Davis said that we are just on the verge of a wonderful electric railway development in this country. He explained the provision of the law by which a line running a short distance out of a city may be considered part of the city franchise, but there was springing up a new kind of railway extending for perhaps 30 miles, like the Metropolitan in York County. Owing to the decision of the Railway Committee in Ottawa a question of jurisdiction arose, & the Ontario Government wished it to be distinctly understood that they believed the jurisdiction over railways of this class rests with the Provincial Government & the municipalities through which they pass, & steps had already been taken to find out exactly what the power of the Local Government is. Whatever power they had under the B.N.A. Act they would fight for in the interests of the people of Ontario, no matter what Government was in power at Ottawa.

Dominion Government Telegraph Lines.

J. B. Charleson, of Ottawa, Ont., who superintended the construction of the line from Bennett, B.C., to Dawson, Yukon, stated in a recent interview, according to the Montreal Herald, that he left Ottawa with the construction party Mar. 10, & the line was opened on Sep. 28. He is reported to have stated the distance from Bennett to Dawson as being 740 miles, though possibly this is a mistake, as it has been understood to be only 593 miles. The principal points served by the line between the two terminal points above mentioned are Cariboo Crossing, Tagish, White Horse Canyon, Lake Laberge, Thirty Mile River, Teslin, Five Fingers, Selkirk, Pentlers, Selwyn, Ogilvie & Big Salmon. Mr. Charleson said: "I had 108 men engaged in construction, & the cost of the line will be about \$137,000, but besides constructing the line, I had to build 13 houses for operators, who are to work the line between Bennett & Dawson, as well as for the men who will be employed to look after its maintenance. Close beside these 13 houses we constructed small sheds, each provided with wooden bedsteads that may be required by belated travellers. At each of the stations I also left two men, one being the operator & the other in charge of the repairs. At each post provisions have been put in in sufficient quantities to last at least nine months." The cost above given is merely that of the line itself, & the other things mentioned by Mr. Charleson bring the total cost up to \$185,000, while what

John A. McGillivray, Q.C., S.S., Toronto, Ont.

A. E. Stevenson, 6436 Kimbark Ave., Chicago, Ill.

Or Any Officer or Member of the Order.

was evidently a typographical error made him say that it would average \$980 a mile. He says the C.P.R. Co.'s telegraph authorities estimated the cost of the line at \$350 a mile, & the G.N.W. telegraph manager thought it would cost \$400. Of course the use of scows on the river cheapened the cost considerably. Where the Big Salmon enters the Yukon, the former had to be crossed, the distance being 900 ft., the very rapid current preventing a cable being laid, so the wire was strung above the river at a height of 69 ft.

When Mr. Charleson arrived at Skagway last spring he found that neither wire nor insulators had arrived there. The White Pass & Yukon Ry. lent him sufficient for 40 miles, enabling the work to be started without delay. As it was evident that some of the figures given in the interview above quoted were erroneous, we communicated with Mr. Charleson with a view of obtaining correct information & received a reply reading as follows:—"I am not in a position to give you figures as to the cost of the line as I have not yet made my report to the Government & you will therefore see the delicate position in which I am placed. You say that I am credited with stating that the distance between Bennett & Dawson is 750 miles, & you further say that you understand it to be 593 miles. I am not yet in a position to say what the correct distance between these two points is. Further I wish to state that I never gave an interview to any newspaper man in the Dominion, & when they quote me they do so on their own responsibility & without my approval. You say that I am credited with giving the cost of the line itself at \$137,000, & the total cost, including buildings, at \$183,200. This also I am not yet in a position to state, but when I have submitted my report to the Minister he will be quite at liberty in his position to give out details. You also state that I am reported as stating that the line cost \$980 a mile, & you are kind enough to say that this is absurd. If I was speaking & not writing I might use a word more emphatic, because taking the statement which you say I am reported as having made, that the distance was 750 miles, and multiplying the same by \$980, would give you an amount difficult to cover with \$137,000. You are quite right when you call \$980 a mile absurd. At some future date, when I have submitted my report to the Minister, it will give me much pleasure to send you correct figures."

Mr. Charleson may be technically correct in saying that he never gave an interview to a newspaper man in Canada, but there is no doubt that he has done a lot of talking to reporters both at the Pacific coast & in the east.

During the first month the Bennett-Dawson line was in operation the receipts were \$13,000.

On Oct. 13 a correspondent at Dawson wrote that the line had been inoperative for two weeks.

A correspondent of the "Victoria Colonist" writes:—"Mr. Charleson arrived at Bennett on April 1, accompanied by a staff of assistants of all kinds, imported from the Eastern provinces at great expense for transportation & keep, although all the necessary help & better than that brought West could have been obtained in the district. The material & tools, many of which will never see use in the country, were hauled to Bennett at great expense, & the poles were purchased at Bennett & shipped down the river, although 20% could have been saved by cutting them along the line. The telegraph follows the windings of the river. The Government built a new trail, which, it is claimed, is 140 miles shorter than the one following the river. Why was not the line built along the new trail & 140 miles of wire saved?"

A Yukon paper says that at a dinner given Mr. Charleson, at Dawson, on the opening of the line, he stated that he had received in-

structions from the Department of Public Works to make immediate arrangements to extend the line south to Quesnelle. The distance in a direct line is about 600 miles, but the route which the telegraph line will have to follow will probably be in the neighborhood of 750 miles. The Western Union had a line at at one time for about one-third of the distance from Quesnelle. It was to have been extended to Europe, via Siberia, but the successful laying of an Atlantic cable led to the abandonment of the enterprise. If the same route is followed by the new line, this part of the distance will present no great difficulties. The Victoria Colonist thinks there must be about 400 miles of the route to be covered yet to be thoroughly examined before a final section is made, and the work will necessarily occupy some time, although work could be begun simultaneously from Atlin south, from Telegraph Creek north, from Telegraph Creek south, from the Naas north, from the Naas south, from the Skeena north, from the Skeena south, & from Quesnelle north. That is, eight construction parties might be put in the field simultaneously.

The telegraph line between Kamloops & Nicola, B.C., has been completed.

C.P.R. Company's Telegraph.

W. J. Camp having been appointed Superintendent of the Eastern division, the position of electrician, heretofore held by him, has been abolished. In future the electrical part of the work will be performed by the inspector of each division. Tariffs, etc., will be attended to in the manager's office.

A large amount of construction & improvement work has been done during the year. The only change in buildings on the Eastern Division has been the removal at Halifax, N.S., into the Government building, which the Co. occupies jointly with the Commercial Cable Co. & the Direct West India Co., & which is very handsomely fitted up. The floors outside the counter are tiled, all wood work is quarter cut oak. The ceilings & walls are handsomely decorated to conform with other parts of the office. One wire was strung from Carleton Place to Brockville. One single wire & one quadruplex wire was strung from Montreal to Smith's Falls, meeting two new Toronto wires at that point.

Ontario Division.—A no. 6 gauge wire has been built between Toronto & Buffalo; no. 6 gauge wire between Montreal & Toronto; no. 8 gauge wire between Toronto & Elora; taking in Streetsville Jct., Brampton, Cheltenham, Inglewood, Cataract, Alton, Erin, Belwood, Hillsburg, Fergus & Elora; new line between Harriston & Listowel via Palmers-ton; no. 8 gauge wire between Toronto & St. Thomas; no. 8 gauge wire between Toronto & London. The Co. is putting in 12 motor generators at Toronto to supply electric power for the working of the lines on this division. This plant, when completed, will, it is said, be the most up-to-date in Canada.

Western Division.—The pole line on the main line has been reconstructed for 329 miles between Winnipeg & Fort William & for 112 miles between Moose Jaw & Swift Current. This completes the reconstruction of the pole line between Fort William & Bowell, west of Medicine Hat. This new line is of the most substantial description. A no. 8 gauge wire has been strung between Rat Portage & Ignace, 145 miles. Telegraph lines have been constructed along the following branch railways: Snowflake branch, 16 miles; Deloraine-Waskada branch, 21 miles. On the Pipestone branch extension, about 48 miles will be constructed by the end of the year, weather permitting. On the Canadian Northern Ry. about 70 miles of new telegraph line will be constructed by the end of the year & about 70 miles on the Manitoba & Southeastern. About

23 miles have been constructed on the Great Northwest Central extensions at Rapid City & beyond Hamiota.

Pacific Division.—Two no. 8 wires have been constructed along the Columbia & Western Ry. from West Robson to Greenwood, 92 miles. A branch of 12 miles is being built from Eholt to Phoenix, & will be completed about Dec. 20. An additional wire has been strung between Robson & Rossland, 30 miles, & 2 additional wires between Robson & Nelson, 28 miles. The main line & branches have also been greatly strengthened by a general overhauling, & the erection of about 100 miles of new poles.

Along the Columbia & Western Ry. extension from West Robson, B.C., offices have been opened at Grand Forks, Greenwood, Midway Rock Creek & Camp McKinney. An office has also been opened at Lardeau, B.C.

Great North-Western Telegraph Co.

Reconstruction work has been going on over the entire system during the past season, & the Co. has had engaged in different parts of the country almost continually since the spring, 6 or 7 gangs of men.

A wire is under erection along the route of the Great Northern Ry. between Quebec & Hawksbury, Que. The line will be of the usual specifications, one wire being put up in the meantime on a 4-wire cross-arm.

Since the completion of the Victoria Jubilee Bridge at Montreal, the Co. has strung on the top of the structure some 40 wires, using hard-drawn copper & steel pins. This open work was considered to be more advantageous in every respect than the cables which had heretofore been in use.

The new offices in Montreal have attracted considerable attention. Besides giving the Co. thoroughly up-to-date quarters, a large part of the building has been rented to first-class tenants, such as steamship agencies, etc. An elevator was installed, & the interior of the building made thoroughly up-to-date in every particular.

The crowded condition of business over the G.T.R. wires between Montreal & Toronto & Montreal & Portland, has rendered necessary the erection of new wires over these parts of the system, which have just been completed.

The telegraph service at stations along the G.T.R. has recently been made a subject of rigid inquiry, & in order that this branch might be placed on a thoroughly satisfactory footing, General Manager Hays has issued a circular to all agents & operators along the road containing special instructions to the effect that all commercial business offered by the public at station offices should receive every possible attention.

The Co. has this fall completed the erection of a new wire over the Northern Pacific Ry. between Winnipeg & Brandon, including an extension over the Souris River branch to Hartney. The business along the route of the N.P.R. has greatly increased during the last year or two, & additional facilities were rendered necessary in consequence.

The Co.'s business between Eastern & Western Canada is reported as never having been better, & the business between Vancouver, Victoria & other B.C. points & the West, is steadily on the increase.

General Telegraph Matters.

The Spokane & Northern Telegraph Co. has opened an office at Cascade, B.C.

The G.T.R. is stringing a despatchers' wire between Toronto & Montreal.

Some information about the North American Telegraph Co. will be found under the head of "General Telephone Matters," on page 376.

A large telegram, of Nov. 23, said:—
By the use of a new automatic telegraph invention, 12,000 words an hour were sent yesterday from the Tribune office to Milwaukee & back again. The apparatus was invented in Buda Pest, Hungary, & this was the first exhibition of its working powers in this country. Nearly as many words were sent to Buffalo & return, but the experiment was not so successful. The instruments used were not adapted to such a long distance."

We have been unable to find any foundation for the report that telegraph communication is to be established between Port Arthur, Ont., & Duluth, Minn., via the Port Arthur, Duluth & Western Ry., though, of course, it may come later on. At present there is no telegraph line along the P.A., D. & W., but a wire has been strung from Port Arthur to Stanley, & is being continued along the Ontario & Rainy River Ry., now under construction. On the Minnesota side the telegraph wires now extend to the terminus of the Duluth & Iron Range Ry., at Ely.

The people in Prince Edward Island who are agitating for improved or competitive cable service with the mainland, allege that the Anglo-American Telegraph Co., the only company operating on the Island, only provides a 12 hours' service in the day, closing down from 7 p.m. to 7 a.m. daily, that the tolls from the Island to the mainland are double the tolls charged between points in the mainland provinces, & within 5c. of double the charges between New Brunswick & Nova Scotia, & Ontario & Quebec, & that press messages are charged double those of the mainland. Wireless telegraphy from the Island to the New Brunswick shore is suggested as a remedy.

General Telephone Matters.

A telephone line is projected between Skagway, Alaska, & Bennett, B.C.

Oyster Bay, B.C., has been connected with Alexandria & Extension Mines by telephone.

The Bell Telephone Co.'s Hamilton, Ont., office is to have an entirely new keyboard & fittings.

Telephone service has been established between St. George, Pennfield, Beaver Harbor, & Black's Harbor, N.B.

The Eastern Telephone Co., which operates in Cape Breton, has added over 50 subscribers this year, & has made a number of office improvements.

Thieves have found a new sphere of activity in copper telephone wires. The Delaware & Atlantic Co. recently lost about 2½ miles of wire by one night's operations.

The New Westminster & Burrard Inlet Telephone Co.'s new switchboard at Vancouver, referred to in our last issue, is to be put in by the Bell Telephone Co.

The people of Oaklands district, Man., to which the Northern Pacific Ry. has recently been extended, are trying to secure telephone connection with Portage la Prairie.

The North American Telegraph Co. has rebuilt its line between Belleville & Madoc, Ont., putting up a copper metallic circuit between those places for telephone purposes, & has connected Douglas, Ont., with its telephone system.

In reference to the issue of debenture stock & shares of the British Columbia Telephones, Ltd., referred to in our last issue, pg. 343, we were advised by the Secretary on Nov. 26 that he was in a position to say that the whole issue would be taken up.

The Roads Committee of Montreal City Council recently considered the application of B. R. Dodge, of Vermont, inventor of the Dodge system of telephones, to establish a new system of telephones in the city, a system which he claims is away ahead of anything so far invented, while the prices are practically nothing. He refrained, however, from giving any prices in his letter, which asked for the right to erect poles on the streets & carry on a system of telephones. The committee took the matter as a huge joke, the City Engineer saying there were already too

many poles on the streets. It was decided that there was not enough information given in the letter, & it was decided to reply, asking for capitalization of the company, what it would give for the franchise, charge for a telephone, & if it could put its wires underground.

Among the Express Companies.

The Great Northern Ex. Co. has opened an office at Salmo, B.C.

The Western Ex. Co.'s money orders are now payable at all offices of the Maritime Ex. Co.

The Canadian Ex. Co. has opened the following offices; Grand Mere Jct., Que.; Shawenegan Falls, Que.; Niagara Falls South (Drummondville), Ont.

At a recent meeting of the Great Northern Ex. Co. the following officers were elected: President, D. Miller; Vice-Pres. & General Manager, W. J. Footner; other directors, M. D. Groves, R. I. Farrington, J. N. Hill; Sec.-Treas., E. Sawyer. The new President is 2nd Vice-President of the Great Northern R.R.

It has been agreed that the charge on all business, except special traffic matter, from common points in the U.S. to all points in Canada, not reached by American or National Ex. Companies, shall be the local charge from the point of origin to the Canadian transfer point by which the lowest through rate can be obtained added to the Canadian or Dominion Ex. Co.'s charge from such transfer point to destination, excepting that from any common point in the U.S. reached by the American National or other Ex. Company to common points of such Company in Canada that are reached also by either the Canadian, Dominion or other Express Company, the through charge shall be that fixed by the company or companies reaching both the U. S. & Canadian common point; & it is further agreed that such companies will furnish to all other companies parties hereto, on application, their tariffs from common points in the U. S. to their common points in Canada.
